Philosophy is the study of the most fundamental issues concerning reality, knowledge, and value, and of the basic concepts, principles, and arguments of the major intellectual disciplines. Its fields include metaphysics, epistemology, logic, ethics, history of philosophy, political philosophy, aesthetics, philosophy of science, philosophy of mind, philosophy of language, philosophy of law, and philosophy of religion.

UNDERGRADUATE PROGRAM

Adviser

361 Savery, Box 353350

(206) 543-5855

philadv@uw.edu

The Department of Philosophy offers the following programs of study:

- The Bachelor of Arts degree with a major in philosophy
- The Bachelor of Arts degree with a major in history and philosophy of science, offered jointly with the Department of History
- A minor in philosophy

The Department of Philosophy also administers the interdisciplinary minor in ethics.

Bachelor of Arts

Philosophy

Suggested First- and Second-Year College Courses: Introductory courses in symbolic logic, social philosophy, major problems of philosophy, and history of philosophy. Courses to develop writing, language, and analytic skills.

Department Admission Requirements

Minimum 2.00 cumulative GPA and completion of 10 credits of philosophy coursework

Major Requirements

50 credits, to include:

1. One course from PHIL 115, PHIL 120, or an upper-division course in logic
2. One course from PHIL 320, PHIL 330, PHIL 335, or PHIL 340 (undergraduate adviser must approve substitutions)
3. One course from PHIL 322, PHIL 332, PHIL 342, or 400-level courses in the same areas (undergraduate adviser must approve substitutions)
4. At least four UW philosophy courses at the 400 level, excluding PHIL 484
5. At least 25 credits at the UW
6. Minimum 2.00 cumulative GPA for all philosophy courses taken

History and Philosophy of Science

Suggested First- and Second-Year College Courses: PHIL 120, PHIL 160. Courses that develop writing skills. Introductory science courses and mathematics courses through calculus.

Department Admission Requirements

1. HSTCMP 311, HSTCMP 312; PHIL 160 or PHIL 460; PHIL 120, each with a minimum 2.0 grade
2. Completion of 10 credits toward the Natural World (science) requirement (see below), each course with a minimum 2.0 grade
3. Minimum UW 2.00 GPA
4. Completion of 10 credits of composition/writing courses with a minimum 2.0 grade for each course. This requirement may be met by freshman English composition courses, "W" courses, or any courses in which the student has written a graded paper (to be reviewed by HPS faculty) of at least 10 pages.

Major Requirements

85 credits as follows:

1. *Core Courses:* HSTCMP 311, HSTCMP 312, HSTCMP 390; PHIL 160 or PHIL 460; PHIL 120 (25 credits). A minimum 2.0 grade in each course and an overall minimum 2.50 GPA.
2. *Electives:* 25 credits from the following, of which at least 10 must be PHIL courses and at least 5 must be HIST courses (or others upon petition): ESS 404, HIST 211, HIST 215, HIST 310, HIST 313 (or ASTR 313), HIST 314, HIST 315, HIST 316, HIST 317 (also MHE 422), HIST 318 (also MHE 424), HIST 412; PHIL 243, PHIL 350, PHIL 360, PHIL 406, PHIL 450, PHIL 460 (if PHIL 160 has been taken), PHIL 464, PHIL 466, PHIL 473, PHIL 481, PHIL 482, PHIL 483. A minimum 2.0 grade in each class.

3. *Capstone:* Completion of HPS 400, with a minimum 2.0 grade (5 credits)
4. *Science Component:* 30 credits of Natural World (NW) courses from anthropology, astronomy, atmospheric sciences, biology, chemistry, computer science, earth and space sciences, economics, environmental studies, mathematics, physics, psychology, and sociology, with a minimum 2.50 GPA in these courses and a minimum 2.0 grade in each course. At least 15 of the credits must be outside mathematics.

Minor

Minor Requirements: 30 credits, to include:

1. PHIL 115 or PHIL 120, or an upper-division course in logic
2. At least 15 UW philosophy credits at the 300 level or above, excluding PHIL 484.
3. 10 philosophy elective credits at any level

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Graduates of the Department of Philosophy acquire considerable skills in abstract thinking, analysis, and critical writing (constructing and critiquing arguments). Because of these skills, philosophical training is invaluable in almost any area of life. Recent graduates have been successful in software development, financial planning, journalism, teaching, and law. A few go on to graduate school and become professional philosophers.

Students' work is subjected to careful critical scrutiny. As a result, students benefit from philosophy courses with an increased competence in expository clarity, logical rigor, and analytical skill.

Philosophy is an excellent undergraduate major for pre-professional students. It is perhaps ideal for those who aspire to work in the legal profession. The history and philosophy of science major is of particular interest to those planning careers in the sciences. Courses in ethics offer students in any field the opportunity to think clearly about the normative dimensions of their career choices. Because the skills of philosophical analysis can be applied widely, philosophy is always a good complementary second degree for any major, whether it is in the physical sciences, social sciences, arts, or humanities.

- *Instructional and Research Facilities:* The Philosophy Writing Center provides a free tutoring service to any student writing a philosophical paper.
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning:* The department offers internship credits for students participating in the philosophy of children program. Students may also arrange for internship credit with individual faculty. See adviser for details.
- *Department Scholarships:* The Kenneth Clatterbaugh scholarship acknowledges a student with financial need who has outstanding academic merit and commitment to philosophy. The Kenneth R. Parker Award for Excellence in Community Service award honors an undergraduate philosophy major or minor who has blended her or his studies in philosophy with a volunteer-based community project. The recipient receives a \$500 scholarship. A donation of \$250 is made on behalf of the recipient to a community organization of the student's choice. See adviser for details.
- *Student Organizations/Associations:* The undergraduate student club, Lyceum, is dedicated to the informal discussion of philosophical issues.

- *Of Special Note:* The department offers a new majors seminar for those wishing to explore the major.

GRADUATE PROGRAM

Graduate Program Coordinator

361 Savery, Box 353350

(206) 543-5855

philinfo@uw.edu

The Department of Philosophy offers programs of study leading to the Master of Arts and Doctor of Philosophy degrees, the MA program serving as the initial stage of the PhD program. The department's program on values in society offers an interdisciplinary graduate certificate.

The master of arts program option is a two-year non-thesis program which may be extended to three years depending on the outcome of the spring research papers. The student must take twelve courses in philosophy, satisfy a logic requirement, and at the end of the second year, submit three research papers for evaluation by the graduate faculty of the department. The courses and the papers must satisfy a distribution requirement. The departmental evaluation of the student's papers and coursework determines whether an MA degree is awarded and also whether admission to the PhD program is granted. The MA portion of the program serves as the initial stage of the PhD program.

The PhD program, which normally requires at least two years of study beyond the MA, has three general requirements: (1) general examination, (2) dissertation, and (3) final examination.

Master of Arts

Admission Requirements

In evaluating applications, the Department of Philosophy takes the following factors into account: the philosophical potential displayed in a sample of the applicant's written work, letters of recommendation, undergraduate record, and GRE scores.

1. Three letters of recommendation written on the recommender's departmental letterhead and addressed to the Graduate Admissions Committee. Recommenders may send their letters directly to the department, or the applicant may include the letters in sealed envelopes with the other application materials.
2. A sample of the applicant's written philosophical work, normally an essay or paper (approximately 8-15 pages) written for a course in philosophy. Applicants are allowed one writing sample only.
3. Official GRE scores (verbal, quantitative, and analytic).
4. A 200-300 word statement of the applicant's reasons for doing graduate work in philosophy and his or her professional objectives.
5. A complete set of official college transcripts.
6. An undergraduate major in philosophy is recommended although not required.
7. International applicants should refer to UW Graduate School policies.

Degree Requirements

The Philosophy Department at the University of Washington does not offer a terminal MA degree.

This is a non-thesis program. There is no language requirement for the MA degree.

The following requirements supplement the general requirements set forth by the UW Graduate School in the General Catalog (see the Graduate School admissions page for further information). All students, whether or not they have

earned an MA at another institution, must complete the MA requirements before entering the PhD program.

36 credits minimum, as follows:

1. *Logic Requirement:* Either a grade of 3.0 or better in one of the graduate-level logic courses or a passing score on the departmental logic examination. The department offers the logic exam once annually upon request. Part-time students must satisfy this requirement by the time they submit master's papers.
2. *Distribution Requirement:* Graduate courses are divided into three areas. Students must take at least three courses in each of the following three areas:
 - a. *Area One:*
 - i. *Greek Philosophy:* PHIL 430, PHIL 431, PHIL 433, PHIL 520
 - ii. *Medieval Philosophy:* PHIL 421
 - iii. *Modern Philosophy:* PHIL 422, PHIL 436, PHIL 437, PHIL 438, PHIL 522
 - iv. *Recent Philosophy:* PHIL 426, PHIL 469, PHIL 526
 - b. *Area Two:*
 - i. *Logic and Philosophy of Mathematics:* PHIL 470, PHIL 471, PHIL 472, PHIL 473, PHIL 474, PHIL 570
 - ii. *Philosophy of Science:* PHIL 459, PHIL 460, PHIL 466, PHIL 481, PHIL 482, PHIL 560, PHIL 566, PHIL 574
 - iii. *Philosophy of Mind:* PHIL 463, PHIL 464, PHIL 563
 - iv. *Philosophy of Language:* PHIL 453, PHIL 479, PHIL 553
 - v. *Epistemology:* PHIL 450, PHIL 490, PHIL 550
 - vi. *Metaphysics:* PHIL 456, PHIL 556, PHIL 587
 - c. *Area Three:*
 - i. *Ethics:* PHIL 416, PHIL 417, PHIL 440, PHIL 540
 - ii. *Philosophy of Art:* PHIL 445, PHIL 446, PHIL 449, PHIL 545
 - iii. *Philosophy of History:* PHIL 465, PHIL 565
 - iv. *Social and Political Philosophy:* PHIL 406, PHIL 407, PHIL 408, PHIL 409, PHIL 410, PHIL 411, PHIL 414, PHIL 461, PHIL 510, PHIL 514
 - v. *Philosophy of Religion:* PHIL 467, PHIL 567
3. Courses numbered below 400 cannot be used to satisfy graduate degree requirements.
4. *12-Course Requirement:* Students must complete twelve courses (numbered 400 or above) in philosophy, with a minimum grade of 3.0 in each course. At least four of these twelve courses must be seminars.
5. *Master's Papers:* At the end of their second year, in lieu of a master's thesis, students submit three papers, one in each distribution area. (Part-time students will submit their papers for evaluation upon completion of twelve courses in philosophy. A change of status from full-time to part-time student requires departmental approval.)
6. *Evaluation:* The graduate faculty of the department evaluates students' progress on the basis of coursework in philosophy and the papers submitted. The graduate faculty then decides whether students are (a) awarded an MA and admitted to the PhD program; (b) awarded an MA and invited to submit papers a second time; (c) awarded a terminal MA; or (d) dropped from the program without a degree. Students resubmitting papers must provide completely new ones that satisfy the distribution requirements. A completely new paper has not been submitted before and is not a revised version of one previously submitted. These papers are due the following year.
7. *Satisfactory Progress:* Students not yet admitted to the PhD program must take at least two courses (10 credits) per quarter with a grade of 3.0 or better to be in good

standing. An excessive number of incompletes may jeopardize a student's good standing. If a student does not make satisfactory progress in a given quarter, the director of graduate studies recommends to the dean of the Graduate School that the student be placed on probation.

8. *Other Courses:* Students may use three courses outside philosophy in determining whether they are making satisfactory progress. The courses must be approved by the director of graduate studies as part of a program of specialization. Courses in areas other than philosophy do not normally satisfy the twelve-course requirement.

Doctor of Philosophy

Admission Requirements

Admission to the PhD program is based on the level of performance with the MA requirements. (See above.)

Degree Requirements

Minimum 90 credits (60 credits minimum beyond the master's degree), as follows:

1. *General Requirements:* There are four general requirements for the completion of the doctoral degree:
 - a. General written examination
 - b. General oral examination
 - c. Dissertation
 - d. Final examination

The master's papers constitute the written portion of the general examination. The general oral examination is normally a presentation and defense of the student's dissertation proposal.
2. *Course Requirement:* The only departmental course requirement is that the student must complete a total of at least six seminars with a grade of 3.0 or better in each before being awarded the PhD (seminars taken to fulfill the MA requirements may count toward this total). A student's Supervisory Committee may, however, require additional courses.
3. *Language Requirement:* There is no departmental language requirement. However, in writing a dissertation a student must be able to deal with primary sources in the original language of the source. All language requirements are determined by the student's Supervisory Committee. A student should develop the needed language skills as early as possible in his or her career. The student should consult with the director of graduate studies during the first and second year in the MA program to insure that he or she is developing any needed language skills.
4. *Satisfactory Progress:* A student's Supervisory Committee determines whether a student in the PhD program is making satisfactory progress. Satisfactory progress for the PhD program includes steady and substantial progress toward the completion of the dissertation. Sanctions for failure to make satisfactory progress are the same as described for the master's requirements.

Financial Aid

The department has some teaching assistantships available to incoming students and the Graduate School offers some non-teaching assistantships.

Graduate Certificate in Values in Society

The program on values in society aims to facilitate graduate research in ethics as it arises across the disciplines. The program is designed to provide students with the knowledge and skills necessary for integrating ethics and ethics scholarship into their chosen field.

The graduate certificate program is open only to students already enrolled in other graduate degree programs at the

University of Washington. Successful completion of the certificate program is noted on official transcripts.

Certificate Requirements

1. Selection of a faculty adviser from the values in society core faculty
2. Completion of VALUES 511 and VALUES 512 (10 credits)
3. Completion of two other graduate-level values-laden courses specific to the student's field of study (6 credits). Courses from the student's home department are eligible. All courses must be approved by the student's faculty adviser and the program director.
4. Completion of VALUES 513 (2 credits)

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

Philosophy

PHIL 100 Introduction to Philosophy (5) I&S C. MARSHALL, M. ROSENTHAL, A. WOODY Major philosophical questions relating to such matters as the existence of God, the foundations of knowledge, the nature of reality, and the nature of morality. Approach may be either historical or topical. Offered: AWSpS.

PHIL 102 Contemporary Moral Problems (5) VLPA/I&S M. BLAKE Philosophical consideration of some of the main moral problems of modern society and civilization, such as abortion, euthanasia, war, and capital punishment. Topics vary. Offered: AWSpS.

PHIL 110 Introduction to Social and Political Philosophy (5) I&S An introduction to political theories such as conservatism, liberalism, and socialism and their treatment of select social issues.

PHIL 114 Philosophical Issues in the Law (5) I&S R. MOORE Analysis and critical assessment of various philosophical issues in law and legal reasoning. Material drawn from actual law cases, as well as writings by contemporary philosophers of law and lawyers. Topics include criminal responsibility, civil disobedience, abortion, enforcement of morals. Special legal or philosophical training not required.

PHIL 115 Practical Reasoning (5) I&S, QSR Lee Introduction to logic emphasizing concepts and methods useful for practical analysis of arguments in everyday contexts; meaning, syllogisms, logical diagrams, inductive and statistical inference, informal fallacies, argument structure, perhaps some beginning symbolic logic. Offered: AWSpS.

PHIL 120 Introduction to Logic (5) I&S/NW, QSR C. MAYO-WILSON, C. WELLER Elementary symbolic logic. The development, application, and theoretical properties of an artificial symbolic language designed to provide a clear representation of the logical structure of deductive arguments. Offered: AWSpS.

PHIL 160 Why Do We Believe in Quarks, Evolution, and Other Crazy Things? Perspectives on Science, Reason, and Reality (5) I&S/NW L. HANKINSON NELSON Study of how scientific theories are justified and why they are accepted, using selected examples from the history of science.

PHIL 200 Topics in Philosophy (3-5, max. 10) I&S A study of philosophical topics at the introductory level. The content of the course is entirely at the discretion of the instructor.

PHIL 205 Philosophy for Children (5) I&S J. LONE Introduction to the methods of "doing" philosophy with young people. Stresses the development of a community of inquiry in which budding philosophers are encouraged to ask their own relevant questions, develop views and articulate reasons for them, and to listen and learn from one another. Credit/no-credit only.

PHIL 206 Philosophy of Feminism (5) I&S, DIV Philosophical analysis of the concepts and assumptions central to feminism. Theoretical positions within the feminist movement; view of the ideal society, goals and strategies of the movement, intersections of the sex-gender system with other systems of oppression. Offered: jointly with GWSS 206/POL S 212.

PHIL 207 Issues of Global Justice (5) I&S M. BLAKE, J. MAYERFELD, W. TALBOTT Introduces issues of global justice. Topics include: global poverty and aid, immigration, transnational governance, gender in global relations, climate change, and cultural relativism. Offered: jointly with POL S 207/VALUES 207.

PHIL 240 Introduction to Ethics (5) VLPA/I&S S. GARDINER, J. ROBERTS, W. TALBOTT Critical introduction to various philosophical views of the basis and presuppositions of morality and moral knowledge. Critical introduction to various types of normative ethical theory, including utilitarian, deontological, and virtue theories.

PHIL 241 Topics in Ethics (5, max. 10) VLPA/I&S Introduction to ethics through in-depth study of one or more selected topics (e.g., limits of moral community, animal rights, moral education, and freedom). Topics vary.

PHIL 242 Introduction to Medical Ethics (5) VLPA/I&S S. GOERING Introduction to ethics, primarily for first- and second-year students. Emphasizes philosophical thinking and writing through an in-depth study of philosophical issues arising in the practice of medicine. Examines the issues of medical ethics from a patient's point of view.

PHIL 243 Environmental Ethics (5) VLPA/I&S L. NICHOLS Focuses on some of the philosophical questions that arise in connection with environmental studies. Topics to be considered include: the ideological roots of current issues, values and the natural world, public policy and risk assessment, intergenerational justice, and social change. Offered: jointly with ENVIR 243.

PHIL 267 Introduction to Philosophy of Religion (5) I&S Consideration of the sources of religious ideas and practices, the main kinds of religious views and the problems they raise, and the different forms that spirituality can take. Issues concerning the relations of religion to science and morality also treated.

PHIL 301 Intermediate Topics in Philosophy (3-5, max. 10) I&S Philosophical topics at the intermediate level. Content varies each quarter, depending on instructor.

PHIL 307 Justice Across Disciplinary Boundaries (5) I&S W. TALBOTT What is justice? One of the oldest questions in philosophy and also one of the most current. A multidisciplinary approach to understanding justice.

PHIL 314 Philosophy of Crime and Punishment (5) I&S R. MOORE Examination of philosophical theories regarding criminal habits and punishment and the philosophical problems connected with specific topics in criminal law. Examines proper subject matter of criminal law (drug use, pornography, euthanasia); limits of criminal sanctions; crime and privilege (corporate crime, white-collar crime, blackmail); justifications for punishment; mercy; and execution.

PHIL 320 Ancient Philosophy (5) I&S J. ROBERTS, C. WELLER Survey of ancient Greek philosophy, beginning with the pre-Socratics and proceeding on through Plato to Aristotle.

PHIL 322 Modern Philosophy (5) I&S C. MARSHALL, M. ROSENTHAL, C. WELLER Examination of metaphysical and epistemological problems from the works of Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, and Kant.

PHIL 325 Nineteenth-Century Philosophy (5) I&S C. MARSHALL

PHIL 330 History of Ancient Political Philosophy (5) I&S J. ROBERTS Political philosophy of fourth- and fifth-century Greece, especially the Sophists, Plato, and Aristotle, stressing the connection between the political philosophy

and the underlying philosophical system of each philosopher.

PHIL 332 History of Modern Political Philosophy (5) I&S M. BLAKE, W. TALBOTT Examination of major political philosophies from the sixteenth century to the nineteenth century, with attention to the underlying philosophical methods and foundations.

PHIL 335 Plato's Republic (5) VLPA/I&S Designed especially for philosophy majors, but open to non-majors. Intensive study of Plato's masterpiece. Prerequisite: one PHIL course.

PHIL 338 Philosophy of Human Rights (5) I&S W. TALBOTT Theories of human rights and the bearing of these theories on issues of public policy such as legitimacy of war and terrorism, economic justice, and whether future generations have rights.

PHIL 340 History of Ancient Ethics (5) VLPA/I&S J. ROBERTS, C. WELLER Development of moral thought from Socrates through the Stoics. Particular emphasis on the ethical writings of Plato and Aristotle.

PHIL 342 History of Modern Ethics (5) VLPA/I&S M. ROSENTHAL, C. WELLER Development of moral thought from Hobbes through Nietzsche, with particular emphasis on the ethical writings of Hume, Kant, and John Stuart Mill.

PHIL 343 Ethics and the Environment (5) I&S L. NICHOLS Advanced introduction to environmental ethics, with an emphasis on nonanthropocentric value theory.

PHIL 344 History of Recent Ethics (5) VLPA/I&S Study of major ethical writings in the twentieth century, with principal emphasis on the Anglo-American tradition.

PHIL 345 Moral Issues of Life and Death (5) VLPA/I&S S. GOERING Examination of such topics as war and murder, famine relief, capital punishment, high-risk technologies, abortion, suicide, and the rights of future generations.

PHIL 346 Personal Values and Human Good (5) I&S S. GOERING Examination of the idea of a good human life. Emphases differ from year to year. Typical topics include happiness and prudence, rationality and life plans, personal values and the meaning of life, autonomy and false consciousness, self-respect and self-esteem, honesty and self-deception, faith and "vital lies."

PHIL 347 Philosophy in Literature (5) VLPA/I&S Study of philosophical ideas expressed in works of literature.

PHIL 350 Introduction to Epistemology (5) I&S C. MAYO-WILSON, W. TALBOTT Nature, definition, and possibility of knowledge.

PHIL 356 Introduction to Metaphysics (5) I&S Introductory examination of some of the main problems in metaphysics, such as the nature of truth and reality, the metaphysical status of properties, the existence of free will.

PHIL 360 Introductory Topics in Philosophy of Science (5, max. 10) I&S/NW L. HANKINSON NELSON, A. WOODY Study of one or more current topics in philosophy of science such as scientific realism, explanation, confirmation, causation. Prerequisite: one PHIL course; recommended: PHIL 120; PHIL 160.

PHIL 363 Introduction to the Philosophy of Mind (5) I&S C. LEE Various theories of the nature of mind, the relationship between mind and body, the self, introspection, and knowledge of other minds.

PHIL 373 Introduction to Philosophy of Mathematics (5) I&S Introduction to some of the main issues in philosophy of mathematics: to what degree are mathematical theorems justified by rational insight, sensory experience, purely symbolic computations; what is the infinite, and how can one reason about infinite sets, spaces, and numbers without becoming entangled in contradictions.

PHIL 399 Foreign Study (2-5, max. 10) Upper-division philosophy studies with no direct UW equivalents, taken through UW foreign study programs.

PHIL 401 Advanced Topics in Philosophy (3-5, max. 10) I&S A study of philosophical topics at the advanced level. Topics vary.

PHIL 406 Philosophical Topics in Feminism (5) I&S, DIV S. GOERING, L. HANKINSON NELSON, A. WOODY Detailed examination of questions raised by recent feminist scholarship in particular areas of philosophy, such as political theory, ethics, epistemology, or philosophy of science. Emphasis varies.

PHIL 407 International Justice (5) M. BLAKE, S. GARDINER Examines issues through investigation of the moral foundations of international politics. Issues include: What moral duties constrain the relationships between states? Is international poverty a matter of moral concern? Are we justified in preferring the interest of our fellow nations? Prerequisite: one course in philosophy.

PHIL 408 Philosophy of Diversity (5) I&S, DIV M. BLAKE Must a liberal political community respect all claims made on behalf of minority cultural groups? Are there moral limits to the forms of diversity compatible with just governance? Examines modern philosophical writings on these topics. Prerequisite: One philosophy course.

PHIL 409 Philosophy of Disability (3) I&S, DIV S. GOERING Rethinks the non-disabled assumption at the heart of much of western moral and political philosophy. Explores concepts of autonomy, opportunity, personhood, and dependence in regard to disability. Issues may include prenatal testing and reproduction, special education, requirements of accommodation, and social and legal interpretations of disability. Prerequisite: one philosophy course or LSJ 332/CHID 332, LSJ 433/CHID 433, or LSJ 434/CHID 434.

PHIL 410 Social Philosophy (5) I&S W. TALBOTT An examination of topics pertaining to social structures and institutions such as liberty, distributive justice, and human rights.

PHIL 411 Justice in Health Care (5) VLPA/I&S N. JECKER Examination of the ethical problem of allocating scarce medical resources. Emphasizes the fundamental principles of justice that support alternative health policies. Recommended: prior courses in philosophy or ethics. Offered: jointly with B H 474.

PHIL 412 Ethical Theory (5) I&S N. JECKER Studies the major normative ethical theories, including both teleological and deontological approaches. Emphasizes moral philosophy during the eighteenth and nineteenth centuries, as well as contemporary commentary. Recommended: one basic course in ethics. Offered: jointly with B H 402.

PHIL 413 Metaethical Theory (5) I&S N. JECKER Studies the major metaethical theories, including both cognitivist and noncognitivist approaches. Emphasizes moral philosophy during the twentieth century, as well as contemporary commentary. Recommended: one introductory philosophy course. Offered: jointly with B H 404.

PHIL 414 Philosophy of Law (5) I&S R. MOORE Nature and function of law. Relation of law to morality. Legal rights, judicial reasoning.

PHIL 415 Advanced Topics in Animal Welfare (5) I&S L. NICHOLS Critical examination of issues in the philosophy of animal welfare and animal rights. Prerequisite: one philosophy course.

PHIL 416 Ethics and Climate Change (5) I&S S. GARDINER, L. NICHOLS Critical examination of the ethical issues surrounding climate change. Prerequisite: either one philosophy or one environmental studies course. Offered: jointly with ENVIR 416.

PHIL 417 Advanced Topics in Environmental Philosophy (5) I&S S. GARDINER Critical examination of issues in environmental philosophy. Topics vary. Prerequisite: one philosophy course. Offered: jointly with ENVIR 417.

PHIL 418 Jewish Philosophy (5) I&S M. ROSENTHAL Introduces the central concepts and themes of Jewish philosophy. Focuses either on debates within a particular historical period - e.g., medieval or modern; or on a topic - e.g.,

reactions to the Enlightenment or to the Holocaust. Prerequisite: at least one previous course in philosophy. Offered: jointly with JSIS C 418.

PHIL 422 Studies in Continental Rationalism (5, max. 15) I&S C. MARSHALL, M. ROSENTHAL Study of one or more of the major continental rationalists: Descartes, Spinoza, Leibniz.

PHIL 426 Twentieth-Century Philosophy (5) I&S C. WELLER A study of development of contemporary analytic philosophy, the revolt against idealism, and the linguistic turn in philosophy.

PHIL 430 Hellenistic Philosophy (3) I&S J. ROBERTS Survey of the Epicurean, Stoic, and Skeptic philosophy of the Hellenistic period. Emphasis may vary.

PHIL 431 Philosophy of Plato (3, max. 6) I&S J. ROBERTS, C. WELLER Study of selected middle and late dialogues.

PHIL 433 Philosophy of Aristotle (3, max. 6) I&S J. ROBERTS, C. WELLER Study of several major Aristotelian treatises.

PHIL 436 British Empiricism (3) I&S C. WELLER Examination of the metaphysical and epistemological views of Locke and Berkeley, with perhaps some attention also to Hume. Prerequisite: either PHIL 322 or PHIL 350.

PHIL 437 Philosophy of Hume (3) I&S W. TALBOTT, C. WELLER Hume's analyses of knowledge, the passions, and morals.

PHIL 438 Philosophy of Kant (5) I&S C. MARSHALL, C. WELLER Systematic study of *The Critique of Pure Reason*.

PHIL 440 Ethics (5) I&S J. ROBERTS, W. TALBOTT Critical examination of the concepts and judgments of value, including an analytical treatment of the notions of good and bad, right and wrong, and obligation. Emphasis varies from quarter to quarter.

PHIL 445 Philosophy of Art (5) VLPA/I&S R. MOORE Critical examination of various accounts of the nature of art, artistic activity, the aesthetic experience. Problems in interpretation and evaluation of works of art.

PHIL 446 Development of Aesthetic Theory (5) VLPA/I&S R. MOORE Historical development of aesthetics, emphasizing such major figures as Plato, Aristotle, Hume, Kant, Hegel, and Goodman.

PHIL 450 Epistemology (5) I&S C. MAYO-WILSON, W. TALBOTT Systematic study of some of the main problems of the theory of knowledge, such as: the definition of "knowledge"; a priori knowledge; perception and knowledge of the external world; and whether knowledge has or requires a foundation. Emphasis varies from quarter to quarter.

PHIL 453 Philosophy of Language (5) VLPA/I&S Current theories of meaning, reference, predication, and related concepts. Offered: jointly with LING 476.

PHIL 459 Philosophy of Medicine (5) I&S N. JECKER Familiarizes students with central issues in the philosophy of medicine. Focuses on the nature of medical knowledge, the connection between theory and observation, the meaning of medical concepts, and the relationship between theories and the world. Recommended: prior courses in philosophy, history of science, or history of medicine. Offered: jointly with B H 440.

PHIL 460 Philosophy of Science (5) I&S/NW L. HANKINSON NELSON, A. WOODY Critical study of the nature of scientific knowledge. Topics include the relation of theory to observation, the use of mathematics, how theories change, the requirements for the meaningfulness of a theory, and nature of confirmation.. Prerequisite: one PHIL course; recommended: PHIL 120 or PHIL 160.

PHIL 461 Philosophical Anthropology (5) I&S Investigation of the question, "What is human reality?" Philosophical significance of this question and its relation to the human sciences. Typical answers. Implications of those answers for culture, religion, morals, and politics.

PHIL 463 Philosophy of Mind (5) I&S C. LEE Examination of current theories of the nature of the mind and mental processes.

PHIL 464 Philosophical Issues in the Cognitive Sciences (5) I&S/NW C. LEE Philosophical problems connected with research in psychology, artificial intelligence, and other cognitive sciences. Topics vary. Readings from both philosophical and scientific literature. Accessible to nonphilosophers with suitable interests and backgrounds.

PHIL 465 Philosophy of History (3) I&S M. WYLIE Analyses of basic concepts employed in historical interpretation, and study of some of the principal philosophers of history, such as Plato, Saint Augustine, Hegel, Marx, Spengler, Toynbee.

PHIL 466 Philosophy of the Social Sciences (5) I&S L. HANKINSON NELSON, W. TALBOTT, M. WYLIE Examination of fundamental issues in the foundations, methodology, and interpretation of the social sciences. Topics include value orientation and objectivity, methodological individualism, functionalism, reductionism, and the status of idealized models, including models involving idealized conceptions of individual rationality. Emphasis varies from quarter to quarter.

PHIL 467 Philosophy of Religion (5) I&S M. ROSENTHAL Study of selected topics and problems in the philosophy of religion, such as: arguments for the existence of God; the problem of evil; atheism; faith; religious experience and revelation; the attributes of God; miracles; immortality; and the relation between religion and morality. Readings from historical and contemporary authors.

PHIL 470 Intermediate Logic (5) I&S/NW, QSR An introduction to the concepts and methods of metatheory and their application to the sentential calculus.

PHIL 471 Advanced Logic (5) I&S/NW Study of the first-order predicate calculus with identity and function symbols. Consistency, soundness, completeness, compactness. Skolem-Lowenheim theorem. Formalized theories. Prerequisite: PHIL 470.

PHIL 472 Axiomatic Set Theory (5) I&S/NW Development of axiomatic set theory up to and including the consistency of the Axiom of Choice and Continuum Hypothesis with the Zermelo-Fraenkel Axioms.

PHIL 473 Philosophy of Mathematics (5) I&S/NW Study of the traditional accounts of the nature of mathematical entities and mathematical truth given by logicism, intuitionism, and formalism, and the impact of Godel's incompleteness theorems on these accounts.

PHIL 474 Modal Logic (5) I&S/NW Notions of necessity and possibility, using the classical systems T, S4, and S5, and the syntax and the semantics (Kripke models) of these systems.

PHIL 479 Semantics II (3) VLPA/I&S/NW T. OGIHARA Formal characterization of linguistic meaning. Emphasis on nature and purpose of formal semantics and on its relation to formal syntax. Prerequisite: LING 442. Offered: jointly with LING 479.

PHIL 481 Philosophy of Biology (5) I&S/NW L. HANKINSON NELSON Study of several current topics in philosophy of biology, which may include the logical structure of evolutionary theory, fitness, taxonomy, the concept of a living thing, reductionism, the concept of a biological species, evolutionary explanations, and philosophical consequences of sociology. Prerequisite: one PHIL course; recommended: college-level course in biological science.

PHIL 482 Philosophy of Physical Science (5, max. 10) I&S/NW A. WOODY Study of philosophical issues raised by theories in physics or chemistry, such as whether space (time) is a substance, how causation and locality are treated in quantum mechanics, temporal anisotropy and time travel, the nature of a field of force, the reduction of chemistry to physics. Prerequisite: one PHIL course.

PHIL 483 Induction and Probability (5) NW/I&S Introduction to current accounts of evidence and observation,

the confirmation of scientific theories, the logic of inductive reasoning, and the metaphysics and epistemology of chance. High school-level math used. Specific topics vary from year to year. Prerequisite: PHIL 120.

PHIL 484 Reading in Philosophy (1-5, max. 15) Individual study of selected philosophical works.

PHIL 490 Advanced Topics in Epistemology (5, max. 15) I&S W. TALBOTT Intensive study of a particular topic or area in epistemology. Prerequisite: either PHIL 350 or PHIL 450.

PHIL 495 Philosophy for Children Practicum (3) I&S S. GOERING, J. LONE Explores methods for introducing philosophy to K-12 students, focusing on ways to establish “communities of philosophical inquiry.” Students learn how to inspire philosophical discussions with pre-college students, and work in pairs with the instructor to lead philosophy sessions in the seminar and in local schools. Credit/no-credit only. Offered: A.

PHIL 498 Undergraduate Internship (1-5, max. 10) Independent fieldwork under the supervision of a faculty member. Individual experiences vary but could include an off-campus practicum or being trained as study group leader or tutor. Credit/no-credit only. Offered: AWSp.

PHIL 500 Proseminar in Philosophy (5) Introduces incoming graduate students to topics representative of the field and the faculty’s interest. Each class session is devoted to a separate topic taught by a different member of the faculty. In addition to reading and short written assignments, students prepare a term paper on a topic presented. Offered: A.

PHIL 505 Seminar in Teaching Philosophy (1, max. 10) First quarter: seminar on topics of importance to a graduate student teaching two quiz sections of a large lecture course. Second quarter: focus on helping student prepare to teach own course. Prerequisite: graduate standing in philosophy. Credit/no-credit only. Offered: AW.

PHIL 510 Seminar in Social Philosophy (5, max. 20) W. TALBOTT

PHIL 514 Seminar in Legal Philosophy (5, max. 20) R. MOORE

PHIL 520 Seminar in Ancient Philosophy (5, max. 20) J. ROBERTS, C. WELLER

PHIL 522 Seminar in Modern Philosophy (5, max. 20) C. MARSHALL, M. ROSENTHAL, C. WELLER

PHIL 526 Seminar in Recent Philosophy (5, max. 20) C. WELLER

PHIL 538 Philosophy of Human Rights (5, max. 20) W. TALBOTT

PHIL 540 Seminar in Ethics (5, max. 20) S. GOERING, J. ROBERTS, W. TALBOTT

PHIL 545 Seminar in the Philosophy of Art (5, max. 20) R. MOORE

PHIL 550 Seminar in Epistemology (5, max. 20) C. MAYO-WILSON, W. TALBOTT

PHIL 556 Seminar in Metaphysics (5, max. 20)

PHIL 560 Seminar in the Philosophy of Science (5, max. 20) L. HANKINSON NELSON, A. WOODY

PHIL 563 Seminar in the Philosophy of Mind (5, max. 20) C. LEE

PHIL 564 Seminar in Philosophy of the Cognitive Sciences (5) Examines philosophical questions raised in and by cognitive sciences, including the nature of explanation, the role of models in explanation, and debates about reductionism versus pluralism in the face of diverse research paradigms.

PHIL 565 Seminar in the Philosophy of History (5, max. 20)

PHIL 566 Seminar in Philosophy of the Social Sciences (5, max. 20) C. LEE, M. WYLIE

PHIL 570 Seminar in Logic (5, max. 20) Prerequisite: PHIL 470.

PHIL 574 Meta-archaeology: Philosophy and Archaeology (4) M. WYLIE Examines philosophical issues raised in and by archaeology, including theories of explanation and model building, analyses of evidential reasoning and hermeneutic interpretation, debates about ideals of objectivity and about science and values. Recommended: ARCHY 570. Offered: jointly with ARCHY 574.

PHIL 584 Reading in Philosophy (1-5, max. 12) Intensive reading in philosophical literature. Prerequisite: permission of Graduate Program Coordinator.

PHIL 587 Contemporary Analytic Philosophy (5, max. 20)

PHIL 595 Philosophy for Children Practicum (3) S. GOERING, J. LONE Explores methods for introducing philosophy to K-12 students, focusing on ways to establish “communities of philosophical inquiry.” Students learn how to inspire philosophical discussions with pre-college students, and work in pairs with the instructor to lead philosophy sessions in the seminar and in local schools. Credit/no-credit only. Offered: A.

PHIL 600 Independent Study or Research (*) Prerequisite: permission of Graduate Program Coordinator.

PHIL 800 Doctoral Dissertation (*)

Values in Society

VALUES 207 Issues of Global Justice (5) I&S M. BLAKE, J. MAYERFELD, W. TALBOTT Introduces issues of global justice. Topics include: global poverty and aid, immigration, transnational governance, gender in global relations, climate change, and cultural relativism. Offered: jointly with PHIL 207/POL S 207.

VALUES 291 Ethical Issues in the Non-Medical Sciences (3) I&S Provides an introduction to ethics and research ethics issues in the non-medical sciences. Possible topics include: publication and peer review, intellectual property, and the social responsibilities of scientists.

VALUES 495 Ethics in Practice (2) M. BLAKE, S. GARDINER, S. GOERING Culmination of the values-in-society minor. Synthesizes training in ethics with primary discipline. Includes a project of positive social engagement (service learning or research project with fieldwork). Limited to undergraduates completing the minor in values and society. Credit/no-credit only.

VALUES 511 Ethics Matters: An Exploration of Some Moral Qualities (5) S. GOERING Asks what we fundamentally require of ourselves and others if we are to live together in morally acceptable ways by discussing moral qualities as they appear in various arenas. Topics include: autonomy, respect, integrity, and trust.

VALUES 512 Justice Matters: An Exploration of Justice as a Social Ideal (5) S. GARDINER Asks what makes social policies and institutions morally acceptable, primarily through a discussion about justice and injustice. Topics include: relativism, the sources of competing conceptions of justice and equality, cost-benefit analysis, distributive justice, and beneficence.

VALUES 513 Capstone Workshop (2) M. BLAKE, S. GARDINER, S. GOERING Collaborative research workshop. Capstone course for the values-in-society graduate certificate program. Prerequisite: VALUES 511 and VALUES 512. Offered: Sp.

VALUES 591 Ethics Matters in Science: Research Questions as Moral Questions (3) Aims to introduce graduate and professional students from a wide range of primarily non-medical scientific backgrounds to some common moral questions that arise in the course of doing scientific research, and to provide a basic philosophical framework for thinking about related issues that arise within their own disciplines or fields.

Physics

C121 Physics-Astronomy Building

Physics is the study of the fundamental structure of matter and the interaction of its constituents, with the goal of providing a quantitative description of nature based on a limited number of physical principles.

UNDERGRADUATE PROGRAM

Adviser

C139A Physics-Astronomy, Box 351560

(206) 543-2772

The Department of Physics offers the following programs of study:

- The Bachelor of Science degree with a major in physics
- A minor in physics

Bachelor of Science

Suggested First- and Second-Year College Courses: MATH 124, MATH 125, MATH 126; PHYS 121, PHYS 122, PHYS 123, PHYS 224, PHYS 225, PHYS 227. (Note: MATH 134, MATH 135, and MATH 136 can be used in place of MATH 124, MATH 125, MATH 126, and MATH 308.)

These physics and mathematics courses are required prerequisites for junior-level work in physics, not only at the UW, but also at most colleges and universities in the United States. Students who do not complete them during the first two years in college either need to take more than four years to earn a degree or be limited to a minimal course of study for graduation in four years.

Admission Requirements

Students in good academic standing may declare the major at any time by visiting the department advising office to complete the necessary paperwork.

Major Requirements

Minimum 89-106 credits, including the following:

1. *Physics Core Courses (40 credits):* PHYS 121, PHYS 122, PHYS 123, PHYS 224, PHYS 225, PHYS 226, PHYS 227, PHYS 294, PHYS 321, PHYS 322, PHYS 334
2. *Mathematics Core Courses (18-19 credits from one of the following options):*
 - a. MATH 124, MATH 125, MATH 126, and one course from MATH 307/AMATH 351, MATH 308/AMATH 352, MATH 309/AMATH 353, MATH 324, MATH 326, or AMATH 401
 - b. MATH 134, MATH 135, MATH 136 and one course from MATH 309/AMATH 353, MATH 324, MATH 326, or AMATH 401
3. One of the four options shown below (31-48 credits): any course used to satisfy departmental degree requirements can only be used once in any option listed below.
 - a. *Comprehensive Physics Option (35-40 credits):*
 - i. 17 credits from PHYS 228; PHYS 324; minimum three courses from PHYS 323, PHYS 325, PHYS 328, PHYS 329, ASTR 321, or ASTR 322
 - ii. One additional math course from the core list (3-4 credits): MATH 307/AMATH 351, MATH 308/AMATH 352, MATH 309/AMATH 353, MATH 324, MATH 326, or AMATH 401
 - iii. *Advanced Laboratory (6-8 credits):* Two courses from PHYS 331, PHYS 335, PHYS 431, PHYS 432, PHYS 433, PHYS 434, and either ASTR 480 or ASTR 481

- iv. *Upper-Division Lecture Electives* (6 credits): See adviser for approved list of electives.
 - v. *Undergraduate Research*: 3 credits from any combination of PHYS 485, PHYS 486, PHYS 487, PHYS 494, PHYS 495, PHYS 496, PHYS 499, ASTR 481 or ASTR 499. (ASTR 481 may count as lab or research).
- b. *Applied Physics Option* (31-35 credits):
- i. PHYS 231 and AMATH 301 (7 credits)
 - ii. Two additional mathematical courses (6-8 credits) from PHYS 228, MATH 307/AMATH 351, MATH 308/AMATH 352, MATH 309/AMATH 353, MATH 324, MATH 326, or AMATH 401
 - iii. *Advanced Laboratory* (6-8 credits): Two courses from PHYS 331, PHYS 335, PHYS 431, PHYS 432, PHYS 433, PHYS 434, and either ASTR 480 or ASTR 481
 - iv. *Electives* (9 credits): See adviser for approved list of electives.
 - v. *Undergraduate Research*: 3 credits from any combination of PHYS 485, PHYS 486, PHYS 487, PHYS 494, PHYS 495, PHYS 496, PHYS 499, ASTR 481 or ASTR 499. (ASTR 481 may count as lab or research).
- c. *Biophysics Option* (48-52 credits):
- i. PHYS 228, PHYS 324, PHYS 328, PHYS 429 (14 credits)
 - ii. *Chemistry* (15 credits): CHEM 142, CHEM 144, or CHEM 145; CHEM 152, CHEM 154, or CHEM 155; and CHEM 162, CHEM 164, or CHEM 165
 - iii. *Biology* (10 credits): BIOL 180 and BIOL 200
 - iv. *Additional Chemistry and Biology* (6-10 credits): Two courses from CHEM 223 or CHEM 237, CHEM 224 or CHEM 238, CHEM 428, CHEM 452 or CHEM 456, CHEM 453 or CHEM 457, BIOL 220, BIOL 340, BIOL 350, BIOL 355, BIOL 401, BIOL 427, BIOL 467, BIOC 405, or BIOC 440
 - v. *Undergraduate Research*: 3 credits from any combination of PHYS 499, BIOC 499, BIOL 499, CHEM 499, GENOME 499, MICROM 499, N BIO 499, P BIO 499, or BIOEN 499
- d. *Teacher Preparation Option* (35-39 credits):
- i. 11-12 credits from PHYS 228; PHYS 324; one course from PHYS 323, PHYS 328, PHYS 329
 - ii. *Physics by Inquiry* (15 credits): PHYS 407, PHYS 408, and PHYS 409
 - iii. One additional mathematics course from the core list (3-4 credits): MATH 307/AMATH 351, MATH 308/AMATH 352, MATH 309/AMATH 353, MATH 324, MATH 326, or AMATH 401
 - iv. *Advanced Laboratory* (3-5 credits): One course from PHYS 331, PHYS 335, PHYS 431, PHYS 432, PHYS 433, PHYS 434, and either ASTR 480 or ASTR 481
 - v. *Teaching Practicum* (3 credits): PHYS 499, working on a project that involves teaching

1. *Core Courses*: PHYS 121, PHYS 122, PHYS 123, PHYS 224, and PHYS 225
2. One of the following options:
 - a. *Physics Education*: PHYS 407, PHYS 408, PHYS 409 (total 36 physics credits)
 - b. *Experimental Physics*: PHYS 231, PHYS 334, and one course from PHYS 331, PHYS 335, PHYS 431, PHYS 432, PHYS 433, or PHYS 434 (total 30 physics credits)
 - c. *Mathematical Physics*: PHYS 227, PHYS 228 (MATH 308 required), and one course from PHYS 321 or PHYS 324 (MATH 324 required) (total 30 physics credits)
3. Minimum grade of 2.0 required for each physics course counted toward the minor.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes*: The program is one of the largest in the nation, with approximately 80-100 majors graduating every year. Graduates may join the work force in a variety of technical occupations where analytical, computational, and problem-solving skills are highly valued, both in government and the private sector. They may also continue with further studies in physics or in other fields (such as astronomy, medicine, law, business, biology, or engineering).
- *Instructional and Research Facilities*: The Physics and Astronomy Departments share a modern building which contains excellent instructional and research facilities. Undergraduate students are strongly encouraged to participate in ongoing research in the department.
- *Honors Options Available*: With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning*: Most undergraduate physics majors participate in a research experience, either on campus or off. Research internships in physics and related departments are available for both pay and course credit. Many students participate in national programs, typically the summer after their junior year. The department also maintains an exchange program with Universitat Justus-Leibig in Gießen, Germany.
- *Department Scholarships*: Select scholarships available every spring upon nomination by an instructor.
- *Student Organizations/Associations*: Society of Physics Students, www.uwsp.org; Career Development Organization for Physicists and Astronomers, students.washington.edu/cdophys/CAREER/
- *Of Special Note*: One year of high school physics is strongly recommended before taking PHYS 121.

GRADUATE PROGRAM

Graduate Program Coordinator
C139 B Physics-Astronomy, Box 351560
(206) 543-2488

The Department of Physics offers studies leading to the degrees of Master of Science and Doctor of Philosophy. The department has a permanent faculty of 46 members, about 14 research faculty, and about 56 adjunct, affiliate, and emeritus faculty. An average of twenty PhD and thirty MS degrees in physics have been awarded annually in recent years.

Research Facilities

The department is well equipped, both in staff and facilities, for instruction and research in a discipline that emphasizes fundamental problems in the understanding of the physical universe. Areas of research available to the PhD student within the department include atomic physics, astrophysics, condensed-matter physics, elementary-particle physics, nuclear physics, and physics education. In addition, students may do research in physics with adjunct faculty members whose primary appointment is in another department such as Aeronautics and Astronautics, Astronomy, Biochemistry, Bioengineering, Chemistry, Earth and Space Sciences, Materials Science and Engineering, or Physiology and Biophysics.

Experimental work in atomic physics is concentrated on the measurement of fundamental physical properties through laser, ion trap, and radiofrequency techniques. The emphasis on fundamental measurements is continued in experiments on the gravitational force, carried out by faculty and students in atomic physics, nuclear physics, and astrophysics. Condensed-matter experiment includes research on surfaces, interfaces, nanotubes, lower-dimensional and bulk matter, with materials as diverse as high-temperature superconductors and low-temperature hydrogen monolayers. Facilities used range from synchrotron radiation and neutron sources in the United States and abroad to on-campus laboratories with low-temperature, high-pressure, scanning-probe microscopy, x-ray and light scattering, and surface-physics equipment.

Members of the high-energy and particle astrophysics experimental groups are heavily engaged in experiments at the European Center for Nuclear Research in Geneva, Kamiokande, KEK in Japan, and Fermilab in Illinois. Faculty and students of the nuclear physics group are involved in a broad spectrum of research including studies of neutrino properties, relativistic heavy ions, fundamental symmetries and nuclear astrophysics. Researchers use the on-campus accelerators of the Center for Experimental Physics and Astrophysics (CENPA), as well as major facilities in the United States, Canada, and Europe.

Theorists in the department are concerned with problems in the theories of elementary particles and quantum fields, string theory, nuclear and high-energy reactions from the very lowest to the very highest energies, phase transitions and statistical mechanics, condensed-matter physics from localization in disordered systems to electron transport in mesoscopic systems, atomic physics, general relativity, and astrophysics. The Institute for Nuclear Theory, a national facility closely associated with the department, offers a unique opportunity for students to pursue research with distinguished permanent and visiting staff. Students in physics have the opportunity to obtain a physics degree in a number of interdisciplinary and applied physics areas through research with faculty members in other departments.

Department facilities are housed in the Physics-Astronomy Building and the Center for Experimental Physics and Astrophysics (CENPA).

Master of Science (Applications of Physics)

Admission Requirements

This option is designed for students who are currently employed and whose background is in physical science, engineering, mathematics, or computer science. Admission is based on course grades in physics and related fields, adequacy of preparation in physics, and interest in areas of instruction offered in the physics department. Entering students are expected to have an undergraduate background equivalent to a BS degree in physical science, engineering, mathematics, or computer science. This program is part time, with classes offered evenings.

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, contact the departmental adviser or refer to the department website.

Minor

Minor Requirements: 30-36 physics credits (in addition to 15 credits of MATH 124, MATH 125, and MATH 126) as follows:

Degree Requirements

As part of the standard Graduate School requirements, students are expected to complete the sequence of core courses PHYS 441, PHYS 541, and PHYS 543, and to select appropriate elective courses. In addition, students must complete an independent-study project in consultation with a faculty member. This project may be carried out at the University or at the student's place of employment. A written report as well as an oral presentation of the project are required. Students must take at least 3 credits of PHYS 600 while completing the project, and must complete a total of 36 credits of work at the 400 level or above, with at least 18 of those credits at the 500 level or above. Of the 36 credits, at least 18 credits must be from numerically graded courses. No thesis is required.

Master of Science, Doctor of Philosophy

Admission Requirements

Undergraduate preparation should include upper-division courses in mechanics; electricity and magnetism; statistical physics and thermodynamics; modern physics, including an introduction to quantum mechanics; and advanced laboratory work. Preparation in mathematics should include vector analysis, complex variables, ordinary differential equations, Fourier analysis, boundary-value problems, and special functions. Admission is determined by the applicant's undergraduate program, undergraduate grades, Graduate Record Examination aptitude and advanced physics scores, letters of recommendation, and a statement of educational and professional objectives.

Master of Science

Degree Requirements

Students must take at least 3 credits of PHYS 600 while completing the project, and must complete a total of 36 credits of work at the 400 level or above, with at least 18 of those credits at the 500 level or above. Of the 36 credits, at least 18 credits must be from numerically graded courses. A qualifying examination is required. No thesis is required.

Doctor of Philosophy

Degree Requirements

The student is expected to obtain here, or elsewhere with a master's degree, a background in physics equivalent to that contained in the following basic graduate courses: PHYS 505, PHYS 506, PHYS 511, PHYS 513, PHYS 514, PHYS 515, PHYS 517, PHYS 518, PHYS 519, PHYS 520, and PHYS 524; specialized courses appropriate to each student's interests; and two advanced elective courses outside the student's area of research. The student is required to pass, successively, a written qualifying examination (typically at the beginning of the second year), an oral general examination for admission to candidacy, and an oral final examination. In order to take the general examination, the student must have been accepted by a graduate faculty member as a research student and have completed the graduate studies outlined above. This examination concentrates on the area in which the dissertation research is planned. Teaching experience is required of all candidates. Courses in teaching techniques in physics, PHYS 501 through PHYS 503, are required of students holding teaching assistantships.

Financial Aid

Most graduate students are supported by fellowships and assistantships. Applications for the PhD program are automatically considered for these fellowships and assistantships.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/.

PHYS 101 Physical Science by Inquiry I (5-) NW, QSR

PHYS 104 Facilitated Group Inquiry I (2) NW Laboratory-based development of concepts and reasoning skills. Develops problem-solving techniques and scientific method in a large group setting. Co-requisite: PHYS 114. Offered: A.

PHYS 105 Facilitated Group Inquiry II (2) NW Laboratory-based development of concepts and reasoning skills. Develops problem-solving techniques and scientific method in a large group setting. Co-requisite: PHYS 115. Offered: W.

PHYS 106 Facilitated Group Inquiry III (2) NW Laboratory-based development of concepts and reasoning skills. Develops problem-solving techniques and scientific method in a large group setting. Co-requisite: PHYS 116. Offered: Sp.

PHYS 107 Physics Concepts for Non-Scientists (5) NW Wilkes Overview of physical science, from subatomic particles to cosmology. Intended to help students understand the importance of scientific research in society with emphasis on basic ideas about how the universe operates. Readings from popular books by leading scientists for non-science majors. For students without high school physics or with limited mathematics background. Offered: W.

PHYS 110 Liberal Arts Physics (5) NW, QSR Basic concepts of physics presented with emphasis on their origin and their impact on society and the Western intellectual tradition. Primarily for students in the arts, humanities, and social sciences. Offered: WSp.

PHYS 114 General Physics (4) NW, QSR Basic principles of physics presented without use of calculus. Suitable for students majoring in technically oriented fields other than engineering or the physical sciences. Mechanics. Credit is not given for both PHYS 114 and PHYS 121. Recommended: working knowledge of algebra and trigonometry; one year high school physics; concurrent registration in PHYS 117. Offered: AWSpS.

PHYS 115 General Physics (4) NW Basic principles of physics presented without use of calculus. Suitable for students majoring in technically oriented fields other than engineering or the physical sciences. Heat and electromagnetism. Credit is not given for both PHYS 115 and PHYS 122. Prerequisite: PHYS 114 or PHYS 121; recommended: concurrent registration in PHYS 118. Offered: AWSpS.

PHYS 116 General Physics (4) NW Basic principles of physics presented without use of calculus. Suitable for students majoring in technically oriented fields other than engineering or the physical sciences. Sound, light, and modern physics. Credit is not given for both PHYS 116 and PHYS 123. Prerequisite: PHYS 115 or PHYS 122; recommended: concurrent registration in PHYS 119. Offered: AWSpS.

PHYS 117 General Physics Laboratory (1) NW Mechanics laboratory. Credit is not given for both PHYS 117 and the PHYS 121 laboratory. Prerequisite: PHYS 114 which may be taken concurrently. Credit/no-credit only. Offered: AWSpS.

PHYS 118 General Physics Laboratory (1) NW Heat and electromagnetism laboratory. Credit is not given for both PHYS 118 and the PHYS 122 laboratory. Prerequisite: PHYS 115 which may be taken concurrently. Credit/no-credit only. Offered: AWSpS.

PHYS 119 General Physics Laboratory (1) NW Sound, light, and modern physics laboratory. Credit is not given for both PHYS 119 and the PHYS 123 laboratory. Prerequisite: PHYS 116 which may be taken concurrently. Credit/no-credit only. Offered: AWSpS.

PHYS 121 Mechanics (5) NW, QSR Basic principles of mechanics and experiments in mechanics for physical science and engineering majors. Lecture tutorial and lab components must all be taken to receive credit. Credit is not given for both PHYS 114 and PHYS 121. Prerequisite: either MATH 124 or MATH 134, which may be taken concurrently; recommended: one year high school physics. Offered: AWSpS.

PHYS 122 Electromagnetism (5) NW Covers the basic principles of electromagnetism and experiments in these topics for physical science and engineering majors. Lecture tutorial and lab components must all be taken to receive credit. Credit is not given for both PHYS 115 and PHYS 122. Prerequisite: either MATH 125 or MATH 134, which may be taken concurrently; PHYS 121. Offered: AWSpS.

PHYS 123 Waves (5) NW Explores electromagnetic waves, the mechanics of oscillatory motion, optics, waves in matter, and experiments in these topics for physical science and engineering majors. Lecture tutorial and lab components must all be taken to receive credit. Credit is not given for both PHYS 116 and PHYS 123. Prerequisite: either MATH 126 or MATH 134, which may be taken concurrently; PHYS 122. Offered: AWSpS.

PHYS 207 The Physics of Music (3) NW The nature of sound; vibrations; traveling and standing waves; response of the ear to sound; production of musical sounds.

PHYS 210 Physics by Inquiry I (5) NW Selected topics in physics with emphasis on depth of understanding and development of skills essential to the scientific process. Develops perspective of science as a process of inquiry. Prerequisite: either PHYS 116 or PHYS 123. Offered: A.

PHYS 211 Physics by Inquiry I (5) NW Selected topics in physics with emphasis on depth of understanding and development of skills essential to the scientific process. Develops perspective of science as a process of inquiry. Prerequisite: PHYS 210. Offered: W.

PHYS 212 Physics by Inquiry I (5) NW Selected topics in physics with emphasis on depth of understanding and development of skills essential to the scientific process. Develops perspective of science as a process of inquiry. Prerequisite: PHYS 211. Offered: Sp.

PHYS 214 Light and Color (5) NW, QSR Compares past explanation of certain familiar natural phenomena with present understandings. Lamps and lighting, outdoor light, optical devices, color vision, perspective, paints, and pigments. Quantitative comparison critical to the course, but college-level mathematics background not required. Intended for non-science students.

PHYS 216 Science and Society (5) I&S/NW Chaloupka Investigation of the relationship between science, technology, and society. Nuclear physics and molecular biology serve as concrete examples of fields with significant impact on society. Offered: jointly with JSIS B 216; Sp.

PHYS 217 Energy Future: The Technical and Social Barriers to Large-Scale Sustainable Energy (5) I&S/NW Seidler Surveys the scientific, technological, and social barriers to large-scale renewable energy implementation. Includes discussion of solar, wind, nuclear, and other sustainable modalities; energy efficiency; large-scale energy storage; the greenhouse effect; and numerous domestic and international case studies of sustainable energy efforts. Offered: A.

PHYS 224 Thermal Physics (3) NW Introduces heat, thermodynamics, elementary kinetic theory, and statistical physics. Prerequisite: either MATH 126 or MATH 136, which may be taken concurrently; PHYS 122, which may be taken concurrently. Offered: ASpS.

PHYS 225 Introduction to Quantum Mechanics (3) NW Emphasizes two-state systems. Introduces spin and applications in nuclear magnetic resonance. Prerequisite: minimum 2.0 grade in PHYS 121, PHYS 122, and PHYS 123; PHYS 227. Offered: WS.

PHYS 226 Particles and Symmetries (3) NW Introduction to the fundamental constituents of matter and the symmetries which characterize their interactions. Topics include special relativity; strong, weak, and electromagnetic interactions; quarks and leptons; baryons and mesons; and neutrinos and nuclei. Prerequisite: PHYS 225; recommended: PHYS 228. Offered: ASp.

PHYS 227 Elementary Mathematical Physics (4) NW Applications of mathematics in physics with emphasis on the mechanics of particles and continuous systems. Develops and applies computational methods, both analytic and numerical. Prerequisite: either MATH 134, MATH 135, and MATH 136, or one of MATH 307, MATH 308, MATH 309, MATH 324, AMATH 401, AMATH 351, AMATH 352, any of which may be taken concurrently; minimum 2.0 grade in PHYS 121, PHYS 122, and PHYS 123. Offered: ASp.

PHYS 228 Elementary Mathematical Physics (4) NW Applications of mathematics in physics with emphasis on the mechanics of particles and continuous systems. Develops and applies computational methods, both analytic and numerical. Prerequisite: minimum 2.0 grade in PHYS 227. Offered: WS.

PHYS 231 Introductory Experimental Physics (3) NW Introduction to data acquisition and analysis using experiments which measure fundamental constants or properties of nature (Planck's constant, Boltzmann's constant, speed of light, charge of electron). Prerequisite: minimum 2.0 grade in PHYS 123. Offered: A.

PHYS 232 Introduction to Computational Physics (3) NW Computational techniques applied to physics and data analysis in laboratory setting. Emphasis on numerical solutions of differential equations, least square data fitting, Monte Carlo methods, and Fourier Analysis. A high-level language taught and used; no previous computing experience required. Prerequisite: PHYS 227.

PHYS 248 Introductory Selected Topics (1-5, max. 15) NW

PHYS 294 Introduction to Research: Frontiers of Physics (1) NW Provides a survey of contemporary research in experimental and theoretical physics, with an emphasis on subfields seeing revolutionary changes in understanding. Recommended: PHYS 123. Offered: W.

PHYS 321 Electromagnetism (4) NW First of a three-quarter sequence. Charges at rest and in motion; dielectric and magnetic media; electromagnetic waves; relativity and electromagnetism; physical optics. Prerequisite: minimum grade of 2.0 in PHYS 227; two of PHYS 228, MATH 307 or AMATH 351, MATH 308 or AMATH 352, MATH 309 or AMATH 353, MATH 324, MATH 326, or AMATH 401; recommended: either PHYS 228 or MATH 324. Offered: ASp.

PHYS 322 Electromagnetism (4) NW Continuation of PHYS 321. Charges at rest and in motion; dielectric and magnetic media; electromagnetic waves; relativity and electromagnetism; physical optics. Prerequisite: PHYS 321. Offered: WS.

PHYS 323 Electromagnetism (4) NW Continuation of PHYS 322. Charges at rest and in motion; dielectric and magnetic media; electromagnetic waves; relativity and electromagnetism; physical optics. Prerequisite: PHYS 322. Offered: Sp.

PHYS 324 Quantum Mechanics (4) NW First part of a two-quarter sequence. Introduction to nonrelativistic quantum mechanics: need for quantum theory, Schrodinger equation, operators, angular momentum, the hydrogen atom, identical particles, and the periodic table. Prerequisite: minimum 2.0 grade in both PHYS 225 and PHYS 228; either MATH 307 or AMATH 351, MATH 308 or AMATH 353, MATH 309 or AMATH 353, MATH 324, MATH 326, or AMATH 401. Offered: AS.

PHYS 325 Quantum Mechanics (4) NW Continuation of PHYS 324. Introduction to nonrelativistic quantum mechanics: perturbation theory, the variational principle, radiation; application of quantum mechanics to atomic phys-

ics, magnetic resonance, scattering, and various special topics. Prerequisite: PHYS 324. Offered: W.

PHYS 328 Statistical Physics (3) NW Elements of statistical mechanics and their applications. Prerequisite: PHYS 224; PHYS 324, which may be taken concurrently. Offered: A.

PHYS 329 Mathematical Methods and Classical Mechanics (3) NW Mathematical methods applied to classical mechanics, including Lagrangian mechanics. Prerequisite: minimum grade of 2.0 in PHYS 228. Offered: Sp.

PHYS 331 Optics Laboratory (3) NW Measurements of interference and diffraction, optical properties of matter, image processing, interferometry, holography. Prerequisite: PHYS 228. Offered: A.

PHYS 334 Electric Circuits Laboratory (3) NW Basic elements of DC, AC, and transient circuits; electronic devices; electrical measurements. Prerequisite: either MATH 126 or MATH 136; minimum 2.0 grade in PHYS 123; recommended: PHYS 227. Offered: WS.

PHYS 335 Electric Circuits Laboratory (3) NW Electrical measurements, data management, digital electronics of microprocessor systems. Building a microprocessor application. Prerequisite: PHYS 334. Offered: Sp.

PHYS 401 Special Problems (*, max. 30) Supervised individual study. Offered: AWSpS.

PHYS 402 Special Problems (*, max. 30) Supervised individual study. Offered: AWSpS.

PHYS 403 Special Problems (*, max. 30) Supervised individual study. Offered: AWSpS.

PHYS 405 Physical Science by Inquiry II (5-) NW Emphasis on depth of understanding and development of reasoning and representational skills essential to the scientific process. Provides background for teaching physical science as a process of inquiry and develops scientific literacy. Offered: A.

PHYS 406 Physical Science by Inquiry II (-5) NW Emphasis on depth of understanding and development of reasoning and representational skills essential to the scientific process. Provides background for teaching physical science as a process of inquiry and develops scientific literacy. Offered: W.

PHYS 407 Physics by Inquiry II (5) NW Selected topics in physics, with emphasis on depth of understanding and development of skills essential to the scientific process. Background for teaching physics at secondary school and introductory college levels. Some mathematical proficiency required. Prerequisite: minimum grade of 2.0 in PHYS 123. Offered: A.

PHYS 408 Physics by Inquiry II (5) NW Selected topics in physics, with emphasis on depth of understanding and development of skills essential to the scientific process. Background for teaching physics at secondary school and introductory college levels. Some mathematical proficiency required. Prerequisite: PHYS 407. Offered: W.

PHYS 409 Physics by Inquiry II (5) NW Selected topics in physics, with emphasis on depth of understanding and development of skills essential to the scientific process. Background for teaching physics at secondary school and introductory college levels. Some mathematical proficiency required. Prerequisite: PHYS 408. Offered: Sp.

PHYS 410 Physics by Inquiry for In-Service Teachers (1-2, max. 30) NW A "hands-on" inquiry-oriented approach designed to train in-service teachers in the use of the physical science content for any of several science programs selected by a school or school district. Credit/no-credit only.

PHYS 411 Physics by Inquiry for Lead Teachers (1-4, max. 4) NW Extends the content covered in previous courses and helps prepare lead teachers to train colleagues to use any of several science programs selected by schools or districts. Prerequisite: two courses selected from PHYS 405,

PHYS 406, PHYS 407, PHYS 408, or PHYS 409. Credit/no-credit only. Offered: A.

PHYS 412 Physics by Inquiry for Lead Teachers (1-4, max. 4) NW Extends the content covered in previous courses and helps prepare lead teachers to train colleagues to use any of several science programs selected by schools or districts. Prerequisite: two courses selected from PHYS 405, PHYS 406, PHYS 407, PHYS 408, or PHYS 409. Credit/no-credit only. Offered: A.

PHYS 413 Physics by Inquiry for Lead Teachers (1-4, max. 4) NW Extends the content covered in previous courses and helps prepare lead teachers to train colleagues to use any of several science programs selected by schools or districts. Prerequisite: two courses selected from PHYS 405, PHYS 406, PHYS 407, PHYS 408, or PHYS 409. Credit/no-credit only. Offered: A.

PHYS 421 Contemporary Atomic Physics (3) NW Survey of the principal phenomena of atomic and molecular physics. Prerequisite: PHYS 322; PHYS 325; recommended: PHYS 323. Offered: Sp.

PHYS 422 Contemporary Nuclear and Particle Physics (3) NW Survey of the principal phenomena of nuclear and elementary-particle physics. Prerequisite: PHYS 226; PHYS 322; PHYS 325. Offered: A.

PHYS 423 Contemporary Condensed Matter Physics (3) NW Survey of the principal phenomena of solid-state physics. Prerequisite: a minimum 2.0 grade in PHYS 324; recommended: PHYS 328. Offered: W.

PHYS 427 Applications of Physics (1-3, max. 12) NW Current applications of physics to problems in the sciences and technology.

PHYS 428 Selected Topics in Physics (1-5, max. 12) NW

PHYS 429 Biophysics (3) Application of the concepts and methods of physics to biological systems. Prerequisite: PHYS 224; PHYS 225; recommended: PHYS 328. Offered: W.

PHYS 431 Modern Physics Laboratory (3) NW Measurement in modern atomic, molecular, and solid-state physics. Prerequisite: PHYS 225; PHYS 334; recommended: 30 credits in physics. Offered: WS.

PHYS 432 Modern Physics Laboratory (3) NW Measurement in modern atomic, molecular, and solid-state physics. Prerequisite: PHYS 225; PHYS 334; recommended: 30 credits in physics. Offered: Sp.

PHYS 433 Modern Physics Laboratory (3) NW Techniques in nuclear and elementary-particle research. Prerequisite: PHYS 225; PHYS 334; recommended: 30 credits in physics; PHYS 226. Offered: A.

PHYS 434 Application of Computers to Physical Measurement (3) NW Laboratory giving specific instruction and experience in interfacing laboratory equipment to computers. Prerequisite: PHYS 334; recommended: PHYS 335; 30 credits in physics. Offered: A.

PHYS 436 Nonlinear Dynamics and Chaos (4) NW Variational Principle, Lagrangian and Hamiltonian Mechanics, phase space, nonlinear dynamics, approach to chaos, Lyapunov exponents, applications to physical systems. Numerical exercises to illustrate phenomena. Prerequisite: MATH 309.

PHYS 441 Quantum Physics (4) NW Introduction to concepts and methods of quantum physics: wave mechanics (de Broglie wavelength, uncertainty principle, Schrodinger equation), one-dimensional examples (tunneling, harmonic oscillator), formalism of quantum physics, angular momentum and the hydrogen atom. Recommended: 30 credits in physical science or engineering. Offered: A.

PHYS 451 Issues for Ethnic Minorities and Women In Science and Engineering (3/5) I&S Addresses issues faced by women and ethnic minorities in physical sciences and engineering. Focuses on participation, barriers to participation, and solutions to those issues for women and ethnic

minorities in physical sciences and engineering. Offered: jointly with GWSS 485.

PHYS 460 Water in the Environment (3) NW Discusses the unique physical and chemical properties of the water molecule in relation to the atmospheric greenhouse effect, precipitation formation, oceanic circulations, infiltration of water through soils, geyser eruptions, and glacier and sea ice thickness. Prerequisite: either ESS 310, MATH 126, or MATH 136; PHYS 123. Offered: jointly with ATM S 460/ESS 424.

PHYS 485 Senior Honors Seminar (1, max. 3) NW Prerequisite: Honors standing; 12 credits of physics. Offered: A.

PHYS 486 Senior Honors Seminar (1, max. 3) NW Prerequisite: Honors standing; 12 credits of physics. Offered: W.

PHYS 487 Senior Honors Seminar (1, max. 3) NW Prerequisite: Honors standing; 12 credits of physics. Offered: Sp.

PHYS 494 Seminar on Current Problems in Physics (1, max. 3) NW Supervised, independent study of topics (chosen by faculty in charge) of current interest in physics. Written and oral presentations summarizing work accomplished are required. Recommended: 12 credits in physics above 200 level. Offered: A.

PHYS 495 Seminar on Current Problems in Physics (1, max. 3) NW Supervised, independent study of topics (chosen by faculty in charge) of current interest in physics. Written and oral presentations summarizing work accomplished are required. Recommended: 12 credits in physics above 200 level. Offered: W.

PHYS 496 Seminar on Current Problems in Physics (1, max. 3) NW Supervised, independent study of topics (chosen by faculty in charge) of current interest in physics. Written and oral presentations summarizing work accomplished are required. Recommended: 12 credits in physics above 200 level. Offered: Sp.

PHYS 499 Undergraduate Research (1-6, max. 18) Research in physics and study of physics literature. Credit/no-credit only. Offered: AWSps.

PHYS 501 Tutorials in Teaching Physics (1, max. 2) Preparation for teaching introductory physics; use and critical analysis of instructional materials in a collaborative learning environment; supervised teaching practicum in which instructional materials are used with undergraduates. Credit/no-credit only. Offered: A.

PHYS 502 Tutorials in Teaching Physics (1, max. 2) Preparation for teaching introductory physics; use and critical analysis of instructional materials in a collaborative learning environment; supervised teaching practicum in which instructional materials are used with undergraduates. Credit/no-credit only. Offered: W.

PHYS 503 Tutorials in Teaching Physics (1, max. 2) Preparation for teaching introductory physics; use and critical analysis of instructional materials in a collaborative learning environment; supervised teaching practicum in which instructional materials are used with undergraduates. Credit/no-credit only. Offered: Sp.

PHYS 505 Mechanics (3) Lagrangian and Hamiltonian dynamics, with applications to various topics such as coupled oscillators, parametric resonance, anharmonic oscillations, chaos. Offered: W.

PHYS 506 Numerical Methods (3) Integration, solution of differential equations, Monte Carlo methods, function minimization, data analysis, modern computing techniques, computation in experimental physics. Offered: WSp.

PHYS 507 Physical Applications of Group Theory (3) Applications of finite and continuous groups, representation theory, symmetry, and conservation laws to physical systems. Offered: Sp.

PHYS 511 Topics in Contemporary Physics (3, max. 9) Topics of current experimental, theoretical, or technological interest in modern physics. Offered: Sp.

PHYS 513 Electromagnetism and Relativity (3) First of a three-part sequence. Principles of electrostatics, complex variable techniques, boundary value problems and their associated mathematical techniques, Green's functions. Offered: A.

PHYS 514 Electromagnetism and Relativity (4) Continuation of PHYS 513. Electric and magnetic fields in free space and material media, wave guides and cavity resonators. Offered: W.

PHYS 515 Electromagnetism and Relativity (4) Continuation of PHYS 514. Special relativity, electromagnetic radiation from accelerated charges, synchrotron radiation, Cerenkov radiation, radiation reaction. Offered: Sp.

PHYS 517 Quantum Mechanics (4) First of a three-part sequence. Modern non-relativistic quantum mechanics developed, beginning with its basic principles. Dirac and abstract operator notation introduced, starting with simple examples. Offered: A.

PHYS 518 Quantum Mechanics (4) Continuation of PHYS 517. Modern non-relativistic quantum mechanics. The character of the theory illustrated both with physical examples and with conceptual problems. Topics include: atomic structure, scattering processes, density operator description of mixed states, and measurement theory. Abstract operator methods emphasized in the exposition of angular momentum, scattering, and perturbation theory. Offered: W.

PHYS 519 Quantum Mechanics (4) Continuation of PHYS 518. Modern non-relativistic quantum mechanics. Physical examples and conceptual problems. Topics include: atomic structure, scattering processes, density operator description of mixed states, and measurement theory. Abstract operator methods emphasized in the exposition of angular momentum, scattering, and perturbation theory. Offered: Sp.

PHYS 520 Advanced Quantum Mechanics - Introduction to Quantum Field Theory (4) Multi-particle systems, second quantization, diagrammatic perturbation theory, radiation, correlation functions and multi-particle scattering, relativistic theories, renormalizability, basic quantum electrodynamics, and other applications. Offered: A.

PHYS 521 Advanced Quantum Mechanics - Introduction to Quantum Field Theory (3) Multi-particle systems, second quantization, diagrammatic perturbation theory, radiation, correlation functions and multi-particle scattering, relativistic theories, renormalizability, basic quantum electrodynamics, and other applications. Offered: W.

PHYS 522 Advanced Quantum Mechanics: Introduction to Modern Quantum Field Theory (3) Functional integrals, symmetry breaking, critical phenomena and continuum limits, and non-perturbative methods. Credit/no-credit only. Offered: Sp.

PHYS 524 Thermodynamics and Statistical Mechanics (4) Statistical mechanical basis of the fundamental thermodynamical laws and concepts; classical and quantum statistical distribution functions; applications to selected thermodynamic processes and examples of Bose and Fermi statistics. Offered: A.

PHYS 525 Statistical Mechanics (3) Introduction to equilibrium and non-equilibrium aspects of many-body systems; scale invariance and universality at phase transitions and critical phenomena; exactly soluble models; Markov processes, master equations and Langevin equation in non-equilibrium stochastic processes. Prerequisite: PHYS 524. Offered: Sp.

PHYS 527 Current Problems in Physics (1) Introduction to current research topics for beginning graduate students. Credit/no-credit only. Offered: A.

PHYS 528 Current Problems in Physics (1) Introduction to current research topics for beginning graduate students. Credit/no-credit only. Offered: A.

PHYS 530 Laser Physics (4) Physics underlying laser design and operation in the context of common laboratory systems. Topics may include continuous and pulsed lasers; solid, liquid, and gas gain media; Q-switching, mode-locking, resonator theory, nonlinear optics, and others. Prerequisite: basic quantum mechanics, electromagnetism, and optics; recommended: PHYS 541.

PHYS 532 Liquid Crystal Devices (4) Physics of liquid crystals and applications to practical display devices. Phases, phase transitions, optical and dielectric properties, molecular and device "engineering," future prospects.

PHYS 536 Introduction to Acoustics and Digital Signal Processing (4) *Chaloupka* Introduces mathematical and physics principles of acoustics in digital signal processing applications. Complex analysis and Fourier methods, physics of vibrations and waves, solutions of the wave equation, digital convolution and correlation methods, and Maximum Length Sequence method in signal analysis and spread-spectrum applications. Prerequisite: PHYS 123; MATH 120.

PHYS 541 Applications of Quantum Physics (4) Techniques of quantum mechanics applied to lasers, quantum electronics, solids, and surfaces. Emphasis on approximation methods and interaction of electromagnetic radiation with matter. Prerequisite: PHYS 421 or PHYS 441 or equivalent. Offered: Sp.

PHYS 542 Numerical Methods in Physics (4) Numerical methods for analysis and computation in physics. Topics may include integration, differential equations, partial differential equations, optimization, data handling, and Monte Carlo techniques. Emphasis is applications in physics. Prerequisite: 30 credits in physical sciences, computer science, or engineering.

PHYS 543 Electromagnetic Theory (4) Principal concepts of electromagnetism. Static electric and magnetic fields. Boundary-value problems. Electric and magnetic properties of materials. Electromagnetic waves and radiation. Prerequisite: 30 credits in physical sciences, computer science, or engineering. Offered: W.

PHYS 544 Applications of Electromagnetic Theory (4) Emphasis may vary from year to year. Topics may include electromagnetic waves, radiation, scattering, wave guides, plasma physics, quantum electronics, and accelerator physics. Prerequisite: PHYS 543 or equivalent.

PHYS 545 Contemporary Optics (4) Coordinated lecture and laboratory treatment of topics in contemporary optics. Subjects include Fourier optics, lens systems, interferometry, laser optics, holography, polarization, crystal optics, birefringence, laser and conventional light sources, optical detectors. Prerequisite: PHYS 543 or equivalent.

PHYS 546 Condensed-Matter Physics (4) Introduction to the theory of solids: crystal structure in real space and reciprocal space, phonons, free electrons, band theory, semiconductor devices. Prerequisite: PHYS 441 or equivalent.

PHYS 547 Electronics for Physics Research (4) Electronic techniques as applied in physics research. Topics include noise, control-system analysis, operational amplifiers, lock-in amplifiers, precision power supplies and metering, data transmission, microprocessors. Several integrated measurement systems are examined in the context of specific research problems. Prerequisite: elementary electronics.

PHYS 549 Low-Temperature Physics and Cryogenics (4) Condensed-matter physics at low and ultralow temperatures. Production of low temperatures; liquefaction of gases, dilution refrigeration, magnetic and compressional cooling. Macroscopic quantum effects: superconductivity, superfluidity. Applications of superconductors. The ultralow temperature frontier.

PHYS 550 Atomic Physics (3) Theory of atomic structure and spectra; atomic and molecular beams; resonance techniques; atomic collisions; topics of current interest. Prerequisite: PHYS 519.

PHYS 551 Atomic Physics (3) Theory of atomic structure and spectra; atomic and molecular beams; resonance techniques; atomic collisions; topics of current interest. Prerequisite: PHYS 519.

PHYS 552 Introduction to Cosmic Ray Physics (3) The nature and cosmological significance of cosmic ray photons and particles. The motion and confinement of particles in the geophysical, interplanetary, and interstellar medium. Theories of the processes involved in the high-energy interaction of cosmic rays, including shower theory. Methods of measurement and current problems. Prerequisite: introductory quantum mechanics. Credit/no-credit only.

PHYS 554 Nuclear Astrophysics (3) Big bang nucleosynthesis; nuclear reactions in stars; solar neutrinos and neutrino oscillations; core-collapse supernovae; nucleosynthesis in stars, novae, and supernovae; neutron stars; composition and sources of cosmic rays; gamma ray bursts; atmospheric neutrinos. Offered: jointly with ASTR 510; A.

PHYS 555 Cosmology and Particle Astrophysics (3) Big bang cosmology; relativistic world models and classical tests; background radiation; cosmological implications of nucleosynthesis; baryogenesis; inflation; galaxy and large-scale structure formation; quasars; intergalactic medium; dark matter.

PHYS 557 High Energy Physics (3) First quarter of a three-quarter series. Emphasis on the experimental foundations of particle physics. Prerequisite: PHYS 519; recommended: PHYS 520, which may be taken concurrently. Offered: A.

PHYS 558 High Energy Physics (3) Second quarter of a three-quarter series. Phenomenology of the standard model of strong and electro-weak interactions, including an introduction to Feynman diagrams. Prerequisite: PHYS 519; recommended: PHYS 520; PHYS 521, both of which may be taken concurrently. Offered: W.

PHYS 559 High Energy Physics (3) Third quarter of a three-quarter series. Topics of current interest in high-energy particle physics. Prerequisite: PHYS 519; recommended: PHYS 520; PHYS 521, both of which may be taken concurrently. Offered: Sp.

PHYS 560 Theoretical Nuclear Physics (3) First of a two-part sequence. Nuclear structure, scattering, reactions, and decays in terms of elementary properties of nucleons and current theoretical models. Prerequisite: PHYS 519. Offered: A.

PHYS 561 Theoretical Nuclear Physics (3) Continuation of PHYS 560. Nuclear structure, scattering, reactions, and decays in terms of elementary properties of nucleons and current theoretical models. Prerequisite: PHYS 519. Offered: W.

PHYS 564 General Relativity (3) First of a two-part sequence. General covariance and tensor analysis, the relativistic theory of gravitation as given by Einstein's field equations, experimental tests and their significance, and applications of general relativity, particularly in the areas of astrophysics and cosmology. Prerequisite: PHYS 515.

PHYS 565 General Relativity (3) Continuation of PHYS 564. General covariance and tensor analysis, the relativistic theory of gravitation as given by Einstein's field equations, experimental tests and their significance, and applications of general relativity, particularly in the areas of astrophysics and cosmology. Prerequisite: PHYS 515.

PHYS 567 Theory of Solids (3) First quarter of a course on modern solid state and condensed matter physics, aimed at bringing student's knowledge up to the level of current literature. Topics include structural, electronic, and vibrational properties; optical response functions and dynamics; transport theory; and cooperative phenomena. Prerequisite: PHYS 519, PHYS 524. Offered: AW.

PHYS 568 Theory of Solids (3) Second quarter of a course on modern solid state and condensed matter physics, aimed at bringing the student's knowledge up to the level of current literature. Additional topics (see PHYS 567) in-

clude magnetism, quantum Hall effect, superconductivity. Offered: WSp.

PHYS 570 Quantum Field Theory (3) Emphasizes either relativistic quantum field theory or the many-body problem. Normally offered credit/no-credit only. Prerequisite: PHYS 522.

PHYS 571 Quantum Field Theory (3) Emphasizes either relativistic quantum field theory or the many-body problem. Normally offered credit/no-credit only. Prerequisite: PHYS 522.

PHYS 572 Modern Quantum Field Theory (3) Advanced topics in quantum field theory. Prerequisite: PHYS 570, PHYS 571. Credit/no-credit only.

PHYS 575 Selected Topics in Applications of Physics (*, max. 30)

PHYS 576 Selected Topics in Experimental Physics (*, max. 30)

PHYS 578 Selected Topics in Theoretical Physics (*, max. 30) Credit/no-credit only.

PHYS 580 Physics Colloquium (*, max. 30) Credit/no-credit only. Offered: AWSp.

PHYS 581 Seminar in High-Energy Physics (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 582 Seminar in Particle Theory (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 583 Seminar in Relativistic Astrophysics (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 584 Seminar in Recent Developments in Atomic Physics (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 585 Seminar in Experimental Nuclear Physics (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 586 Seminar in Condensed Matter Physics (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 587 Seminar in Nuclear Theory (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 588 Particle Astrophysics Seminar (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 589 Seminar in Problems of Physics Education (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 590 Seminar in Statistical Physics (1-3, max. 20) Credit/no-credit only. Offered: AWSp.

PHYS 600 Independent Study or Research (*-) Study or research under the supervision of individual faculty members. Prerequisite: permission of supervisor. Credit/no-credit only. Offered: AWSpS.

PHYS 800 Doctoral Dissertation (*-) Prerequisite: permission of Supervisory Committee chairperson. Credit/no-credit only. Offered: AWSpS.

Political Science

101 Gowen

Political science, broadly conceived, is the study of governments and other political actors, including their origins and foundations, interactions with groups and individuals, and interactions with nations. Within this larger framework political scientists study power, authority, conflict, economic relationships, culture, laws, policy, values, ethics, justice, equality, rights, legitimacy, and representation, to list only a few. Using these and other concepts, they analyze the political impacts of social issues such as war, peace, poverty, crime, education, the environment, race, gender, and globalization. Modes of inquiry are highly interdisciplinary.

UNDERGRADUATE PROGRAM

Adviser

215 Smith, Box 353530

(206) 543-1824

polsadv@uw.edu

The Department of Political Science offers the following programs of study:

- The Bachelor of Arts degree with a major in political science and options in political economy and in international security
- A minor in political science

Coursework in the discipline covers four major fields of political science: American politics, comparative politics, international relations, and political theory. In addition to major requirements, students may pursue faculty-supervised internships, research, independent study projects and an optional senior thesis.

Bachelor of Arts

Suggested First- and Second-Year College Courses: Courses that develop writing skills and breadth of knowledge. Introductory statistics.

Department Admission Requirements

1. Minimum 2.00 cumulative GPA
2. Three introductory political science courses (15 credits) with a minimum 2.0 grade in each from the following: POL S 101, POL S 201, POL S 202, POL S 203, POL S 204, POL S 205
3. Students are admitted all quarters. Applications are due the second Friday of each quarter. Applications and additional information available from advisers in 215 Smith and on the Political Science Department website.
4. Applicants who meet the stated requirements are admitted in time to register for the following quarter as majors.

Major Requirements

50 credits in political science as follows:

1. *Introductory Requirement (15 credits):* Three courses from POL S 101, POL S 201, POL S 202, POL S 203, POL S 204, POL S 205
2. *Field Requirement (15 credits):* One course numbered POL S 210 or above in three different fields of political science chosen from political theory, comparative politics, international relations, American politics, and research methods, with a grade of at least 2.0 in each
3. *Electives (20 credits):* Four courses numbered POL S 210 or above with a grade of at least 2.0 in each.
4. *GPA Requirement:* Minimum cumulative GPA of 2.25 in political science courses at graduation and a minimum grade of 2.0 in each political science course taken to fulfill requirements for the major
5. Transfer and postbaccalaureate students must meet all the above requirements and complete a minimum of 10 political science credits numbered 210 or above at the UW.

Political Economy: This interdisciplinary option is a specialized program that combines study of political science and economics. Students who wish to pursue this option should consult with a political science adviser. A list of recommended coursework is available.

International Security: This option, recommended to students interested in an in-depth study of international security, concentrates on the relationship between politics and security, and specifically on the causes of war and the use and control of force, threats, promises, and the tac-

tics, techniques, and ethics of violence. Teaches theories to address security issues and provides historical context for understanding contemporary security issues. Option coursework is completed in addition to the requirements of the major, however, up to 25 credits from the option may also be used to fulfill requirements for the political science major. A list of recommended coursework is available.

45 credits as follows:

1. POL S 203, POL S 321, POL S 407 (15 credits)
2. 30 additional credits from an approved list of courses maintained in the department. At least 15 elective credits must be at the 300 or 400 level.

Minor

Minor Requirements: 30 political science credits as follows:

1. One introductory course chosen from POL S 101, POL S 201, POL S 202, POL S 203, POL S 204, or POL S 205
2. 25 elective credits numbered POL S 210 and above. (Internship and independent study courses such as POL S 496, POL S 498, POL S 499 do not count toward the minor)
3. Minimum cumulative GPA of 2.00 for courses applied to the minor
4. Minimum 15 credits for the minor completed in residence at UW

Student Outcomes and Opportunities

- **Learning Objectives and Expected Outcomes:** The study of political science arms students with substantive knowledge of the discipline, including its concepts and theories. It also prepares them to be knowledgeable and active citizens. Through their study, students develop critical thinking, analytical, research, writing, interpersonal, and communication skills.

Graduates of political science pursue careers in many fields, including government (federal, state, and local), business, trade, public service (including non-governmental and international organizations), law, journalism, and teaching.

- **Instructional and Research Facilities:**
 - **Political Science Laboratory:** This facility has 25 computer stations. It functions as a computer classroom and also as a general lab.
 - **Center for Social Science Computation and Research** maintains an extensive data archive and offers many statistical and software consulting services.
 - **Political Science/Jackson School/Law, Societies, and Justice/Comparative History of Ideas Writing Center:** The Writing Center is staffed by peer tutors and provides free help to students seeking feedback about their writing. The Writing Center director works with instructors to design workshops to help students with assignments.

The Department of Political Science is affiliated with a number of research centers:

- **The Center for American Politics and Public Policy** is a focal point for the study of politics and policy processes in the United States. Research relates to public policy processes, including issues of agenda setting, decision making, implementation, quantitative and qualitative measures of policy change, and the role of ideas and dialogue in policy change. Policy arenas include education reform, health care, environmental regulation, and building code enforcement.
- **The Center for Communication and Civic Engagement** investigates how innovative communication can improve the quality of civic life. The center's primary focus is to understand how new information

technologies can supplement more traditional forms of communication to facilitate civic engagement.

- **The University of Washington's Institute for the Study of Ethnicity, Race, and Sexuality** is an interdisciplinary research center dedicated to bringing the tools of contemporary social science inquiry to the careful examination of issues of social, economic, and political exclusion and disadvantage of marginalized minority populations in the United States, and their potential solutions.
- **Harry Bridges Center for Labor Studies** promotes the study of labor as a central concern in higher education and focuses on labor's contribution to society—locally, nationally, and worldwide. The center supports research, teaching, and community outreach.
- **The Comparative Law and Society Studies Center** is committed to promoting interdisciplinary research and teaching as well as community service regarding law, justice, and human rights throughout the world.
- **European Union Center** promotes the study of the European Union and trans-Atlantic relations.
- **Honors Options Available:** With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- **Research, Internships, and Service Learning:** The department offers three internship programs that range from part-time to full-time programs. Students may work in local agencies (POL S 496), in the state legislature (POL S 497), and in Washington, D.C. (POL S 498).

Listings of local internships and applications are available in 215 Smith.

The Washington State Legislative Internship Program is a winter-quarter program in Olympia and is open to students from all majors. Students earn 15 credits for the internship and attend a class taught by a political science faculty member. Applications are available from departmental advisers in 215 Smith and are due by the end of October.

Students in all majors may apply for The Washington Center, a comprehensive internship program that places students in Washington, D.C. Students earn 15 credits for the internship. Additional information is available from departmental advisers in 215 Smith.

- **Department Scholarships:**
 - **Hugh Bone Scholarship:** The endowed Hugh A. Bone Scholarship was established by the Department of Political Science in 1986 to recognize Professor Bone, a former department chair, and to continue his commitment to a "participative citizenry." Professor Bone founded the Washington State Legislative Internship Program and many of the students who studied with him continue active political lives due to his stewardship and interest. The scholarship was established in his name to help students with financial need to study and intern away from the UW-Seattle campus.
 - **Agnes C. Nelson Memorial Scholarship:** The departments of Political Science and Economics make annual full-tuition awards to students who demonstrate interest in the interrelationship of politics and economics and who meet financial eligibility requirements. To apply for the scholarship, students must have completed a minimum of 25 credits in political science and economics with at least 10 credits in each discipline. Deadlines are posted early in spring quarter.
- **Department Awards**
 - **The Robert A. Dahl Award:** The Department of Political Science recognizes an outstanding graduating senior with the Robert A. Dahl Award. To be eligible for

consideration, a student must demonstrate scholarship excellence as well as interest in political science as a discipline.

- **Daniel C. Lev Award:** The Department of Political Science created this award to recognize the contribution of Professor Dan Lev to the department's Honors program. The award recognizes an exceptional Senior Honors Thesis.
- **Sharon S. Redeker Award for Public Service:** The Department of Political Science created this award in honor of Sharon Redeker, who served for many years as the department's Director of Academic Services. This award recognizes the exceptional public service of a political science senior while at the UW.
- **Student Organizations/Associations:** Pi Sigma Alpha (Political Science Honor Society), Phi Alpha Delta (pre-law fraternity). See adviser for details.

GRADUATE PROGRAM

Graduate Program Coordinator

215 Smith, Box 353530

(206) 543-1898

polsgrad@uw.edu

Graduate study in political science integrates traditional education in political science's primary fields with other fields in the social sciences, allowing an eclectic, interdisciplinary approach.

The department has an outstanding reputation in comparative politics, international relations, American politics, political theory, political economy, race and ethnic politics, public policy, public law, political communication, and methodology. Graduate students can incorporate study in other campus units, such as the School of Marine Affairs, the Daniel J. Evans School of Public Affairs, the Henry M. Jackson School of International Studies, and the Department of Communication.

Graduate work in political science is primarily for preparation for the Doctor of Philosophy degree. The Master of Arts requirement serves as the initial stage of the PhD program; the department does not offer a terminal Master of Arts degree and admits students for the PhD program only.

Doctor of Philosophy

Admission Requirements

1. Statement of Purpose detailing academic background, including any research experience and methodological skills; plans and goals for study, including intellectual interests and areas of specialization; and reasons for interest in studying at the University of Washington
2. **Writing Sample:** A relatively short paper (not to exceed 20 pages) or excerpts from a larger work (e.g., honors thesis) demonstrating the ability to write critically and analytically.
3. Resume
4. Letters of recommendation
5. Transcripts
6. **Test Scores:** GRE General Test scores sent directly by the Educational Testing Service (ETS). English Proficiency scores for international students, sent directly by the Educational Testing Service (ETS)-

Degree Requirements

Minimum 124 credits, to include:

The department recognizes four "general fields" in political science: American politics, comparative politics, international relations, and political theory. The department requires each PhD student to select one general field, in

which the student must become familiar with the main body of literature, major intellectual issues, and develop competence in that field's mode of analysis. All students are required to take at least one additional core course in another general field.

A student must also prepare in a second general field or in one of the specialized fields: area study public law, political communication, political economy, political methodology, public policy processes, and minority and race politics. Specialized fields are periodically redefined, given faculty/student interests.

During their first year, students complete a series of courses designed to prepare them to achieve a minimum level of competence in political research methods. Demonstration of competence in a foreign language is not required for the PhD. Students who select a field(s) where the Supervisory Committee believes that competence in a language would be beneficial are so advised.

After completing a minimum of requirements in two fields and the methodology courses students are expected to complete the MA degree (46 credits), including an essay of distinction and a final oral examination to demonstrate substantive field knowledge and the ability to synthesize and apply that knowledge to new problems. The MA is usually completed within the first two years of study.

The doctoral student continues preparation in the first two chosen fields and in a required third field. The third field can be another general field and/or one or more of the specialized fields listed above, and/or at most one non-designated field. A non-designated field is constructed from another academic discipline such as anthropology or sociology, or individually defined by the student. International law, public administration, urban politics, political psychology, and philosophy of social science are examples of recent non-designated fields.

The doctorate usually takes at least an additional three years beyond the MA (124 credits minimum, including at least 27 credits for the dissertation). Students must pass comprehensive written and oral examinations in each of the three fields. They must also write and defend their dissertation prospectus for what is termed the general examination. Successful completion of the general examination constitutes advancement to candidacy. Approval of the prospectus leads to the research and writing of the dissertation. A final oral examination and committee approval of the doctoral dissertation complete the degree requirements.

Research Facilities

Access to computing facilities and extensive data holdings is available through the Center for Social Science Computation and Research and the Political Science Laboratory. The Department of Political Science is also affiliated with several research centers, including the Center for American Politics and Public Policy, the Center for Communication and Civic Engagement, the Center for Statistics and Social Sciences, the Comparative Law and Society Studies Center, the Harry Bridges Labor Studies Center, the Center for Comparative and Historical Analysis of Organizations and States, and the UW's Institute for the Study of Ethnicity, Race, and Sexuality. The University is also a member of the Inter-University Consortium for Political and Social Research.

Financial Aid

Fellowships, research assistantships, and teaching assistantships are available to qualified graduate students, including those in their first year of study. Provided they make satisfactory progress, students are eligible for departmental financial assistance for five consecutive years.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/.

POL S 101 Introduction to Politics (5) I&S Political problems that affect our lives and shape the world around us.

POL S 110 Political Argumentation (5) VLPA/I&S Skills- and practice-based approach to political argumentation. Suitable for non-majors.

POL S 195 Study Abroad: Political Science (1-10, max. 15) I&S Lower-division political science courses taken through a UW approved study abroad program. Specific content varies and must be individually evaluated. Credit does not apply to major requirements.

POL S 201 Introduction to Political Theory (5) I&S Philosophical bases of politics and political activity. Provides an introduction to the study of politics by the reading of books in political philosophy. Organized around several key political concepts, such as liberty, equality, justice, authority, rights, and citizenship. Offered: AWSpS.

POL S 202 Introduction to American Politics (5) I&S Institutions and politics in the American political system. Ways of thinking about how significant problems, crises, and conflicts of American society are resolved politically. Offered: AWSpS.

POL S 203 Introduction to International Relations (5) I&S The world community, its politics, and government. Offered: AWSpS.

POL S 204 Introduction to Comparative Politics (5) I&S Political systems in a comparative framework. Traditional and contemporary approaches to the study of governments and societies in different countries. Offered: AWSpS.

POL S 205 Political Science as a Social Science (5) I&S, QSR Methodological perspectives of social science disciplines: commonalities and differences in assumptions, values, and paradigms. Current issues from the multiple perspective of social sciences; limits of the social sciences in resolving key social issues.

POL S 207 Issues of Global Justice (5) I&S M. BLAKE, J. MAYERFELD, W. TALBOTT Introduces issues of global justice. Topics include: global poverty and aid, immigration, transnational governance, gender in global relations, climate change, and cultural relativism. Offered: jointly with PHIL 207/VALUES 207.

POL S 212 Philosophy of Feminism (5) I&S, DIV Philosophical analysis of the concepts and assumptions central to feminism. Theoretical positions within the feminist movement; view of the ideal society, goals and strategies of the movement, intersections of the sex-gender system with other systems of oppression. Offered: jointly with GWSS 206/PHIL 206.

POL S 213 The Korean Peninsula and World Politics (5) I&S Ha Introduces Korean politics, economics, society, and international relations. Overviews the development in politics, economy, and society since the late nineteenth century. Addresses the evolution of Korea in the international society by comparing Korea experience with that of China and Japan. Offered: jointly with JSIS A 213.

POL S 246 African American Politics (5) I&S, DIV C. PARKER Survey of African Americans within the U.S. sociopolitical processes. Situates African Americans within a post-civil rights context where there is debate about race's centrality to an African American politics. Recommended: either AES 150, AFRAM 201, or POL S 202. Offered: jointly with AFRAM 246.

POL S 249 Introduction to Labor Studies (5) I&S Conceptual and theoretical issues in the study of labor and work. Role of labor in national and international politics. Formation of labor movements. Historical and contemporary role

of labor in the modern world. Offered: jointly with HSTCMP 249/SOC 266.

POL S 270 Introduction to Political Economy (5) I&S A. GILL Political economy as a tool for understanding and evaluating the political world. Combines theory, methods, and insights derived from economics and political science and applies them to a range of substantive issues.

POL S 273 The Concept of Political Power (5) I&S How to understand and explain relationships of power. Readings from Marxism, Weberian sociology, anarchism, classical political philosophy, and contemporary political science. May also include works of fiction.

POL S 281 Literature and American Political Culture (5) VLPA/I&S Introduction to the methods and theories used in the analysis of American culture. Emphasizes an interdisciplinary approach to American literature, including history, politics, anthropology, and mass media. Offered: jointly with ENGL 251.

POL S 295 Study Abroad: Political Science (1-10, max. 15) I&S Political science courses taken through a UW approved study abroad program. Specific content varies and must be individually evaluated.

POL S 299 Special Topics in Political Science (2-5, max. 10) I&S Examines a different subject or problem of current interest within the discipline.

POL S 301 Topics in Political Theory (5, max. 10) I&S Study of topics in political theory.

POL S 302 Free Will, Nature, and Nurture in Politics and Society (5) I&S M. SMITH Examines beliefs and actions in politics and other domains from the standpoint of free will, nature, and nurture. Compares political science to other disciplines in explaining why people think and act as they do.

POL S 303 Public Policy Formation in the United States (5) I&S Policy decision making with emphasis on: how issues arise, the way they become part of the policy agenda of the executive and the legislature, how these institutions organize to handle policy issues, and the roles of the legislature, the executive, and the bureaucracy. Public policy literature and familiarization with key aspects of policy decision making at the national, state, and local levels.

POL S 304 The Press and Politics in the United States (5) I&S Journalists' role in elections and public policy. Relationship between news coverage and political campaigns. Study and analysis of local political newswriting, reporting, and response by local and state political figures. Extensive off-campus experience included. Offered: jointly with COM 304.

POL S 305 The Politics of Mass Communication in America (5) I&S Role of mass audiences in politics from the standpoint of the communication strategies used to shape their political involvement. Topics include: social structure and political participation, political propaganda and persuasion, the political uses of public opinion, and the mass media and politics. Offered: jointly with COM 305.

POL S 306 Media, Society, and Political Identity I&S (5) I&S W. BENNETT Explores how society and culture are both represented in and shaped by communication technologies and media content. Media include film, advertising, news, entertainment television, talk shows, and the Internet. Explores how media represent and affect individual identity, values, and political engagement. Offered: jointly with COM 306.

POL S 307 Religion and World Politics (5) I&S A. GILL Explores the intersection of religion and politics in various regions of the world, including the United States, Europe, Middle East, Latin America, and other regions. Presents an historical perspective on religion alongside contemporary issues in religion, politics, and church-state relations. Offered: jointly with JSIS C 307.

POL S 308 The Western Tradition of Political Thought, Ancient and Medieval (5) I&S Origin and evolution of major

political concepts from ancient Greece to the medieval period.

POL S 309 The Western Tradition of Political Thought, Pre-Modern (5) I&S Continuation of POL S 308, treating materials from the fifteenth through eighteenth centuries.

POL S 310 The Western Tradition of Political Thought, Modern (5) I&S Continuation of POL S 308 and POL S 309, focusing on material from the eighteenth through twentieth centuries.

POL S 311 Individual and the State (5) I&S Individualism and communitarian critics. Political and ethical implications of both. Nature of the state, liberty, responsibility, cooperation. Important individualist and collectivist literature, dealing with market institutions and citizen politics, critically assessed.

POL S 312 Survey of American Political Thought (5) I&S Survey of American political thought from colonial times to the 1980s. Topics include the idea of the self-made man; the intellectual contexts of the Declaration of Independence and the Constitution; slavery, abolition, and the Civil War; progressivism; Cold War liberalism; the Civil Rights Movement and its critics; and modern conservatism. Prerequisite: cannot be taken for credit if POL S 318 or POL S 319 already taken.

POL S 313 Women in Politics (5) I&S, DIV Theoretical, historical, and empirical studies of women's participation in political and social movements. Women's diverse efforts to improve their political, social, and economic status. Policy issues of particular concern to women. Women's political experiences in household, local, regional, national, and international arenas. Offered: jointly with GWSS 313.

POL S 314 Israel: Dynamic Society and Global Flashpoint (5) I&S Introduces the people, institutions, and culture of Israel in the context of larger global forces. Examines domestic, regional, and international elements, both historically and in the contemporary period, that have shaped Israel's culture, politics, and special role in world affairs. Topics include nationalism, ethnicity, politics, religion, film, literature, and culture. Offered: jointly with JSIS A 314/NEAR E 315.

POL S 315 Black Identities and Political Power (5) I&S Rivers Relates the deployment of political power within institutions to shifting racial identities. Shows how racial identities both reflect and inflect relations of domination and resistance within and between cultures in the black diaspora. Prerequisite: either AES 150, AFRAM 150, AFRAM 201, or POL S 201. Offered: jointly with AFRAM 315.

POL S 316 African-American Political and Social Thought (5) I&S C. PARKER Race relations in U.S. politics as defined by the struggle of African Americans for economic, political, and social equality. Studies of African-American political and social thought; expands and clarifies our understanding of the strengths and weaknesses of American democratic ideals.

POL S 317 The Politics of Race and Ethnicity in the United States (5) I&S, DIV M. FRANCIS Introduction to the history and development of racial hierarchy, focusing on how race and ethnicity shape political institutions (e.g., the Constitution, political parties, voting systems). Examination of political relationships between Whites, African Americans, Latinos, and Asian Americans. Case studies of minority representation and the politics of welfare, crime, immigration, and terrorism. Offered: jointly with LSJ 331.

POL S 318 American Political Thought I (5) I&S J. TURNER III Major thinkers and themes in American political and cultural development from Puritan origins to the Civil War. Prerequisite: cannot be taken for credit if POL S 312 already taken.

POL S 319 American Political Thought II (5) I&S J. TURNER III Major thinkers and themes in American political and cultural development from the Civil War to the present. Prerequisite: cannot be taken for credit if POL S 312 already taken.

POL S 320 State-Society Relations in Third World Countries (5) I&S, DIV Bachman, Callahan Relationships among political, social, and economic changes in Asia, Africa, and Latin America. Problems of economic and political development, revolution and reform, state-society relations, imperialism and dependency. Offered: jointly with JSIS B 310.

POL S 321 American Foreign Policy (5) I&S Constitutional framework; major factors in formulation and execution of policy; policies as modified by recent developments; the principal policymakers - president, Congress, political parties, pressure groups, and public opinion.

POL S 322 International Political Economy of Latin America (5) I&S V. MENALDO Exploration of politics underlying Latin America's economic development. Topics covered include import-substituting industrialization, mercantilism, the debt crisis, neoliberalism, market integration, and poverty. Review of major theoretical perspectives such as modernization theory, dependency, and the new political economy. Offered: jointly with JSIS A 322.

POL S 324 Europe in World Politics (5) I&S Independent and coordinated efforts of Britain, France, and West Germany to adapt to the post-World War II global system. Creation and development of the Atlantic Alliance. Relations with postcommunist states. Decolonization and the evolution of relations with the Third World. The movement for European integration. Recommended: POL S 203.

POL S 325 The Arab-Israeli Conflict (5) I&S The politics of conflicting ideologies: Zionism and Arab nationalism; formation of the state of Israel; development of Palestinian nationalism; Arab-Israeli wars. Re-emergence of Palestinian activism; domestic sources of foreign policy.

POL S 326 Scandinavia in World Affairs (5) I&S C. INGEBRITSEN Introduction to the foreign relations of Scandinavia with a focus on Nordic security, international economic pressures, and global conflict resolution. Includes a survey of the national settings for international involvements and highlights the dilemmas for industrial societies exposed to the pressures of interdependence. Offered: jointly with SCAND 326.

POL S 327 Women's Rights as Human Rights (5) I&S R. CICHOWSKI Women's rights in comparative perspective, focusing on varying settings that alter the meaning and practical application. Domestic level: areas including abortion politics to trafficking in women. International level: areas including equality claims before European supranational judicial bodies, rape as war crime in international law. Offered: jointly with LSJ 327.

POL S 328 International Organizations (5) I&S Explores historical, theoretical, and empirical aspects of the United Nations, its specialized agencies, and other international organizations, both governmental and nongovernmental. Recommended: POL S 203.

POL S 329 Global Communication (5) I&S Introduction to the history, purpose, channels, content, technologies, policy, and regulation of international communications systems. Issues covered include disparities in media development between post-industrial and developing nations, imbalances in international news and information flow, and the emergence of global communications. Offered: jointly with COM 322.

POL S 330 Communications in International Relations (5) I&S Looks at communications in relations between international groups and states. Examines the range of functions and roles communication media play in international affairs, global issues, and intergroup relations. Also examines the strategic use of communications by various groups. Offered: jointly with COM 321.

POL S 331 Government and Politics in the Middle East and North Africa (5) I&S Breakdown of traditional society and the problems of building modern political systems.

POL S 332 Topics in Comparative Politics (5, max. 10)

POL S 333 Topics in International Relations (5, max. 10)

POL S 334 Topics in American Politics (5, max. 10)

POL S 335 Topics in Political Economy (5, max. 10)

POL S 337 Collective Violence and the State (5) I&S, DIV Comparative study of how and why genocides have occurred in modern times. Examines how ethnic, religious, and nationalist conflicts have sometimes led to violent conflict, and how political leaders and governments have mitigated or exacerbated them, sometimes engaging in state sponsored mass killing. Offered: jointly with JSIS B 337.

POL S 338 Topics in Public Policy (5, max. 10)

POL S 340 Government and Politics of South Asia (5) I&S Comparison of problems of national integration and political development in India, Pakistan, and Sri Lanka. Offered: jointly with JSIS A 340.

POL S 341 Government and Politics of Canada (5) I&S Critical analysis of parliamentary institutions, political parties, and the federal system in Canada. Offered: jointly with JSIS A 321.

POL S 342 Government and Politics of Latin America (5) I&S Analysis of the political dynamics of change in Latin America comparing various national approaches to the political problems of modernization, economic development, and social change. Offered: jointly with JSIS A 342.

POL S 343 Politics and Change in Southeast Asia (5) I&S Government and politics in the countries of Southeast Asia, with attention given to the nature of the social and economic environments that condition them. Offered: jointly with JSIS A 343.

POL S 346 Governments of Western Europe (5) I&S Modern government and politics of Great Britain, France, Germany, and Italy.

POL S 348 European Union as Global Actor (5) I&S Surveys the European Union's evolution as a global actor and emergence as a potential superpower with increasingly unified foreign and defense policies. Covers institutions and interests that have driven this process; specific examples of European Union global engagement; and the potential implications for U.S. foreign policy. Offered: jointly with JSIS A 348.

POL S 350 Government and Interest Groups in the United States (5) I&S Agrarian, labor, professional, business, and ethnic interest in politics; impact on representative institutions and governmental processes.

POL S 351 The American Democracy (5) I&S Democratic theory; constitutional theory; the presidency; Congress; the Supreme Court; civil rights and civil liberties. Designed for nonmajors.

POL S 352 American Political Parties (5) I&S Theories of American parties, campaigns, and voting behavior; party leadership; political socialization and participation.

POL S 353 United States Congress (5) I&S J. WILKERSON Organization and procedure of Congress, state legislative politics, lobbying, legislative roles, theory and practice of representative government.

POL S 354 Elections and Voting in the United States (5) I&S Electoral institutions and processes of the United States: the idea and practice of elections, the electoral system, individual voting behavior, collective voting behavior, and the impact of elections on policy.

POL S 355 The American Presidency (5) I&S R. THORPE The American presidency; its evolution, its occupants, and its place within the American system. Topics include presidential character, war, elections, impeachment, the economy, and the Constitution.

POL S 356 Society and Politics (5) I&S Causes of political change in democratic countries, including public opinion, social movements, interest group activity, and party organization. Offered: jointly with SOC 356.

POL S 357 Minority Representation and the Voting Rights Act (5) I&S Explores whether and how African-Americans and Latinos are able to organize effectively and press their

demands on the political system. Focuses on minority political behavior, the effect of these groups at the polls, the responsiveness of elected officials, and legal or constitutional obstacles affecting these phenomena.

POL S 358 American Political Culture (5) Examines the origins and content of Americans' political values and beliefs. Topics include American exceptionalism, the culture war, freedom, civic engagement, the American dream, individualism, and political ideology.

POL S 359 U.S. Latino Politics (5) I&S, DIV M. BARRETO Examines historical and current political incorporation of Latinos in the United States. Topics include Latino voting and voter mobilization, office seeking and representation, Latino public opinion, and public policy formation on "Latino issues." Offered: jointly with CHSTU 359.

POL S 360 Introduction to United States Constitutional Law (5) I&S G. LOVELL Growth and development of the United States Constitution as reflected in decisions of the Supreme Court; political, social, and economic effects. Offered: jointly with LSJ 360.

POL S 361 United States Courts and Civil Liberty (5) I&S G. LOVELL Cases and literature bearing on protection of constitutionally guaranteed private rights, with particular reference to the period since 1937. Offered: jointly with LSJ 361.

POL S 363 Law in Society (5) I&S Inquiry into how law matters in social practice. Examines general theories of law, the workings of legal institutions, and the character of legally constituted practices and relationships in diverse terrains of social life. Instructor: McCann. Offered: jointly with LSJ 363.

POL S 365 Lawyers in American Politics (5) I&S Influence of lawyers on American politics. Official and unofficial political roles, lawyers as lobbyists, as legislators, in the bureaucracy, politics of the American Bar Association. Includes study of legal education, professional values, and avenues of political access.

POL S 367 Comparative Law and Courts (5) I&S R. CICHOWSKI Introduction to comparative judicial politics, focusing on the relationship between law and politics in cross-national perspective, as well as on the functioning of supranational and international legal entities in the international system. May not be taken for credit if student has taken LSJ/JSIS B 366. Offered: jointly with LSJ 367.

POL S 368 The Politics and Law of International Human Rights (5) I&S, DIV J. MAYERFELD Studies the international human rights movement in its legal and political context. Focuses on institutions which influence, enable, and constrain the international promotion of human rights. Offered: jointly with LSJ 320.

POL S 370 Privacy (5) I&S S. Pekkanen Explores how individuals, corporations, and governments respond to privacy challenges in the digital age. Examines evolution of the idea of privacy using case studies of actual privacy policies, legal cases, and real-world situations. Covers legal, political, and social facets of this fundamental human issue. Offered: jointly with JSIS B 370/LSJ 370; Sp.

POL S 381 Urban Politics and Policy in the United States (5) I&S Fraga Introduces actors, institutions, processes, and policies of substate governments in the United States. Provides and intensive comparative examination of historical and contemporary politics and policy-making. Promotes understanding of city government and its role within the larger context of state and national governments.

POL S 382 State Government (5) I&S J. WILKERSON Focus on the structures, processes, and policy outputs of state governments in the United States.

POL S 383 Environmental Politics and Policy in the United States (5) I&S Interrelation between technological and environmental change and policy formation. Consideration of political behavior related to these phenomena and the capacity of urban public organizations to predict change

and to formulate policies that can take future states into account.

POL S 384 Global Environmental Politics (5) I&S K. LITFIN Examines the globalization of environmental problems, including climate change, ozone depletion, and loss of biodiversity, as well as the globalization of political responses to these problems within the framework of globalization as set of interlinked economic, technological, cultural, and political processes. Offered: jointly with ENVIR 384.

POL S 385 Political Ecology of the World Food System (5) I&S/NW K. LITFIN Investigates the intersection of globalization and food politics, the pivotal role of petroleum in the world food system, and the commodity chains for some foods. Includes an optional service learning component. Offered: jointly with ENVIR 385.

POL S 395 Study Abroad: Political Science (1-10, max. 15) I&S Political science courses taken through a UW approved study abroad program. Specific content varies and must be individually evaluated.

POL S 398 Honors Seminar (5, max. 15) I&S Intensive and advanced studies in various aspects of political science. Open only to participants in the departmental Honors program. Offered: AWSp.

POL S 401 Advanced Seminar in Political Theory (5, max. 10) I&S Topics can include, but are not limited to, analytical theory pertaining to justice, exploitation, and freedom; revolution and social changes; collective choice and action; sexuality and politics; critical theory; Marxist theory; post-structuralism. Content varies. Recommended: POL S 201.

POL S 402 Advanced Seminar in Human Rights (5, max. 10) I&S J. MAYERFELD Examines selected human rights topics including questions relating to the meaning, justification, promotion, implementation, suppression, or denial of human rights.

POL S 403 Advanced Seminar in International Relations (5, max. 10) I&S Examination of contemporary developments in the field of international relations. Content varies according to the nature of developments and research interests of the instructor.

POL S 404 Topics in Public Policy (3-5, max. 6) I&S Examines selected issues of importance in all areas of public policy. Focus on in-depth analysis of vital public policy issues and the integration of economic, political, and administrative perspectives on them. Offered: jointly with PB AF 499.

POL S 405 Advanced Seminar in American Politics (5, max. 10) I&S Intensive reading and research in selected problems or fields of political analysis.

POL S 406 Marxian Political Economy (5) I&S Explores the relationship between social classes, the state, and political power in advanced capitalist societies. Investigates this relationship primarily by means of the tools of Marxian political economy and, in the process, evaluates these tools. Emphasis on theoretical perspectives, although the reading list has a few empirical applications as well. Recommended: POL S 201.

POL S 407 International Conflict (5) I&S E. KIER, J. MERCER Examines different theoretical explanations for the causes of war, including the role of international, state, organizational, and individual factors; additional topics vary with instructor. May include the development of warfare, deterring weapons of mass destruction, terrorism, intelligence, and the ethics of warfare.

POL S 409 Undergraduate Seminar in Political Economy (5, max. 10) I&S Seminar in political economy with focus on Marxian and public choice approaches to political economy. Explores the questions raised by each approach, the assumption(s) and testability of hypotheses, and applies these approaches to a number of problems in political economy. Recommended: ECON 300; POL S 270. Offered: jointly with ECON 409.

POL S 410 Technology, Politics, and the State (5) I&S Relationships between politics and technological change. Considers whether the relations between political and economic systems of industrial societies have been fundamentally altered by the increased importance and interdependence of government, experts, and new technological possibilities for intervention in social life.

POL S 411 Theories of the State (5) I&S Topics may include origins and development of the state; arguments about the necessity, desirability, and proper role of the state; the nature and operation of modern states and the international state system; the legitimacy of modern state power.

POL S 412 Democratic Theory (5) I&S Explores the concept of democracy and theoretical models purporting to describe its central features: majority rule, participation, and deliberation. Themes also include: representative vs. direct democracy; the rights of minorities; the relationship between democracy and other political theories such as liberalism, socialism, and conservatism. Recommended: POL S 201.

POL S 413 Contemporary Political Theory (5, max. 10) I&S Analysis of political theorists, exploring contemporary theories of humanity and society that form the basis for differing political ideas. Recommended: POL S 201.

POL S 414 Politics and Culture (5) I&S How people interpret and shape the political world around them through the use of such cultural resources as language, symbolism, myth, and ritual. The various uses of these cultural elements establish the place of the individual in society, influence the perception of political events, and create opportunities for individual and mass political responses.

POL S 415 Women's Rights in an Integrated Europe (5) I&S Examines the transformation in women's rights policy within the European community from the late 1950s through the present. Focuses on the legal rules and bodies that govern not only these policy domains, but also their evolution and impacts. Offered: jointly with LSJ 428.

POL S 416 Economic Theory as Applied to the Political System (5) I&S Explanation and evaluation of the political system, using elementary economics theory. Topics include alternative voting rules, the political effectiveness of various types of groups, causes and consequences of logrolling, and bureaucratic organizations. Prerequisite: ECON 300. Offered: jointly with ECON 452.

POL S 417 Political Economy of India (5) I&S Analysis of relationships among processes of economic change, political institutions, and structures of political power in contemporary India. Includes contrasting approaches to Indian economic development, land reform, radical and agrarian political movements, and role of foreign aid. Offered: jointly with JSIS A 417.

POL S 418 Japanese Trade Politics (5) I&S R. Pekkanen Survey of Japan's foreign trade diplomacy. Examines evolution of Japan's trade patterns in exports and foreign direct investment with key partners. Covers institutional and legal frameworks of Japan's trade relations, such as bilateral fora, regional options including free trade agreements, and multilateral venues such as the WTO. Recommended: either JSIS A 437 or POL S 424. Offered: jointly with JSIS A 487.

POL S 419 United States-China Relations (5) I&S Bachman Surveys the history of United States-China relations and examines the evolution of bilateral relations, particularly since 1949. Focus on the period since 1972 and the major issues as they have evolved since that time, including trade, human rights, security, and Taiwan. Offered: jointly with JSIS A 459.

POL S 420 Soviet and Russian Foreign Policy (5) I&S Ideological, historical, and strategic components of Soviet foreign policy; Gorbachev's "new thinking" and the collapse of the USSR; redefining post-Soviet "Russia"; Russian military and security policy; Russia and the West; Russian relations with the newly independent states.

POL S 421 Relations Among Communist and Post-Communist States (5) I&S Major disputes and types of relationships among different communist states; international effects of the communist collapse; comparative dynamics of state-building, market reform, and democratic transition; international integration and domestic politics in the former Soviet bloc; ethnic conflict and the problem of state boundaries; redefining security in the post-communist milieu.

POL S 422 International Environmental Politics Seminar (5) I&S Study of the practical and theoretical challenges associated with global ecological interdependence. Examination of international treaties and institutions, state, and nonstate actors with an emphasis on the emerging concept of sustainability.

POL S 424 International Relations of Japan (5) I&S S. Pekkanen Comprehensive examination of Japan's international relations. Covers issues such as trade, security, environment, aid, and human rights. Investigates Japan's participation in international organizations, including the UN, World Bank, IMF, and WTO. Examines Japan's relations with the United States, the European Union, Asia, Latin America, Africa, and other regions. Recommended: JSIS A 242. Offered: jointly with JSIS A 437.

POL S 425 War and Deterrence (5) I&S Seminar addresses the strengths and weaknesses of deterrence theory and then applies it to a variety of international security issues. Topics may include deterring the use of nuclear, chemical, and biological weapons, the use of brute force when deterrence fails, and the role for humanitarian intervention.

POL S 426 World Politics (5) I&S The nation-state system and its alternatives, world distributions of preferences and power, structure of international authority, historical world societies and their politics. Offered: jointly with JSIS B 426.

POL S 427 International Political Economy (5) I&S Examines major theoretical problems, substantive issues, and schools of thought in international political economy (IPE), including issues of trade, production, and finance. Preparation for critical analysis of dilemmas entailed in establishing and maintaining an instrumentally effective and ethically acceptable IPE system.

POL S 428 Military Intervention (5) I&S Historical and theoretical analysis of military intervention in the post-World War II era. Considers how and why interventions occur and evaluates intervention as a foreign-policy response.

POL S 429 Political Parties in Japan and East Asia (5) I&S R. Pekkanen Focus on political parties in Japan. Combines theoretical readings on political parties with intensive study of Japanese political parties. Recommended: either JSIS A 242, JSIS A/POL S 435, or JSIS A 424/HSTAS 424. Offered: jointly with JSIS A 436.

POL S 430 Civil-Military Relations in Democracies (5) I&S E. KIER Explores issues of civil-military relations in the United States including debates about the garrison state hypothesis; military advice on the use of force; the civil-military "gap"; and issues of race, gender, and sexual orientation in the military.

POL S 431 International Relations in the Middle East (5) I&S Study of domestic sources of foreign policy in the Middle East; politics of oil; the East-West rivalry in the arena; and conflict and collaboration among the local powers.

POL S 432 Political Islam and Islamic Fundamentalism (5) I&S Robinson Study of resurgence, since mid-1970s, of political Islam and what has come to be called Islamic fundamentalism, especially in the Middle East. Topics include the nature and variety of political Islam today, causes and implications of the current resurgence, and comparison with previous resurgences. Offered: jointly with JSIS B 406.

POL S 433 International Relations in Southeast Asia (5) I&S Analysis of the problems affecting relations among the countries of Southeast Asia.

POL S 434 International Relations of South Asia (5) I&S Interrelationships of domestic, interstate, and extraregional forces and their effects upon the resolution or expansion of interstate conflicts in South Asia. Offered: jointly with JSIS A 434.

POL S 435 Japanese Government and Politics (5) I&S Government and politics of Japan with emphasis on the period since 1945. Recommended: JSIS A 242. Offered: jointly with JSIS A 435.

POL S 436 Ethnic Politics and Nationalism in Multi-Ethnic Societies (5) I&S Provides a broad theoretical base, both descriptive and analytical, for the comparative study of ethnicity and nationalism. Examples drawn from ethnic movements in different societies. Some previous exposure either to introductory courses in political science or to courses in ethnicity in other departments is desirable. Offered: jointly with JSIS B 436.

POL S 437 Politics in Scandinavia (5) I&S C. INGEBRITSEN Twentieth-century politics in Scandinavia. How Scandinavian countries have been governed. Costs and consequences of their governmental style and its uncertain future. Optimal size of polities, problems of mature welfare states, process of leadership and representation in multi-party systems, decline of political parties. Offered: jointly with SCAND 437.

POL S 438 Politics in France (5) I&S Study of contemporary France. Structures of government in the Fifth Republic; nature of French voting behavior and evolution of the bipolarized political party system; behavior of political interest groups; training of France's administrative elite and functioning of the state bureaucracy; dynamics of policy-making.

POL S 439 Politics of Divided Korea (5) I&S Governments, politics, and economy of South and North Korea, the inter-Korea relations, and the two Koreas' relationship with the major powers - especially the United States - with emphasis on the post-cold war period. Offered: jointly with JSIS A 439.

POL S 440 European Fascism (5) I&S Analysis of fascism as revolutionary movement and type of political system in post-World War I Europe: Hitler's Third Reich, Mussolini's Italy, and Vichy France. Consideration of dynamics of resistance, policies that produced Holocaust, and questions raised at trials of fascist leaders in Nuremberg and elsewhere.

POL S 441 Government and Politics of Russia (5) I&S Ideological and historical bases of Soviet politics; Leninism; Stalinism; Gorbachev's perestroika and the collapse of the USSR; the role of Yeltsin; problems of Russian state-building, market reform, and democratic transition; political parties and civil society; the relationship between the center and the regions; the problem of Russian national identity.

POL S 442 Government and Politics of China (5) I&S S. WHITING Post-1949 government and politics, with emphasis on problems of political change in modern China. Offered: jointly with JSIS A 408.

POL S 443 Comparative Political Societies (5) I&S Analyses of modern and premodern types of stable political society; special attention to contemporary representative democracy.

POL S 444 Revolutionary Regimes (5) I&S Analysis of the several types of political regimes concerned with effecting fundamental social change; emphasis on the twentieth century.

POL S 445 Politics and Society in Eastern Europe (5) I&S Political and social issues in lands east of the Elbe, treating some historical problems but focusing particularly on developments since 1945. Includes all communist states of Eastern Europe and their successors. Offered: jointly with JSIS D 445.

POL S 447 Advanced Seminar in Comparative Politics (5, max. 10) I&S Selected comparative political problems, po-

litical institutions, processes, and issues in comparative perspective. Strongly Recommended: POL S 204.

POL S 448 Politics of the European Union (5) I&S Examines the origins, structures, and political dynamics of the European Union. Attention given to theories of integration, to relations between the European Union and member states, and to the role of the European Union in world politics.

POL S 449 Politics of Developing Areas (5) I&S Comparative study of problems of national integration and political development in the new states of Asia and Africa.

POL S 451 Communication Technology and Politics (5) I&S Employs some core concepts of political communication and theories of democracy to examine the emerging role of information and communication technologies in candidate and issue campaigning; online voting; protest and advocacy movements; law-making and electronic governance in the United States and internationally. Offered: jointly with COM 407.

POL S 452 Mass Media and Public Opinion (5) I&S Examines the foundations of the idea of public opinion in a democratic environment and the role of mass communication in the organization, implementation, and control of that opinion. Considers these relationships from the perspectives of societal elites, media, and citizens. Offered: jointly with COM 414.

POL S 453 The State Legislature (5) I&S Study of American state legislatures, with special reference to Washington State legislature. Student must spend several Fridays in Olympia when the legislature is in session. Those desiring a more extensive involvement with the legislature should enroll in the political internship.

POL S 454 Political Communication Seminar (5, max. 10) I&S Contemporary topics studying how communication affects citizen engagement with public life. Offered: jointly with COM 411.

POL S 455 Political Deliberation (5) I&S Exploration of philosophical and empirical writings on political deliberation in small groups, campaigns, and other public settings. Contemporary deliberative theory. Participation in face-to-face discussions on current issues. Recommended: either COM 273 or COM 373. Offered: jointly with COM 417.

POL S 457 Topics in Labor Research (5, max. 10) I&S Analysis of the post-World War II decline of national labor movements and strategies employed to reverse this trend. Requires a major research project on organizing, bargaining, or another question in labor studies. Prerequisite: either POL S 249, HIST 249, or SOC 266. Offered: jointly with HSTCMP 457.

POL S 460 Political Economy of the European Union (5) I&S J. CAPORASO Historical foundation of the European Economic Community; major phases of its development; theoretical explanations for European integration.

POL S 461 Mass Media Law (5) I&S Survey of laws and regulations that affect the print and broadcast media. Includes material on First Amendment, libel, invasion of privacy, freedom of information, copyright, obscenity, advertising and broadcast regulation, and matters relating to press coverage of the judicial system. Offered: jointly with COM 440.

POL S 462 The Supreme Court in American Politics (5) I&S Explores the US Supreme Court as a political institution. Topics include processes that bring issues before the court, influences on judicial decision making, the impact of the court on democratic processes, the role of the court in constitutional development, and the court's interactions with other branches. Prerequisite: either POL S 360 or POL S 361.

POL S 464 The Politics of American Criminal Justice (5) I&S Political forces and value choices associated with the enforcement of criminal law. Distribution of resources among participants in the criminal justice system (e.g., police, attorneys, defendants, and judges). Understanding

and evaluation of the interaction of criminal justice processes with the political system.

POL S 465 Law and Public Policy in the United States (5) I&S Relationship between law and public policy, with particular attention to problems of social, economic, and political change. Considers legal and constitutional processes as they relate to such problems of public policy as race relations, the environment, and the economy.

POL S 467 Comparative Law in Society (5) I&S Legal systems around the world as they actually work in their respective political, social, and economic contexts. Emergence and development of European legal systems, legal customs at variance with those of Europe, problems of legal processes in the modern state.

POL S 468 Comparative Media Systems (5) I&S Provides students an understanding of policies that shape national communication processes and systems. Uses comparative analysis to identify both similarities and differences among media structures of nations at different levels of development. Primary emphasis on broadcast media. Offered: jointly with COM 420/JSIS B 419.

POL S 469 Law and Rights in Authoritarian Regimes (5) I&S S. WHITING Explores role of law and courts and nature of rights in authoritarian regimes. Questions addressed include why authoritarian regimes promote "rule-of-law", who is empowered by law, and the political consequences of "rule-of-law" promotion. Recommended: LSJ 366/JSIS B 366 or POL S 367/LSJ 367. Offered: jointly with JSIS B 469/LSJ 469.

POL S 470 Public Bureaucracies in the American Political Order (5) I&S Growth, power, and roles of governmental bureaucracies in America: conflict and conformity with American political thought, other political institutions, and the public.

POL S 471 Politics of Risk (5) I&S May Examines risks that occur infrequently but have catastrophic impacts, including health and environmental harms, terrorism, and natural disasters. Considers social science theorizing about risks, how risks enter the policy agenda, and political and policy responses to different risks within the United States.

POL S 472 Electoral Systems (5) I&S R. Pekkanen Explores a fundamental link between citizens and political representation: how electoral systems shape party systems, what kinds of people become candidates, how parties work, representation, and policy. Covers effects and mechanics of the various voting systems. Offered: jointly with JSIS B 472.

POL S 473 Decision-Making in Politics (5) I&S Process of decision-making in politics at elite and mass levels, comparison of approaches based on the comprehensive rationality of decision makers with approaches based on limitations on the cognitive capacities of decision makers. Applications to real decision-making situations.

POL S 474 Government and the Economy (5) I&S Interaction between politics and the economy. Impact of policy makers on economic performance. Models of partisan and political business cycles. Concepts of economic voting. Marxist theories of modern capitalist economics.

POL S 475 Public Choice (5) I&S A. GILL Problems and prospects for collective action in a political democracy. Designing rules and institutions for effective central authority and effective constraints on governmental power. Social choice theory and game theory. Recommended: either POL S 270 or POL S 474.

POL S 476 Strategy in Politics (5) I&S Explores the problem of finding fair methods for making social decisions, and examines alternative methods of social choice. Emphasis on the importance of agenda control for outcomes, and the implications of theories of social choice for common interpretations of concepts such as democracy and the general will. Recommended: either POL S 101 or POL S 202; POL S 481.

POL S 477 African Political Development (5) I&S Topics in contemporary African politics related to development of the African state in comparative perspective, including state formation; nationalism and the struggle for independence; civil wars, genocide, and under-development; democratic transition, elections, and voting; economic growth; film and literature; gender and ethnicity; and corruption and terrorism. Prerequisite: POL S 204.

POL S 479 Contemporary Central Asian Politics (5) I&S Radnitz Examines the politics of contemporary post-Soviet Central Asia. Analyzes issues relevant to the region in comparative perspective, including democratization, religion, terrorism, civil society, economic reform, ethnic identity, and international influences. Uses theory to shed light on current policy debates. Offered: jointly with JSIS A 479.

POL S 480 Comparative Politics and Korea Studies (5) I&S Ha Approaches Korean politics, political economy, and society from a comparative perspective. Examples of major comparative questions based on Korean case include democratization, strong state dynamics, civil society, and impact of globalization. Offered: jointly with JSIS A 466.

POL S 481 Big City Politics (5) I&S Contemporary big city politics, focusing on Seattle and the largest 25 cities. Social, economic, and political trends that have shaped characteristics of large American cities. Distribution and use of economic and political power among parties and groups. Future of large cities and politics of change.

POL S 488 Honors Senior Thesis (5-) I&S Political Science Honors students individually arrange for independent study of selected topics under the direction of a faculty member. Research paper is student's honors thesis.

POL S 489 Honors Senior Thesis (-5) I&S Political Science Honors students individually arrange for independent study of selected topics under the direction of a faculty member. Research paper is student's honors thesis.

POL S 495 Study Abroad: Political Science (1-10, max. 20) I&S Political science courses taken through a UW approved study abroad program for which there are no direct UW equivalents. Specific content varies and must be individually evaluated.

POL S 496 Undergraduate Internship (2-5, max. 15) Students serving in approved internships. Credit/no-credit only.

POL S 497 Political Internship in State Government (5, max. 20) Students serving in approved internship program with state government agencies.

POL S 498 The Washington Center Internship (15) Full-time academic internship with the Washington Center in Washington, DC. Includes internship activities, academic seminar, assemblies, and related activities. Recommended: POL S 202; 45 UW credits. Credit/no-credit only.

POL S 499 Undergraduate Readings and Research (1-5, max. 20) Intensive study with faculty supervision.

POL S 500 Political Research Design and Analysis (5) Major quantitative methods of empirical research in political science. Primary emphasis on research design, data collection, data analysis, and use of computers.

POL S 501 Advanced Political Research Design and Analysis (5) Testing theories with empirical evidence. Examines current topics in research methods and statistical analysis in political science. Content varies according to recent developments in the field and with interests of instructor. Offered: jointly with CS&SS 501.

POL S 502 Qualitative Research Methods (5) Introduction to qualitative methods in political science, emphasizing practical experience with techniques. Readings and exercises cover research design, multiple methods, varieties of qualitative data, measurement and validation, participant observation, interviewing, and content analysis. Research decision-making issues include analytical strategies, presentation of data, ethics, epistemology, and theory-building.

POL S 503 Advanced Quantitative Political Methodology (5) Theory and practice of likelihood inference. Includes probability modeling, maximum likelihood estimation, models for binary responses, count models, sample selection, and basis time series analysis. Offered: jointly with CS&SS 503.

POL S 504 Multi-Method Field Research (5) J. LONG IV Provides training in how to design and implement multi-method field research in American, comparative, and international politics, covering qualitative/ethnographic approaches; survey design, implementation, and analysis; and the design and implementation of field experiments and randomized impact evaluation.

POL S 505 Comparative Politics Core (5) Modern theories, approaches, and methods in the study of comparative politics.

POL S 509 Political Theory Core (5, max. 10) Central themes in political theory and the works of major political theorists, past and present.

POL S 510 Maximum Likelihood Methods for the Social Sciences (5) C. ADOLPH Introduces maximum likelihood, a more general method for modeling social phenomena than linear regression. Topics include discrete, time series, and spatial data, model interpretation, and fitting. Prerequisite: POL S 501/CS&SS 501; POL S 503/CS&SS 503. Offered: jointly with CS&SS 510; W.

POL S 511 Seminar in Ethical and Political Theory (5) Ethical writings of major political philosophers. Coherent themes arising from these works and assessment of their impact on concepts of politics.

POL S 513 Issues in Feminist Theory (5, max. 10) Contemporary issues in feminist theory as they affect studies of women, politics, and society. Content varies according to recent developments in the field and the research interests of the instructor.

POL S 514 Selected Topics in Political Theory (5, max. 15) Selected topics, historical and conceptual, national, regional, and universal. Prerequisite: permission of instructor.

POL S 515 Political Theory Research Seminar (5) Survey of paradigmatic research approaches in political theory through the exploration of a theme (canonical text, theoretical concept, and specific topic). Methods covered may include rational choice, psychoanalytic, Straussian, Marxian, and feminist approaches. Students carry out substantive theoretical research. Recommended: second- or third-year graduate standing.

POL S 516 Special Topics in American Political Thought (3/5) Special topics or themes in the development of American political culture.

POL S 517 Marxism and Critical Theory (5) Works of Marx and Engels as well as selected works of twentieth-century Marxist and critical theorists. Themes such as Marx's method, twentieth-century interpretations of Marx, and relationship of twentieth-century theorists to their eighteenth- and nineteenth-century forebears.

POL S 519 Modern Scandinavian Politics (5) Analyzes the political, economic, and historical development of Sweden, Norway, Denmark, Iceland, and Finland from World War II to the present. Readings focus on domestic and foreign policies that distinguish these countries from other advanced industrial societies. Offered: jointly with SCAND 519.

POL S 520 Seminar on Russian Foreign Policy (3) Selected topics in the development and objectives of the foreign policy of the Russian Federation.

POL S 521 International Relations Core (5) Key theories, concepts, and debates in the study of world politics and international relations. Provides an overview of the field and prepares students for the IR comprehensive exam.

POL S 522 International Political Economy (5) Theories of international political economy. Focuses on the emergence and development of the modern world system, the transi-

tion from feudalism to capitalism, and the institution of the nation-state system. Examines the political economy of trade, investment, and the international division of labor from a variety of theoretical perspectives. Prerequisite: POL S 521.

POL S 524 International Security (5) *E. KIER* Introduces some of the major debates concerning the use of force in international politics. Covers traditional issues in international security such as alliances and the causes of war, as well as some of the new and important questions, such as explaining war outcomes and war termination.

POL S 525 International Law and Institutions (5) *K. LITFIN* Inputs of international law into the decisional process in foreign policy. Effect of policy on law. Relevant roles of individuals and institutions in routine and crisis situations.

POL S 526 The Security of China (5) *Bachman* Examines how the Chinese state conceptualizes its national security interests and how it pursues strategies designed to achieve those interests. Topics include use of force, military modernization, civil-military relations, and defense industrialization. Offered: jointly with JSIS A 526.

POL S 527 Special Topics in International Relations Research (5, max. 15) Examination of current topics in the theory and practice of world politics. Content varies according to recent developments in the field and research interests of the instructor.

POL S 530 Transatlantic Relations: The United States and Europe in World Politics (3) Fulfills required component of "American Module" of Transatlantic Studies program. Addresses political dynamics of relations between United States and Europe from American republic's founding to post-Cold War era. Limited to students in Transatlantic Studies program.

POL S 532 The Chinese Political System (5) *S. WHITING* Examination of key approaches, interpretations, and secondary literature in the study of contemporary Chinese politics. Offered: jointly with JSIS A 532.

POL S 533 Seminar on Contemporary Chinese Politics (5) Research on selected problems in contemporary Chinese politics. Prerequisite: POL S 532, or permission of instructor. Offered: jointly with JSIS D 533.

POL S 534 International Affairs (3) Provides a broad understanding of international issues and United States policy. Students explore U.S. foreign policy and theories of major international actors in international trade, security, and strategic concerns, refugee policy, conflict resolution, development assistance, and the environment. Offered: jointly with JSIS B 534/PB AF 530.

POL S 535 International Relations of Modern China (5) Foreign policy of the People's Republic of China: historical antecedents; domestic and international systemic determinants; and Chinese policies toward major states, regions, and issues. Prerequisite: a course on contemporary Chinese politics or history, or permission of instructor. Offered: jointly with JSIS A 535.

POL S 537 Approaches to East European Politics (3-5) Selected concepts and methodologies useful for the analysis of politics and social structure in the socialist countries of east-central and southeastern Europe. Prerequisite: permission of instructor. Offered: jointly with JSIS A 563.

POL S 538 Government and Politics in the Middle East and North Africa (5) Political change in the area within the context of comparative politics; breakdown of traditional political systems; new range of choice expressed in competing ideologies; governmental and nongovernmental instrumentation of change; and problems of international relations and regional conflict and integration.

POL S 539 International Relations of Northeast Asia (5) *Hellmann* Comprehensive survey of contemporary international relations of Northeast Asia with emphasis on Russia, Japan, China, and the United States. Multidisciplinary approach placing contemporary problems in historical

context, drawing on modern social science theories. Connections between defense and economics are examined. Prerequisite: permission of instructor. Offered: jointly with JSIS A 551.

POL S 540 Problems in South Asian Politics (3) Research problems in contemporary Indian politics.

POL S 541 Institutions and Institutional Change in the Soviet Union, Russia, and the Newly Independent States (5) Critical appraisal of the principal theories and research methods dealing with the development of the Soviet state from 1917-1991 and the formation of the newly independent states after the Soviet collapse.

POL S 542 Seminar: State and Society (5) *Migdal* Examines the mutually conditioning relationship between states and the societies they seek to govern. Studies states as large, complex organizations and their interactions with society on different levels. Shows that interactions on any level affect the nature of the state on other levels as well. Offered: jointly with JSIS B 542.

POL S 543 Latin American Politics (5) Theories of authoritarianism, corporatism, democratization, and revolution in Latin America. Explores role of international and domestic economic factors shaping politics and the effect of politics on economic development. Examines elite behavior and grassroots social movements.

POL S 544 Problems in Comparative Government (5, max. 15) Selected problems in the comparative analysis of political institutions, organizations, and systems.

POL S 547 Politics of Reform (5) Examines cases of reform in democratic political systems, e.g., Roosevelt's New Deal, Allende's Chilean "revolution," Mitterand's socialist experiment in France, and the Thatcher government in Britain.

POL S 548 Comparative Political Parties (5) Role of political parties in the modern state. Similarities and differences in origins and development of political parties and functions they perform, both in established democracies and in developing countries.

POL S 549 Problems of Political Development (5) Concepts of development and modernization, with particular attention to their political dimensions and their application to various historical and contemporary cases.

POL S 550 American Politics Core (5) Systematic survey of the American government and politics literature; focuses on national politics.

POL S 551 Political Communication (5) Surveys classic works and new directions in political communication, including functionalist, structuralist, constructivist, network, and comparative approaches, reflecting a range of methods. Examines political organizing, electoral and legislative processes, civic (dis)engagement, media and politics, public deliberation and opinion formation, political identity and discourse. Offered: jointly with COM 551.

POL S 552 Special Topics in Political Communication (5, max. 10) Examination of current topics in the theory and practice of political communication.

POL S 553 Public Opinion (5) *C. PARKER* Selected problems in opinion formation, characteristics, and role of public opinion in policy-making process.

POL S 554 Legislative Politics (5) Selected problems in legislative processes and leadership, state and national.

POL S 555 American Politics Topics (5, max. 10) Examination of current topics in the theory and practice of American politics. Content varies according to recent developments in the field and research interests of the instructor.

POL S 556 American Political Development (5) Examination of leading works in, and theories of, American political development. Topics include the development approach itself; critical junctures in U.S. political history; key changes in institutions, the American state, the representation of interests and party politics; and the relevance of development studies to current politics.

POL S 557 United States Party System (5) Examines the institutional and behavioral foundations of party politics in the United States, emphasizing key historical patterns of party system development and the major scholarly approaches to the study of the American parties and party politics.

POL S 558 Political Deliberation (5) *Gastil* Exploration of deliberative theories of democracy and research on political discussion in campaigns, face-to-face meetings, on-line forums, and informal conversations. Presents different uses and understandings of deliberation and its role in democratic governance. Recommended: COM 577; POL S 551/COM 551. Offered: jointly with COM 555.

POL S 559 Special Topics in Political Methodology (5, max. 10) Examination of current topics on the theory and practice of political methodology. Course content varies according to recent developments in the field and the research interests of the instructor.

POL S 560 Industrialization and International Relations (5) *Ha* Examines internal-external linkage with a focus on industrialization and international relations. Comparative perspective on the question of how industrialization shapes distinctive international perspectives in terms of perception, strategies, and foreign policy behaviors. Countries covered: South Korea, Japan, Prussia, the Soviet Union, and China. Offered: jointly with JSIS A 552.

POL S 561 Law and Politics (5) *McCann, Lovell.* Points and levels at which law and politics intersect. What is distinctive about legal forms; how these legal forms influence, and are influenced by, politics. Conceptions of law, courts and public policy, law and bureaucracy, civil and criminal justice, and the legal profession.

POL S 562 Law, Politics, and Social Control (5) Explores works of social scientists and lawyers regarding these competing conceptions of social control: as the seamy side of law - reinforcing equitable patterns of domination and disciplining deviants; as law embodying society's basic values, articulating minimum rules for harmonious social interaction.

POL S 563 Supreme Court in American Politics (5) Explores the tendency in the United States to turn to the Supreme Court to provide constitutional solutions for some of our biggest social, economic, and political problems. Focuses on the controversies concerning the legitimacy and capacity of the Supreme Court to intervene in American politics and public policy.

POL S 564 Law and the Politics of Social Change (5) Explores the many ways that law figures into the politics of social struggle and reform activity. Analyzes law in terms of particular state institutions (courts, agencies), professional elites (lawyers, judges), and especially cultural norms ("rights" discourses) that are routinely mobilized by reform-movement activists.

POL S 565 Special Topics in Public Law (5, max. 10) Examination of current topics on the theory and practice of public law. Content varies according to recent developments in the field and the research interests of the instructor.

POL S 566 Comparative Law and Politics (5) *R. CICHOWSKI* Study of the interaction between law and politics, at both the macro and micro levels of politics, and discussion of research drawing from a wide array of geographical settings. Examination in comparative context of whether macro-structures are autonomous from underlying social structures of power and interest in the micro-level.

POL S 567 Discourse and the Politics of Resistance (5) Examines how disciplines theorize and empirically study discourse in the politics of resistance. Examines the discursive turn in U.S. and European "new" social movement theory. Ranges across disciplines, such as political sociology, cultural anthropology and human geography, to discover ways in which discourse is conceptualized and studied for its role in seeding social change. Offered: jointly with COM 554.

POL S 569 Law and Rights in Authoritative Regimes (5)

Explores role of law and courts and the nature of rights in authoritarian regimes. Questions addressed include why authoritarian regimes promote “rule-of-law”, who is empowered by law, and the political consequences of “rule-of-law promotion. Offered: jointly with JSIS B 569.

POL S 570 The American Racial State (5)

Explores the mutually constitutive relationship between race and American political institutions, beginning with theories of race and racial constructions, race-making and nation-making, racial triangulation, and intersectionality. Examines various institutions and public policies as manifestations of the American racial state, focusing on the epistemological challenges of identifying race, racism, and racialization.

POL S 571 American National Institutions (5)

Answers the question, “Do institutions matter?” Surveys American national institutions from theoretical perspectives, focusing on how they affect the manner in which decisions are made. Employs cross-institutional perspective of American institutions.

POL S 572 Electoral Systems (5)

R. Pekkanen Explores a fundamental link between citizens and political representation: how electoral systems shape party systems, what kinds of people become candidates, how parties work, representation, and policy. Covers effects and mechanics of the various voting systems. Offered: jointly with JSIS B 572.

POL S 573 Topics in Public Policy (5, max. 10)

Specialized research topics with a policy process or related theoretical content.

POL S 574 Environmental Regulation Policy (5)

Scholarly and practical aspects of environmental regulation. Examines literature concerning regulatory policy design, policy instruments, federalism, compliance, and enforcement. Studies selected federal, state, and other nations’ environmental policies. Participants are expected to have a good understanding of American policy processes.

POL S 575 Public Policy Processes (5)

Covers political science research about policy processes. Research seminar addressing frameworks and perspectives on policy processes as they concern issue emergence, agenda dynamics, policy subsystems, policy learning, and implementation.

POL S 576 Political Culture (5)

Values, beliefs, and rituals that guide political action in society. Some approaches emphasize symbolic sphere of value and belief over material conditions of power and economic production. Other approaches emphasize material relations. Reconciliation of symbolic and materialist approaches that explain intervention of the modern state in cultural processes.

POL S 577 The Politics of Social Movements (5)

Theoretical inquiry directed to questions of collective action and political tactics by social movement groups. Case studies include labor, civil rights, women’s, environmental, and other movements in twentieth-century United States.

POL S 578 Health Politics and Policy (5)

Introduces central themes of health-policy research: health is not healthcare and politics has much to do with why our healthcare system works as it does. Investigates how social science helps us understand health issues.

POL S 579 Contemporary Central Asian Politics (5)

Radnitz Examines the politics of contemporary post-Soviet Central Asia. Analyzes issues relevant to the region in comparative perspective, including democratization, religion, terrorism, civil society, economic reform, ethnic identity, and international influences. Uses theory to shed light on current policy debates. Offered: jointly with JSIS A 579.

POL S 580 Comparative Politics and Korea Studies (5)

Ha Approaches Korean politics, political economy, and society from a comparative perspective. Examples of major comparative questions based on Korean case include democratization, strong state dynamics, civil society, and impact of globalization. Offered: jointly with JSIS A 566.

POL S 582 Institutional Analysis (3/5)

Social change and property rights theory. Exploration of long-term secular change through works whose approaches derive from neo-classical economics and analytical Marxism. Evolution and transformation of property rights over land, labor, and capital and the consequences of the property rights structure for political and economic institutions.

POL S 583 Economic Theories of Politics (5)

Problems of public goods provision and collective action. Collective action theories and applications as well as critical review of the concept of rationality.

POL S 584 Comparative Political Economy (5)

Overview of current developments in comparative political economy. Topics may include globalization, the welfare state, partisan models of economic policymaking, economic development, and trade.

POL S 586 Topics in International Political Economy (5, max. 10)

Examination of current topics in the theory and practice of international political economy. Content varies according to recent developments in the field and research interests of the instructor.

POL S 587 Politics of Urban Reform (5)

Interpretations of urban reformers at turn of this century and during 1960s and 1970s. Historical and political science literature on the subject. Prerequisite: permission of instructor.

POL S 588 Special Topics in Comparative Political Economy (5, max. 10)

Examination of current topics in the theory and practice of comparative political economy. Content varies according to recent developments in the field and research interests of the instructor.

POL S 589 Special Topics in Political Economy (3-5, max. 10)

Evaluating research in political economy as well as developing research problems. Topics vary with instructor and with current problems in the literature.

POL S 590 Seminar in Political Behavior (5, max. 10)

Analysis of behavioral research in selected fields of political science.

POL S 593 Theories of Decision Making (5)

Explanation of political decisions using models of such theoretical processes as preference formation, learning, heuristics, noncooperative games, collective action, agenda manipulation, and coalition formation. Examination of competing notions of political rationality and irrationality and criteria for their evaluation. Strategies for design of decision research.

POL S 594 Political Communication Research Practicum: Community, Communication, and Civic Engagement (5)

Overview of the research process, including literature review, hypothesis generation, data gathering, empirical analysis, and writing for publication. Topics vary with instructor, but generally address questions of how communication affects democracy and citizen engagement in national or international contests. Offered: jointly with COM 556.

POL S 595 College Teaching of Political Science (1)

POL S 597 Directed Readings (1-10, max. 10) Intensive reading in the literatures of political science, directed by the chair of the doctoral Supervisory Committee. Credit/no-credit only.

POL S 598 Independent Writing I (1-5, max. 5)

Supervised research and writing for graduate students completing the MA essay of distinction.

POL S 600 Independent Study or Research (*-)**POL S 800 Doctoral Dissertation (*-)**

Psychology

119 Guthrie

Psychology involves the scientific study of behavior and its causes and the understanding of human and animal behavior in a variety of settings. Psychology is studied both as a natural science, which stresses physical and biological causes of behavior, and as a social science, which stresses the effects of the social setting on human and animal behavior. Major areas of emphasis are human cognition and perception, animal behavior, behavioral neuroscience, developmental, social and personality, and clinical psychology.

UNDERGRADUATE PROGRAM

Adviser

119 Guthrie, Box 351525

(206) 543-2698

psyadvis@uw.edu

The Department of Psychology offers the following programs of study:

- The Bachelor of Science degree with a major in psychology
- The Bachelor of Arts degree with a major in psychology

The Bachelor of Science program prepares students for doctoral programs in psychology, leading to careers in teaching, research, or clinical psychology. The program emphasizes laboratory/research experience and statistics.

The Bachelor of Arts program provides a general background in psychology for students preparing for master’s-level graduate programs or professional schools, seeking employment at the baccalaureate level, or wanting to apply the principles of psychology in other disciplines.

The department does not have formal programs in educational, school, or counseling psychology; engineering psychology; or industrial psychology.

Bachelor of Science

Suggested First-Year College Courses: MATH 120 and MATH 124. PSYCH 101. Any sociology or anthropology course. Students are encouraged to begin completion of general education requirements.

Suggested Second-Year College Courses: PSYCH 202 and PSYCH 209 should be completed as soon as possible during this year; BIOL 118, BIOL 161-BIOL 162, BIOL 180, BIOL 200, or BIOL 220. Students intending to take animal behavior courses in the Psychology Department should plan to fulfill the biology requirement with either BIOL 161-BIOL 162, BIOL 180, or BIOL 200. Continue working toward completion of general education requirements, including foreign language. The foreign language requirement should, ideally, be completed within the first two years of college.

Department Admission Requirements

Students apply to the Department of Psychology under the same admission requirements, regardless of the degree they wish to pursue.

1. Minimum 2.00 cumulative UW GPA
2. Completion of one of the following math courses with a minimum 2.0 grade: MATH 111, MATH 112, MATH 120, or MATH 124. (Students may fulfill this requirement with test scores that place them in MATH 112 or MATH 124 or higher.)
3. Completion of the following psychology courses with a minimum 2.0 grade in each course and a cumulative

2.50 GPA in the three courses: PSYCH 101, PSYCH 202, and PSYCH 209.

4. Admission is competitive based on the following criteria:

- Preparation for a major in psychology as indicated by the grades earned in courses required for admission
- GPA, with an emphasis on grades earned in psychology courses
- Other evidence of a commitment to becoming a psychology major
- Personal statement reflecting an interest in and commitment to becoming a psychology major
- Copies of unofficial transcripts from all schools attended (UW and transfer).

Meeting the above criteria does not guarantee admission to the department.

5. The application deadline is the first Friday of autumn, winter, and spring quarters; no applications are accepted summer quarter. Applications and additional information are available in 119A Guthrie.

Major Requirements

84-86 credits as follows:

- PSYCH 101, PSYCH 202, PSYCH 209 (with a grade of 2.5 or higher), PSYCH 317 and PSYCH 318
- One lab course from PSYCH 330, PSYCH 331, PSYCH 332, PSYCH 361, PSYCH 417, PSYCH 418, or PSYCH 419
- One course from PSYCH 300, PSYCH 333, or PSYCH 355
- One course from PSYCH 303, PSYCH 305, PSYCH 306, or PSYCH 345
- One additional course from PSYCH 300, PSYCH 303, PSYCH 305, PSYCH 306, PSYCH 333, PSYCH 345, or PSYCH 355
- Three additional graded upper-division classes with at least one at the 400 level (cannot include PSYCH 491 through PSYCH 499)
- PSYCH 499 (3 credits)
- PSYCH 496, PSYCH 497, or PSYCH 498 (3 credits) or 3 additional credits of PSYCH 499
- Up to 6 credits in 200- to 400-level electives to make a minimum total of 66 psychology credits
- (Students may not use PSYCH 200 as an elective if PSYCH 300 is used to fulfill major requirements; or use PSYCH 203 as an elective if PSYCH 303 is used to fulfill major requirements; or use PSYCH 206 as an elective if PSYCH 306 is used to fulfill major requirements; or use PSYCH 245 as an elective if PSYCH 345 is used to fulfill major requirements.)
- Courses in related fields:*
 - MATH 120 and MATH 124. Students may satisfy this requirement by testing out of MATH 124 or MATH 144
 - One biological science course from BIOL 118, BIOL 161-BIOL 162, BIOL 180, BIOL 200, or BIOL 220
 - One of the following philosophy courses: PHIL 120, PHIL 160
 - One social science course (3 to 5 credits) from anthropology or sociology
- Cumulative minimum 2.50 GPA in all PSYCH courses applied toward the degree (UW and transfer), with a minimum 2.0 grade in each course presented for the major. Note that a grade of 2.5 or higher is required in PSYCH 209 in order for students to progress to the PSYCH 317/PSYCH 318 statistics series.
- Transfer students must meet all of the above requirements and are required to complete at least 15 grad-

ed credits in psychology at the 300 and 400 level at the UW.

Bachelor of Arts

Suggested First-Year College Courses: MATH 111, MATH 112, MATH 120, or MATH 124. PSYCH 101. Any sociology or anthropology course. Students are encouraged to begin completion of general education requirements.

Suggested Second-Year College Courses: PSYCH 202 and 209 should be completed as soon as possible during this year. BIOL 118, BIOL 161-BIOL 162, BIOL 180, BIOL 200, or BIOL 220. Students intending to take animal behavior courses in the Psychology Department should plan to fulfill the biology requirement with either BIOL 161-BIOL 162, BIOL 180, or BIOL 200 Continue working toward completion of general education requirements, including foreign language. The foreign language requirement should, ideally, be completed within the first two years of college.

Major Requirements

66 to 68 credits as follows:

- PSYCH 101, PSYCH 202, PSYCH 209, PSYCH 315 (or PSYCH 317 and PSYCH 318)
- One lab course from PSYCH 330, PSYCH 331, PSYCH 332, PSYCH 361, PSYCH 417, PSYCH 418, or PSYCH 419
- One course from PSYCH 300, PSYCH 333, or PSYCH 355
- One course from PSYCH 303, PSYCH 305, PSYCH 306, or PSYCH 345
- One additional course from PSYCH 300, PSYCH 303, PSYCH 305, PSYCH 306, PSYCH 333, PSYCH 345, or PSYCH 355
- Two additional graded upper division classes with at least one at the 400 level (cannot include PSYCH 491 through PSYCH 499)
- 3 credits from the following list: PSYCH 494, PSYCH 496, PSYCH 497, PSYCH 498, PSYCH 499; or credit from an approved study abroad program
- Up to 4 credits of PSYCH 200- to 400-level electives to make a minimum total of 53 psychology credits
- (Students may not use PSYCH 200 as an elective if PSYCH 300 is used to fulfill major requirements; or use PSYCH 203 as an elective if PSYCH 303 is used to fulfill major requirements; or use PSYCH 206 as an elective if PSYCH 306 is used to fulfill major requirements; or use PSYCH 245 as an elective if PSYCH 345 is used to fulfill major requirements.)
- Courses in related fields:*
 - One MATH course from MATH 111, MATH 112, MATH 120, MATH 124, or MATH 144. Students may satisfy this requirement by testing out of any of the specified classes.
 - One biological science course from BIOL 118, BIOL 161-BIOL 162, BIOL 180, BIOL 200, or BIOL 220
 - One social science course (3 to 5 credits) from anthropology or sociology
- Minimum 2.50 cumulative GPA in all psychology courses applied toward the degree (UW and transfer), with a minimum 2.0 grade in each course presented for the major
- Transfer students must meet all the above requirements and must to complete at least 15 graded credits in psychology at the 300 and 400 level at the UW.

Student Outcomes and Opportunities

- Learning Objectives and Expected Outcomes:* Students understand and apply scientific methods and principles, receive an excellent preparation in the theoretical explanations of human and animal behavior, and understand

the introductory concepts underlying the biological basis of behavior.

- Instructional and Research Facilities:* The psychology faculty have extensive research facilities and research laboratories on the UW campus and nearby buildings.
- Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- Research, Internships, and Service Learning:* The Department of Psychology offers academic credit for approved fieldwork experience. The advising office maintains internship listings which are updated regularly.
- Department Scholarships:* None offered.
- Student Organizations/Associations:* Psi Chi (national honors society for undergraduate psychology students).
- Of Special Note:* A student may earn either a Bachelor of Science or a Bachelor of Arts degree in psychology, but not both.

GRADUATE PROGRAM

Graduate Program Coordinator

306 Guthrie, Box 351525

(206) 543-2563

psygrad@uw.edu

Graduate work in psychology is organized primarily as preparation for the Doctor of Philosophy degree. The optional Master of Science degree is taken by some doctoral students in the course of their work toward the doctorate.

For graduate instruction, the department is organized into six major areas of study: animal behavior, adult and child clinical, cognition and perception, developmental, physiological, and social psychology and personality. Specialization groups also exist in the sub-areas of diversity and self-regulation, and in community, sport, and quantitative psychology.

The program in clinical psychology is accredited by the American Psychological Association and provides scientific and professional training.

Master of Science (Optional)

A master's-degree-only program is not available. Doctoral students have the option of obtaining a master's degree while working toward the PhD.

Graduation Requirements: Completion of first-year graduate program (see Doctor of Philosophy degree requirements below) and an appropriate research program, including a research thesis.

Doctor of Philosophy

Admission Requirements

An undergraduate degree in psychology is desirable, but not required. Some preparation in biological, social, or quantitative sciences is strongly advised. Applicants are judged on a number of criteria, including academic and research backgrounds, Graduate Record Examination scores, and written evaluations submitted by former professors or supervisors. Admission of new students occurs in autumn quarter. The deadline for receipt of admission material is December 15.

Degree Requirements

Minimum 90 credits, as follows:

- Coursework:*
 - Orientation Week:* PSYCH 500 (1)
 - Psychology Colloquium:* PSYCH 500 (1)

- c. *Statistics and General Methodology*: During the first year, students must complete each of the following with a minimum 2.7 grade: PSYCH 522, PSYCH 523, PSYCH 524, PSYCH 525.
 - d. *Area Course Requirements*: All students are required to take a set of six or more courses as required by the individual areas (see below)
 - e. *Seminars and Advanced Seminars*: All students are strongly encouraged to attend a seminar as specified by their area (see below), and to attend the departmental colloquium (PSYCH 550).
 - f. *Substitutions*: Potential substitutions should be discussed with the student's adviser and Area Head or Area Representative.
2. *Area Requirements*:
- a. *Animal Behavior*:
 - i. *Core Courses*: PSYCH 502, PSYCH 503, PSYCH 562
 - ii. Three additional courses chosen in consultation with adviser. The following courses may be particularly appropriate for animal behavior students: PSYCH 504, PSYCH 505, PSYCH 513
 - iii. All animal behavior students are strongly encouraged to participate in additional seminars and advanced seminars, both within and outside their area, throughout their graduate careers.
 - b. *Adult Clinical Area*:
 - i. *Core Courses*: PSYCH 517, PSYCH 518, PSYCH 519, PSYCH 511 [PSYCH 594 may be substituted], PSYCH 515 [PSYCH 571 or PSYCH 572 may be substituted]
 - ii. Six additional out-of-area courses. These six courses must meet the APA curriculum guidelines for "breadth of scientific psychology," covering biological, affective-cognitive, and social aspects of behavior as determined by mutual agreement between the student and adviser. Courses should be selected toward developing cohesive themes of subspecialty expertise pertinent to the student's future research and clinical endeavors. Core concepts courses that can be used to meet the APA breadth requirements are as follows: Affective-Cognitive Breadth: PSYCH 507 ; Social Breadth: PSYCH 510 (4); Biological Breadth: PSYCH 502 , PSYCH 503 (4), PSYCH 504 , PSYCH 506 . Note: PSYCH 594, PSYCH 571, and PSYCH 572 cannot be used as out-of-area courses.
 - iii. One course in community psychology of minority mental health: PSYCH 574, PSYCH 580, or other approved courses.
 - iv. Three courses in clinical issues and methods: PSYCH 591, PSYCH 587, PSYCH 588
 - v. Two courses in assessment: PSYCH 586; one of the following three courses: PSYCH 576 with PSYCH 590 practicum), PSYCH 578 with PSYCH 590, PSYCH 579
 - vi. Clinical practica on a continuing basis: PSYCH 589, PSYCH 593, PSYCH 597
 - vii. Seminars and advanced seminars: PSYCH 550
 - viii. All clinical students are strongly encouraged to participate in additional seminars and advanced seminars, both within and outside their area, throughout their graduate careers.
 - ix. Other requirements for clinical students: A one-year predoctoral internship
 - c. *Behavioral Neuroscience*:
 - i. *Core Courses*: PSYCH 421, PSYCH 504, NEUBEH 502; two of the following three courses: NEUBEH 501, NEUBEH 503, CONJ 531/CONJ 532
 - ii. Three additional psychology courses: PSYCH 565; not more than one of the following: PSYCH 423, PSYCH 424, PSYCH 426, PSYCH 427, PSYCH 430; one or more of the following: PSYCH 502, PSYCH 503, PSYCH 506, PSYCH 513
 - iii. Seminars and advanced seminars: All BNS students are required to take at least three quarters of PSYCH 522. In addition, all BNS students are required to take at least one advanced seminar (usually PSYCH 542), chosen in consultation with the student's adviser.
 - iv. All behavioral neuroscience students are strongly encouraged to participate in additional seminars and advanced seminars, both within and outside their area, throughout their graduate careers.
 - d. *Child Clinical Area*:
 - i. *Research Methods*: PSYCH 529, PSYCH 531
 - ii. Four courses in child clinical psychology: PSYCH 571, PSYCH 572, PSYCH 576 with PSYCH 590 practicum, PSYCH 573
 - iii. Four core concepts courses: PSYCH 513, PSYCH 514, PSYCH 515, PSYCH 517
 - iv. One course in minority mental health: PSYCH 580
 - v. Three courses in clinical issues and methods: PSYCH 591, PSYCH 587, PSYCH 588
 - vi. Clinical practica on a continuing basis: PSYCH 589, PSYCH 593, PSYCH 597
 - vii. One treatment seminar: PSYCH 543, PSYCH 553, PSYCH 550
 - viii. All child clinical students are strongly encouraged to participate in additional seminars and advanced seminars, both within and outside their area, throughout their graduate careers.
 - ix. Other requirements for child clinical students: A one-year predoctoral internship
 - e. *Cognition and Perception*:
 - i. *Core Courses*: PSYCH 506, PSYCH 507, PSYCH 508
 - ii. Three additional courses, selected to broaden and deepen the student's understanding of his/her research specialty. These courses should be chosen in consultation with the adviser. They can be additional core concepts courses in any area, or other courses chosen from anywhere on campus, within or outside the Psychology Department.
 - iii. The following out-of-area core concepts courses may be particularly appropriate for cognition: PSYCH 504 , PSYCH 510 (4), PSYCH 514 (4), PSYCH 515 (4)
 - iv. Seminars and advanced seminars: PSYCH 555
 - v. All Cognition/Perception students are strongly encouraged to participate in additional seminars and advanced seminars, both within and outside their Area, throughout their graduate careers.
 - f. *Developmental Psychology*:
 - i. *Research Methods*: PSYCH 529
 - ii. *Area Course Requirements*. PSYCH 513, PSYCH 514, PSYCH 515
 - iii. Three additional courses, selected to broaden and deepen the student's understanding of his/her research specialty. These courses should be chosen in consultation with the adviser. They can be additional core concepts courses in any area, or other courses chosen from anywhere on campus, within or outside the Psychology Department.

The following out-of-area core concepts courses may be particularly appropriate for Developmental students, depending on the student's research specialty: PSYCH 503, PSYCH 504, PSYCH 507, PSYCH 510, PSYCH 511

- iv. In lieu of a core concepts course in child clinical psychology, PSYCH 553 is also recommended for Developmental graduate students.
- v. Seminars and advanced seminars: PSYCH 556
- vi. All developmental students are strongly encouraged to participate in additional seminars and advanced seminars, both within and outside their area, throughout their graduate careers.

g. *Social Psychology and Personality*:

- i. In addition to the four statistical courses required by the department, social/personality students are required to take one additional quantitative course, within or outside the department.
- ii. *Core Courses*: PSYCH 510, PSYCH 511
- iii. Four additional courses, selected to broaden and deepen the student's understanding of his/her research specialty. These courses should be chosen in consultation with the adviser. They can be additional core concepts courses in any area, or other courses chosen from anywhere on campus, within or outside the Psychology Department.
- iv. *Seminars and Advanced Seminars*: PSYCH 557, one additional departmental seminar (PSYCH 550 through PSYCH 558) every quarter throughout the student's graduate career
- v. All social/personality students are strongly encouraged to participate in additional seminars and advanced seminars, both within and outside their area, throughout their graduate careers.

Assistantships, Fellowships, or Traineeship Opportunities

Research and teaching assistantships are generally available. Traineeships and fellowships are also available.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

PSYCH 101 Introduction to Psychology (5) I&S King, McDermott, Osterhout, Passer Surveys major areas of psychological science. Core topics include human social behavior, personality, psychological disorders and treatment, learning, memory, human development, biological influences, and research methods. Related topics may include sensation, perception, states of consciousness, thinking, intelligence, language, motivation, emotion, stress and health, cross-cultural psychology, and applied psychology. Offered: AWSpS.

PSYCH 200 Comparative Animal Behavior (5) NW Barash, Beecher Research methods and findings of comparative animal behavior, their importance to an understanding of human behavior; rationale for study of behavioral differences/similarities between animal species, behavior viewed as part of adaptation of each species to its natural habitat. Not open for credit to students who have taken PSYCH 300.

PSYCH 201 Psychology of Performance Enhancement (4) I&S Smith, Smoll Applications of psychological theories, research, and intervention strategies to performance enhancement in variety of life settings. Self-regulation models and techniques; stress and emotional control; attention control and concentration; mental rehearsal; time management; goal-setting; memory enhancement; communication and interpersonal conflict resolution. Participation in

various psychological training procedures. Prerequisite: PSYCH 101.

PSYCH 202 Biopsychology (5) NW Kim, Olavarria Examines the biological basis of behavior, the nervous system, how it works to control behavior and sense the world, and what happens when it malfunctions. Topics include learning and memory, development, sex, drugs, sleep, the senses, emotions, and mental disorders. Prerequisite: PSYCH 101. Offered: AWSpS.

PSYCH 203 Introduction to Personality and Individual Differences (4) I&S Smith Overview of the major theories, research findings, and applications in the scientific study of personality. Covers research methods and approaches to measuring personality variables. Not open for credit to students who have taken PSYCH 303. Prerequisite: PSYCH 101.

PSYCH 205 Behavior Disorders (5) I&S Examines the bio-psycho-social origins of behavioral disorders. Topics include theories of etiology, developmental perspectives of behavior disorders, and assessment and diagnosis of the most common behavioral disorders. Note: not open for credit for students who have taken PSYCH 305. Prerequisite: minimum 2.0 grade in PSYCH 101.

PSYCH 206 Human Development (5) I&S Theoretical perspectives and research methods in child development with an overview of historical and current works. Includes prenatal and biological development, the development of cognitive, linguistic, and social and emotional abilities. Not open for credit to students who have taken PSYCH 306. Prerequisite: PSYCH 101.

PSYCH 209 Fundamentals of Psychological Research (5) Little, Passer Psychological research methodology and techniques. Topics include the logic of hypothesis testing, experimental design, research strategies and techniques, fundamentals of scientific writing, search and evaluation of research literature in psychology, and ethical issues in psychological research. Required for all psychology majors. Prerequisite: minimum 2.0 grade in PSYCH 101. Offered: AWSpS.

PSYCH 210 The Diversity of Human Sexuality (5) I&S, DIV McDermott Considers biological, psychological, and socio-cultural determinants of human sexuality and sexual behavior, and how their interaction leads to diverse expressions of sexuality, sexual bonding, gender orientation, reproductive strategies, and physical and psychological sexual development. Topics include cultural appraisal of sexuality, sexual health and reproduction (pregnancy, contraception, abortion), and sexual abuse and assault.

PSYCH 245 Introduction to Social Psychology (5) I&S Brown Overview of major findings of social psychology, emphasizing the relevance for understanding the social behaviors of individuals and groups of individuals and their relationship to social context. Not open for credit to students who have taken PSYCH 345. Prerequisite: PSYCH 101.

PSYCH 250 Racism and Minority Groups (5) I&S, DIV Overview of the causes, contexts, and consequences of racism and its effects upon minority groups and society. Emphasis on cultural history, political and socioeconomic structures that contribute to racism. Examination of current issues in race relations and cultural pluralism in the United States and selected international topics.

PSYCH 257 Psychology of Gender (5) I&S, DIV Kenney Major psychological theories of gender-role development; biological and environmental influences that determine and maintain gender differences in behavior; roles in children and adults; topics include aggression, cognitive abilities, achievement motivation, affiliation. Recommended: either PSYCH 101 or GWSS 200. Offered: jointly with GWSS 257.

PSYCH 260 Psychosocial Aspects of Nuclear War (3) I&S Barash Introduction to basic issues of nuclear war, including its effects, weaponry, and history of the arms race. Primary focus on the psychologic underpinnings of deter-

rence, relations between nations, and the personal and social forces operative in the arms race and peace movements.

PSYCH 291 Principles of Applied Animal Behavior (3-5) NW Further explores the basic principles of animal behavior, and related disciplines, with particular emphasis on application to human-animal interaction and issues. Introduces the primary literature in applied animal behavior.

PSYCH 292 Applied Animal Behavior in Practice (3-5) NW Integrates animal behavior theory with real-world practice to resolve practical problem in human-animal interactions, including companion animals, captive animals, and livestock. Introduces the primary clinical literature in applied animal behavior.

PSYCH 299 Psychology Transfer Academic Community (2) Provides opportunity for transfer students new to or contemplating the psychology major to experience an in-depth orientation to the department, curriculum, and resources available to undergraduates. Students meet weekly to explore ways to effectively engage in the major and expand their understanding of the academic discipline. Credit/no-credit only.

PSYCH 300 Animal Behavior (5) NW Beecher, Sisneros Introduces important concepts and empirical findings in animal behavior. Emphasizes evolutionary and mechanistic approaches to understanding diversity and complexity of behavior. Topics include communication, mating, migration, and sociality. Prerequisite: either BIOL 118, BIOL 161, or BIOL 180.

PSYCH 303 Personality (5) I&S Brown Overview of major perspectives, scientific issues, applications, and research findings in the area of personality. Direct exposure to scientific literature, writing assignments, and research-based class experiences prepare students for advanced work in personality, social, abnormal, and developmental psychology. Prerequisite: minimum 2.0 grade in each of PSYCH 101; PSYCH 202; and PSYCH 209.

PSYCH 305 Abnormal Psychology (5) I&S An overview of major categories of psychopathology, including description and classification, theoretical models, and recent research on etiology and treatment. Prerequisite: minimum 2.0 grade in PSYCH 202; 2.0 in PSYCH 209.

PSYCH 306 Developmental Psychology (5) I&S Repacholi, Sommerville Overview of past and present theoretical and research-based approaches to biological, cognitive, and social development from the prenatal period to early adolescence. Prerequisite: minimum 2.0 grade in PSYCH 202; 2.0 in PSYCH 209.

PSYCH 315 Understanding Statistics in Psychology (5) QSR Boynton, Flaherty, Little Statistics for psychological research. Elementary probability theory, hypothesis testing, and estimation. Satisfies the statistics requirement for majors registered in the psychology Bachelor of Arts degree program. Prerequisite: minimum 2.0 grade in PSYCH 209; 2.0 in either MATH 111, MATH 112, MATH 120, MATH 124, or MATH 144. Offered: AWSpS.

PSYCH 317 Introduction to Probability and Statistics for Psychology (5) QSR Little, Loftus Probability theory as a model for scientific inference. Probabilistic variables and experimental outcomes, conditional probability, binomial and related distributions, experiments as samples, statistics and sampling distributions, the normal distribution, confidence intervals, problems of estimation from experiments. Prerequisite: minimum 2.5 grade in PSYCH 209; 2.0 in either MATH 124, MATH 134, or MATH 144. Offered: AW.

PSYCH 318 Statistical Inference in Psychological Research (5) QSR Little, Loftus Hypothesis testing: probabilistic and statistical basis. Development and application of statistical inference techniques employed in psychological research: confidence intervals, t-test, ANOVA, and correlation and regression. Nature and control of experimental and inferential error in research. Required for majors for

psychology BS degree. Prerequisite: minimum 2.0 grade in PSYCH 317. Offered: WSp.

PSYCH 322 Introduction to Drugs and Behavior (3) NW Diaz Basic concepts of drug action emphasizing the behavioral consequences of the intake of a variety of drugs. Prerequisite: PSYCH 202.

PSYCH 330 Laboratory in Animal Behavior (5) NW Brenowitz Experience with a variety of animal species and experimental procedures and instrumentation. Prerequisite: either minimum 2.0 grade in PSYCH 315, or 2.0 in PSYCH 317; 2.0 in PSYCH 209.

PSYCH 331 Laboratory in Human Performance (5) I&S Joslyn Selected aspects of human cognition, perception, and performance. Prerequisite: minimum 2.0 grade in PSYCH 209; either 2.0 in PSYCH 315, or 2.0 in PSYCH 317.

PSYCH 332 Neurobehavioral Lab (5) NW Diaz Explores the neural mechanisms of behavior via neuropharmacological and neuroanatomical approaches. Includes the ethics and regulation of animal experimentation. Prerequisite: either minimum 2.0 grade in PSYCH 315, or 2.0 in PSYCH 317.

PSYCH 333 Sensory and Perceptual Processes (5) NW Boynton, Buck, Covey, Fine An overview of each of the major senses with emphasis on the structure and function of sensory systems and the relation of the underlying biology to perceptual processes and behavior. Prerequisite: minimum 2.0 grade in PSYCH 202; 2.0 in PSYCH 209.

PSYCH 334 Laboratory in Social Psychology (5) I&S Cheryan Methodology of laboratory and field research on social behavior; data analysis and report writing; research projects. Prerequisite: minimum 2.0 grade in PSYCH 209; minimum 2.0 grade in either PSYCH 315 or PSYCH 317; minimum 2.0 grade in either PSYCH 245 or PSYCH 345.

PSYCH 345 Social Psychology (5) I&S Brown, Kaiser The scientific study of how people's thoughts, feelings, and actions influence, and are influenced by, other people. Prerequisite: minimum 2.0 grade in PSYCH 202; 2.0 in PSYCH 209.

PSYCH 350 Honors Research Seminar in Psychology (2-, max. 4) Bassok Presentations by professors and advanced students concerning the rationale, methodology, and progress of their research projects; assistance with research projects; preparation of junior paper. Four credits of PSYCH 350 required for all junior Honors candidates in conjunction with PSYCH 498 and PSYCH 499. Offered: AWSp.

PSYCH 355 Cognitive Psychology (5) I&S Joslyn, Miyamoto Current theory and research in perception, attention, memory and learning, attitudes, thinking and decision making, and language. For the student who wishes a survey or who intends additional work in any of the above content areas. Prerequisite: minimum 2.0 grade in PSYCH 202; 2.0 in PSYCH 209.

PSYCH 357 Psychobiology of Women (5) NW Kenney Physiological and psychological aspects of women's lives; determinants of biological sex; physiological and psychological events of puberty; menopause; sexuality; contraception, pregnancy, childbirth, and lactation; role of culture in determining psychological response to physiological events. Offered: jointly with GWSS 357.

PSYCH 380 Cross-Cultural Competence (4) I&S Facilitates development of multicultural competence; focuses on mental health/social service needs of ethnic and linguistic minorities, and developing personal/interpersonal skills to reduce barriers, enhance effective service provision to cross cultural groups, sexual minorities, and disabled people. Prerequisite: PSYCH 250; either PSYCH 305 or PSYCH 306.

PSYCH 399 Foreign Study (3-5, max. 10) Upper division psychology courses for which there are no direct University of Washington equivalents taken through the UW Study Abroad program.

PSYCH 400 Learning (5) I&S/NW Experimental research and basic theories primarily in animal learning. Prerequisite: minimum 2.0 grade in PSYCH 202.

PSYCH 402 Infant Behavior and Development (3/5) I&S *Meltzoff* Psychological development in the first two years of life. Basic and advanced techniques for assessing psychological development in infancy. Classic theories of human infancy and examination of a wide range of new experiments about infant behavior and development. Prerequisite: minimum 2.0 grade in either PSYCH 206, PSYCH 306 or PSYCH 414.

PSYCH 403 Motivation (5) I&S/NW Theory and research on reinforcement, punishment, frustration, preference, instinctual mechanisms, and other factors controlling animal behavior. Prerequisite: minimum 2.0 grade in PSYCH 202.

PSYCH 405 Advanced Personality: Theory and Research (5) I&S Intensive survey of theoretical concepts and detailed review of experimental methods and experiments in the field of personality. Prerequisite: PSYCH 303.

PSYCH 407 History of Psychology (5) I&S Historical and theoretical background of the basic assumptions of modern psychology, including such doctrines as behaviorism, determinism, and associationism and the scientists who developed them. Prerequisite: minimum 2.0 grade in PSYCH 209.

PSYCH 408 Mechanisms of Animal Behavior (4) NW *Beecher, Brenowitz, Sisneros* Comparative exploration of physiological and perceptual mechanisms that control behaviors necessary for survival and reproduction in animals. Model systems discussed include animal communication, mate choice, escape behavior, learning and memory, orientation, biological rhythms, foraging behavior. Prerequisite: either minimum 2.0 grade in BIOL 180, or 3.5 in PSYCH 200, or 2.0 in PSYCH 300. Offered: jointly with BIOL 408.

PSYCH 409 Sociobiology (5) NW Biological bases of social behavior, emphasizing evolution as a paradigm. Emphasizes how to think like an evolutionary biologist, especially with regard to interest conflict. Topics are individual versus group selection, kin selection, altruism, mating systems, sexual conflict, alternate reproductive strategies, and parent/offspring conflict. Prerequisite: either minimum grade of 2.0 in BIOL 180, 2.0 in B BIO 180, 2.0 in TESC 120, 3.5 in PSYCH 200, or 2.0 in PSYCH 300. Offered: jointly with BIOL 409.

PSYCH 410 Child and Adolescent Behavior Disorders (5) I&S Introduction to psychopathology in children and adolescents, and an overview of principal modes of intervention. Particularly for students interested in advanced work in clinical psychology, social work, or special education. Prerequisite: minimum 2.0 grade in PSYCH 305; either 2.0 in PSYCH 306 or 2.0 in PSYCH 202, 2.0 in PSYCH 206, and 2.0 in PSYCH 209.

PSYCH 411 Perceptual Development (5) I&S/NW *Meltzoff* Origins and development of perception in human infancy. Object, face, and speech perception; cross-modal relations between touch, vision, audition. Prerequisite: minimum 2.0 grade in either PSYCH 206, PSYCH 306, or PSYCH 414. Offered: jointly with SPHSC 411.

PSYCH 413 Adolescent Development (5) I&S Provides an overview of physical, cognitive, psychosocial, and emotional development of adolescents with an emphasis on understanding the context in which young people grow up. Explores cultural, environmental, and social influences on development. Prerequisite: minimum 2.0 grade in PSYCH 209; 2.0 in either PSYCH 315 or PSYCH 317.

PSYCH 414 Cognitive Development (5) I&S *Sommerville* Key theoretical and research approaches to cognitive development from infancy through adolescence. Sensorimotor development, language development, imitation, number concepts, logical reasoning, memory, cognition in adolescents, intelligence, and the role of biology, environment, and experience. Prerequisite: either minimum 2.0

grade in PSYCH 306, or 2.0 in both PSYCH 206 and PSYCH 209.

PSYCH 415 Personality Development of the Child (5) I&S *Repacholi* Socialization theory and research, infant attachment and social relationships, development of aggressive and altruistic behaviors, sex-role development, moral development, parent and adult influences. Applied issues in social development and policy. Prerequisite: minimum 2.0 grade in either PSYCH 206 or PSYCH 306.

PSYCH 416 Animal Communication (5) NW *Beecher, Brenowitz, Sisneros* Evolution and mechanisms of animal communication and related processes of perception, thinking, and social behavior. Prerequisite: either minimum 2.0 grade in BIOL 180, 3.5 in PSYCH 200, or 2.0 in PSYCH 300.

PSYCH 417 Human Behavior as a Natural Science (5) I&S/NW Evolution of human social behavior and the adaptive significance of communication systems from a sociobiological and anthropological perspective. Prerequisite: either PSYCH 200, PSYCH 300, BIO A 201, or BIOL 180.

PSYCH 418 Primate Social Behavior (5) NW Social behavior, ecology, and group structure of monkeys and apes from an evolutionary, sociobiological, and anthropological perspective. Prerequisite: either minimum 3.5 grade in PSYCH 200, 2.0 in PSYCH 300, 2.0 in BIO A 201, or 2.0 in BIOL 180.

PSYCH 419 Behavioral Studies of Zoo Animals (5, max. 10) NW Observational studies of behavior of zoo animals to expand basic knowledge of animal behavior, conservation of endangered species, and research methodology with discussions and tours focusing on zoo philosophy and operations. Offered in cooperation with Woodland Park Zoo. Prerequisite: either minimum 2.0 grade in BIOL 180, 3.5 in PSYCH 200, or 2.0 in PSYCH 300.

PSYCH 420 Drugs and Behavior (3) NW *Diaz* Animal and clinical research on the behavioral consequences of drug intake. Prerequisite: PSYCH 322.

PSYCH 421 Neural Basis of Behavior (5) NW *Diaz* Anatomical and physiological principles and resultant behavior involved in the integrative action of the nervous system. Prerequisite: minimum 2.0 grade in PSYCH 202.

PSYCH 423 Sensory Basis of Behavior (5) NW *Olavarria* Study of sensory mechanisms as a way to understand behavior. Basic properties of neurons, anatomy, and physiology of sensory systems, with some emphasis on the visual system. Prerequisite: minimum 2.0 grade in either PSYCH 202 or PSYCH 333.

PSYCH 425 Surgical and Histological Techniques (5) NW Practicum in basic and advanced surgical and histological techniques used in psychophysiological experimentation. Prerequisite: PSYCH 421.

PSYCH 426 Neurobiology of Learning and Memory (4) NW *Mizumori* Theory and research on how animals learn and remember, including basic concepts of brain plasticity, how brain areas and neurons adapt to changes in experiences throughout the lifespan, and cellular and structural substrates of a "memory." Prerequisite: minimum 2.0 grade in either PSYCH 202, PSYCH 322, PSYCH 333, PSYCH 421, PSYCH 422, or PSYCH 423.

PSYCH 427 Behavioral Endocrinology (5) NW The endocrine system and how its secretions influence and are influenced by behavior; relationships between the nervous and endocrine systems. Prerequisite: PSYCH 421.

PSYCH 428 Human Motor Control and Learning (5) I&S/NW Current theory and research in human motor performance and skill acquisition. Prerequisite: minimum 2.0 grade in PSYCH 209; 2.0 in PSYCH 202.

PSYCH 429 Brain Anatomy for the Behavioral Scientist (1) NW *Diaz* Detailed review of the neuroanatomical features of the sheep brain with laboratory demonstrations. Prerequisite: PSYCH 421 which may be taken concurrently.

PSYCH 430 Development of Brain Connections (4) NW *Olavarria* Analysis of innate and environmental factors that

play a role in the development of brain connections. Critical review of current literature on the various strategies used by neurons to find their appropriate targets. Prerequisite: minimum 2.0 grade in either PSYCH 202, PSYCH 333, PSYCH 421, PSYCH 422, or PSYCH 423.

PSYCH 432 Visual Neuroscience (4) I&S/NW Surveys current facts/theories about how our brains interpret the images formed by our eyes to create a presentation of the visual environment. Topics include retinal processing, 3-D vision; color, form, motion, and object perception; and visual illusions. Prerequisite: minimum 2.0 grade in either PSYCH 333 or PSYCH 355.

PSYCH 433 Regulatory Behavior (4) NW *Kenney* Neural and endocrine mechanisms in the control of food and water intake and the regulation of body weight and fluid balance. Prerequisite: either PSYCH 421 or PSYCH 427.

PSYCH 435 Human Color Vision (5) I&S/NW *Buck* Discusses how color does not exist in the physical environment but is instead a creation of our brains. Explores perceptual, physiological, developmental, evolutionary, genetic, and cultural aspects of human color vision, including its role in language, culture, and art. Prerequisite: PSYCH 202; PSYCH 209.

PSYCH 436 Developmental Aspects of Sport Competition (4) I&S *Smoll* Biophysical and psychosocial influences of sport participation on growth and development of children and youth. Competition readiness, injuries, stress, aggression, roles and responsibilities of parents and coaches. Prerequisite: minimum 2.0 grade in PSYCH 209.

PSYCH 437 Motor Development (4) NW *Smoll* Analysis of motor development from prenatal origins through adolescence with emphasis on relations between biophysical and psychosocial development of children and youth. Prerequisite: minimum 2.0 grade in PSYCH 209.

PSYCH 438 Social Psychology of Sport (4) I&S *Smith, Smoll* Reciprocal effects of interpersonal and group influence processes, e.g., social facilitation, behavior modification, observational learning, individual versus group performance, group cohesion, leadership, aggression. Prerequisite: minimum 2.0 grade in PSYCH 101; 2.0 in PSYCH 202; 2.0 in PSYCH 209.

PSYCH 441 Perceptual Processes (5) I&S/NW Theory and findings in perception with a focus on visual perception in humans. Discrimination and constancy for simple judgments, segregation and identification of visual objects, and specific areas of investigation such as reading and computer vision. Prerequisite: minimum 2.0 grade in PSYCH 333.

PSYCH 443 Motivational Theories in Social Psychology (5) I&S Theories of motivation in social psychology. Emphasis on how motivation and cognition mutually influence each other to produce behavior. Explores such topics as persuasion, goal pursuit, self-regulation, achievement, and social comparison. Prerequisite: minimum 2.0 grade in PSYCH 345.

PSYCH 445 Theories of Social Psychology (5) I&S *Brown* Evaluation of the major theories of human social behavior supported by the empirical literature; theories of social cognition and thought; major theories of social interaction, group processes, and social learning. Prerequisite: PSYCH 345.

PSYCH 446 Personality Assessment (3) I&S *Smith* Measurement of personality variables in personality research, social psychology, and clinical psychology. Theoretical conceptions underlying various clinical and experimental scales and an assessment of their construct validity and behavioral correlates. Prerequisite: minimum 2.0 grade in PSYCH 303; 2.0 in PSYCH 315; 2.0 in PSYCH 317.

PSYCH 447 Psychology of Language (4) VLPA/I&S *Osterhout* Introduction to the study of language, including language structure, speech perception, language acquisition, psychological processes underlying comprehension and production of language, the relation between brain and language, and the question of the species-specificity of hu-

man language. Prerequisite: either minimum 2.0 grade in PSYCH 209, minimum 2.0 grade in LING 200, or LING 201. Offered: jointly with LING 447.

PSYCH 448 Seminar in Psychology (1-15, max. 15) Selected research topics of contemporary interest. Quarterly listings of specific offerings are available at departmental advising office.

PSYCH 450 Honors Research Seminar in Psychology (2-, max. 4) Bassok Senior thesis research; preparation of senior thesis; oral presentation of research. Four credits of PSYCH 450 required for all senior Honors candidates in conjunction with PSYCH 498 and PSYCH 499. Offered: AWSp.

PSYCH 451 Health Psychology (5) I&S/NW Overview of the psychological and behavioral factors in health and disease. Includes research on both psychological causes and treatments. Topics include stress, risky behaviors, patient-provider interactions, pain, behavioral/medical treatments, and lifestyle interventions. Prerequisite: minimum 2.0 grade in PSYCH 202; 2.0 in PSYCH 209; 2.0 in either PSYCH 303, or PSYCH 345.

PSYCH 452 Psychology of the Self-Concept (4) I&S Brown Examines psychological theory and research on the role of the self-concept in regulating behavior. Topics include the development of the self-concept; self-awareness; and self-esteem maintenance. Prerequisite: minimum 2.0 grade in either PSYCH 245 or PSYCH 345.

PSYCH 454 Personality and Social Influence (4) I&S Shoda Survey of various theories and research for analyzing person-situation interactions - how the qualities of persons and situations combine to generate thoughts, feelings, and behaviors of a person in a given social situation. Prerequisite: PSYCH 209; either PSYCH 203, PSYCH 245, PSYCH 303, or PSYCH 345.

PSYCH 456 Social and Moral Development (5) I&S Kahn Theoretical approaches toward explaining children's social and moral development, including those that are nativistic, sociobiological, behavioristic, psychoanalytic, and constructivist. Use of theory to investigate applied problems related to parenting, education, peer relationships, authority, sexuality, culture, ecology, and technology. Prerequisite: either PSYCH 206 or PSYCH 306.

PSYCH 457 Language Development (5) VLPA/I&S First-language acquisition and use by children. Emphasis on theoretical issues and research techniques. Prerequisite: minimum 2.0 grade in either PSYCH 206, PSYCH 306, LING 200, or LING 400. Offered: jointly with LING 457.

PSYCH 458 Behavioral Genetics (4) NW Role of genetics in determining variation in human and animal behavior and in regulating behavioral development. Techniques for quantifying genetic variation, behavioral effects, and gene expression. Prerequisite: either minimum 3.5 grade in PSYCH 200, 2.0 in PSYCH 300, or 2.0 in BIOL 180. Offered: jointly with BIOL 458.

PSYCH 459 Evolutionary Psychology (4) I&S/NW Barash, Beecher Explores human behavior from the perspective of biological evolution. Covers core issues such as cooperation, communication, aggression, mating, reproduction, and parental and family interactions, as well as specialized applications within psychology such as psychopathology. Encourages a critical, skeptical examination of this new field. Prerequisite: either minimum 3.5 grade in PSYCH 200 or minimum 2.0 grade in PSYCH 300.

PSYCH 460 Cognitive Neuroscience (4) NW Murray, Osterhout Discussion of neural systems underlying cognitive behavior with particular focus on breakdown of cognition following brain damage. Topics include object and space perception, language, voluntary movement, attention, and memory. Examination of contributions from related areas of neuroimaging, visual perception, linguistics, physiology, and neuroscience. Prerequisite: minimum 2.0 grade in either PSYCH 333, PSYCH 355, or PSYCH 421.

PSYCH 461 Asian American Psychology (5) I&S Cheryan Psychological research on Asian American individuals and the community, with emphasis on social psychological research. Topics include the model minority myth, stereotypes of unassimilation, gender and sexuality, and relationships with other groups. Prerequisite: minimum 2.0 grade in either PSYCH 303, PSYCH 305, PSYCH 306, PSYCH 345, or PSYCH 355.

PSYCH 462 Human Memory (5) I&S Joslyn Research and theory in key areas of memory. Issues covered include information processing theory, the link between memory processes and their biological underpinnings, autobiographical memory, implicit memory, and the effect of emotion on memory. Prerequisite: minimum 2.0 grade in PSYCH 209; recommended: PSYCH 355.

PSYCH 463 Implicit and Unconscious Cognition (3) I&S/NW Greenwald Overview of method, theory, and findings concerning cognitive processes operating outside attentional focus or without introspective awareness. Considers relevance to basic phenomena of social, cognitive, and clinical psychology. Prerequisite: minimum 2.0 grade in either PSYCH 315 or PSYCH 317; minimum 2.0 grade in either PSYCH 303, PSYCH 305, PSYCH 333, PSYCH 345, or PSYCH 355.

PSYCH 465 Intelligence (5) I&S Analysis of individual differences in cognition. Includes description/use of psychometric ("intelligence test") models, test scores' relationship to academic and non-academic performance, information processing and biological models of intelligence (including genetic models). Discussion of male-female and demographic group differences in cognition. Prerequisite: either PSYCH 315 or PSYCH 317; PSYCH 355.

PSYCH 466 Psychology of Judgment and Decision Making (5) I&S Miyamoto Human information processing in judgment and decision making, especially the interface between cognitive theories and normative and prescriptive theories of decision making. Prerequisite: minimum 2.0 grade in either PSYCH 315 or PSYCH 317; either PSYCH 331, PSYCH 355, or PSYCH 361.

PSYCH 469 Psychology of Reasoning (4) I&S Bassok Cognitive processes in human learning, problem solving, deductive and inductive reasoning. Prerequisite: minimum 2.0 grade in PSYCH 209.

PSYCH 470 Psychology and Music (5) VLPA/I&S Covey Introduction to the scientific study of musical behavior. An overview of current topics in the psychology of music from the areas of musical perception and cognition, musical development, music therapy, musical performance, and composition. Includes psychoacoustical and neuropsychological foundations, research methods, and some basic material in music theory. Prerequisite: minimum 2.0 grade in either PSYCH 202 or NBIO 302.

PSYCH 471 Cognition in the Real World (4-5, max. 10) I&S Joslyn Examines cognitive issues in applied settings, such as the workplace and education. Topics include such issues as attention, expertise, problem solving, decision-making, human error, automation, navigation, and individual differences. Prerequisite: minimum 2.0 grade in PSYCH 209.

PSYCH 472 Human Factors Psychology (4) I&S Considers human performance factors in the design of tools/equipment, tasks/jobs, and work and living environments. Emphasizes the importance of human perception, memory, attention, motor control, and social context for understanding ways to optimize the relationship between people and technology. Prerequisite: minimum 2.0 grade in PSYCH 202; minimum 2.0 grade in PSYCH 209.

PSYCH 477 Psychology of Peace (5) I&S Barash Examination of the psychological aspects of peace in the modern world. Topics include theories of individual aggressiveness and violence, leadership personalities, crisis decision making, nuclear psychology, images of the enemy, and psycho-

logical opportunities and obstacles to the establishment of a peaceful society.

PSYCH 478 Cultural Psychology (4) I&S Surveys cultural influences on cognitive, emotion, morality, self-concept, and mental health, from a multicultural perspective. Prerequisite: minimum 2.0 grade in PSYCH 202; minimum 2.0 grade in PSYCH 209. Offered: A.

PSYCH 479 Advanced Human Sexuality (5) I&S McDermott Intensive reading on current issues relevant to the physiological, psychological, cultural aspects of human sexuality. Prerequisite: minimum 2.0 grade in PSYCH 210.

PSYCH 480 Ideas of Human Nature (5) I&S Barash Reviews various approaches to the nature of human nature, including ideas from ancient philosophy, theories of the soul, empiricism, idealism, conditioning, social constructions, concepts of Freud, Marx, the existentialists, and neo-Darwinism. Prerequisite: PSYCH 101.

PSYCH 481 Seminar in Advanced Quantitative Methods (3) Little Examines the role of statistical methods in psychological research. Issues and controversies surrounding null hypothesis significance testing. Review of selected alternative statistical methods in psychology. Prerequisite: minimum 2.0 grade in either PSYCH 315 or PSYCH 318.

PSYCH 482 Advanced Research Methods for Behavioral Psychology (4) QSR Greenwald, Shoda Develops skills of collecting and analyzing behavioral research data, communicating the results orally and in writing, and expressing perspectives on issues of scientific method and practice. Prerequisite: either PSYCH 315 or PSYCH 317; either PSYCH 330, PSYCH 331, PSYCH 332, or PSYCH 350. Offered: Sp.

PSYCH 483 Writing in Psychology (5) Covey, Joslyn Helps students refine scientific writing skills. Students practice conducting focused literature searches and writing literature reviews, preparing empirical data for presentations, organizing and writing research reports, and writing about psychology for a lay audience. Prerequisite: minimum 2.0 grade in PSYCH 202; minimum 2.0 grade in PSYCH 209; minimum 2.0 grade in either PSYCH 300, PSYCH 303, PSYCH 305, PSYCH 306, PSYCH 333, PSYCH 345, or PSYCH 355.

PSYCH 485 Primate Conservation Biology and Behavior (5) NW Kyes Examines the principles and concepts of conservation biology as they apply to the nonhuman primates with special attention to theoretical advances, conservation strategies, and management practices central to primate conservation. Prerequisite: either minimum 3.5 grade in PSYCH 200 or 2.0 in PSYCH 300 or 2.0 in BIO A 201.

PSYCH 486 Animal Mind (4) NW Beecher Explores the cognitive capacities of animals. Focuses on the classical question, first clearly posed by Darwin, of how similar are the cognitive processes underlying behavior in humans and animals. Encourages a critical, skeptical examination of this new field. Prerequisite: minimum 3.5 grade in PSYCH 200 or 2.0 in PSYCH 300.

PSYCH 487 Advanced Psychobiology of Women (5) I&S/NW Kenney Intensive reading on current issues relevant to women's psychology and physiology. Prerequisite: minimum 2.0 grade in PSYCH 357/ GWSS 357. Offered: jointly with GWSS 487; W.

PSYCH 488 Stress and Coping (4) I&S/NW Reviews theories and research concerning stress and its roles in behavior, personality, development, health, and interpersonal relationships. Coping analyzed as a factor in the way people respond to stressful circumstances. Prerequisite: minimum 2.0 grade in PSYCH 202; 2.0 in PSYCH 209.

PSYCH 489 Clinical Psychology (3) I&S Basic issues, methods, and research: professional issues, psychological assessment, and approaches to psychotherapy and behavioral change. Prerequisite: minimum 2.0 grade in PSYCH 305.

PSYCH 490 Stress Management (3) I&S/NW Nature of stress. Physiological responses to stress and relaxation. Techniques of stress management with training in relaxation, biofeedback, meditation, cognitive restructuring, exercise, nutrition, interpersonal communication skills, and time management. Prerequisite: PSYCH 101.

PSYCH 491 Special Topics in Child Development, Learning, and Mental Health (1-5, max. 30) I&S Selected topics of contemporary interest in child development, learning, and mental health.

PSYCH 494 Field Study in Animal Behavior (2-3, max. 9) Kyes Field experience in areas relating to animal behavior through participation in seminar discussion and field exercises and training at foreign and domestic field study sites.

PSYCH 496 Undergraduate Teaching Experience in Psychology (2-3, max. 6) Students are trained as assistants in quiz sections or as supplemental tutors for undergraduate psychology courses. Designed especially for students planning graduate work or education certification. An overall maximum of 18 credits in PSYCH 496, PSYCH 497, PSYCH 498, and PSYCH 499 may apply toward a baccalaureate degree. Credit/no-credit only.

PSYCH 497 Undergraduate Fieldwork (2-5, max. 10) Individual consultation with faculty member and supervised practicum experience in a broad range of community settings and agencies dealing with psychological problems. An overall maximum of 18 credits in PSYCH 496, PSYCH 497, PSYCH 498, and PSYCH 499 may apply toward a baccalaureate degree.

PSYCH 498 Directed Reading in Psychology (1-3, max. 18) Readings in special interest areas under supervision of departmental faculty. Discussion of reading in conference with the instructor. An overall maximum of 18 credits in PSYCH 496, PSYCH 497, PSYCH 498, and PSYCH 499 may apply toward a baccalaureate degree.

PSYCH 499 Undergraduate Research (1-3, max. 18) Design and completion of individual research projects. An overall maximum of 18 credits in PSYCH 496, PSYCH 497, PSYCH 498, and PSYCH 499 may apply toward a baccalaureate degree.

PSYCH 500 Proseminar in Psychology (1, max. 10) Greenwald Presentations on professionally and practically useful topics by guest faculty presenters designed for first-year and second-year graduate students. Prerequisite: graduate standing in psychology, or permission of instructor. Credit/no-credit only.

PSYCH 502 Core Concepts in Animal Behavior (3) Barash, Beecher, Sisneros Reading, reports, and discussion on animal behavior, with a focus on topics that lie at the interface of animal behavior, evolutionary science, neurobiology, and psychology. Includes social organization, mating systems, foraging, learning, communication, and agonistic behavior. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 503 Core Concepts in Behavior Genetics (4) Shoda Overview of current approaches to genetic analysis in psychology. Role of genetics in behavioral variation, and in regulating behavioral development. Techniques for quantifying genetic variation, behavioral effects of genes, and patterns of gene expression. Genetic effects on major behavioral differences. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 504 Core Concepts in Behavioral Neuroscience (3) Buck, Covey, Diaz, Kim, Mizumori, Olavarria Historical and contemporary perspectives in behavioral neuroscience. Current methodologies and research strategies. May include sensory processing, genetics, behavioral neuroendocrinology, developmental neural plasticity, neurobiology of learning and memory, lifespan perspectives on behavioral neurobiology, and psychopharmacology. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 505 Core Concepts in Neuroethology (3) Sisneros Reviews the current topics and approaches to the study of the neurobiological basis of natural behaviors or "neuroethology." Explores core concepts in the field of neuroethology and examines the role of the nervous system and the underlying neural circuits adapted for species-typical behaviors. Offered: A/WSp.

PSYCH 506 Core Concepts in Cognitive Neuroscience (3) Murray, Osterhout Combines psychological models of information processing with research techniques in the biomedical sciences. Topics in vision, attention, memory, motor behavior, and language illustrate this integrative approach. Research methods include behavioral, single unit, lesion, and neuro-imaging techniques. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 507 Core Concepts in Cognitive Psychology (3) Bassok, Miyamoto Survey of the major topics in human cognition. Discussion of memory, concepts and categories, language, decision-making, and problem solving. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 508 Core Concepts in Perception (3) Loftus Current topics in perception, psychophysics, sensory memory, pattern recognition, letter and word perception, and visual masking. Prerequisite: graduate standing in psychology, or permission of instructor. Offered: Sp.

PSYCH 510 Core Concepts in Social Psychology (4) Cheryan, Kaiser, Shoda An overview of contemporary theories and research in social psychology, focusing on introducing graduate students to the field as practitioners of social psychological research. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 511 Core Concepts in Personality (3) Shoda, Smith Review of personality research. Roles of cognitive, affective, motivational, and psychodynamic processes. Critical evaluation of current personality, its antecedents, and its influences over behavior. Attention to role of personality variables in social relationships. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 513 Core Concepts in Biological Basis of Development (4) Embryological, genetic, physiological, and evolutionary perspectives of human development; biological development in infancy; sensory development and its influence on the development of perception; primate models for human development. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 514 Core Concepts in Early Cognitive and Linguistic Development (4) Meltzoff, Sommerville Origins and early development of thought and language. Piagetian theory and modern-day revisions. In-depth examination of historical and philosophical bases for current empirical research. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 515 Core Concepts in Personality and Social Development (4) Theories and empirical literature in personality and social development throughout infancy, childhood. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 517 Core Concepts in Systems of Psychotherapy (3) George Theory and research of major systems of psychotherapy, including the psychodynamic, behavioral, cognitive, and family systems approaches as an introduction to subsequent practice in clinical psychology. Required for all graduate students majoring in clinical psychology. Prerequisite: graduate standing in psychology, or permission of instructor. Offered: A.

PSYCH 518 Core Concepts in Behavior Disorders (5) Zoellner Major types of behavior disorders, with emphasis on clinical manifestations, relevant research, and theoretical perspectives. Required for all graduate students majoring in clinical psychology. Prerequisite: graduate standing in psychology, or permission of instructor. Offered: W.

PSYCH 519 Core Concepts in Behavior Change (5) Kohlenberg Behavioral theory and behavioral approaches to treatment. Prerequisite: PSYCH 518 and permission of instructor. Offered: Sp.

PSYCH 522 Laboratory in Statistical Computation I (2) Techniques of computation using statistical software on personal computers. Organization of data files, transformations of variables, graphical representations of data, descriptive statistics, elementary inferential statistical analyses. Prerequisite: concurrent enrollment in PSYCH 524, or permission of instructor. Offered: A.

PSYCH 523 Laboratory in Statistical Computation II (2) Techniques of statistical computation using statistical software on personal computers and mainframe computers. Multiple regression, analysis of variance and covariance. Planned and post hoc comparisons and confidence intervals. Data analytic diagnostics for violations of regression assumptions. Prerequisite: PSYCH 522 and PSYCH 524, concurrent enrollment in PSYCH 525, or permission of instructor. Offered: W.

PSYCH 524 Introduction to Statistics and Data Analysis (4) Basic concepts of statistical theory and methods of data analysis. Emphasis on the integration of statistical theory, statistical computation, and psychological research methods. Required of all first-year graduate students in psychology. Prerequisite: concurrent enrollment in PSYCH 522, or permission of instructor. Offered: A.

PSYCH 525 Linear Models and Data Analysis (4) Analysis of data in the behavioral sciences. Required of all first-year graduate majors. Prerequisite: PSYCH 522, PSYCH 524; concurrent registration in PSYCH 523, or permission of instructor. Offered: W.

PSYCH 526 Multivariate Statistics (4) An introduction to statistical modeling; interactive data analyses; use of regression, ANOVA, logistic regression, and log-linear models in explanatory studies. Prerequisite: PSYCH 525.

PSYCH 527 Mathematical Modeling for Psychology and the Neurosciences (3) Introduces a collection of mathematical models increasingly important to research in psychology and neuroscience, including random walks, differential equations, linear systems theory, Fourier analysis, nonlinear systems, and neural modeling. Topics illustrated by examples from recent literature. Prerequisite: undergraduate statistics.

PSYCH 528 Practical Methods for Behavioral Research (4, max. 8) Greenwald, Shoda Examination of methodological, practical, and communication problems associated with research on human behavior. Topics include: selecting research problems, use of theory, types of validity, common sense about statistics, when to replicate, dealing with unpredicted results, strategies for presentation and publication. Offered: Sp.

PSYCH 529 Advanced Research Methods (5) Surveys advanced clinical research methods not covered in the required statistics sequence. Examples include structural equation modeling, hierarchical linear modeling, growth curve modeling, and taxometric analyses. Hands-on experience gained through weekly assignments using each method. Prerequisite: PSYCH 525.

PSYCH 530 Introduction to Latent Variables (4) Greenwald Analyses techniques to assess effects of latent variables in presence of error in observed data. Provides experience with statistical tools for confirmatory structural equation modeling and testing of hypotheses concerning causal and other relations among latent variable. Prerequisite: PSYCH 525, or permission of instructor.

PSYCH 531 Research Methods in Clinical and Community Psychology (4) Lengua Addresses issues concerning the design and implementation of research in clinical and community psychology. Topics include validity; reliability; experimental, quasi-, and non-experimental designs; causal inference; interpretation of data; and research ethics. Provides students with tools to evaluate research, de-

velop hypotheses, and design rigorous empirical studies. Offered: A.

PSYCH 532 Single Subject Design and Research (3) *Kohlenberg* Single subject designs (reversal, multiple baseline, changing criterion) and their application to clinical cases. Prerequisite: graduate major standing in clinical psychology, or permission of instructor. Offered: W.

PSYCH 535 Scientific Writing in Psychology (5, max. 10) Addresses issues in scientific writing and publishing; laboratories assist with writing, and provide feedback on drafts of articles throughout the writing process. Students write a journal article to submit for publication. Other writing projects are also possible with instructor's permission. Credit/no-credit only.

PSYCH 536 Grant Preparation in Psychology (3, max. 6) *Mizumori* Prepare and submit an application for a major national fellowship. Joint registration in PSYCH 598 with faculty adviser is required. Prerequisite: graduate standing in psychology and permission of instructor. Credit/no-credit only.

PSYCH 537 Teaching of Psychology (3) *Passer* Examines issues concerning the teaching of psychology, including educational goals, course development, instructional methods, TA-student and TA-faculty relations, grading, student diversity, and problem situations. Assignments designed to enhance students' organizational, presentational, and problem-solving skills. Prerequisite: graduate standing in the Department of Psychology. Credit/no-credit only.

PSYCH 538 Interactive Software for Psychological Research (4) *Boynton, Fine, Loftus* Introduction to a variety of computing and programming skills with the goal of teaching how to design, program, and analyze experiments. Topics include principles of programming, the programming environment, presentation software, and data collection, management, and analysis. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 540 Advances in Psychology (3-5, max. 30) Intensive readings from the current literature on an emerging topic or theoretical perspective in psychology. Student presentations and discussion. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 541 Advances in Animal Behavior (3-5, max. 30) *Barash, Beecher, Brenowitz, Kyes, Sisneros* Intensive readings from the current literature on an emerging topic or theoretical perspective in animal behavior. Student presentations and discussion. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 542 Advances in Behavioral Neuroscience (3-5, max. 30) *Buck, Covey, Diaz, Kim, Mizumori, Olavarria* Intensive readings from the current literature on an emerging topic or theoretical perspective in behavioral neuroscience. Student presentations and discussion. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 543 Advances in Child Clinical Psychology (3-5, max. 30) *King, Lengua* Intensive readings from the current literature on an emerging topic or theoretical perspective in child clinical psychology. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 544 Advances in Clinical Psychology (3-5, max. 30) *George, Kohlenberg, Linehan, Smith, Zoellner* Intensive readings from the current literature on an emerging topic or theoretical perspective in clinical psychology. Student presentations and discussion. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 545 Advances in Cognition/Perception (3-5, max. 30) *Loftus* Intensive readings from the current literature on an emerging topic or theoretical perspective in cognition/perception. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 546 Advances in Developmental Psychology (1-5, max. 30) *Kahn, Meltzoff, Repacholi, Smoll, Sommerville* Intensive readings from the current literature on an emerging

topic or theoretical perspective in developmental psychology. Student presentations and discussion. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 547 Advances in Social/Personality (3-5, max. 30) *Cheryan, Greenwald, Kaiser, Shoda* Intensive readings from the current literature on an emerging topic or theoretical perspective in social psychology/personality. Student presentations and discussion. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 548 Advances in Quantitative Psychology (3-5, max. 30) *Flaherty* Intensive readings from the current literature on an emerging topic or theoretical perspective in quantitative psychology. Student presentations and discussion. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 549 Seminar in Physiological Psychology (2) *Diaz* Prerequisite: permission of instructor.

PSYCH 550 Seminar in Psychology (1-2, max. 30) Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 551 Seminar in Animal Behavior (1-2, max. 30) *Barash, Beecher, Brenowitz, Sisneros* Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 552 Seminar in Behavioral Neuroscience (1-2, max. 30) *Buck, Covey, Diaz, Kenney, Mizumori, Olavarria* Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 553 Seminar in Child Clinical Psychology (1-2, max. 30) *King, Lengua* Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 554 Seminar in Clinical Psychology (1-2, max. 30) *George, Kohlenberg, Linehan, Simoni, Smith, Zoellner* Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 555 Seminar in Cognition/Perception (1-2, max. 30) *Bassok, Boynton, Buck, Fine, Kerr, Loftus, Murray* Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 556 Seminar in Developmental Psychology (1-2, max. 30) *Meltzoff, Repacholi, Smoll* Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 557 Seminar in Social/Personality (1-2, max. 30) *Brown, Cheryan, Greenwald, Kaiser, Leu, Shoda* Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 558 Seminar in Quantitative Psychology (1-2, max. 30) *Flaherty, Little, Miyamoto* Weekly meetings for discussion of current topics. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 560 Research Strategies (1-2, max. 30) Group discussions of problems and continuing strategies for ongoing and future research projects. Prerequisite: graduate standing in psychology; others by permission of department.

PSYCH 561 Current Trends in Psychology (*, max. 30) Prerequisite: permission of instructor. Offered: AWSpS.

PSYCH 562 Evolutionary Psychology of Gender, Mating, and Reproduction (3) *Barash, Beecher, Sisneros* Reviews evidence for biological factors influencing human mating and reproductive behavior, through application of concepts and theory from animal behavior, behavioral genetics, and evolutionary biology. Offered: W.

PSYCH 563 Developmental Psychology and the Human Relationship with Nature (4) *Kahn* Theories of development used to investigate the ontogenesis of the human relationship with nature. An emphasis on social cognition, children's environmental moral reasoning, the effects of technology in children's lives, and evolutionary theory. Offered: W.

PSYCH 564 Advanced Attitude Theory (5) *Greenwald* Theoretical, methodological, and empirical work on the concept of attitude and its practical applications. Topics include: definition of attitude, measurement of attitudes, information-processing theories, functional theories, cognitive structure theories, the self as attitude object, unconscious attitudinal processes. Prerequisite: PSYCH 445; PSYCH 525 or equivalent; or permission of instructor.

PSYCH 565 Quantifying Brain Analysis (3) Covers concepts and applications of statistically unbiased methods for quantifying brain structure. Hands-on learning and application of concepts, sampling strategies and calculations for unbiased stereological measure of the size and number of various brain components.

PSYCH 566 Neural Correlates of Perceptual Cognition (3) *Olavarria* Contribution of sensory systems to perceptual capabilities. Critical review of literature on the neural correlates of abilities such as sensory discrimination, subjective perception, attention, imagery, object and face recognition, and spatial behavior. Some sensory disabilities reviewed. Offered: W.

PSYCH 567 Higher Order Cognition (3) *Bassok* Survey of research on higher-order cognition with an emphasis on theoretical accounts of knowledge representation. Topics include problem solving, inductive and deductive reasoning, hypothesis testing, causal inferences, similarity judgments, and categorization.

PSYCH 568 Cognitive Approaches to Human Memory (3) Examination of current topics in human memory from the perspective of cognitive psychology. Offered: Sp.

PSYCH 570 Child Clinical Psychology (4) Issues and content of child clinical psychology, promotion of student's beginning work in research. Prerequisite: graduate major or minor standing in child-clinical psychology.

PSYCH 571 Child Psychopathology (5) Broad survey of major categories of child and adolescent disorders. Emphasis on scientific, empirical approach to description, classification, and research literature on these disorders. Required for all graduate students majoring in child clinical psychology. Prerequisite: graduate standing in psychology, or permission of instructor.

PSYCH 572 Approaches to Child Treatment (4) Major approaches to child psychotherapy, including specific applications, issues in treatment, and research. Prerequisite: graduate major standing in child-clinical psychology, or permission of instructor. Offered: Sp.

PSYCH 573 Psychological Assessment of Children (5) Assessment techniques appropriate to children, including those for infants, special problems of preschool and school-age children; projective tests, family interviews, and target observational assessment; training in administration of selected techniques. Prerequisite: PSYCH 576 and permission of instructor.

PSYCH 574 Community Psychology (4) Overview of key issues and concepts in the field of community psychology. History of field and overview of different models used to conceptualize system-level mental health issues and delivery systems. Emphasizes theory and research rather than intervention. Prerequisite: psychology graduate student, or permission of instructor.

PSYCH 575 Anxiety Disorders (3) *Zoellner* General topics related to primary anxiety disorders (panic, OCD, GAD, posttraumatic stress disorder, and specific phobias), including diagnosis, theory, and treatment.

PSYCH 576 Assessment of Intelligence (5) *King, Lengua* Current theory and research on intelligence and intelligence testing; training in administration, scoring, and interpretation of major intelligence tests; ethical issues in assessment. Prerequisite: graduate major standing in child-clinical or clinical psychology, or graduate minor standing in child-clinical psychology. Offered: Sp.

PSYCH 577 Psychological Assessment (3) Provides a foundation in the theory underlying adult assessment as well as training in specific adult assessment techniques. Focuses on behavioral and cognitive assessment. Prerequisite: permission of instructor.

PSYCH 578 Approaches to Psychological Assessment (4) Problem-solving approach to psychological assessment; review of psychological tests and procedures and presentation of approaches to their clinical interpretation and use. Required for all graduate students majoring in clinical and child-clinical psychology. Prerequisite: graduate major standing in clinical psychology. Offered: Sp.

PSYCH 579 Dialectical Behavior Therapy Skills Group Training (3) *Linehan* In-depth learning of skills training component of dialectical behavior therapy, an empirically supported treatment approach for high risk clinical populations. Topics include skills in mindfulness, emotion regulation, interpersonal effectiveness and distress tolerance. Credit/no-credit only. Offered: A.

PSYCH 580 Minority Mental Health (3) *Barrett, George, Simoni* Surveys topics on mental health and treatment of racial and ethnic minorities. Theory emphases include: models addressing ethnic identity, cross-cultural differences, models of culturally sensitive intervention. Practice emphases include unique psychotherapy strategies for: African-, Asian-, and Latino-Americans, and American Indians. Prerequisite: graduate clinical major standing in psychology, or permission of instructor.

PSYCH 581 Cross-Cultural Competency I (2) *George* Focuses on development of multicultural competence in the provision of psychological services to meet APA guidelines for ethnic, linguistic, and culturally diverse populations. Students address personal development, increase their knowledge of diverse groups, and study effective models of intervention in working with clients of diverse backgrounds. Prerequisite: PSYCH 580.

PSYCH 582 Cross-Cultural Competency II (2) *George* Third in the graduate multicultural-competence sequence. Focuses on American ethnic minorities, multiracial children and families, social action, and organizational development. Prerequisite: PSYCH 581.

PSYCH 583 Introduction to Dialectical Behavioral Therapy (3) *Linehan* Introduces dialectical behavioral therapy, an empirically supported treatment approach for high risk clinical populations. Topics include mindfulness, dialectics, validation, behavioral therapy, and case conceptualization. Credit/no-credit only. Offered: A.

PSYCH 584 Behavioral Methods: Clinical Interventions (3) *Linehan* Provides students with basic skills required for competent practice of cognitive and behavioral therapies. Topics include behavioral skills training, cognitive restructuring, contingency management, and exposure-based procedures. Prerequisite: second year of graduate clinical psychology, social work, psychosocial nursing, or psychiatric residency.

PSYCH 585 Methods in Suicide and Crisis Intervention (3) *Linehan* Provides a foundation for risk assessment and crisis intervention with suicidal individuals. Addresses risk factors for suicide across the age range, and methods for both behavioral interventions and crisis management with suicidal individuals. Also covers ethical issues. Offered: Sp.

PSYCH 586 Clinical Personality Assessment (3) *Smith* Use of objective personality inventories in the description of normal and abnormal personality and use of such information in case conceptualization and treatment planning. Minnesota Multiphasic Personality Inventory, Millon Clinical

Multi-axial Inventory. Prerequisite: clinical psychology graduate standing. Credit/no-credit only.

PSYCH 587 Clinical Methods: Interviewing (2) *Fagan* Provides the foundation for developing good clinical skills. Enables students to conduct an initial clinical interview and generate a diagnostic formulation, problem list, and treatment plan after taking a complete history. Limited to and required of all second-year clinical psychology graduate students. Credit/no-credit only. Offered: A.

PSYCH 588 Clinical Methods: Ethics (3) *Fagan* Enables students to acquire a thorough working knowledge of the American Psychological Association's Ethical Standards for Psychologists; an awareness of Washington state law as it affects psychologists and a knowledge of how to identify and solve ethical dilemmas. Limited to and required of all second-year clinical psychology graduate students. Credit/no-credit only. Offered: W.

PSYCH 589 Clinical Supervision (4, max. 100) *George, King, Kohlenberg, Lengua, Linehan, Simoni, Smith, Zoellner* Supervised psychotherapy involving several individual clients. Separate consultations with instructor for intensive supervision of each case. Occasional meetings in small groups of instructors and students to discuss case material. Assigned readings appropriate to each case with opportunities to discuss these with instructor. Prerequisite: clinical psychology graduate standing and permission of instructor. Credit/no-credit only. Offered: AWSpS.

PSYCH 590 Practicum in Psychological Assessment (2) Demonstration and practice of selected psychological test procedures and interviewing skills. Concurrent registration in PSYCH 576 or PSYCH 578 required. Required for all first-year graduate students majoring in clinical and child-clinical psychology. Prerequisite: graduate major standing in clinical or child-clinical psychology and permission of instructor.

PSYCH 591 Issues in Clinical Psychology (1, max. 3) *Smith* Personal and professional issues in clinical psychology. Required for all first-year graduate students majoring in clinical and child-clinical psychology. Prerequisite: graduate major standing in clinical psychology. Credit/no-credit only. Offered: AW.

PSYCH 593 Clinical Practica and Colloquium (1-6, max. 99) *Fagan* Required of all clinical psychology graduate students seeing clients in the clinic. Clinical colloquium required of all second-year students, optional for others. Credit/no-credit only. Offered: AWS.

PSYCH 594 Advanced Clinical Practicum (1-6, max. 55) *Kohlenberg, Linehan, Smith, Zoellner* Advanced supervised training in specific empirically supported treatment approaches. Each practicum provides intensive training in a specific treatment, such as dialectical behavior therapy, functional analytic psychotherapy, acceptance and commitment therapy, mindfulness-based relapse prevention, and exposure treatment for anxiety disorders. Prerequisite: graduate standing in clinical psychology; PSYCH 593; permission of instructor. Credit/no-credit only. Offered: AWSpS.

PSYCH 596 Advanced Teaching Practicum (2, max. 6) Supervised participation in graduate teaching. Prerequisite: graduate student in psychology and permission of instructor. Offered: AWSpS.

PSYCH 597 Fieldwork in Clinical Psychology (1-5, max. 36) *George, King, Kohlenberg, Lengua, Linehan, Simoni, Smith, Zoellner* Prerequisite: second-year graduate major standing and permission of departmental faculty.

PSYCH 598 Directed Reading in Psychology (*, max. 30) Selected topics. Prerequisite: permission of a supervising psychology faculty member.

PSYCH 599 Directed Research in Psychology (1-3, max. 24) Supervised participation in research. Prerequisite: permission of a supervising psychology faculty member.

PSYCH 600 Independent Study or Research (*-) Offered: AWSpS.

PSYCH 700 Master's Thesis (*-) Offered: AWSpS.

PSYCH 800 Doctoral Dissertation (*-) Offered: AWSpS.

Romance Languages and Literature

C104 Padelford

The department consists of two divisions: French and Italian Studies and Spanish and Portuguese Studies. The divisions offer programs designed to develop competence in the reading, speaking, and writing of the languages and in the study of the literatures and cultures.

French and Italian Studies

C254 Padelford

UNDERGRADUATE PROGRAM

Adviser

C252 Padelford

(206) 616-5366

The Division of French and Italian Studies offers the following programs of study:

- The Bachelor of Arts degree with a major in French or Italian
- Minors in French and Italian

Bachelor of Arts

Suggested First- and Second-Year College Courses: Community college students should take as many lower-division language courses as possible before transferring to the UW.

Department Admission Requirements

Students in good academic standing may declare this major at any time.

Major Requirements

French: 60 credits beyond FRENCH 203, to include FRENCH 301; FRENCH 302; FRENCH 303; three of the following four survey courses: FRENCH 304, FRENCH 305, FRENCH 306, FRENCH 307; and FRENCH 376 or FRENCH 378. 15 credits in 400-level courses and 10 additional credits above FRENCH 203, excluding FRENCH 207, FRENCH 227, FRENCH 234, FRENCH 237, FRENCH 297, FRENCH 299, FRENCH 327, and FRENCH 337. Transfer credits at the 400 level are accepted only by petition to the Faculty Studies Committee. Minimum 2.00 cumulative GPA for courses applied toward the major.

Italian: 60 credits in courses at the 300 and 400 levels, including ITAL 301, ITAL 302, ITAL 303; two from ITAL 341, ITAL 342, ITAL 343, ITAL 351, ITAL 352; ITAL 401 (or ITAL 470); ITAL 402 (or ITAL 403); and ITAL 404 (or ITAL 405); 20 additional credits in literature/culture/film courses at the 300 or 400 level, with at least 10 of these credits at the 400 level. Prerequisite for all 300-level courses is ITAL 203 or approved equivalent. Minimum 2.0 grade for course applied toward the major.

Minor

Minor Requirements

French

30 credits beyond FRENCH 203, including FRENCH 301; FRENCH 302; FRENCH 303; one of the following four survey courses: FRENCH 304, FRENCH 305, FRENCH 306, FRENCH 307; FRENCH 376 or FRENCH 378. Five elective credits above FRENCH 203, excluding FRENCH 207, FRENCH 227, FRENCH 234, FRENCH 237, FRENCH 297, FRENCH 299, FRENCH 327, and FRENCH 337. Up to 10 credits taken abroad may be counted toward the minor. Minimum 2.00 cumulative GPA for courses applied toward the minor.

Italian

30 credits as follows: ITAL 301, ITAL 302, ITAL 303, or ITAL 334 (15 credits); two-5 credit courses chosen from ITAL 341, ITAL 342, ITAL 343, ITAL 351, ITAL 352, ITAL 353; 5 elective credits beyond ITAL 203 (excluding ITAL 227, ITAL 234, ITAL 327, ITAL 334). N more than one course offered in English may be counted toward the minor. Up to 10 credits taken abroad may be applied toward the minor with adviser approval. Minimum 2.00 cumulative GPA for courses applied toward the minor.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Students achieve levels of linguistic and cultural competency that allow them to pursue professional opportunities in a wide variety of internationally oriented fields and to be effective citizens in a rapidly changing world.

Students with substantial foreign language fluency who combine language skills with a solid foundation in liberal education and adequate job preparation and internships find fulfilling occupations. . The combination of studies in foreign languages and international affairs is ideal for students seeking job opportunities in government (foreign service and diplomatic fields, intelligence agencies, immigration and customs, Department of Labor, law enforcement, armed forces, legal agencies, public aid, social and community work, and international agencies, such as the United Nations and UNICEF), business (airlines, marketing, banking/finance, multi-national corporations, shipping industry, travel and hotel industries, import/export firms, publishing houses, and consulting), and communication fields (journalism, radio and television, fashion enterprises, teaching/counseling, translation, bilingual office work, library/museum work, nursing, phone companies, art and cultural affairs, and film and theatrical industries).

Beyond the practical, the department's commitment is to impart to our students the skills and the genuine desire to learn throughout their lives, fostering the type of cultural and intellectual flexibility that lends itself to the multiple work and personal changes that most will face over the course of their lives.

- *Instructional and Research Facilities:* UW Rome Center in Rome, Italy.
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning:* The Rome Center offers one intern position per year, providing room and board and a modest stipend. Interns work in the administrative Rome/UW office and are required to follow an independent course of language and literature study or other proposed course of study.
- *Department Scholarships:* Scholarships for departmental study abroad programs are available. Program ap-

plicants are notified of opportunities by their program director.

- *Student Organizations/Associations:* French Club, Italian Club.
- *Of Special Note:* The department sponsors study-abroad programs in France, Italy, and Martinique. See adviser for details.

GRADUATE PROGRAM

Graduate Adviser

C256 Padelford, Box 354361
(206) 616-5366

Graduate Program Coordinator
C259 Padelford

The Division of French and Italian Studies offers programs of graduate study leading to the degrees of Master of Arts in French or Italian and Doctor of Philosophy in French. Students who wish to complete their doctoral studies in Italian may apply to do so through the Department of Comparative Literature during their second year in the master's program.

Master of Arts in French Studies

Admission Requirements

Undergraduate major or its equivalent in French literature and culture. Preparation equivalent to requirements for the Bachelor of Arts degree in French at the UW. Proficiency in speaking and writing the French language.

1. Application for Graduate Admission, along with supporting documents
2. Three letters of recommendation
3. Autobiographical statement
4. Digital file of recording of the applicant reading the autobiographical statement mentioned above, together with any other informal comments the applicant wishes to make
5. Writing sample
6. Graduate Record Examination (GRE) scores
7. Applicants whose native language is not English must demonstrate English language proficiency as outlined in Memo 8: Graduate School English Language Proficiency Requirements. Such students who wish to be appointed as teaching assistants (TAs) must meet the conditions for appointment specified in Graduate School Memorandum 15, "Conditions of appointment for TAs who are not native speakers of English."

Degree Requirements

55 credits, as follows:

A total of 45 applicable credits (400-level and above) are required in coursework, and an additional 10 credits in FRENCH 600 are given for examination preparation. 15 credits must be taken at the 500 level (courses limited to graduate students). 5 credits are given for the required pedagogy methods seminar for first-time TAs. To remain in good standing the student must maintain a cumulative 3.60 GPA. The minimum acceptable grade for any course is 2.7.

Four of the department's seven period distributions, plus one class in the history of criticism/critical theory rubric.

Up to 15 credits in supporting or related fields (other than the major field of study) may be taken with approval of the Graduate Program Coordinator. Courses must be at the 400 level or above.

MA examinations (written and oral) are taken in the sixth quarter of study.

Master of Arts in Italian Studies

Admission Requirements

Undergraduate major or its equivalent in Italian literature and culture. Preparation equivalent to requirements for the Bachelor of Arts degree in Italian at the UW. Proficiency in speaking and writing the Italian language.

1. Application for Graduate Admission, along with supporting documents
2. Three letters of recommendation
3. Autobiographical statement
4. Digital file recording of the applicant reading the autobiographical statement mentioned above, together with other informal comments the applicant wishes to make.
5. Writing sample
6. Graduate Record Examination (GRE) scores.
7. Applicants whose native language is not English must demonstrate English language proficiency as outlined in Memo 8: Graduate School English Language Proficiency Requirements. Such students who wish to be appointed as teaching assistants (TAs) must meet the conditions for appointment specified in Graduate School Memorandum 15, "Conditions of appointment for TAs who are not native speakers of English."

Degree Requirements

60 credits

50 applicable credits (400-level and above) in coursework, 30 of which must be taken at the 500 level (courses limited to graduate students). An additional 10 credits in ITAL 600 required for examination preparation. To remain in good standing the student must maintain a minimum 3.60 cumulative GPA. Minimum acceptable grade for any course is 2.7.

Up to 10 credits in disciplines other than the major field may be taken. Courses must be at the 400 level or above. Students are encouraged to take up to 10 credits in disciplines other than their major field of study. Credits in such supporting or related fields are allowed only for courses numbered 400 or above.

MA candidates must pass a foreign language reading ability examination in a language other than the major or their native language. Students stipulate their choice at the time of first enrollment, after consultation with the Graduate Adviser.

The Graduate Program Coordinator, in consultation with the student and appropriate faculty members, appoints a Supervisory Committee no later than the first week of the quarter prior to the MA examinations, consisting of three Italian and Italian adjunct faculty members. The MA examinations (written and oral) are taken the final quarter of study.

Doctor of Philosophy in French Studies

Admission Requirements

MA degree in French or its equivalent. Students with a background in comparative literature or with a specialization in French within another national literature and language program are admitted on a case-by-case basis. All incoming doctoral students must have demonstrable, broad knowledge in French literature and culture as well as a general background in critical theory (i.e., coursework in critical theory and/or coursework that incorporates a strong component of critical theory).

Degree Requirements

77 credits (beyond the MA)

77 credits (beyond the 45 required for the French studies MA), of which 25 should be taken in applicable 500-level courses (graduate seminars both inside and outside the division) and 27 as dissertation credits (FRENCH 800). The other 25 credits of 400-level and above courses should be chosen in collaboration with the Graduate Program Coordinator. 10 of these credits can be 600-level independent studies. Doctoral students work closely with the Graduate Program Coordinator in the selection of graduate seminars within French studies and of courses outside French studies that correspond to the students' cross-disciplinary interests.

Financial Aid

The department awards a number of teaching assistantships. Teaching assistants normally participate in teaching three classes during the academic year. A typical class is limited to approximately 25 students and meets five hours a week for the 10 weeks of the quarter. Research assistantships are available on a limited and competitive basis.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

French

FRENCH 101 Elementary French (5) Development of speaking, listening, reading, and writing skills to a basic level of proficiency. Teaches students to communicate in French and understand the cultural context of the language. Methods and objectives are primarily oral-aural. Oral practice in the language laboratory is required. First in a sequence of three. Prerequisite: score of 0-14 on FR TL placement test if French is language of admission.

FRENCH 102 Elementary French (5) Development of speaking, listening, reading, and writing skills to a basic level of proficiency. Teaches students to communicate in French and understand the cultural context of the language. Methods and objectives are primarily oral-aural. Oral practice in the language laboratory is required. Second in a sequence of three. Prerequisite: either FRENCH 101 or score of 15-30 on FR TL placement test.

FRENCH 103 Elementary French (5) Development of speaking, listening, reading, and writing skills to a basic level of proficiency. Teaches students to communicate in French and understand the cultural context of the language. Methods and objectives are primarily oral-aural. Oral practice in the language laboratory is required. Third in a sequence of three. Prerequisite: either FRENCH 102, FRENCH 110, or score of 31-56 on FR TL placement test.

FRENCH 134 First-year Intensive French (15) Equivalent of FRENCH 101, FRENCH 102, FRENCH 103. No more than 15 credits allowed for any combination of FRENCH 101, FRENCH 102, FRENCH 103, and FRENCH 134. Offered: S.

FRENCH 199 Foreign Study - Elementary (4-16, max. 16) Elementary level instruction in approved foreign study program. Students who wish to satisfy foreign language proficiency requirement must see the departmental adviser and may be required to take additional courses through FRENCH 103.

FRENCH 201 Intermediate French (5) VLPA Designed to bring students to an intermediate level of proficiency. Emphasis on experiencing the language in context through a multi-media approach. First in a sequence of three. Prerequisite: either FRENCH 103, FRENCH 134, or score of 57-100 on FR TL placement test.

FRENCH 202 Intermediate French (5) VLPA Designed to bring students to an intermediate level of proficiency. Emphasis on experiencing the language in context through a

multi-media approach. Second in a sequence of three. Prerequisite: FRENCH 201.

FRENCH 203 Intermediate French (5) VLPA Designed to bring students to an intermediate level of proficiency. Emphasis on experiencing the language in context through a multi-media approach. Third in a sequence of three. Prerequisite: FRENCH 202.

FRENCH 207 Second-Year Reading (5) VLPA Intermediate vocabulary building and reading of literary texts. Students receiving credit for FRENCH 207 may subsequently earn credit for lower-division French courses involving other skills.

FRENCH 210 Paris (5) VLPA/I&S Taught in English. Provides an introduction to the art, architecture, politics, and literature of the City of Light.

FRENCH 211 Renaissance, Enlightenment, Revolution: Major Works in English (5) VLPA/I&S Introduction to major figures of French culture from the Middle Ages to the eighteenth century, their contributions to the intellectual life of the Western world. Readings include Montaigne, Descartes, Rousseau, Voltaire, and Moliere. In English. Offered: jointly with JSIS D 217.

FRENCH 212 French Masterworks: Modern in English (5) VLPA Introduction to major figures of French culture from the nineteenth and twentieth centuries. Readings include Balzac, Flaubert, Proust, Sartre, and Celine. In English.

FRENCH 214 The French Fairy Tale Tradition in English (5) VLPA Delcourt French fairy tales as a major trend in French literature and a continuing influence on modern fictions and films. Particular attention given to the numerous French women writers of fairy tales at the time of Charles Perrault (seventeenth century) and after. In English.

FRENCH 224 Culture and Media Forms (5) VLPA/I&S Explores French, Francophone, and European culture in history through a focus on varied and evolving media forms: manuscripts, printed books, digital media, visual forms, etc. Taught in English. Offered: jointly with JSIS A 224.

FRENCH 227 Intermediate Conversational French (2, max. 8) VLPA Practice of intermediate-level French conversational skills through class discussion and oral presentations. Topics oriented toward French culture and current events. Prerequisite: FRENCH 103

FRENCH 228 The Water Crisis in Literature and Film (5) VLPA/I&S Watts Interprets a variety of texts (literary, cinematic, etc.) that address the water crisis to understand how water's meaning has changed as people become more conscious of risks in supply (pollution and natural/man-made scarcity) and as access to it is increasingly mediated in light of things like privatization and commodification. Offered: jointly with LIT 228.

FRENCH 234 Intermediate French Immersion (15) VLPA Covers the equivalent of second-year French (FRENCH 201, FRENCH 202, FRENCH 203) through an alternative "planned immersion" method with video as the central medium of presentation. Prerequisite: either FRENCH 103, FRENCH 134, or score of 57-100 on FR TL placement test.

FRENCH 237 Foreign Study Conversational French (2-8, max. 8) VLPA For participants in foreign study programs.

FRENCH 250 History of French Cinema in English (5) VLPA History of cinema in France from the birth of film, the seventh art, to the present. Socio-historical context of French cinema explored. In English.

FRENCH 297 Foreign Study - French Civilization (3/6, max. 6) VLPA For participants in the Study Abroad Program. Literary tradition, social and cultural values as reflected in literature. Paper (in English) and higher degree of participation required to earn 6 credits. In English.

FRENCH 299 Foreign Study - Intermediate (4-16, max. 16) VLPA Intermediate instruction in approved foreign study program. Evaluation by departmental adviser required to establish proficiency. Further study at 200-level subject to departmental evaluation.

FRENCH 301 Advanced French (5) VLPA Designed to bring students to an advanced level of proficiency in grammar and composition. Emphasis on experiencing the language in context through a multi-media approach. FRENCH 303 prepares students for literature classes. First in a sequence of three. Prerequisite: either FRENCH 203 or FRENCH 234.

FRENCH 302 Advanced French (5) VLPA Designed to bring students to an advanced level of proficiency in grammar and composition. Emphasis on experiencing the language in context through a multi-media approach. FRENCH 303 prepares students for literature classes. Second in a sequence of three. Prerequisite: FRENCH 301.

FRENCH 303 Advanced French (5) VLPA Designed to bring students to an advanced level of proficiency in grammar and composition. Emphasis on experiencing the language in context through a multi-media approach. FRENCH 303 prepares students for literature classes. Third in a sequence of three. Prerequisite: FRENCH 302.

FRENCH 304 Survey of French Literature: Origins to 1600 (5) VLPA Thematic and formal developments in literature of the period with emphasis on movements and texts in relation to cultural background. Prerequisite: FRENCH 303, which may be taken concurrently.

FRENCH 305 Survey of French Literature: 1600-1789 (5) VLPA Emphasis on literary movements and texts in relation to cultural background. Prerequisite: FRENCH 303, which may be taken concurrently.

FRENCH 306 Survey of French Literature: 1789 to the Present (5) VLPA Development of modern literature through its most important writers and movements. Prerequisite: FRENCH 303, which may be taken concurrently.

FRENCH 307 Survey of Francophone Literatures and Cultures (5) VLPA Survey of contemporary Francophone (post) colonial literatures and cultures. Prerequisite: FRENCH 303, which may be taken concurrently.

FRENCH 308 Foreign Study Composition (3-5, max. 10) VLPA For participants in foreign study programs. Compositions on topical subjects of intermediate difficulty relating to the civilization of the French-speaking countries of Europe. Grammar review as needed. Prerequisite: FRENCH 203.

FRENCH 313 Business Communication in French (5) VLPA Offers students the opportunity to develop French language skills (reading, writing, speaking, and listening) within the context of the French-speaking business world. Business-specific culture emphasized. May be taken in lieu of, or in addition to FRENCH 303. Prerequisite: FRENCH 302.

FRENCH 320 French Language and Cultural Identity (5) VLPA/I&S Explores the French language as social practice. Students learn of the social aspect of the evolution of the French language, the dynamic relationship between language and identity, and the linguistic and cultural diversity in the Francophone world. Texts in English. Prerequisite: either FRENCH 103 or FRENCH 134.

FRENCH 327 Advanced Conversation (2, max. 8) VLPA Not open to students whose native language is French. Prerequisite: FRENCH 203.

FRENCH 337 Foreign Study Conversational French (2-8, max. 8) VLPA For participants in foreign study programs. Prerequisite: FRENCH 203.

FRENCH 376 Culture, Politics, and Society in France from the Religious Wars to Revolutions (5) VLPA/I&S Studies the development of intellectual, literary, and artistic cultures in the context of the profound political and social evolutions of the Renaissance through the early nineteenth century in France. Taught in English.

FRENCH 378 The Making of Contemporary France (5) VLPA/I&S Study of the historical origins and subsequent development of contemporary problems and characteris-

tics of French government and politics, economy, and society. Prerequisite: FRENCH 203.

FRENCH 390 Supervised Study (2-6, max. 20)

FRENCH 397 Foreign Study French Civilization (3/6, max. 6) VLPA For participants in the foreign study program. Literary tradition, social and cultural values as reflected in literature. Paper (in French) and higher degree of participation required to earn 6 credits. In French. Prerequisite: FRENCH 203.

FRENCH 404 Old French (5) VLPA

FRENCH 406 Advanced French Composition (5) VLPA Extensive guidance in advanced French composition, emphasizing stylistics and grammar. Prerequisite: FRENCH 303.

FRENCH 411 Topics in the Middle Ages (5) VLPA Sixteenth-century literature with emphasis on poetry and the general artistic ambiance. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 412 Topics in Sixteenth Century French Literature (5) VLPA An introduction to major French literature and culture of the sixteenth century, usually with a guiding theme such as travel and the court. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 413 Topics in Seventeenth Century Literature (5) VLPA Seventeenth-century literature, with emphasis on the development of classicism. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 414 French Literature of the Eighteenth Century: Enlightenment (5) VLPA Eighteenth-century literature, with emphasis on the development of the Enlightenment ideology. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 415 French Literature of the Eighteenth Century: Post-Enlightenment (5) VLPA Eighteenth-century literature, with emphasis on the "dark side of the Enlightenment" and nascent romanticism. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 416 French Literature of the Nineteenth Century: Romanticism (5) VLPA Nineteenth-century literature, with emphasis on romanticism and the early manifestations of realism. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306 or FRENCH 307.

FRENCH 418 French Literature of the Early Twentieth Century (5) VLPA Twentieth-century literature, with emphasis on the period 1900-1939. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 419 French Literature Since World War II (5) VLPA Twentieth-century literature, with emphasis on the period 1939 to the present. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 420 Interdisciplinary Approaches to Literature (5) VLPA Interdisciplinary studies in French literature and culture, focusing on the complex interactions of literature and other disciplines, i.e. philosophy, psychoanalysis, anthropology, architecture. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 421 Psychoanalysis and Literature (5) VLPA Borch-Jacobsen Readings from Freud and French critical writers regarding the relationship between psychoanalysis and literature. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 427 Fiction: Twentieth Century (5) VLPA Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 431 Critical Approaches to French Poetry (5) VLPA Interdisciplinary approaches to French poetry focusing on the intersection of fine art, cultural movements, and the production of literature in the Second Empire and the

Third Republic. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 432 Critical Approaches to French Fiction (5) VLPA Addresses theory and practice of fiction within the context of a given century or movement. Content varies. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 435 Topics in Non-Fiction (5) VLPA Content varies. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 441 Quebecois Literature (5) VLPA Readings of novels, plays, and occasionally, poetry. Special attention paid to how Quebecois authors represent in their works the complex socio-political reality of their culture. Conducted in French. French majors required to read and write in French; all others may read and write in English. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307. Offered: jointly with JSIS A 441.

FRENCH 445 Women Writers (5) VLPA Focuses on French women writers and writing about women. Chronological and geographic range varies. Gender issues addressed in critical fashion, considering the different historical and ideological contexts in which each of the works was produced. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 448 Cultures of Franco-America (5) VLPA/I&S, DIV Considers a broad range of literary and cultural texts emerging from the long history of the French in North America and Americans in France. Traces processes of racialization; paying particular attention to intersections between race and class, gender, and sexuality. Texts in French and English. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 450 Themes in French Literature and Culture (5) VLPA Interdisciplinary studies in French literature and culture, focusing on the construction and representation of gender roles in the French novel from the early eighteenth century. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 451 History and Literature of the French Religious Wars (5) VLPA/I&S Major political, social, and religious movements and events of, and related to, the French religious wars of 1560 to the end of the century, along with the treatment of these in the prose, poetry, and drama of the period. For students receiving French credit, readings must be done in French. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 455 One Author in French Literature/Culture (5, max. 15) VLPA In-depth focus on the works of one author in French literature or culture. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 457 One Decade in French Literature and Culture (5, max. 15) VLPA Content varies. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 458 French Art and Literature: Period Studies (5) VLPA Comparative studies of theme and technique in art and literature to illustrate major concerns of a particular period as expressed in these two media. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 461 Seventeenth-Century Drama (5) VLPA Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 463 Nineteenth-Century Drama (5) VLPA Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 465 Twentieth-Century Drama (5) VLPA Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 470 Cinema (5) VLPA Major films and figures of French cinema from the beginnings to the present. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 472 French-English/English-French Translation (5) VLPA Intense practice of translation from English into French and from French into English. Translation issues specific to French and English syntactic, semantic, and grammatical differences with emphasis on the naturalness of the target language and the accuracy of the translation of the source language. Conducted in French. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 473 Introduction to Localization and Project Management (5) Covers basic concepts of translation, localization, and internationalization. Explores rationales for localizing products; history and future of the industry; workflows, professional roles, and localization tools. Includes the application of central concepts of localization to real-life situations; and introduction to the basics of localization project management. Offered: jointly with JSIS D 473; S.

FRENCH 474 Localization: Technology and Tools (5) Covers basic concepts of localization and internationalization. Examines how technology and tools are applied to solving translation and localization scenarios in the real world. Includes daily tasks and basic steps; machine translation; community localization; and experience with actual localization tools. Offered: jointly with JSIS D 474; S.

FRENCH 490 Honors Seminar (2-5, max. 10) VLPA Special studies in French literature. Required of candidates for Honors in French. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 499 Special Topics (1-5, max. 10) Topics to meet specific needs. Prerequisite: FRENCH 303; either FRENCH 304, FRENCH 305, FRENCH 306, or FRENCH 307.

FRENCH 510 Methodology of French Language Teaching (3) Theoretical and practical foundation of teaching French. Major topics include modern theories of language and language acquisition which underlie modern methods of foreign language teaching, teaching techniques, testing, and classroom relations with emphasis on the multiple-approach direct method. Required for beginning French teaching assistants. Credit/no-credit only.

FRENCH 515 French Literature of the High Middle Ages (5, max. 10) Old French literature, from the beginning to 1315. Prerequisite: permission of instructor.

FRENCH 516 Middle French Literature (5, max. 10) French literature from 1315 to 1500. Prerequisite: permission of instructor.

FRENCH 541 History of the French Language (5) Survey of the phonological, morphological, and syntactical development of the French language from its origins to the present.

FRENCH 552 Manuscript Cultures (5) Techniques, terminology, and bibliography of manuscript scholarship. The production of manuscripts from Antiquity through the Renaissance; the evolution of scripts; the rise of literacy; and the development of libraries in Italy and France. Topics and methods include material philology, textual criticism, relations between text/image, and the digitalization of manuscripts. Offered: jointly with ITAL 552.

FRENCH 553 Topics in Print Culture (5) Key readings, theoretical questions, and critical approaches in book history, focusing on printed texts from Gutenberg to today. The impacts of evolving technologies, material forms, and circulation within French, Italian, and other literary traditions. Methods and tools for evaluating an interpreting these impacts (bibliography, *histoire du livre*, and textual scholarship). Offered: jointly with ITAL 553.

FRENCH 565 Studies in French Drama (5, max. 10) Studies in French drama, sixteenth to twentieth centuries.

FRENCH 570 Seminar in Cinema (5, max. 10) Prerequisite: permission of instructor.

FRENCH 575 Literary Criticism (5)

FRENCH 576 Critical Methodology (5) Basic scholarly tools of bibliography; historical review of literary doctrine; an introduction to critical methodology.

FRENCH 577 Modern Critical Methods (5) Modern critical methodology and theory.

FRENCH 590 Special Seminar and Conference (1-10, max. 30) Group seminars, or individual conferences, are scheduled under this number to meet special needs. Prerequisite: permission of the Graduate Program Coordinator.

FRENCH 591 Literary Problems: Middle Ages (5, max. 10)

FRENCH 592 Literary Problems: Renaissance (5, max. 10)

FRENCH 593 Literary Problems: Seventeenth Century (5, max. 10)

FRENCH 594 Literary Problems: Eighteenth Century (5, max. 10)

FRENCH 595 Literary Problems: Nineteenth Century (5, max. 10)

FRENCH 596 Literary Problems: Twentieth Century (5, max. 10)

FRENCH 600 Independent Study or Research (*-)

FRENCH 700 Master's Thesis (*-) Credit/no-credit only.

FRENCH 800 Doctoral Dissertation (*-) Credit/no-credit only.

Italian

ITAL 101 Elementary Italian (5) Methods and objectives are primarily oral-aural. Use of audio material required. First in a sequence of three. Offered: A.

ITAL 102 Elementary Italian (5) Methods and objectives are primarily oral-aural. Use of audio material required. Second in a sequence of three. Prerequisite: either ITAL 101 or score of 15-30 on IT TL placement test. Offered: W.

ITAL 103 Elementary Italian (5) Methods and objectives are primarily oral-aural. Use of audio material required. Third in a sequence of three. Prerequisite: either ITAL 102, ITAL 111, or score of 31-56 on IT TL placement test. Offered: Sp.

ITAL 111 Accelerated First-Year Italian (10) Intensive version of ITAL 101 and ITAL 102 designed for highly motivated students.

ITAL 127 Beginning Conversational Italian (2, max. 6) Development of beginning-level Italian conversational skills through class discussions and oral presentations. Topics vary. Not open to native speakers.

ITAL 134 Intensive First-Year Italian (15) An intensive language course equivalent to ITAL 101, ITAL 102, ITAL 103, designed for highly motivated students. Not open for credit to students who have taken ITAL 102 and ITAL 103. Offered: S.

ITAL 199 Foreign Study - Elementary (4-16, max. 16) Elementary instruction in approved foreign study program. Students who wish to satisfy foreign language proficiency requirement must see the departmental adviser and may be required to take additional courses through ITAL 103.

ITAL 201 Intermediate Italian (5) VLPA Intensive speaking, reading, and writing. Functional review of grammar. First in a sequence of three. Prerequisite: either ITAL 103, ITAL 113, ITAL 134, or score of 57-100 on IT TL placement test.

ITAL 202 Intermediate Italian (5) VLPA Intensive speaking, reading, and writing. Functional review of grammar. Second in a sequence of three. Prerequisite: ITAL 201.

ITAL 203 Intermediate Italian (5) VLPA Intensive speaking, reading, and writing. Functional review of grammar. Third in a sequence of three. Prerequisite: ITAL 202.

ITAL 227 Intermediate Conversational Italian (2, max. 6) VLPA Development of intermediate-level Italian conversational skills through class discussions and oral presenta-

tions. Topics vary. Not open to native speakers. Prerequisite: ITAL 103.

ITAL 234 Intensive Second-Year Italian (15) VLPA Intensive language course designed for highly motivated students. Equivalent to ITAL 201, ITAL 202, ITAL 203. Prerequisite: either ITAL 103, ITAL 113, ITAL 134, or score of 57-100 on IT TL placement test. Offered: S.

ITAL 250 Rome (5) VLPA/I&S Focuses on Rome as an historical, intellectual, and artistic world center. Literary and historic documents, visual arts, architecture, film, and opera used to explore the changing paradigms of the Eternal City. In English. Offered: jointly with ART H 250/HSTEU 250.

ITAL 260 Fashion, Nation, and Culture (5) VLPA/I&S *Gay-lard* Introduction to Italian culture focusing on fashion and manners from the late Middle Ages to today. Explores common assumptions about nation, gender, clothes, make-up, and manners, through literary and visual analysis. In English. Offered: jointly with ART H 260/JSIS A 260; W.

ITAL 261 Italian Cities (5) VLPA Introduces Italian culture by focusing on the past and present of five of the nation's most important cities: Rome, Florence, Venice, Milan, and Naples. Taught in English. Offered: jointly with ART H 261.

ITAL 262 Dante and the Middle Ages (5) VLPA *Arduini* Introduces the major currents of thirteenth-century Italian Poetry and explores Dante's *Divine Comedy* as an encyclopedic compendium of medieval thought as well as a very personal vision of the individual's place in the universe. Taught in English. Offered: W.

ITAL 299 Foreign Study - Intermediate (4-16, max. 16) VLPA Intermediate instruction in approved foreign study program. Evaluation by departmental adviser required to establish proficiency. Further study at 200-level subject to departmental evaluation.

ITAL 301 Advanced Syntax and Composition (5) VLPA Prerequisite: either ITAL 203 or ITAL 234.

ITAL 302 Advanced Syntax and Composition (5) VLPA Prerequisite: ITAL 301.

ITAL 303 Italian Stylistics (5) VLPA Functional grammar review; creative written and oral composition and reading, with special attention to problems of style. Prerequisite: ITAL 302.

ITAL 318 Italian Literature in English (5) VLPA

ITAL 327 Advanced Conversation (2, max. 8) VLPA Not open to students whose native language is Italian. Prerequisite: either ITAL 203 or ITAL 234.

ITAL 334 Intensive Third-Year Italian (15) VLPA Intensive advanced Italian language equivalent to ITAL 301, ITAL 302, and ITAL 303. Prerequisite: Either ITAL 203 or ITAL 234. Offered: S.

ITAL 341 Italian and American Poetry in Translation (5) VLPA Introduction to basic concepts and skills required for Italian-to-English translation. Examines the main aspects of contrastive grammar and stylistics used in translation, providing practical opportunities to incorporate and apply the material. Exposure to a variety of types of translation. Prerequisite: either ITAL 203 or ITAL 234.

ITAL 342 Advanced Italian Composition and Essay Writing (5) VLPA Addresses issues of syntax and grammar, register and style, and advanced vocabulary for academic writing. Teaches students to write a cogent, well-structured essay for upper-level literature classes in Italian. Writing intensive. Conducted in Italian (some material in English). Prerequisite: either ITAL 203 or ITAL 234.

ITAL 343 Stylistics and Rhetoric (5) VLPA Introduces rhetorical devices and figures of speech through analysis of texts within Italian literary tradition. Particular attention given to poetic texts. Prerequisite: either ITAL 203 or ITAL 234.

ITAL 351 Contemporary Italian Culture (5) I&S Italian culture from the 1980s to the present, with discussion of major events of the period and readings from fiction, political

manifestos, song lyrics, etc. Emphasis on recent linguistic developments, changed role of women, meaning of multiculturalism in Italy, and the spread of global culture. Conducted in Italian. Prerequisite: either ITAL 203 or ITAL 234.

ITAL 352 Italian Cultural History (5) VLPA/I&S Italian history and culture from the thirteenth to the twentieth century, with discussion of major historical and cultural events. Readings from selected bibliography and historical documents, literature, etc. Emphasis on the historical context of the most significant aspects of Italian culture through the centuries. Conducted in Italian. Prerequisite: either ITAL 203 or ITAL 234.

ITAL 353 Language and Cultural Identity (5) VLPA/I&S Investigates the connection between Italian language and cultural identity, from Dante's linguistic theories in the early fourteenth century to nineteenth-century nationalist myths and today's transformations in Italian society. Taught in Italian.

ITAL 366 Italian Society in Film and Literature (5, max. 15) VLPA/I&S Studies the evolution of Italian postwar society through the analysis of film and literature as well as critical, historical, and sociological readings.

ITAL 390 Supervised Study (2-6, max. 20)

ITAL 399 Foreign Study: Advanced (4-16, max. 16) VLPA Advanced instruction in approved foreign study program.

ITAL 401 Medieval Italian Readings (5) VLPA Exploration of medieval Italian cultural history through a broad variety of literary and other textual traditions. Prerequisite: ITAL 302.

ITAL 402 Early Modern Italian Readings I (5) VLPA Readings in Italian Quattro/Cinquecento, covering the period of the Renaissance. Prerequisite: ITAL 302.

ITAL 403 Early Modern Italian Readings II (5) VLPA Readings in Italian Sei/Settecento, covering the periods of Baroque and Enlightenment literature. Prerequisite: ITAL 302.

ITAL 404 Modern Italian Readings I (5) VLPA Readings in Italian Ottocento, covering the period of Romanticism. Prerequisite: ITAL 302.

ITAL 405 Modern Italian Readings II (5) VLPA Readings in Italian Novecento, covering the work of major Italian twentieth-century authors. Prerequisite: ITAL 302.

ITAL 413 Literature of the Renaissance: Quattrocento (5) VLPA The early Renaissance. Humanism; writings of Lorenzo de' Medici, Poliziano, Belcari, Alberti, Masuccio, Sannazaro, Pulci, Boiardo. Prerequisite: ITAL 302.

ITAL 431 Italian Theater (5) VLPA The development of Italian theater from the Renaissance to the twentieth century. Prerequisite: ITAL 302.

ITAL 465 Contemporary Italian Narrative (5, max. 15) VLPA Critical reading of selected modern exponents of the short story and novel. Prerequisite: ITAL 302.

ITAL 466 Italian Society in Cinema and Literature in Italian (5, max. 15) VLPA/I&S Studies the evolution of Italian postwar society through the analysis of film and literature as well as critical, historical, and sociological readings. Offered in Italian. Prerequisite: ITAL 302.

ITAL 470 Dante (5) VLPA Introduction to Dante's *Commedia* and minor works, conducted in Italian. Prerequisite: ITAL 302.

ITAL 475 Italian Fascism: Architecture and Power (5) VLPA/I&S Fascism in Italy as studied within the broader European context of nationalism, imperialism, and modernization, with particular emphasis on the arts - literature, film, architecture, and urbanism. Offered: jointly with ART H 495.

ITAL 480 Dante's Comedy in English (5) VLPA Introduction to Dante's *Comedy*. Considers formal, structural, linguistic, literary, historical, cultural, philosophical, and theological issues raised by the text. Discusses the main currents of twentieth-century Dante criticism.

ITAL 481 Dante's Comedy in English (5) VLPA Second half of a two-quarter series. Close study of Dante's *Purgatory*

and Paradiso and retrospective reading of Inferno. Explores Dante's concept of art, both human and divine, as it is developed in and defines the poem. Prerequisite: ITAL 480.

ITAL 482 The Decameron in English (5) VLPA An integral reading of the Decameron, with some consideration of its place in world literature and as an expression of the culture of its time.

ITAL 490 Proseminar in Italian Literature (3-5) VLPA Intended to help students achieve a mature critical mastery of Italian literature.

ITAL 499 Special Topics (1-5, max. 10) Topics to meet specific needs. Prerequisite: ITAL 302.

ITAL 501 Medieval Italian Readings (5) Exploration of medieval Italian cultural history through a broad variety of literary and other textual traditions.

ITAL 502 Early Modern Italian Readings I (5) Readings in Italian Quattro/Cinquecento over the period of the Renaissance. Covers major intellectual, literary, and cultural movements and figures of the period, including humanistic rediscovery of Graeco-Roman models, chivalric poems, comic theater.

ITAL 503 Early Modern Italian Readings II (5) Readings in Italian Sei/Settecento, covering the periods of Baroque and Enlightenment literature.

ITAL 504 Modern Italian Readings I (5) Readings in Italian Ottocento, covering the period of Romanticism.

ITAL 505 Modern Italian Readings 2 (5) Readings in Italian Novecento, covering the work of the major Italian twentieth-century authors.

ITAL 514 Dante (5, max. 10)

ITAL 531 Italian Theater (5) The development of Italian theater from the Renaissance to the twentieth century. Individual conferences with lecturing professor. Prerequisite: graduate students only.

ITAL 552 Manuscript Cultures (5) Techniques, terminology, and bibliography of manuscript scholarship. The production of manuscripts from Antiquity through the Renaissance; the evolution of scripts; the rise of literacy; and the development of libraries in Italy and France. Topics and methods include material philology, textual criticism, relations between text/image, and the digitalization of manuscripts. Offered: jointly with FRENCH 552.

ITAL 553 Topics in Print Culture (5) Key readings, theoretical questions, and critical approaches in book history, focusing on printed texts from Gutenberg to today. The impacts of evolving technologies, material forms, and circulation within French, Italian, and other literary traditions. Methods and tools for evaluating an interpreting these impacts (bibliography, *histoire du livre*, and textual scholarship). Offered: jointly with FRENCH 553.

ITAL 560 Reading Fashion (5) Examines the emergence and problematizing of the notion of "fashion" in early modern Europe, focusing on Italy, France, and England. Analyzes late medieval and early modern literary and visual reflections of "fashion" in relation to today's critical discourses on fashion. Taught in English.

ITAL 570 Seminar in Cinema (5) Studies in various areas of Italian cinema, concentrating on major directors, critics, and movements. Prerequisite: permission of instructor.

ITAL 590 Special Seminar and Conference (1-10, max. 30) Group seminars, or individual conferences, are scheduled under this number to meet specific needs. Prerequisite: permission of instructor.

ITAL 591 Literary Problems: Middle Ages and Fourteenth Century (5, max. 10)

ITAL 592 Literary Problems: Renaissance (5, max. 10)

ITAL 593 Literary Problems: Early Modern (5, max. 10)

ITAL 594 Literary Problems: Eighteenth Century (5, max. 10)

ITAL 595 Literary Problems: Nineteenth Century (5, max. 10)

ITAL 596 Literary Problems: Twentieth Century (5, max. 10)

ITAL 600 Independent Study or Research (*-)

Spanish and Portuguese Studies

C104 Padelford

The educational philosophy of Spanish and Portuguese studies is that knowledge and understanding of other cultures is fundamental in an increasingly global world, and that competence in the languages of those cultures is an indispensable gateway to them. Spanish studies provides students with the four basic language skills (listening, speaking, reading, and writing) in increasing levels of sophistication so that they may read and analyze works of literature written in Spanish as well as understand complex cultural structures and artifacts from Spain, Latin America, and the Latino populations of the United States. The UW offers beginning and intermediate Portuguese and all levels of Spanish.

UNDERGRADUATE PROGRAM

Adviser

C104F Padelford, Box 354360

(206) 543-2075

spsadv@uw.edu

The Division of Spanish and Portuguese Studies offers the following programs of study:

- The Bachelor of Arts degree with a major in Spanish
- A minor in Spanish

Bachelor of Arts

Suggested First- and Second-Year College Courses: SPAN 101, SPAN 102, SPAN 103, or SPAN 121, SPAN 122, SPAN 123, or SPAN 134; SPAN 201, SPAN 202 (or SPAN 210), SPAN 203. Spanish, Latin American, and Chicano literature. Courses related to history and culture. Courses in English literature and comparative literature

Department Admission Requirements

1. Completion of SPAN 203, with a minimum cumulative GPA of 2.70 for all Spanish coursework completed and a minimum grade of 2.5 in each Spanish course
2. Completion of at least 5 credits of English composition with a minimum grade of 2.5
3. Change-of-major forms, available online and outside C-104F Padelford Hall, are processed autumn, winter, and spring quarters only. Forms and unofficial transcripts must be turned in by the end of the third week of the quarter to assure registration priority for the following quarter. Paperwork turned in after the third week of the quarter is processed during the following admission cycle.

Major Requirements

58 credits beyond SPAN 203 as follows:

1. SPAN 301, SPAN 302, SPAN 303 (or equivalents, SPAN 314, SPAN 315, SPAN 316; SPAN 310; SPAN 330)
2. SPAN 321, SPAN 322, SPAN 323
3. One 300-level literature elective: See department website for list of eligible courses.

4. Five 400-level courses (only one course numbered SPAN 400 through SPAN 405 may apply to the major)
5. Participation in an approved study abroad program (one quarter minimum, any level) or one or more experiential learning projects (minimum 2 credits of SPAN 392) which involve significant engagement with the Spanish-speaking community. Students are strongly encouraged to do both.
6. Other than SPAN 400 through SPAN 406, only one course whose instructional materials are primarily in English may apply to the major.

Minor

Minor Requirements

Minimum 27 credits above SPAN 203 level to include the following:

1. One of the following sequences: SPAN 301, SPAN 302, and either SPAN 303 or SPAN 330; SPAN 314, SPAN 315, and either SPAN 316 or SPAN 330; SPAN 310 and either SPAN 303, SPAN 316, or SPAN 330
2. Four 300- or 400-level electives
3. Only one course in which instructional materials are primarily in English may apply to the minor. SPAN 327 may not apply to the minor and is not open to heritage/native speakers.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* The study of Spanish and Portuguese is both skills- and content-based, i.e., it has practical and cognitive elements. Students learn to communicate in Spanish or Portuguese, refining their language skills as they acquire a body of knowledge about the literary and cultural history of Spain, Latin America, and the Spanish-speaking populations of the United States. Graduates have found these skills extremely useful as they pursue careers in teaching, business, NGOs and human rights organizations, law, and politics.
- *Instructional and Research Facilities:* Departmental facilities include a Writing Center for students registered in third-year Spanish. The Center for Spanish Studies, housed in the department, is a joint initiative of the University of Washington, the Education Office of the Embassy of Spain, and the Office of Superintendent of Public Instruction. This center provides services that include workshops for K-12 teachers of Spanish, sponsorship of cultural events, and a lending library of books as well as audio and visual materials. A branch of the Spanish government sponsored Cervantes Institute, also housed in the department, offers linguistic and cultural resources to the university and the general community as well.
- The department directs three study abroad programs, in León (Spain), Oaxaca (Mexico) and Cádiz (Spain). These programs are "living laboratories." Approximately 100 students participate each year.
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors). With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Experiential Learning:* Internship opportunities are posted on the department website as they become available. Also, students may participate in experiential learning (which may include service learning), in which they combine study with service to the community. Students must volunteer two to five hours per week (a minimum of 30 hours per quarter) in organizations that provide services primarily, although not exclusively, to Spanish speakers. Alternatively, they may volunteer in public schools as tutors of

different academic themes. Some of the organizations and schools involved include CASA Latina, The Mexican Consulate, El Centro de la Raza, Our Lady of Mt. Carmel, Northwest Immigrant Rights Project, Cascade People's Center, Center for Spanish Studies, John Stanford International School, Bryant Elementary School, John Hay Elementary School, Hamilton Middle School, Nathan Hale High School, the Pipeline Project, and the East Side Literacy program. Students apply and increase their knowledge of the Spanish language in a real context. They are exposed to Hispanic multiculturalism and become active agents of social change in the community.

- *Department Scholarships:* An annual scholarship, the Susan B. Johnson Memorial Endowment Fund, is awarded to a student of Spanish for foreign study in Spain.
- *Student Organizations/Associations:* None.
- *Of Special Note:* 100- and 200-level Spanish courses do not count toward major/minor requirements.

GRADUATE PROGRAM

Graduate Program Adviser
C104F Padelford, Box 354360
(206) 543-2020
spsadv@uw.edu

The Division of Spanish and Portuguese Studies offers a program of graduate study leading to the Master of Arts degree.

The Master of Arts degree program in Hispanic Literary and Cultural Studies was reformed and updated in 2001 to foster study of Hispanic culture, literature, and language together. The program calls attention to the rich diversity of Hispanic cultural texts and to their interdisciplinary study while also promoting broad understanding of Spanish and Latin American literature. The program gives careful attention to acquainting students with the traditions of scholarship in the field as well as a range of current textual theory, criticism, and research methods.

Study of Portuguese and other Romance literatures and cultures, comparative literature, Romance and Spanish linguistics, and other related disciplines may be included in the master's degree program. The degree is earned normally in six academic quarters.

Students who wish to pursue advanced study in Spanish and Portuguese in a post-master's degree program may do so by entering the doctoral studies programs in Hispanic Studies of Comparative Literature or other departments of the University.

Master of Arts

Admission Requirements

1. Application for admission to the Graduate School
2. Three letters of recommendation
3. Unofficial transcripts. International applicants must also submit official transcripts to the Graduate School.
4. Academic autobiographical statement composed by the applicant in Spanish
5. A sample of the applicant's written work in Spanish in some area of Hispanic literature and culture. This may be a copy of a paper written for a course in the area of the applicant's major. An analytical or critical writing sample is preferred.
6. Graduate Record Examination (GRE) scores are required from applicants whose first language is English, and from applicants whose first language is not English who hold a bachelor's, master's, or doctoral degree from a regionally accredited university in one of the countries noted in Memo 8 from the Graduate School Memoranda. The GRE requirement is waived for applicants

whose first language is not English, if they do not hold a bachelor's, master's, or doctoral degree from a regionally accredited university in one of the countries noted in Memo 8 from the Graduate School Memoranda.

7. Foreign students Applicants whose native language is not English should note that the Graduate School requires proof of proficiency in the English language in one of the ways described in detail in Memo 8 of the Graduate School Memoranda. the form of the TOEFL (Test of English as a Foreign Language) or its computerized version (TOEFLC) or the Michigan Test and also the TSE (Test of Spoken English). A TOEFL score of 500 (or a TOEFLC score of 173) is required for admission, and a score of 580 (or 237 on the computerized form) is required for teaching assistant eligibility. Alternatively a Michigan Test score of 80 is required for admission and 90 for teaching assistantship eligibility. A minimum score of 55 is required on the TSE.8. Complete and upload Assistantship and Fellowship Application regardless of whether or not applicant is applying for a TA position.
8. Complete and upload Assistantship and Fellowship Application regardless of whether or not applicant is applying for a TA position. If applying for a Teaching Assistant position, the following is also required.
 - a. A digital voice recording (mp3 file format preferred) in which the applicant summarizes his/her reasons for applying to the graduate program and explains his/her interest in the TA position. Only spontaneous speech will be considered. The recording must be in English for native Spanish speakers, and in Spanish for all other applicants.
 - b. Resume or Curriculum Vitae

Degree Requirements

1. A total of 60 applicable credits (500 level and above). To remain in good standing the student must maintain a cumulative grade point average of 3.00. The minimum acceptable grade for any given course is 2.7.
2. Either SPAN 577, or an alternate graduate-level literary theory course which must be pre-approved by the GPC (Graduate Program Coordinator).
3. SPAN 510 is required of all teaching assistants and is to be taken during or before a student's first quarter of teaching.
4. *Distribution Requirement:* A minimum of 5 credits (normally one course) must be earned in five of the six: Medieval Spain, "Golden Age" Spain; Spain of the eighteenth and nineteenth centuries; twentieth-century Spain; colonial and nineteenth-century Latin America; and twentieth-century Latin America.
5. MA candidates must pass an MA examination: During the first quarter of graduate study, students must select one area in which to be examined from the six areas of study specified above. They then have a year to prepare that field. Students may not write their MA Thesis in the field they have chosen for their examination. The MA examination is written at the beginning of the fourth quarter of study (ordinarily fall quarter). The examination consists of one question, and the student has five hours to answer his/her question, with only a dictionary available for consultation. The examination in the chosen area is based on the MA reading list, available on this website: depts.washington.edu/spanport/programs/grad_readingList.html.
6. MA candidates must complete an MA Thesis: Students must take ten credits of MA thesis (SPAN 700) in their second year of study (5 credits in the fall quarter and 5 credits in the winter quarter). The MA Thesis (minimum 45 pages of text, plus bibliography) is directed by a graduate faculty member and submitted to the Graduate Studies Committee for its approval by the end of the fifth quarter of study.

7. Admission to the Graduate School allows students to continue graduate study and research at University of Washington only as long as they maintain satisfactory performance and progress toward completion of their degree program. Details can be found here: depts.washington.edu/spanport/programs/grad_academicRequirement.html.

Financial Aid

The department awards annually a number of teaching assistantships. The assistant normally participates in teaching three classes during the academic year. Each class is limited to approximately 25 students and meets five hours a week for the ten weeks of the quarter.

Applicants whose native language is not English must demonstrate English proficiency in one of the ways described in the Graduate School's Memorandum 15 to be considered for a TA position. For more information see: www.grad.washington.edu/policies/memoranda/memo08.shtml; www.grad.washington.edu/policies/memoranda/memo15.shtml.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

Portuguese

PORT 101 Elementary Portuguese (5) Methods and objectives are primarily oral-aural. Covers all major elements of Portuguese grammar. First in a sequence of three.

PORT 102 Elementary Portuguese (5) Methods and objectives are primarily oral-aural. Covers all major elements of Portuguese grammar. Second in a sequence of three. Prerequisite: PORT 101.

PORT 103 Elementary Portuguese (5) Methods and objectives are primarily oral-aural. Covers all major elements of Portuguese grammar. Third in a sequence of three. Prerequisite: PORT 102.

PORT 105 Intensive Portuguese for Spanish Speakers (6) VLPA Covers the verbal system and major grammatical points. Does not satisfy foreign language requirement. Prerequisite: SPAN 203.

PORT 110 Accelerated Elementary Portuguese (5) Covers the equivalent of PORT 101 and PORT 102 to prepare for PORT 103. May not be taken in addition to PORT 101 or PORT 102.

PORT 199 Foreign Study: Elementary (2-16, max. 16) Elementary instruction in approved foreign study program. Students who wish to satisfy foreign language proficiency requirement must see the departmental adviser and may be required to take additional courses through PORT 103.

PORT 201 Intermediate Portuguese (5) VLPA Modern texts, compositions, conversation, and a systematic review of grammar. First in a sequence of three. Prerequisite: either PORT 103 or PORT 105.

PORT 202 Intermediate Portuguese (5) VLPA Modern texts, compositions, conversation, and a systematic review of grammar. Second in a sequence of three. Prerequisite: PORT 201.

PORT 203 Intermediate Portuguese (5) VLPA Modern texts, compositions, conversation, and a systematic review of grammar. Third in a sequence of three. Prerequisite: PORT 202.

PORT 299 Foreign Study: Intermediate (2-16, max. 16) VLPA Intermediate instruction in approved foreign study program. Further study at 200-level subject to department evaluation.

PORT 301 Advanced Portuguese (5) VLPA Emphasizes oral skills while continuing to refine reading comprehension and

written expression. Aims to develop abilities to successfully deal with comprehension and production of oral texts of an academic and professional nature. Not a conversation course. Prerequisite: PORT 203.

PORT 302 Advanced Portuguese (5) VLPA Develops writing techniques and strategies for the production of Portuguese texts of an academic and professional nature. Prerequisite: PORT 301.

PORT 310 Introduction to Lusophone Literature (3) VLPA Introduction to the studies of Lusophone literature and culture.

PORT 335 Twentieth Century Brazilian Fiction in English (5, max. 10) VLPA Reading texts in connection with cultural and theoretical issues.

Spanish

SPAN 101 Elementary Spanish (5) Methods and objectives are primarily oral-aural. Language laboratory is required. First in a sequence of three. Prerequisite: score of 0-15 on SP100A placement test if Spanish is language of admission. No credit if Spanish is the language of admission. Cannot be taken for credit if SPAN 121 already taken.

SPAN 102 Elementary Spanish (5) Methods and objectives are primarily oral-aural. Second in a sequence of three. Prerequisite: either SPAN 101, or score of 16-44 on SP100A placement test. Cannot be taken for credit if SPAN 122 already taken.

SPAN 103 Elementary Spanish (5) Methods and objectives are primarily oral-aural. Third in a sequence of three. Prerequisite: either SPAN 102, SPAN 110 or score of 45-69 on SP100A placement test. Cannot be taken for credit if SPAN 123 already taken.

SPAN 110 Basic Spanish Review (5) Covers the equivalent of SPAN 101 and SPAN 102 to prepare for SPAN 103. May not be taken in addition to SPAN 101 or SPAN 102. Prerequisite: score of 10-44 on SP100A placement test. Offered: AWSp.

SPAN 121 Spanish Immersion (5) Covers the equivalent of elementary Spanish (SPAN 101). Uses an alternative "planned immersion" method with video as the central medium of presentation. First in a sequence of three. Prerequisite: no previous Spanish study, or score of 0-15 on SP100A placement test if Spanish is language of admission. Cannot be taken for credit if SPAN 101 already taken.

SPAN 122 Spanish Immersion (5) Covers the equivalent of elementary Spanish (SPAN 102). Uses an alternative "planned immersion" method with video as the central medium of presentation. Second in a sequence of three. Prerequisite: SPAN 121. Cannot be taken for credit if SPAN 102 already taken.

SPAN 123 Spanish Immersion (5) Covers the equivalent of elementary Spanish (SPAN 103). Uses an alternative "planned immersion" method with video as the central medium of presentation. Third in a sequence of three. Prerequisite: SPAN 122. Cannot be taken for credit if SPAN 103 already taken.

SPAN 134 Intensive First-Year Spanish (15) Equivalent of SPAN 121, SPAN 122, SPAN 123. Employs "planned immersion" method with video as the central medium of presentation. Not open for credit to students who have taken SPAN 121, SPAN 122, SPAN 123 or SPAN 102, SPAN 103. Offered: S.

SPAN 199 Foreign Study - Elementary (1-16, max. 16) Elementary instruction in approved foreign study program. Students who wish to satisfy foreign language proficiency requirement must see the departmental adviser and may be required to take additional courses through SPAN 103.

SPAN 201 Intermediate Spanish (5) VLPA Intensive practice in speaking, reading, and writing. Review of Spanish grammar. Oral practice based on literary and cultural readings. First in a sequence of three. Prerequisite: either SPAN 103, SPAN 123, SPAN 134, score of 70-100 on SP100A

placement test, minimum score of 51 on SP TL placement test, or score of 0-75 on SP200A placement test.

SPAN 202 Intermediate Spanish (5) VLPA Intensive practice in speaking, reading, and writing. Review of Spanish grammar. Oral practice based on literary and cultural readings. Second in a sequence of three. Prerequisite: either SPAN 201 or score of 76-145 on SP200A placement test.

SPAN 203 Intermediate Spanish (5) VLPA Intensive practice in speaking, reading, and writing. Review of Spanish grammar. Oral practice based on literary and cultural readings. Third in a sequence of three. Prerequisite: either SPAN 202, SPAN 210, or score of 146-165 on SP200A placement test.

SPAN 224 Spanish for Health Professionals I (3) Exposes students to a variety of medical terminology, providing opportunities for practicing medical-focused communication, and reading and analyzing written texts, as they would in a clinical setting. Not equivalent to any other Spanish language course. Prerequisite: either SPAN 201, or score of 76-145 on SP200A test, or A2 level DELE diploma.

SPAN 225 Spanish for Health Professionals II (3) Understand and use more complex structures of Spanish; with precision and fluency in the healthcare field. Starts with review of conducting a simple physical exam and follow-up on tests. Includes concepts such as learning to create a medical history, and discussing hospitalization/discharge of patients. Prerequisite: SPAN 224.

SPAN 227 Intermediate Conversation (2, max. 6) VLPA Focuses on developing intermediate conversation skills - listening and speaking - and increasing vocabulary in varying situations. Discussions are based on contemporary Spanish films, current articles, fiction, and essays. Not open to students whose native language is Spanish. Prerequisite: either SPAN 103, SPAN 123, or SPAN 134.

SPAN 237 Foreign Study - Intermediate Conversation (2-6, max. 6) VLPA For participants in approved foreign study programs. Prerequisite: either SPAN 103, SPAN 123, or SPAN 134.

SPAN 292 Experiential Learning in Spanish - Intermediate (1-3, max. 3) I&S An experiential learning project in an NGO or non-profit organization in the Spanish-speaking community that engages students in ways that supplement their formal in-class trainings. Prerequisite: SPAN 103.

SPAN 294 Special Topics in Spanish Literary/Cultural Studies (5, max. 10) VLPA Focuses on a special topic related to Spanish literary or cultural studies. Taught in English.

SPAN 299 Foreign Study - Intermediate (1-16, max. 16) VLPA Intermediate instruction in approved foreign study program. Further study at 200 level subject to placement test score.

SPAN 301 Advanced Spanish (5) VLPA Emphasizes oral skills while continuing to refine reading comprehension and written expression. It aims to develop the abilities to successfully deal with comprehension and production of oral texts of an academic and professional nature. Not a conversation course. Prerequisite: either SPAN 203 or score of 166-175 on SP200A placement test.

SPAN 302 Advanced Spanish (5) VLPA Develops writing techniques and strategies for the production of Spanish texts of an academic and professional nature. Prerequisite: SPAN 301 or SPAN 310, either of which may be taken concurrently.

SPAN 303 Advanced Spanish (5) VLPA Develops writing techniques and strategies for the creation of essays on literary criticism and cultural analysis. Prepares students to deal successfully with academic writing in Hispanic literature and culture courses. Prerequisite: either SPAN 302 or SPAN 310.

SPAN 304 Survey of Spanish Literature: 1140-1498 (3) VLPA Masterpieces of Spanish literature from origins to 1498. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 305 Survey of Spanish Literature: 1498-1681 (3/5) VLPA Gilbert Prerequisite: either SPAN 301, SPAN 302, SPAN 303, 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 306 Survey of Spanish Literature: 1681 to the Present (3/5) VLPA Mercer Prerequisite: either SPAN 301, SPAN 302, SPAN 303, 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 307 Introduction to Latin American Literature: Colonial Era through Early Independence (3/5) VLPA Albaran Study of selected works from the sixteenth through the nineteenth century, with special emphasis on their historical and cultural relevance. Development of reading and writing skills. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 308 Introduction to Latin American Literature: Independence to the Present (3/5) VLPA Study of selected works of twentieth-century Latin American literature and their sociohistorical context. Development of reading and writing skills. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 314 Spanish for Bilingual/Heritage Students (5) VLPA Gillman Provides bilingual students whose formal education has primarily been in English with the skills necessary to succeed in upper-division Spanish classes. Intensive review of grammar, readings of literary and journalistic texts, Web-based exercises, writing review, and a play to enhance their verbal skills. Offered: AW.

SPAN 315 Spanish for Bilingual/Heritage Students (5) VLPA Gillman Emphasizes reading, with attention to problems particular to Spanish-heritage students. Emphasis on critical reading, vocabulary expansion, and grammar review. Prerequisite: SPAN 314. Offered: WSp.

SPAN 316 Stylistics and Composition for Heritage Students (5) VLPA M. GILLMAN, A. WITTE Emphasis on the process of writing essays to help students develop a notion of style in Spanish, with attention to problems particular to Spanish heritage students. Prerequisite: SPAN 315. Offered: ASp.

SPAN 317 Spanish and Latin American Literature in English Translation (5, max. 10) VLPA Spanish and Latin American literature in English translation, with consideration of their background and influence. Does not fulfill any major or minor requirement.

SPAN 318 Cervantes' Don Quixote in English (5) VLPA Gilbert Cervantes' Don Quixote de la Mancha: close study of this comic masterpiece, and the life, times, and works of its author. Consideration of the work's enduring influence and vitality. Does not fulfill any major or minor requirement.

SPAN 319 Mexican Literature (3) VLPA Witte Analysis of selected works of Mexican literature from the second half of the twentieth century: short stories, poetry, essay, and theatre. Focus on issues such as nationalism and national identity, gender, ethnicity, dependent development, and globalization. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 321 Introduction to Hispanic Literary Studies (5) VLPA A. WITTE Acquaints the third-year student with elementary techniques of literary analysis, as applied to examples of narrative, poetry, and theater, within the context of the Spanish and Latin American literary traditions. Prerequisite: either SPAN 301 or SPAN 314, or SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently. Offered: W.

SPAN 322 Introduction to Hispanic Cultural Studies (5) VLPA/I&S Gomez-Bravo Introduces students to elite, mass, and folk cultures of Latin America, Spain, and Latinos in the United States. Sample topics include transculturation, globalization, border culture, and relations between

culture, democratization, and human rights. Prerequisite: either SPAN 301 or SPAN 314; or SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently. Offered: Sp.

SPAN 323 Introduction to Spanish Linguistics (5) VLPA A. FERNANDEZ DOBAO Synchronic and diachronic linguistic analysis of Spanish, including Spanish phonetics and phonology, morphology, syntax, and evolution of the language. Prerequisite: either SPAN 301 or SPAN 314, or SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently. Offered: Sp.

SPAN 327 Advanced Conversation (2-6, max. 6) VLPA Focuses on developing advanced conversational skills - listening and speaking - to fluency and increasing vocabulary in varying situations. Discussions are based on contemporary Spanish films, current articles, fiction, and essays. Does not fulfill any major or minor requirement. Not open to students whose native language is Spanish. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently.

SPAN 328 Spanish Cultural Studies (5, max. 10) VLPA/I&S Focusing on historical, social, and ideological aspects of modern Spanish culture. Lectures, readings, discussions, and written work in Spanish. Prerequisite: either SPAN 301, SPAN 310, or SPAN 314.

SPAN 329 Latin American Cultural Studies (5, max. 10) VLPA/I&S Focuses on historical, social, and ideological aspects of modern Latin American culture. Lectures, readings, discussions, and written work in Spanish. Prerequisite: either SPAN 301, SPAN 310, or SPAN 314.

SPAN 331 Themes in Mexican-American Studies (5) VLPA/I&S Examination of significant historical and cultural themes of the Mexican-American experience. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently.

SPAN 332 Chicano Film and Narrative (5) VLPA/I&S Flores Provides an historical overview of the evolution of Chicano culture through film. Critically examines the portrayal and self-portrayal of Chicanos in film and selected works of narrative. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently.

SPAN 333 Hispanic Film Studies (5) VLPA/I&S Mercer Introduction to major issues in the study of Hispanic cinema from various national contexts. The relationship of film to other types of narrative, and of film to society, specifically relations between class, gender, ethnicity, and artistic production, as well as between cinema and social change. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently.

SPAN 334 Latin American Film (5) VLPA/I&S Overview of the history of Latin American cinema, including the new Latin American cinema of the 1960s; the development of strong film industries in Mexico, Cuba, and Brazil; and recent developments in the context of globalization and democratization. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently.

SPAN 336 Creative Storytelling in Spanish (5) VLPA/I&S Introduction to the theory and practice of storytelling in Spanish. Helps prepare the Spanish language teacher for the classroom. Focuses on the improvement of presentation skills, creativity, and the integration of story in the (second) language classroom.

SPAN 337 Foreign Study Advanced Conversation (2-6, max. 6) VLPA For participants in foreign study program. Does not fulfill any major requirement. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314,

SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently.

SPAN 339 Women Writers (3) VLPA Diaz Critical analysis of Chicana/Latina writers in the United States; or by Spanish-American, Luso-Brazilian, and Spanish women writers in their specific socio-historical context. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 340 Introduction to Latin American Poetry (3) VLPA Traces the oral, musical, and written traditions of Latin American poetry. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 350 Drama (3) VLPA Gilbert Generic study of Spanish drama. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 351 Poetry (3) VLPA O' Hara Generic study of Spanish poetry. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 352 Fiction (3) VLPA Petersen Generic study of Spanish fiction. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 360 Contemporary Spain (5) VLPA/I&S Raneda Social, political, and cultural developments in Spain since the end of the Franco dictatorship in 1975. Extensive use of Spanish Web sites. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330. Offered: jointly with JSIS A 360.

SPAN 390 Supervised Study (2-6, max. 20)

SPAN 392 Experiential Learning in Spanish (1-3, max. 3) Experiential learning project in the local Spanish-speaking community. Engages students in ways that supplement/enhance formal in-class language training. Prerequisite: SPAN 203. Credit/no-credit only.

SPAN 393 Foreign Study (1-10, max. 20) VLPA Study in Spanish speaking country outside the standard Spanish curriculum of the University of Washington. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330, any of which may be taken concurrently.

SPAN 394 Special Topics in Spanish Literature (3/5, max. 10) VLPA Gomez-Bravo Focuses on an individual Spanish author or a special topic in Spanish literature. May be repeated once. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 395 Special Topics in Latin American Literature (3/5, max. 10) VLPA Albarran Focuses on an individual Latin American author or a special topic in Latin American literature. May be repeated once. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 396 Special Topics in Spanish Cultural Studies (3/5, max. 10) VLPA/I&S Focuses on a special topic related to Spanish cultural studies. Taught in English. Prerequisite: either SPAN 301, SPAN 302, SPAN 303, SPAN 310, SPAN 314, SPAN 315, SPAN 316, or SPAN 330.

SPAN 398 Special Topics in Spanish Linguistics (3-5, max. 10) VLPA Focuses on a special topics related to Spanish linguistic studies. May be repeated once. Prerequisite: either SPAN 301 or SPAN 314.

SPAN 400 The Syntactic Structure of Spanish (5) VLPA Scientific study of the syntax of Spanish: structure of phrases, transformationally derived structures, grammatical relations, principles of interpretation. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPLING 400.

SPAN 401 The Morphological Structure of Spanish (5) VLPA Principles of word formation, including derivational and inflectional morphology. Relationship between inflectional morphology and other components of grammar. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPLING 401.

SPAN 402 The Phonological Structure of Spanish (5) VLPA Phonological component of the generative grammar of Spanish; representations of syllabic and segmental units, phonological rules, distinctive features and their articulatory correlates. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPLING 402.

SPAN 403 The Evolution of the Spanish Language (5) VLPA Fernandez-Mallat Historical survey of Spanish phonology, morphology, and syntax, from Latin origins to the modern language. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPLING 403.

SPAN 404 Dialects of World Spanish (5) VLPA Fernandez Dobao Introduction to dialectal variants of Spanish. Considers standardization and the real academia; variation and change; pragmatics and politeness; Spanish in contact; sound, word formation, and grammar variation. Taught in Spanish. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPLING 404.

SPAN 405 Spanish Phonetics (5) VLPA Analysis of sounds: training in pronunciation, intonation, and close transcription of Spanish language in its modalities. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPLING 405.

SPAN 406 Advanced Spanish Grammar (5) VLPA Fernandez-Mallat Problems of Spanish grammar. Differences from English grammar. Techniques for the effective teaching of Spanish. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPLING 406; A.

SPAN 407 Bilinguismo: Made in USA (5) VLPA/I&S Fernandez Dobao Introduces students to the study of bilingualism, focusing on Spanish/English bilingualism in the United States. Explores bilingualism as both an individual and social phenomenon, and aims to raise students' awareness about its benefits as well as complexities. Taught in Spanish. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPLING 407.

SPAN 408 Spanish Translation Workshop (5) VLPA Witte Intensive practice in translation to and from Spanish. Texts include literary prose, poetry, expository writing, newspaper and magazine articles. Problems of standard versus colloquial language, transposition of cultural references, concept of fidelity in translation. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323 and SPAN 406.

SPAN 409 Translation for Performance (5) VLPA Focuses on the translation of a selection of one full length or several short plays from English into Spanish with special attention given both to translation methodology and to the particular challenges encountered when translating/adapting a play for performance.

SPAN 410 Creative Writing in Spanish (5) VLPA O' Hara Creative writing in poetry for students undertaking fourth year advanced coursework in Spanish literature. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 414 Spanish Literature: Eighteenth Century (5) VLPA Mercer Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 415 Spanish Literature: Nineteenth Century (5) VLPA Mercer Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 416 Spanish Literature: 1900 to the Present (5) VLPA *Geist*, *Mercer* Spanish literature of the twentieth century prior to the Civil War to the present. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 420 Spanish Poetry: Origins Through the Fifteenth Century (5) VLPA *Petersen* Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 423 Spanish Poetry: The Golden Age, Sixteenth Through Seventeenth Centuries (5) VLPA *Gilbert* Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 424 Hispanic Poetry: 1870 - 1936 (5) VLPA *Geist* Modern lyric poetry of the Hispanic world. The period studied extends from 1870 to 1936 and deals with thirteen major poets, from Becquer to Hernandez. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 433 Golden Age Prose (5) VLPA *Gilbert* Representative, and outstanding, prose works of sixteenth- and seventeenth-century Spain. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 436 Spanish Novel of the Nineteenth Century (5) VLPA *Mercer* Representative works of Galdos, Clarin, Pareda, Valera, and Blasco Ibanez. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 438 Spanish Novel: 1900 - Present (5) VLPA *Geist* Spanish novel from the generation of 1898 to the present. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 439 Women Writers (5) VLPA/I&S *Diaz* Feminist analysis of selected texts by Chicana/Latina writers in the United States as well as by Spanish-American, Luso-Brazilian and/or Spanish women writers in their specific socio-historical contexts. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 440 Spanish Drama: 1150-1600 (5) VLPA *Gilbert* From the beginning to Lope de Vega. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 441 Spanish Drama: 1600-1635 (5) VLPA *Gilbert* Spanish theatre of the seventeenth century, with emphasis on Lope de Vega. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 442 Latin American Colonial Theatre and Performance (5) VLPA *Albarran* Study of formal Spanish American theatre, performance, and theatricalization of power in political, religious, and social life. Emphasizing how indigenous and European forms combined to create unique forms of spectacle in the Americas. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 445 The Modern Theatre in Spain, 1700-1900 (5) VLPA *Mercer* Literature and historical context of Spain's theatre in the eighteenth and nineteenth centuries. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 446 Modern Spanish Theatre: 1900 to Present (5) VLPA *Mercer* Examines works of Spain's major dramatists since 1900 and their relationship to Spain's changing social and political context. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 447 Modern Latin American Theater (5) VLPA *Witte* Study of the origin, development, and achievements of Latin American theater with an overview of its history prior to the twentieth century. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 449 Spanish Drama and Play Production (5, max. 10) VLPA *Witte* Prerequisite: either SPAN 303 or SPAN 316; SPAN 321. Credit/no-credit only.

SPAN 453 Cervantes and His Times (5) VLPA *Gilbert* Study of Cervantes and his moment in Spanish history, with special attention to his cultural and artistic environment. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 461 Topics in Latin American Cultural Studies (5, max. 10) VLPA/I&S *Albarran*, *O' Hara* Examines Latin American society and its cultural production. Major movements in the development of Latin American society and

intellectual life as reflected in music, the visual arts, literature, etc. Specific topics vary. Prerequisite: either SPAN 303 or SPAN 316; SPAN 322.

SPAN 462 Topics in Spanish Cultural Studies (5, max. 10) VLPA/I&S *Gomez-Bravo*, *Gilbert*, *Petersen* Examines Spanish society and its cultural production. Major movements in the development of Spanish society and intellectual life as reflected in music, the visual arts, literature, etc. Specific topics vary. Prerequisite: either SPAN 303 or SPAN 316; SPAN 322.

SPAN 464 Chicana Expressive Culture (5) VLPA/I&S Expressive culture of Mexican women in United States. Cultural and artistic practices in home, film, literary (print, oral), performing, and visual arts. Focuses on ways Chicana visual artists re-vision traditional iconography. Prerequisite: either SPAN 303 or SPAN 316; SPAN 322.

SPAN 465 Contemporary Chicano Literature (5) VLPA *Flores* Examines one or more problems, themes, and/or figures in the developing body of Chicano literature. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 466 Chicano Literature: Fiction (5) VLPA *Flores* Examines nineteenth- and early twentieth-century fiction, as well as contemporary works in attempts to trace the development of Chicano fiction in the proper historical trajectory. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 467 Spanish Women (5) VLPA/I&S Women's culture in Spain, focusing on women's experience during Civil War; persecution and censorship of women activists, artists, intellectuals during Franco years; changes in women's culture brought about by reintroduction of democracy; major issues addressed by contemporary Spanish feminists. Prerequisite: either SPAN 303 or SPAN 316; SPAN 322.

SPAN 468 Latin American Women (5) VLPA/I&S *Albarran* The elaboration of discourses of identity in relation to gender, ethnicity, social class, and nationality, by women writers from South America, Mexico, Central America, and the Caribbean. Testimonial literature, literature and resistance, women's experimental fiction. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321. Offered: jointly with GWSS 468.

SPAN 472 Colonial Prose (5) VLPA *Albarran* Study of major genres of prose writing in Spanish America during the sixteenth through eighteenth centuries, including history writing, travel writing, historiography, and nascent forms of fictional writing. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 473 Latin American Fiction: Nineteenth Century (5, max. 15) VLPA *Albarran* Study of prose fiction in Latin America in the nineteenth century. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 474 Latin American Fiction: Twentieth Century (5) VLPA *O' Hara* Study of prose fiction in Latin America in the twentieth century. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 475 Latin American Poetry: Colonial Through Nineteenth Century (5) VLPA *Albarran* Poetic movements of the seventeenth, eighteenth, and nineteenth centuries in Spanish American, Renaissance, baroque, neoclassicism, romanticism, and modernism. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 476 Contemporary Latin American Poetry (5) VLPA *O' Hara* Evolution of Latin American poetry, from postmodernism and vanguardism to the most recent poetic expression. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 477 Latin American Essay (5) VLPA *O' Hara* Literary expression of ideas in Latin American countries, nineteenth and twentieth centuries. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 479 The City and Latin American Literature: Points of Departure (5) VLPA/I&S *O' Hara* Representations of Latin American, United States, and European cities by Latin

American authors, and of Latin American and Latino cities by authors from other literary traditions. The literary relation of urbanization to modernization, globalization, exile, and alienation. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 480 Spanish Medieval Literature (5) VLPA *Petersen* Principal literary works of the Spanish Middle Ages in the context of evolving intellectual, spiritual, and artistic climates of the period. Covers the evolution of narrative and lyric prose and verse in both their traditional and learned manifestations. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 481 Sixteenth- and Seventeenth-Century Spanish Literature (5) VLPA *Gilbert* Spanish literature of the sixteenth and seventeenth centuries. Close study of key texts from all genres as well as their socio-historical contexts. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 482 Eighteenth- through Twentieth-Century Spanish Literature (5) VLPA *Mercer* Survey of Spanish literature since 1700, and its historical context. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 483 Latin American Literature: Origins to Independence (5) VLPA *Albarran* The elaboration of discourses of legitimization by the Spanish conquistadores, and of resistance and accommodation by native and mestizo peoples; the development of a New World Baroque aesthetic; literatures of independence from Spain and of nation-building. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 484 Latin American Literature: Modernismo to the Present (5) VLPA *O' Hara* Principal literary movements of Latin America, late nineteenth century to the present, with particular emphasis on poetry and narrative: modernismo, postmodernismo, the vanguard, nueva and novísima narrativa. Includes essays and autobiographical writings to help place the literary works in socio-historical perspective. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 486 Photography and Cultural Studies in Latin America (5) VLPA/I&S *Steele* Interdisciplinary exploration of the connections between visual anthropology (ethnography through photography and film), documentary and art photography, and colonial and post-colonial discourse in Latin America during the twentieth century. Prerequisite: either SPAN 303 or SPAN 316; SPAN 322. Offered: jointly with JSIS A 486.

SPAN 487 Mexican Cinema (5) VLPA/I&S *Steele* Analysis of representative films about post-revolutionary Mexico by directors from both the Golden Age of Mexican Cinema (1940-1960) and the Mexican New Film movement (1975-the present). Revolutionary nationalism, modernization and its discontents; construction of gender, class, and ethnicity; migration and globalization. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 488 The Fantastic in Latin American Literature (5) VLPA *O' Hara* Introduction to the Fantastic in literature, in contrast to realism, and how the concept has been adapted by Latin American authors. May focus on a particular writer: Augusto Monterroso (Guatemala) or Julio Cortázar (Argentina), or survey various authors. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 489 The Mexico-U.S. Border in Literature and Film (5) VLPA/I&S *Steele* Analysis of the Mexico-U.S. Border region in literature and film of the 1990s and early 2000s. Includes migration, tourism, NGOs, globalization, transnational commerce, multiculturalism, and politics of gender, sexuality, and race. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321. Offered: jointly with JSIS A 489.

SPAN 490 Honors Seminar (2-5, max. 10) VLPA Special studies in Spanish literature. Required of candidates for Honors and Distinction in Spanish.

SPAN 491 Individual Authors and Special Topics in Spanish Literature (5, max. 10) VLPA Focus on an individual Spanish author or a special problem in Spanish literature. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 492 Individual Authors and Special Topics in Latin American Literature (5, max. 10) VLPA Focuses on an individual Latin American author or a special problem in Latin American literature. Prerequisite: either SPAN 303 or SPAN 316; SPAN 321.

SPAN 493 Foreign Study (2-10, max. 20) VLPA Advanced study in Spanish speaking country outside the standard Spanish curriculum of the University of Washington. Prerequisite: either SPAN 303, SPAN 316, or SPAN 330; SPAN 321; SPAN 322; either SPAN 304, SPAN 305, SPAN 306, SPAN 307, SPAN 308, SPAN 319, SPAN 339, SPAN 340, SPAN 350, SPAN 351, SPAN 352, SPAN 394, or SPAN 395.

SPAN 495 Study in Spain (2-10, max. 20) VLPA Advanced study in Spain in approved foreign study programs. Prerequisite: either SPAN 303, SPAN 316, or SPAN 330; SPAN 321; SPAN 322; either SPAN 304, SPAN 305, SPAN 306, SPAN 307, SPAN 308, SPAN 319, SPAN 339, SPAN 340, SPAN 350, SPAN 351, SPAN 352, SPAN 394, or SPAN 395.

SPAN 499 Special Topics (1-5, max. 10) Topics to meet special needs.

SPAN 510 Methodology of Spanish Language Teaching (5) *Fernandez Dobao* Theoretical and practical foundations of current trends in second/foreign language teaching. Emphasis on communicative and task-based approaches to Spanish language teaching. Required for beginning Spanish teaching assistants. Credit/no-credit only.

SPAN 521 The Renaissance in Spain (5, max. 20) *Gilbert* Literary creation and the cultural, social, historical context of Spanish literature from La Celestina through the sixteenth century. Extensive study of secondary materials, intensive analysis of representative literary texts.

SPAN 522 The Renaissance in Spain (5, max. 20) *Gilbert* Literary creation and the cultural, social, historical context of Spanish literature from La Celestina through the sixteenth century. Extensive study of secondary materials, intensive analysis of representative literary texts.

SPAN 541 History of the Spanish Language (5, max. 20) *Fernandez Dobao* Summary of the evolution of Spanish language from the fragmentation of Peninsular Romance to *Cantar de Mio Cid*. The main work consists of analysis of early Castilian texts.

SPAN 561 Spanish-American Novel From 1940 to the Present (5, max. 20)

SPAN 571 The Modern Essay in Spanish America (5, max. 20)

SPAN 572 Twentieth-Century Spanish Poetry (5, max. 20)

SPAN 573 Twentieth-Century Spanish-American Poetry (5, max. 20)

SPAN 575 Literary Criticism (5)

SPAN 577 Contemporary Literary Theory (5) *D. GILBERT* Introduction to various structuralist and poststructuralist theories of literary analysis, including those developed by Hispanic theorists, and their application to the study of texts from the Spanish and Latin American traditions.

SPAN 590 Special Seminar and Conference (1-10, max. 30) Group seminars, or individual conferences, are scheduled under this number to meet special needs. Prerequisite: permission of the Graduate Program Coordinator.

SPAN 591 Literary Problems: Middle Ages (5, max. 20) *Gomez-Bravo, Petersen*

SPAN 592 Literary Problems: Renaissance (5, max. 20) *Gomez-Bravo*

SPAN 593 Literary Problems: Golden Age (5, max. 20) *D. GILBERT*

SPAN 594 Literary Problems: Eighteenth Century (5, max. 20)

SPAN 595 Literary Problems: Nineteenth Century (5, max. 20)

SPAN 596 Literary Problems: Twentieth Century (5, max. 20)

SPAN 597 Literary Problems: Spanish-American Colonial Literature (5, max. 20) *Albarrañ*

SPAN 598 Literary Problems: Latin America (5, max. 20) *E. O'HARA*

SPAN 600 Independent Study or Research (*-)

SPAN 700 Master's Thesis (*-) Credit/no-credit only.

SPAN 800 Doctoral Dissertation (*-) Credit/no-credit only.

Spanish Linguistics

SPLING 400 The Syntactic Structure of Spanish (5) VLPA Scientific study of the syntax of Spanish: structure of phrases, transformationally derived structures, grammatical relations, principles of interpretation. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPAN 400.

SPLING 401 The Morphological Structure of Spanish (5) VLPA Principles of word formation, including derivational and inflectional morphology. Relationship between inflectional morphology and other components of grammar. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPAN 401.

SPLING 402 The Phonological Structure of Spanish (5) VLPA Phonological component of the generative grammar of Spanish; representations of syllabic and segmental units, phonological rules, distinctive features and their articulatory correlates. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPAN 402.

SPLING 403 The Evolution of the Spanish Language (5) VLPA *Fernandez-Mallat* Historical survey of Spanish phonology, morphology, and syntax, from Latin origins to the modern language. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPAN 403.

SPLING 404 Dialects of World Spanish (5) VLPA *Fernandez Dobao* Introduction to dialectal variants of Spanish. Considers standardization and the real academia; variation and change; pragmatics and politeness; Spanish in contact; sound, word formation, and grammar variation. Taught in Spanish. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPAN 404.

SPLING 405 Spanish Phonetics (5) VLPA Analysis of sounds: training in pronunciation, intonation, and close transcription of Spanish language in its modalities. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPAN 405.

SPLING 406 Advanced Spanish Grammar (5) VLPA *Fernandez-Mallat* Problems of Spanish grammar. Differences from English grammar. Techniques for the effective teaching of Spanish. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPAN 406; A.

SPLING 407 Bilingüismo: Made in USA (5) VLPA/I&S *Fernandez Dobao* Introduces students to the study of bilingualism, focusing on Spanish/English bilingualism in the United States. Explores bilingualism as both an individual and social phenomenon, and aims to raise students' awareness about its benefits as well as complexities. Taught in Spanish. Prerequisite: either SPAN 303 or SPAN 316; either SPAN 323, LING 200, or LING 400; recommended: SPAN 323. Offered: jointly with SPAN 407.

Scandinavian Studies

318 Raitt

Scandinavian studies is concerned with the study of languages, literature, history, politics, and cultures of Denmark, Finland, Iceland, Norway, Sweden, and the Baltic States of Estonia, Latvia, and Lithuania. Emphasis is placed both on contemporary literature and culture and on historical development. Although most courses designed for majors are taught in the original languages, a broad spectrum of courses designed primarily for nonmajors is offered in English.

UNDERGRADUATE PROGRAM

Adviser

305X Raitt, Box 353420

(206) 543-6099

The Department of Scandinavian Studies offers the following programs of study:

- The Bachelor of Arts degree with a major in Danish, Finnish, Norwegian, Swedish, or Scandinavian area studies.
- Minors in Danish, Finnish, Norwegian, Swedish, Baltic studies, and Scandinavian area studies.

Bachelor of Arts

Suggested First- and Second-Year College Courses: First- and second-year Danish, Estonian, Finnish, Latvian, Lithuanian, Norwegian, or Swedish.

Department Admission Requirements

Students in good academic standing may declare this major at any time.

Major Requirements

Danish, Finnish, Norwegian, or Swedish

65 credits, of which 35 are in upper-division courses. The 65 credits include 30 credits in first- and second-year language training, 15 credits in literature courses in the chosen language, one course in Scandinavian area studies, a course in the history of Scandinavian languages, a course in Scandinavian literature in translation, and a senior essay (SCAND 498).

Scandinavian Area Studies

65 credits, of which 30 are in upper-division courses. The 65 credits include 30 credits in the chosen Scandinavian or Baltic language (normally first and second year), a minimum of one course from each of four area-studies fields (Scandinavian folklore and film; literature in translation; history and mythology; society and politics), and a senior essay (SCAND 498).

Minor

Minor Requirements

Baltic Studies

35 credits as follows:

1. 15 credits of first year Estonian, Latvian, or Lithuanian
2. 20 credits of upper-division Scandinavian coursework, including at least one Baltic studies course from the following: SCAND 344, SCAND 345, SCAND 454, SCAND 455
3. Students entering the UW with language proficiency in Estonian, Latvian, or Lithuanian beyond the first year of language training must take an additional 10 credits of upper-division language courses and must earn a minimum total of 25 credits in relevant coursework

Danish, Finnish, Norwegian, or Swedish

35 credits as follows:

1. 15 credits of first year Danish, Finnish, Norwegian, or Swedish
2. 15 credits of second year Danish, Finnish, Norwegian, or Swedish
3. 5 credits of upper-division Scandinavian coursework or 5 credits of an upper-division language course
4. Students entering the UW with language proficiency in Danish, Finnish, Norwegian, or Swedish beyond the first year of language training must take an additional 10 credits of upper-division language courses and must earn a minimum total of 25 credits in relevant coursework.

Estonian, Latvian, Lithuanian

35 credits as follows:

1. 15 credits of first year Estonian, Latvian, or Lithuanian
2. 15 credits of second year Estonian, Latvian, or Lithuanian
3. 5 credits of Baltic studies coursework (SCAND 344, SCAND 345, SCAND 454, or SCAND 455), or 5 credits of an upper-division language course.
4. Students entering the UW with language proficiency in Estonian, Latvian, or Lithuanian beyond the first year of language training must take an additional 10 credits of upper-division language courses and must earn a minimum total of 25 credits in relevant coursework.

Scandinavian Area Studies

35 credits as follows:

1. 15 credits of first year Danish, Finnish, Norwegian, or Swedish
2. 20 credits of upper-division Scandinavian coursework
3. Students entering the UW with language proficiency in Danish, Finnish, Norwegian, or Swedish beyond the first year of language training must take an additional 10 credits of upper-division language courses and must earn a minimum total of 25 credits in relevant coursework.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Graduates of the Department of Scandinavian Studies have an advanced level of proficiency in a Scandinavian, Fenno-Ugric, or Baltic language. They can talk about a wide range of concrete topics in a sustained conversation and have the ability to interpret and write about literary texts, non-fiction, and other media. Graduates also have knowledge of major figures, ideas, and institutions in Baltic or Nordic culture, history, literature, and politics that enriches a global perspective. They have the ability to research and synthesize source material in the target language and can produce a scholarly essay in English on a topic within their area of concentration.

Graduates of the Scandinavian studies program have the qualifications to embark on careers that require skills in the interpretation of information in various media, critical analysis, and effective communication and to continue in graduate programs and professional schools that value an international perspective.

- *Instructional and Research Facilities:* None
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning:* Internships at museums or with Scandinavian businesses are possible. Exchange program opportunities with Aarhus,

Copenhagen, Linköping, Stockholm, Uppsala, Bergen, Oslo, Åbo/Turku, and Helsinki also exist.

- *Department Scholarships:* The department offers several scholarships for students of Danish, Finnish, Norwegian, and Swedish.
- *Student Organizations/Associations:* The Danish Club, the Norwegian Club, the Swedish Club, and the Finnish Club.

GRADUATE PROGRAM

Graduate Program Coordinator

318 Raitt, Box 353420

(206) 543-0645

uwscand@uw.edu

The Department of Scandinavian Studies offers graduate programs of study leading to the Master of Arts and Doctor of Philosophy degrees. For the M.A. degree, the emphasis may be placed on Old Icelandic (Old Norse), Danish, Finnish, Norwegian, Swedish, or Scandinavian area studies. Ph.D. degree aspirants must complete one quarter's study of Old Icelandic and concentrate their studies primarily within one of five areas: Danish language and literature, Finnish language and literature, Norwegian language and literature, Swedish language and literature, or Scandinavian area studies.

For the graduate student, programs in Scandinavian studies open several areas of inquiry: medieval, particularly Old Icelandic; modern, including the eighteenth century; Romanticism; the Modern Breakthrough; and the twentieth century. Attention is paid to the history of Scandinavian languages, prose, drama, and poetry. Opportunities for supervised study and specialization also exist in such areas as Scandinavian history, politics, mythology, folklore, and Baltic studies, as well as in comparative-literature study.

Master of Arts

Two options are available, each allowing the student to emphasize a target language while pursuing courses in Scandinavian languages, literature, or area studies.

An emphasis on Scandinavian languages and literature includes acquisition of a working knowledge of literary history, critical theory and text analysis, plus study of one secondary area.

An emphasis on Scandinavian area studies includes the study of Scandinavian folklore, mythology, history, politics, society, and Baltic studies, with an emphasis in one of these areas.

Admission Requirements

Bachelor of Arts degree with major in Danish, Finnish, Norwegian, Swedish, or Scandinavian area studies, or equivalent background, including advanced language proficiency in one Nordic language.

Degree Requirements

Minimum 40 credits in courses or seminars in Scandinavian and related subjects approved by the department, of which at least 20 credits must be in courses numbered 500 and above; reading knowledge of French or German (another non-Scandinavian language may be substituted with faculty approval); written and oral examination; option between thesis and non-thesis program. Candidates in Scandinavian languages and literature must satisfy the departmental requirement in Old Icelandic.

Doctor of Philosophy

Concentration primarily on one of two areas: Scandinavian languages and literature, or Scandinavian area studies, with an emphasis on the student's target language. Major attention given to the history of the Scandinavian language

es, literary history and theory, and genre study. Opportunities for graduate work in such areas as Scandinavian history, politics, mythology, folklore, and Baltic studies exist.

Admission Requirements

Master of Arts degree with major in Scandinavian languages and literature or equivalent background.

Degree Requirements

Minimum 90 credits, to include:

40 credits beyond the master's degree in courses or seminars in Scandinavian languages and literature and related subjects approved by the department, one quarter's study of Old Icelandic, a reading knowledge of French and German (other non-Scandinavian languages may be substituted with faculty approval), general examination for admission to candidacy, 27 credits of SCAND 800 (dissertation) taken over at least three quarters, and a final examination on the dissertation.

Financial Aid

Teaching assistantships in Danish, Finnish, Norwegian, Swedish, and Scandinavian area studies are usually available, as well as occasional research assistantships. If funding allows, a Baltic-language teaching assistantship may be available.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at uw.edu/students/crscat/

Danish

DANISH 101 Elementary Danish (5) Fundamentals of oral and written Danish. First in a sequence of three.

DANISH 102 Elementary Danish (5) Fundamentals of oral and written Danish. Second in a sequence of three. Prerequisite: DANISH 101.

DANISH 103 Elementary Danish (5) Fundamentals of oral and written Danish. Third in a sequence of three. Prerequisite: DANISH 102.

DANISH 199 Foreign Study: Elementary Danish (1-15, max. 15) Fundamentals of oral and written Danish.

DANISH 201 Second-Year Danish (5) VLPA Intensive practice in speaking, reading, and writing. Review of grammar. Introduction of modern literary texts. Discussion of culture and current events in Denmark. First in a sequence of three. Recommended: DANISH 103.

DANISH 202 Second-Year Danish (5) VLPA Intensive practice in speaking, reading, and writing. Review of grammar. Introduction of modern literary texts. Discussion of culture and current events in Denmark. Second in a sequence of three. Prerequisite: DANISH 201.

DANISH 203 Second-Year Danish (5) VLPA Intensive practice in speaking, reading, and writing. Review of grammar. Introduction of modern literary texts. Discussion of culture and current events in Denmark. Third in a sequence of three. Prerequisite: DANISH 202.

DANISH 299 Foreign Study: Intermediate Danish (1-15, max. 15) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Discussion of culture and current events in Denmark.

DANISH 310 Topics in Danish Short Prose (5, max. 15) VLPA Focuses on the fairy tale and story, with selections by Bicher, H.C. Andersen, Bang, Blixen, and others.

DANISH 311 Topics in Danish Literature and Culture (5, max. 15) VLPA Selected topics in modern Danish literature and culture, such as women's literature, Danish identity and the European Union, contemporary drama and film, or children's literature. Recommended: DANISH 203.

DANISH 312 Topics in the Danish Novel (5, max. 15) VLPA

Focuses on selected novels from the nineteenth and twentieth centuries by figures such as J.P. Jacobsen, Herman Bang, J.V. Jensen, Hans Kirk, Scherfig and Ditlevsen.

DANISH 395 Foreign Study: Danish Area Studies (1-5, max. 10) I&S Courses in Danish history, society, and/or politics.**DANISH 399 Foreign Study: Topics in Danish Literature and Culture (1-5, max. 15) VLPA** Topics in Danish literature, life, and civilization.**DANISH 490 Supervised Reading (1-5, max. 10)** Readings in a selected area of Danish language, literature, or related fields.

Estonian

ESTO 101 Elementary Estonian (5) Fundamentals of oral and written Estonian. First in a sequence of three.**ESTO 102 Elementary Estonian (5)** Fundamentals of oral and written Estonian. Second in a sequence of three. Prerequisite: ESTO 101.**ESTO 103 Elementary Estonian (5)** Fundamentals of oral and written Estonian. Third in a sequence of three. Prerequisite: ESTO 102.**ESTO 150 Intensive Estonian (15)** Fundamentals of oral and written Estonian. Intensive practice in speaking, reading, and writing Estonian. Interactive classroom, computer-assisted learning, language, and reading laboratories. Emphasis on contemporary Estonian culture and society. If Estonian is the student's language of admission, only 10 credits count towards graduation.**ESTO 201 Second-Year Estonian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. First in a sequence of three. Prerequisite: either ESTO 103 or ESTO 150.**ESTO 202 Second-Year Estonian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. Second in a sequence of three. Prerequisite: ESTO 201.**ESTO 203 Second-Year Estonian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. Third in a sequence of three. Prerequisite: ESTO 202.**ESTO 250 Intensive Intermediate Estonian (15) VLPA** Accelerated second-year Estonian. Systematic review of Estonian grammar. Intensive practice in conversation, reading, and writing. Prerequisite: either ESTO 103 or ESTO 150. Offered: S.**ESTO 490 Supervised Reading (1-5, max. 10)** Readings in a selected area of Estonian language, culture, or society.

Finnish

FINN 101 Elementary Finnish (5) Fundamentals of oral and written Finnish. First in a sequence of three.**FINN 102 Elementary Finnish (5)** Fundamentals of oral and written Finnish. Second in a sequence of three. Prerequisite: FINN 101.**FINN 103 Elementary Finnish (5)** Fundamentals of oral and written Finnish. Third in a sequence of three. Prerequisite: FINN 102.**FINN 150 Intensive First-Year Finnish (15)** Fundamentals of oral and written Finnish. Intensive practice in speaking, reading, and writing. Interactive classroom, computer-assisted learning, and language and reading laboratories. Emphasis on contemporary Finnish culture and society. If Finnish is the student's language of admission, only 10 credits count towards graduation.**FINN 199 Foreign Study: Elementary Finnish (1-15, max. 15)** Fundamentals of oral and written Finnish.**FINN 201 Second-Year Finnish (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of

grammar. First in a sequence of three. Prerequisite: either FINN 103 or FINN 150.

FINN 202 Second-Year Finnish (5) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Second in a sequence of three. Prerequisite: FINN 201.**FINN 203 Second-Year Finnish (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. Third in a sequence of three. Prerequisite: FINN 202.**FINN 250 Intensive Second-Year Finnish (15) VLPA** Intensive study of second-year Finnish. Prerequisite: either FINN 103 or FINN 150.**FINN 299 Foreign Study: Intermediate Finnish (1-15, max. 15) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. Discussion of culture and current events in Finland.**FINN 310 Topics in Finnish Language and Culture (5, max. 15) VLPA** Topics related to Finnish literature, life, and civilization. Recommended: FINN 203.**FINN 395 Foreign Study: Finnish Area Studies (1-5, max. 10) I&S** Courses in Finnish history, society, and/or politics.**FINN 399 Foreign Study: Topics in Finnish Literature and Culture (1-5, max. 15) VLPA** Topics in Finnish literature, life, and civilization.**FINN 490 Supervised Reading (1-5, max. 10)** Readings in a selected area of Finnish language, culture, or society.

Latvian

LATV 101 Elementary Latvian (5) Fundamentals of oral and written Latvian. First in a sequence of three.**LATV 102 Elementary Latvian (5)** Fundamentals of oral and written Latvian. Second in a sequence of three. Prerequisite: LATV 101.**LATV 103 Elementary Latvian (5)** Fundamentals of oral and written Latvian. Third in a sequence of three. Prerequisite: LATV 102.**LATV 150 Intensive Latvian (15)** Fundamentals of oral and written Latvian. Intensive practice in speaking, reading, and writing Latvian. Interactive classroom, computer-assisted learning, language, and reading laboratories. Emphasis on contemporary Latvian culture and society. If Latvian is the student's language of admission, only 10 credits count towards graduation.**LATV 201 Second-Year Latvian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. First in a sequence of three. Prerequisite: either LATV 103 or LATV 150.**LATV 202 Second-Year Latvian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. Second in a sequence of three. Prerequisite: LATV 201.**LATV 203 Second-Year Latvian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. Third in a sequence of three. Prerequisite: LATV 202.**LATV 250 Intensive Intermediate Latvian (15) VLPA** Accelerated second-year Latvian. Systematic review of Latvian grammar. Intensive practice in conversation, reading, and writing. Prerequisite: either LATV 103 or LATV 150. Offered: S.**LATV 310 Topics in Latvian Literature (5, max. 15) VLPA** Topics in Latvian literature, life, and civilization. Recommended: LATV 203.**LATV 490 Supervised Reading (1-5, max. 10) VLPA** Readings in a selected area of Latvian language, culture, or society.

Lithuanian

LITH 101 Elementary Lithuanian (5) Fundamentals of oral and written Lithuanian. First in a sequence of three.**LITH 102 Elementary Lithuanian (5)** Fundamentals of oral and written Lithuanian. Second in a sequence of three. Prerequisite: LITH 101.**LITH 103 Elementary Lithuanian (5)** Fundamentals of oral and written Lithuanian. Third in a sequence of three. Prerequisite: LITH 102.**LITH 111 Basic Lithuanian (3)** Covers the fundamentals of conversational Lithuanian language. Completion of all three quarters does not meet the foreign language requirement.**LITH 112 Basic Lithuanian (3)** Covers the fundamentals of conversational Lithuanian language. Completion of all three quarters does not meet the foreign language requirement. Prerequisite: LITH 111.**LITH 113 Basic Lithuanian (3)** Covers the fundamentals of conversational Lithuanian language. Completion of all three quarters does not meet the foreign language requirement. Prerequisite: LITH 112.**LITH 150 Intensive Lithuanian (15)** Fundamentals of oral and written Lithuanian. Intensive practice in speaking, reading, and writing Lithuanian. Interactive classroom, computer-assisted learning, language, and reading laboratories. Emphasis on contemporary Lithuanian culture and society. If Lithuanian is the student's language of admission, only 10 credits count towards graduation.**LITH 201 Second-Year Lithuanian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. First in a sequence of three. Prerequisite: either LITH 103 or LITH 150.**LITH 202 Second-Year Lithuanian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. Second in a sequence of three. Prerequisite: LITH 201.**LITH 203 Second-Year Lithuanian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. Third in a sequence of three. Prerequisite: LITH 202.**LITH 250 Intensive Intermediate Lithuanian (15) VLPA** Accelerated second-year Lithuanian. Systematic review of Lithuanian grammar. Intensive practice in conversation, reading, and writing. Prerequisite: either LITH 103 or LITH 150. Offered: S.**LITH 490 Supervised Reading (1-5, max. 10)** Readings in a selected area of Lithuanian language, culture, or society.

Norwegian

NORW 101 Elementary Norwegian (5) Fundamentals of oral and written Norwegian. First in a sequence of three.**NORW 102 Elementary Norwegian (5)** Fundamentals of oral and written Norwegian. Second in a sequence of three.**NORW 103 Elementary Norwegian (5)** Fundamentals of oral and written Norwegian. Third in a sequence of three.**NORW 150 Intensive First-Year Norwegian (15)** Fundamentals of oral and written Norwegian. Intensive practice in speaking, reading, and writing. Interactive classroom, computer-assisted learning, language and reading laboratories. Emphasis on contemporary Norwegian culture and society. If Norwegian is the student's language of admission, only 10 credits count towards graduation.**NORW 199 Foreign Study: Elementary Norwegian (1-15, max. 15)** Fundamentals of oral and written Norwegian.**NORW 201 Second-Year Norwegian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional review of grammar. First in a sequence of three. Recommended: NORW 103.**NORW 202 Second-Year Norwegian (5) VLPA** Intensive practice in speaking, reading, and writing. Functional re-

view of grammar. Second in a sequence of three. Recommended: NORW 103.

NORW 203 Second-Year Norwegian (5) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Third in a sequence of three. Recommended: NORW 103.

NORW 299 Foreign Study: Intermediate Norwegian (1-15, max. 15) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Discussion of culture and current events in Norway.

NORW 310 The Norwegian Short Story (5) VLPA Generic study of the Norwegian short story. Recommended: NORW 203.

NORW 311 Drama After Ibsen (5) VLPA Recommended: NORW 203.

NORW 312 Topics in Norwegian Literature and Culture (5, max. 15) VLPA Topics related to Norwegian literature, life, and civilization. Recommended: NORW 203.

NORW 321 The Plays of Henrik Ibsen (5) VLPA Study of selected plays of Ibsen. Recommended: NORW 203.

NORW 395 Foreign Study: Norwegian Area Studies (1-5, max. 10) I&S Courses in Norwegian history, society, and/or politics.

NORW 399 Foreign Study: Topics in Norwegian Literature and Culture VLPA (1-5, max. 15) VLPA Topics in Norwegian literature, life, and civilization.

NORW 490 Supervised Reading (1-5, max. 10) Readings in a selected area of Norwegian language, literature, or related fields.

Scandinavian

SCAND 100 Introduction to Scandinavian Culture (5) VLPA/I&S The Scandinavian experience from the Viking Age to the present day; the background for contemporary Scandinavian democracy, with major emphasis on the cultural, political, and religious development of the Scandinavian countries.

SCAND 150 Norwegian Literary and Cultural History (5) VLPA A survey of Norwegian literary and cultural history from the Vikings to the present. Authors read include Bjornson, Ibsen, Hamsun, and Roolvaag.

SCAND 151 Finnish Literary and Cultural History (5) VLPA A survey of Finnish literature and cultural history during the nineteenth and twentieth centuries. Authors studied include Lonnrot, Snellmann, Kivi, Sodergran, Linna, Haavikko, and Kaurismaki.

SCAND 152 Latvian Literary and Cultural History (5) VLPA *Grinberga* Survey of Latvian literary and cultural history from the nineteenth century to the present. Authors include Pumpurs, Rainis, Aspazija, Blaumanis, Nesaule, Bels, and Zalite.

SCAND 153 Introduction to Lithuanian Literary and Cultural History (5) VLPA *Valanciauskiene* Surveys Lithuanian literary and cultural history from the Medieval period to the present. Authors include Dauksa, Maironis, Biliunas, Ciurlionis, Boruta, Granauskas, Aputis, Vilimaite, Milosz, and others.

SCAND 154 Estonian Literary and Cultural History (5) G. SMIDCHENS Surveys Estonian literary and cultural history from the prehistoric period to the present. Authors, musicians, artists, and filmmakers include Kaplinski, Koidula, Kreutzwald, Vilde, Part, Tormis, Meri, Parn, Pollu, and others. Offered: jointly with JSIS A 154; AWSpS.

SCAND 155 Danish Literary and Cultural History (5) VLPA *Hansen* Introduces the literary and cultural history of Denmark. Focuses on several major literary works and cultural moments from the Viking Age, the Enlightenment, nineteenth-century Romanticism, twentieth-century Modernism, and current Danish literature, journalism, and film.

SCAND 200 Contemporary Scandinavian Society (5) I&S Examines the distinctive policies, institutions, and social

norms of contemporary Scandinavian societies. Topics include: Nordic geography, the development of a "middle way" between capitalism and socialism, universal social policies, Scandinavia in the international system, and contemporary challenges to Scandinavian societies. Recommended: SCAND 100.

SCAND 230 Introduction to Folklore Studies (5) VLPA/I&S Comprehensive overview of the field of folkloristics, focusing on verbal genres, customs, belief, and material culture. Particular attention to the issues of community, identity, and ethnicity. Offered: jointly with C LIT 230.

SCAND 232 Hans Christian Andersen and the Fairy Tale Tradition (5) VLPA Influence of Hans Christian Andersen and the fairy tale on modern Scandinavian tales and stories. Investigates the significance of the fairy tale in the modern world, with attention to writers such as Isak Dinesen, Knut Hamsun, Villy Sorensen, William Heinesen.

SCAND 251 Holberg and His Comedies in English (2) VLPA Holberg and his major dramas, with attention to the comic tradition in the Scandinavian theatre.

SCAND 270 Sagas of the Vikings (5) VLPA Icelandic sagas and poetry about Vikings in the context of thirteenth-century society.

SCAND 275 Crime Scenes: Investigating the Cinema and Its Cultures (5) VLPA Teaches how to analyze film by closely studying crime scenes from historical and contemporary German and Scandinavian cinema. Directors studied include Fritz Lang, Carl Th. Dreyer, Billy Wilder, and Lars von Trier. Offered: jointly with GERMAN 275.

SCAND 280 Ibsen and His Major Plays in English (5) VLPA Reading and discussion of Ibsen's major plays.

SCAND 312 Masterpieces of Scandinavian Literature (5) VLPA Major works of Scandinavian literature by selected authors.

SCAND 315 Scandinavian Crime Fiction (5) VLPA *Nestingen* Studies Scandinavian crime-fiction literature and cinema since 1965, approaching crime fiction as a changing cultural artifact. Analyzes major issues and texts in the genre and its public status, while also training students in critical approaches to study of popular literature and culture. Offered: jointly with JSIS D 317; Sp.

SCAND 326 Scandinavia in World Affairs (5) I&S C. INGE-BRITSEN Introduction to the foreign relations of Scandinavia with a focus on Nordic security, international economic pressures, and global conflict resolution. Includes a survey of the national settings for international involvements and highlights the dilemmas for industrial societies exposed to the pressures of interdependence. Offered: jointly with POL S 326.

SCAND 327 Women in Scandinavian Society (5) VLPA/I&S Examines the changing position of women in Norway, Denmark, Finland, and Sweden from the 1880s to the contemporary period. Readings in literature and political science.

SCAND 330 Scandinavian Mythology (5) VLPA Integrative study of religious life in the pre-Christian North. Emphasis on source materials, including the Prose Edda and Poetic Edda. Discussion of historical, archeological, and folkloric evidence.

SCAND 331 Folk Narrative (5) VLPA Survey of various genres of folk narratives studied in performance contexts to reveal their socio-cultural functions in a variety of milieux. Theory and history of folk narrative study, taxonomy, genre classification, and interpretative approaches. Recommended: either SCAND 230 or C LIT 230. Offered: jointly with C LIT 331.

SCAND 334 Immigrant and Ethnic Folklore (5) VLPA/I&S Survey of verbal, customary, and material folk traditions in ethnic context. Theories of ethnic folklore research applied to the traditions of American communities of Scandinavian, Baltic, or other European ancestry. Recommended: either SCAND 230 or C LIT 230. Offered: jointly with C LIT 334.

SCAND 335 Scandinavian Children's Literature (5) VLPA The history, forms, and themes of Scandinavian children's literature from H. C. Andersen to the present. Exploration of the dominant concerns of authors, adult and non-adult audiences, and the uses to which juvenile and adolescent literature are put. Film adaptations and Scandinavian-American materials included.

SCAND 340 Kalevala and the Epic Tradition (5) VLPA An interdisciplinary approach to the Finnish national epic Kalevala, Estonian Kalevipoeg, and Saami Peivebarnen suongah jehtanasan maajisn. Discussion of traditional worldview, cultural revitalization, and emergent nationalism in nineteenth- and twentieth-century Finland, Estonia, and Saamiland.

SCAND 341 Sami Culture and History (5) VLPA/I&S An interdisciplinary look at the culture of Sami (Lapp) people in Scandinavia from the earliest archeological and textual evidence to the present day. Focus on indigenous modes of expression and worldview, as well as contemporary cultural and political activism.

SCAND 344 The Baltic States and Scandinavia (5) I&S Survey of the cultures and history of Estonia, Latvia, and Lithuania from the Viking Age to the present, with particular attention to Baltic-Scandinavian contacts. Offered: jointly with JSIS A 344.

SCAND 345 Baltic Cultures (5) VLPA/I&S Cultures and peoples of Estonia, Latvia, and Lithuania. Baltic literature, music, art, and film in social and historical context. Traditional contacts with Scandinavia and Central and East Europe. Offered: jointly with JSIS A 345.

SCAND 350 Environmental Norms in International Politics (5) I&S *Ingebritsen* Surveys development of international environmental consciousness from 1960s to present. Models of "green development"; ways in which norms for resource use have entered global politics. Patterns of state compliance with international environmental agreements, and why states fall short of meeting their international obligations. Offered: jointly with ENVIR 360/JSIS B 350.

SCAND 351 Scandinavia, the European Union, and Global Climate Change (5) I&S Reviews the history of climate change, the role of Swedish scientist Svante Arrhenius in defining greenhouse effects, Scandinavian policy response, and the role of the European Union in global climate change. Offered: jointly with JSIS A 351; WSp.

SCAND 360 Scandinavian Cinema (3/5) VLPA Major Scandinavian films and film directors from the 1920s to the present.

SCAND 367 Sexuality in Scandinavia: Myth and Reality (5) VLPA/I&S Examines selected Scandinavian literary and socio-political texts, films, and art to manifest the reality behind the myths of sexual freedom in Scandinavia.

SCAND 370 The Vikings (5) VLPA/I&S Vikings at home in Scandinavia and abroad, with particular emphasis on their activities as revealed in archaeological finds and in historical and literary sources. Offered: jointly with HSTAM 370.

SCAND 380 History of Scandinavia to 1720 (5) I&S Scandinavian history from the Viking Age to 1720, with an emphasis on the political, social, and economic development of Denmark, Norway, Sweden, Finland, and Iceland from the Middle Ages to the Enlightenment. Offered: jointly with HSTEU 380.

SCAND 381 History of Scandinavia Since 1720 (5) I&S Scandinavian history from the Enlightenment to the Welfare State with emphasis on the political, social, and economic development of the modern Scandinavian nations of Denmark, Norway, Sweden, Finland, and Iceland. Offered: jointly with HSTEU 381.

SCAND 399 Foreign Study in Scandinavia (1-5, max. 20) Pan-Scandinavian coursework in Scandinavia, including courses in English.

SCAND 402 International Political Economy and Scandinavia (5) I&S Overview of the most prominent theoretical

approaches to the study of international political economy. Evaluates competing theories and applies these to explain contemporary problems in international political economy. Readings include examples from Scandinavia's experience.

SCAND 427 Scandinavian Women Writers in English Translation (5) VLPA Selected works by major Scandinavian women writers from mid-nineteenth-century bourgeois realism to the present with focus on feminist issues in literary criticism. Offered: jointly with GWSS 429.

SCAND 430 Readings in Folklore (5) VLPA Exploration of theoretical and methodological issues in folklore studies through independent reading of journal articles published during the last five years. Recommended: either SCAND 230 or C LIT 230. Offered: jointly with C LIT 430.

SCAND 431 The Northern European Ballad (5) VLPA Integrative study of the Northern European Ballad, with an emphasis on texts, performance, context, history, theory, genre classification, and interpretive approaches. Offered: jointly with C LIT 431.

SCAND 437 Politics in Scandinavia (5) I&S C. INGEBRITSEN Twentieth-century politics in Scandinavia. How Scandinavian countries have been governed. Costs and consequences of their governmental style and its uncertain future. Optimal size of polities, problems of mature welfare states, process of leadership and representation in multi-party systems, decline of political parties. Offered: jointly with POL S 437.

SCAND 445 War and Occupation in Northern Europe: History, Fiction, and Memoir (5) VLPA/I&S The study of literary representations (fiction, memoirs, and personal narratives) dealing with World War II and the occupation of the Nordic and Baltic countries. Offered: jointly with JSIS A 442.

SCAND 450 Scandinavian Literary History (3) VLPA Survey of Scandinavian literary history. Recommended: either DANISH 203, FINN 203, NORW 203, or SWED 203.

SCAND 454 Baltic History (5) I&S Overview of the history of the area occupied by the Baltic countries of Latvia, Lithuania, and Estonia. Emphasizes their emergence as modern European nation-states. Era from World War I to present treated in depth, including the historical role and present situation of non-Baltic peoples, particularly Russians. Offered: jointly with HSTEU 454.

SCAND 455 Baltic States Since 1991 (5) I&S Intensive interdisciplinary survey of social, political, and economic developments in Estonia, Latvia, and Lithuania since 1991. Offered: jointly with JSIS A 455.

SCAND 460 History of the Scandinavian Languages (5) VLPA Development of languages from common Scandinavian to contemporary Danish, Norwegian, Swedish, Faroese, and Icelandic. Recommended: either DANISH 203, FINN 203, NORW 203, or SWED 203.

SCAND 462 Isak Dinesen and Karen Blixen (5) VLPA The fiction of Isak Dinesen (pseudonym for Karen Blixen) re-evaluated in light of current issues in literary criticism, particularly feminist criticism. Close readings of selected tales, essays, and criticism. Offered: jointly with GWSS 462.

SCAND 470 Scandinavian Auteurs (5, max. 10) VLPA *Nestingen* Studies the body of work of Scandinavia's auteur filmmakers. Introduces the theory and history of auteur cinema, with special attention to Scandinavian filmmakers' contribution. Offered: jointly with C LIT 474; AWSp.

SCAND 479 Eco-Capitalism (5) I&S *Ingebritsen* Explores the idea of environmentalism and sustainability across societies. Compares and contrasts how prominent authors in the field assess the risks and opportunities of human effects on climate and ecology. Questions explored include: will ecological solutions be critical to the revival of the global economy? Why do place such as Europe adapt more readily to environmental challenges? Offered: jointly with JSIS A 429.

SCAND 480 Kierkegaard and Decadence in European Literature (5) VLPA Reading and discussion of core texts by Søren Kierkegaard, as well as a consideration of the relationship between Kierkegaardian thought and the literary practice of various writers of Scandinavian and European decadence. Offered: jointly with JSIS A 480.

SCAND 481 August Strindberg and European Cultural History (5) VLPA/I&S Examines the work of Swedish dramatist, novelist, and painter August Strindberg, in the context of European literary movements and history of ideas from 1880 to 1912, and Strindberg's influence on twentieth-century drama and film. Offered: jointly with JSIS A 481.

SCAND 482 Knut Hamsun and Early European Modernism (5) VLPA Reading and discussion of significant novels by Knut Hamsun, whose oeuvre is considered in the context of works by other European modernist writers. Offered: jointly with JSIS A 482.

SCAND 490 Special Topics (1-5, max. 15) Special topics in Scandinavian art, literature, culture, and history. Course offerings based on instructor's specialty and student demand.

SCAND 495 Foreign Study: Research Project (1-5, max. 10) Research on approved topic.

SCAND 498 Senior Essay (5) VLPA Undergraduate research and the writing of a senior essay in Scandinavian area studies.

SCAND 499 Independent Study or Research (1-5, max. 10) Independent study or research in Scandinavian area studies. May be done in a Scandinavian language or in English.

SCAND 500 Introductory Readings in Old Icelandic (5) Systematic study of the grammatical structure of Old Icelandic and the reading of several short prose works.

SCAND 501 Old Icelandic Language and Literature (5) Reading of a major work in Old Icelandic literature as a vehicle for discussions about literary history and genre, narrative, and rhetorical strategies.

SCAND 503 Methods of Scandinavian Studies (5) Introduction to Scandinavian studies on the graduate level with emphasis on Scandinavian literature, folklore, history, and politics.

SCAND 504 Contemporary Literary Theory (5) Contemporary literary theory and its application to Scandinavian texts. Prerequisite: graduate student standing or permission of instructor.

SCAND 505 Topics in Scandinavian Drama and Film (5, max. 15) Seminar on a selected topic in Scandinavian drama or film, such as an author (Holberg, Ibsen, Strindberg, Bergman), a period, a genre, or a movement.

SCAND 508 Topics in Scandinavian Prose (5, max. 15) Seminar on various topics in Scandinavian prose, including shorter prose texts, as well as a selection of the significant novels of the nineteenth and twentieth centuries.

SCAND 515 Pre-Nineteenth-Century Scandinavian Literature (5) Seminar on Scandinavian literature of the sixteenth, seventeenth, and eighteenth centuries.

SCAND 518 Foreign Language Teaching Methodology (2) *Brandl* Current foreign language teaching methods and approaches. Learning and teaching strategies and techniques for the four skills (reading, writing, speaking, listening) including cultural notions. Current and future trends in pedagogy and technology. Offered: jointly with GERMAN 518/NEAR E 518/SLAV 518; A.

SCAND 519 Modern Scandinavian Politics (5) Analyzes the political, economic, and historical development of Sweden, Norway, Denmark, Iceland, and Finland from World War II to the present. Readings focus on domestic and foreign policies that distinguish these countries from other advanced industrial societies. Offered: jointly with POL S 519.

SCAND 520 Topics in Scandinavian Poetry (5, max. 15) Seminar on selected periods of Scandinavian poetry: romanticism, symbolism, modernism, and contemporary po-

etry. Poetry examined in relation to the literary canon of each country and to Scandinavian literature as a whole. International influences also discussed.

SCAND 525 Topics in Scandinavian History (5, max. 15) Seminar on selected topics in Scandinavian history.

SCAND 530 Old Norse Literature (3) Studies in the poetry and prose tradition of medieval Iceland and Norway.

SCAND 533 Interdisciplinary Approaches to Community in Scandinavia (5) Humanistic examination of community creation, maintenance, and change in the Nordic region. Examples drawn from folklore, literature, activism, popular culture, history. Focus on issues of gender, belief, and art in relation to community. Coursework includes both individual and collaborative assignments.

SCAND 570 Scandinavian Auteurs (5, max. 10) VLPA *Nestingen* Seminar on auteur filmmakers in Scandinavian cinema, studying specific auteurs' bodies of work, theories of auteur cinema, and the history of auteurism in Scandinavian cinema. Offered: jointly with C LIT 574; AWSp.

SCAND 579 Eco-Capitalism (5) *Ingebritsen* Explores the idea of environmentalism and sustainability across societies. Compares and contrasts how prominent authors in the field assess the risks and opportunities of human effects on climate and ecology. Questions explored include: will ecological solutions be critical to the revival of the global economy? Why do place such as Europe adapt more readily to environmental challenges? Offered: jointly with JSIS A 529.

SCAND 580 Kierkegaard and Decadence in European Literature (5) *Sjåvik* Examines Kierkegaardian thought and the literary practice of various writers of Scandinavian and European decadence. Offered: Sp.

SCAND 581 August Strindberg and European Cultural History (5) *Adams* Seminar on Swedish dramatist, novelist, scientist, and painter August Strindberg (1849-1912), on of Europe's most influential artists, and on of the most important innovators of modern drama. Offered: Sp.

SCAND 582 Knut Hamsun and Early European Modernism (5) *Sjåvik* Examines Knut Hamsun's early works and their relationship to early European modernist literature. Offered: W.

SCAND 590 Special Topics in Scandinavian Literature (1-5, max. 15)

SCAND 594 Modern Methods and Materials in Teaching Scandinavian and Baltic Languages (3) Theory and practice of communicative language teaching; current developments in foreign-language teaching; evaluation of teaching materials; includes attendance at the departmental and university-wide fall orientation; required for beginning teaching assistants of Scandinavian and the Baltic languages. May not be taken for credit if GRDSCH 615 already taken. Prerequisite: SCAND 518. Credit/no-credit only.

SCAND 595 Teaching Assistant Workshop (1) *Brandl* Focuses on topics in language pedagogy. Required for continuing teaching assistants in Scandinavian studies. Includes participation in the departmental and University-wide fall orientation teaching workshops. Prerequisite: SCAND 518; SCAND 594. Credit/no-credit only. Offered: A.

SCAND 600 Independent Study or Research (*-) Prerequisite: permission of instructor.

SCAND 700 Master's Thesis (*-)

SCAND 800 Doctoral Dissertation (*-)

Swedish

SWED 101 Elementary Swedish (5) Fundamentals of oral and written Swedish. First in a sequence of three.

SWED 102 Elementary Swedish (5) Fundamentals of oral and written Swedish. Second in a sequence of three.

SWED 103 Elementary Swedish (5) Fundamentals of oral and written Swedish. Third in a sequence of three.

SWED 150 Intensive First-year Swedish (15) Fundamentals of oral and written Swedish. Intensive practice in speaking, reading, and writing. Interactive classroom, computer-assisted learning, language and reading laboratories. Emphasis on contemporary Swedish culture and society. If Swedish is the student's language of admission, only 10 credits count towards graduation.

SWED 199 Foreign Study: Elementary Swedish (1-15, max. 15) Fundamentals of oral and written Swedish.

SWED 201 Second-year Swedish (5) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. First in a sequence of three. Recommended: SWED 103.

SWED 202 Second-year Swedish (5) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Second in a sequence of three. Recommended: SWED 103.

SWED 203 Second-year Swedish (5) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Third in a sequence of three. Recommended: SWED 103.

SWED 299 Foreign Study: Intermediate Swedish (1-15, max. 15) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Discussion of culture and current events in Sweden.

SWED 300 Swedish Women Writers (5) VLPA Readings from works by Swedish women writers. Recommended: SWED 203.

SWED 301 Topics in Swedish Literature and Culture (5, max. 15) VLPA Topics in Swedish literature, life, and civilization. Recommended: SWED 203.

SWED 302 The Swedish Novel (5) VLPA Selected works by novelists of the nineteenth and twentieth centuries. Recommended: SWED 203.

SWED 352 Strindberg and His Works (5) VLPA Representative short stories, dramas, autobiographical works, poems, and one novel. Recommended: SWED 203.

SWED 395 Foreign Study: Swedish Area Studies (1-5, max. 10) I&S Courses in Swedish history, society, and/or politics.

SWED 399 Foreign Study: Topics in Swedish Literature and Culture (1-5, max. 15) VLPA Topics in Swedish literature, life, and civilization.

SWED 490 Supervised Reading (1-5, max. 10) Readings in a selected area of Swedish language, literature, or related fields.

SWED 510 Graduate Level Proficiency in Swedish (2-5, max. 15) Adams, Dubois Advanced training in graduate level proficiency in Swedish. Prerequisite: 15 credits of 300-400 level SWED courses. Offered: AWPSS.

Slavic Languages and Literatures

M253 Smith

Slavic languages and literatures include the principal East European languages and literatures as well as Slavic linguistics. Languages include Bosnian/Croatian/Serbian, Bulgarian, Czech, Georgian, Polish, Romanian, Russian, Slovene, and Ukrainian.

UNDERGRADUATE PROGRAM

Adviser

M253A Smith, Box 353580

(206) 543-6848

slavicll@uw.edu

The Department of Slavic Languages and Literatures offers the following programs of study

- The Bachelor of Arts degree with a major in Slavic languages and literatures with options in Russian language, literature, and culture; and Eastern European languages, literatures, and culture
- Minors in Russian language, Russian literature/Slavic literatures, and Slavic languages

Bachelor of Arts

Suggested First- and Second-Year College Courses: First- and second-year Russian. Courses that develop writing skills.

Department Admission Requirements

Students in good academic standing may declare this major at any time.

Major Requirements

Russian Language, Literature, and Culture Option (Minimum 50 credits):

1. RUSS 322, RUSS 323
2. RUSS 403
3. RUSS 451
4. Courses from the following list of electives to reach the required 50-credit minimum: RUSS 210, RUSS 221, RUSS 223, RUSS 230, RUSS 240, RUSS 313, RUSS 324, RUSS 420, RUSS 421, RUSS 422, RUSS 423, RUSS 424, RUSS 425, RUSS 426, RUSS 430, RUSS 481, RUSS 482, RUSS 483, RUSS 486, RUSS 490, SLAV 110, SLAV 210, SLAV 223, SLAV 320, SLAV 323, SLAV 351, SLAV 401, SLAV 423, SLAV 425, SLAV 426, SLAV 470, SLAV 490, SLAVIC 498; HSTEU 444/SISRE 444, HSTEU 445/SISRE 448. No more than 15 credits from the following may apply: RUSS 303, RUSS 350 (only 5 credits of RUSS 350 may apply), RUSS 401, or RUSS 402. No more than 5 credits from the following units may apply: RUSS 110, RUSS 120.
5. Minimum 2.0 grade for each course and minimum 2.50 GPA for all UW and transfer courses presented for this option
6. Minimum 15 graded credits presented for this option must be completed at the UW

Eastern European Languages, Literature, and Culture Option (Minimum 50 credits):

1. One of the following: BCS 406, BCS 410, BULGR 406, CZECH 406, POLSH 406, ROMN 406, SLVN 406, UKR 406
2. SLAV 351 (5 credits)
3. Courses from the list below to reach the required 50-credit minimum. Additional 15 credits from the principal Eastern European language (item 1, above) may also be counted toward the 50-credit minimum requirement. Minimum 30 credits from BCS 420, CZECH 420, POLSH 320, POLSH 420, SLAV 110, SLAV 210, SLAV 223, SLAV 320, SLAV 323, SLAV 401, SLAV 423, SLAV 425, SLAV 426, SLAV 470, SLAV 481, SLAV 482, SLAV 483, SLAV 486, SLAV 490, SLAVIC 498, UKR 420
4. Minimum 2.0 grade in each course and minimum 2.50 cumulative GPA for all UW and transfer courses presented for this option.
5. Minimum 15 graded credits presented for this option must be completed at the UW.

Minor

Minor Requirements

Russian Language

Minimum 25 credits to include one of the following: RUSS 303, RUSS 350, RUSS 401, RUSS 402, RUSS 403, RUSS 450. Courses from the immediately preceding list or from the following list of electives to reach the required 25-credit minimum: RUSS 301, RUSS 302, RUSS 313, RUSS 451, RUSS 481, SLAV 110, SLAV 210, SLAV 351, SLAV 425, SLAV 426, SLAV 470. Minimum 2.0 grade in each course presented for the minor. Minimum 15 graded credits presented for the minor must be completed at the UW.

Russian Literature/Slavic Literatures

Minimum 25 credits to include RUSS 322, RUSS 323, and 15 credits from the following electives list: BCS 420, CZECH 420, POLSH 320, POLSH 420, RUSS 210, RUSS 221, RUSS 223, RUSS 230, RUSS 240, RUSS 324, RUSS 420, RUSS 421, RUSS 422, RUSS 423, RUSS 424, RUSS 425, RUSS 426, RUSS 430, RUSS 490, SLAV 223, SLAV 320, SLAV 323, SLAV 423, SLAV 490, UKR 420. No more than 5 credits from the following may also apply: RUSS 110, RUSS 120. Minimum 2.0 grade in each course presented for the minor. Minimum 15 graded credits presented for the minor must be completed at the UW.

Slavic Languages

Minimum 25 credits to include one of the following as a principal Eastern European language: BCS 406, BCS 410 (10 credits), BULGR 406, CZECH 406, POLSH 406, ROMN 406, SLVN 406, UKR 406. Also required: SLAV 351. Courses from the following list of electives to reach the required 25-credit minimum: SLAV 110, SLAV 210, SLAV 425, SLAV 426, SLAV 470, SLAV 481. Up to 25 credits from the principal Eastern European language above may also be counted toward the 25-credit minimum requirement. Minimum 2.0 grade in each course presented for the minor. Minimum 15 graded credits presented for the minor must be completed at the UW.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Graduating majors in Slavic languages and literatures have a solid command of the Slavic language of focus, with speaking, listening, reading, writing, and translation skills at the intermediate high or advanced level. They have a broad knowledge of the history of the relevant country, and of its modern culture. Students have a general knowledge of major periods and literature and detailed knowledge of two or three particular authors or genres. Students have a good understanding of Slavic languages in general and the language of their specialization in particular, as well as knowledge of major issues in contemporary phonology, morphology, and syntax. All students develop good general analytical skills and the ability to explore and understand another culture through mastery of its language.
- *Instructional and Research Facilities:* UW Language Learning Center
- *Honors Options Available:* Dobro Slovo membership is available to qualifying students (see adviser for requirements). With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning:* Undergraduates may present their current research at the annual Slavic Student Symposium each spring. Suzzallo Library holdings include some 400,000 titles in Slavic languages and in other languages on Slavic subjects. The library subscribes to all important periodicals and newspapers in Russian and other languages and has exceptionally strong holdings in rare and antiquarian Slavic titles on microfilm and microfiche.

- *Department Scholarships:* Vadim Pahn Scholarship for continued study of Russian in an intensive summer language program; Asante Outstanding Paper Prize for the best undergraduate paper written in a Slavic Department course; Polish Studies Scholarship awarded for study in Poland of the Polish language and culture.
- *Student Organizations/Associations:* Rodnoi Ugolok, the Russian student society; Ukrainian Students United, the Ukrainian student society.

GRADUATE PROGRAM

Graduate Program Coordinator

M268 Smith, Box 353580

(206) 543-6848

The Department of Slavic Languages and Literatures offers a complete program of courses and seminars leading to the Master of Arts and Doctor of Philosophy degrees in Russian and East European languages, literatures, and cultures. Languages taught in the department include Czech, Old Church Slavonic, Polish, Russian, and Bosnian/Croatian/Serbian.

The graduate program is organized to permit completion of the master's degree in four to six quarters and the doctoral degree in three additional years. The duration of each program, however, depends on the extent of the student's preparation upon entrance into the program.

Master of Arts

Admission Requirements

A student seeking admission to the MA program should have a bachelor's degree in Russian or Slavic Studies which includes four years of Slavic language study. Applicants with equivalent experience and basic coursework in Slavic literatures, cultures, and history are considered. A student not meeting these requirements may be given conditional admission but is expected to make up any deficiencies. Consideration is given to those with three years of language who enroll in fourth-year summer intensive Russian the quarter before entry.

All students entering the program take a diagnostic language test to establish their level of proficiency and determine what further instruction may be necessary.

Degree Requirements

45 credits minimum, as follows:

1. *Slavic Core Courses:* 10 credits from the following: RUSS 501, RUSS 502, SLAV 501, SLAV 519
2. *Slavic Linguistics Courses:* 10 credits from the following: SLAV 550, SLAV 551, SLAV 570
3. *Slavic Literature Courses (10 credits):* RUSS 542, RUSS 543
4. *Second Slavic language, (5 credits):* One of the following: BCS 403, BULGR 403, CZECH 403 or POLSH 403 (implies completion of 401 and 402 in the relevant language)
5. *Elective Courses:* 10 credits from above or from the following: BCS 406, BCS 420, CZECH 406, CZECH 420, POLSH 406, POLSH 420, RUSS 420, RUSS 421, RUSS 422, RUSS 423, RUSS 425, RUSS 426, RUSS 430, RUSS 512, RUSS 520, RUSS 521, RUSS 522, RUSS 523, RUSS 526, RUSS 570, RUSS 577, SLAV 420, SLAV 423, SLAV 425, SLAV 426, SLAV 470, SLAV 490, SLAV 520, SLAV 561, SLAV 562, SLAV 563, SLAV 565, SLAV 566, UKR 420
6. *Examinations*
 - a. Russian Language
 - b. Other Slavic Languages

- c. MA Comprehensive Examinations

Doctor of Philosophy

Admission Requirements

Applicants to the doctoral program in Slavic Languages and Literatures, who are expected to possess an MA or equivalent degree, are admitted by vote of the graduate faculty on the basis of their language skills (Slavic and English), general background in Slavic cultures, and a comprehensive statement of purpose.

Degree Requirements

Minimum 90 credits, to include:

1. *Coursework:* At least 90 credits, including graduate credits taken toward the MA degree, and at least one full year of residence at the UW
2. *Readings:* Many post-MA credits are satisfied with individually arranged readings courses. Courses are mutually agreed upon by the student and the Supervisory Committee chair and are organized with an eye to the comprehensive examinations. Students whose emphasis is Slavic linguistics may include a third Slavic language as a field. PhD students with a literature focus should take one year of a second Slavic language (401-403 sequence) or test out of 403. PhD students with a linguistics focus should take two years of one language (401-406 sequence) or at least one year of two different second Slavic languages. The student may also satisfy this requirement by demonstrating appropriate proficiency in the language(s). Students majoring in language pedagogy follow the linguistics guidelines.
3. *Comprehensive Examinations:* As a prerequisite for scheduling the general examination, the candidate must demonstrate reading ability in a language appropriate for research purposes. The two-hour examination consists of a journal article (5-7 pages), which the student summarizes and a portion of which she/he translates. The particular language may be negotiated by the student with his or her adviser on the basis of the research interests of the student.

The student takes four written field examinations, followed two weeks later by the general (oral comprehensive) examination.

The general (oral comprehensive) examination must be set up with the Graduate School at least three weeks before the examination is scheduled. The procedure is described in the Graduate Student Services' how-to instructions on the web.

Part of the oral comprehensive examination is usually a presentation of the dissertation proposal.

4. *Dissertation and Defense:* The candidate must register for a minimum of three quarters of SLAVIC 800 at a maximum of 10 credits per quarter before submitting a dissertation for defense. With the approval of the dissertation reading committee (usually a subset of the Supervisory Committee), the candidate defends the dissertation in a final examination open to the graduate faculty of the University and invited guests.

Research Facilities

The Suzzallo Library holdings include some 400,000 titles in Slavic languages and in other languages on Slavic subjects. It subscribes to all important periodicals and newspapers in Russian and other languages and has exceptionally strong holdings in rare and antiquarian Slavic titles on microfilm and microfiche.

Assistantship Opportunities

The department regularly offers a number of teaching assistantships. In conjunction with the Henry M. Jackson

School of International Studies, students in the department are eligible for several other types of fellowships.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at [www.uw.edu/students/crscat/](http://uw.edu/students/crscat/)

Bosnian-Croatian-Serbian

BCS 401 First Year Bosnian/Croatian/Serbian (5) Comprehensive introduction to spoken and written literary Bosnian, Croatian, and Serbian. First in a sequence of three. Offered: A.

BCS 402 First Year Bosnian/Croatian/Serbian (5) Comprehensive introduction to spoken and written literary Bosnian, Croatian, and Serbian. Second in a sequence of three. Prerequisite: BCS 401, which may be taken concurrently during summer quarter. Offered: W.

BCS 403 First Year Bosnian/Croatian/Serbian (5) Comprehensive introduction to spoken and written literary Bosnian, Croatian, and Serbian. Third in a sequence of three. Prerequisite: BCS 402, which may be taken concurrently during summer quarter. Offered: Sp.

BCS 404 Second-Year Bosnian/Croatian/Serbian (5) **VLPA** Continuation of BCS 401, BCS 402, BCS 403; reinforces basic grasp of language and enlarges both vocabulary and command of grammatical patterns through the reading of contemporary short stories in Bosnian, Croatian, and Serbian. First in a sequence of three. Prerequisite: minimum grade of 2.0 in BCS 403. Offered: A.

BCS 405 Second-Year Bosnian/Croatian/Serbian (5) **VLPA** Continuation of BCS 401, BCS 402, BCS 403; reinforces basic grasp of language and enlarges both vocabulary and command of grammatical patterns through the reading of contemporary short stories in Bosnian, Croatian, and Serbian. Second in a sequence of three. Prerequisite: minimum grade of 2.0 in BCS 404. Offered: W.

BCS 406 Second-Year Bosnian/Croatian/Serbian (5) **VLPA** Continuation of BCS 401, BCS 402, BCS 403; reinforces basic grasp of language and enlarges both vocabulary and command of grammatical patterns through the reading of contemporary short stories in Bosnian, Croatian, and Serbian. Third in a sequence of three. Prerequisite: minimum grade of 2.0 in BCS 405. Offered: Sp.

BCS 410 Intensive Third Year Bosnian/Croatian/Serbian (10) **VLPA** Belic Advanced grammatical exercises and listening, reading, and writing skills development. Emphasis on strengthening of conversational and presentational competence. Prerequisite: BCS 406. Offered: A.

BCS 420 Literature, Film, and Culture of the Former Yugoslavia and the Yugoslav Successor States (5, max. 15) **VLPA** A travelogue through the intellectual and cultural landscape of the former Yugoslavia and the Yugoslav successor states, studying select literary works, films, and other artifacts, with the exploration of both how these phenomena are a part of their intellectual and historical environment, and how they transcend and change it.

Bulgarian

BULGR 401 First-Year Bulgarian (5) Introduction to Bulgarian phonology and grammar in terms of the modern spoken language. Writing conventions of literary Bulgarian. First in a sequence of three. Offered: A.

BULGR 402 First-Year Bulgarian (5) Introduction to Bulgarian phonology and grammar in terms of the modern spoken language. Writing conventions of literary Bulgarian. Second in a sequence of three. Prerequisite: BULGR 401. Offered: W.

BULGR 403 First-Year Bulgarian (5) Reading of modern texts to increase command of grammar and vocabulary.

Third in a sequence of three. Prerequisite: BULGR 402. Offered: Sp.

BULGR 404 Second-Year Bulgarian (5) VLPA Continuation of BULGR 401, BULGR 402, BULGR 403. Selected readings in Bulgarian literature, history, and culture. Reinforces and extends basic knowledge of Bulgarian grammar and vocabulary. First in a sequence of three. Prerequisite: minimum grade of 2.0 in BULGR 403. Offered: A.

BULGR 405 Second-Year Bulgarian (5) VLPA Continuation of BULGR 401, BULGR 402, BULGR 403. Selected readings in Bulgarian literature, history, and culture. Reinforces and extends basic knowledge of Bulgarian grammar and vocabulary. Second in a sequence of three. Prerequisite: BULGR 404. Offered: W.

BULGR 406 Second-Year Bulgarian (5) VLPA Continuation of BULGR 401, BULGR 402, BULGR 403. Selected readings in Bulgarian literature, history, and culture. Reinforces and extends basic knowledge of Bulgarian grammar and vocabulary. Third in a sequence of three. Prerequisite: BULGR 405. Offered: Sp.

Czech

CZECH 401 First-Year Czech (5) Introduction to spoken and written Czech. First in a sequence of three. Offered: A.

CZECH 402 First-Year Czech (5) Introduction to spoken and written Czech. Second in a sequence of three. Prerequisite: CZECH 401. Offered: W.

CZECH 403 First-Year Czech (5) Modern Czech prose, leading to a command of the language as a research tool and providing an adequate basis for further study. Third in a sequence of three. Prerequisite: CZECH 402. Offered: Sp.

CZECH 404 Second-Year Czech (5) VLPA Continuation of CZECH 401, CZECH 402, CZECH 403. Selected readings from the main works of Czech authors of the nineteenth and twentieth centuries. Reinforces and extends basic knowledge of Czech grammar and vocabulary. First in a sequence of three. Prerequisite: minimum grade of 2.0 in CZECH 403. Offered: A.

CZECH 405 Second-Year Czech (5) VLPA Continuation of CZECH 401, CZECH 402, CZECH 403. Selected readings from the main works of Czech authors of the nineteenth and twentieth centuries. Reinforces and extends basic knowledge of Czech grammar and vocabulary. Second in a sequence of three. Prerequisite: CZECH 404. Offered: W.

CZECH 406 Second-Year Czech (5) VLPA Continuation of CZECH 401, CZECH 402, CZECH 403. Selected readings from the main works of Czech authors of the nineteenth and twentieth centuries. Reinforces and extends basic knowledge of Czech grammar and vocabulary. Third in a sequence of three. Prerequisite: CZECH 405. Offered: Sp.

Topics include post-colonialism, gender, reflections of social upheavals, artistic experimentation, issues of commercialism in art, search for new cultural expressions and identity. Readings in both Russian and English. Offered: Sp.

RUSS 542 Seminar in Russian Poetry (5, max. 20) One specific problem or theme in Russian poetry, seen in its widest possible dimensions. Students read, in Russian, the literary works involved and become familiar with the social, historical, and philosophical backgrounds that inspire them.

RUSS 543 Seminar in Contemporary Russian Prose (5, max. 20) Analysis of Russian prose fiction. Selected authors and topics.

RUSS 554 History of the Russian Literary Language (5) Russian literary language from the eleventh through the twentieth centuries, with special attention to syntax and lexicon and to the development of notions of literary styles. Offered in Russian. Prerequisite: SLAV 565, or permission of instructor.

RUSS 570 Research Seminar in Russian Literature (5, max. 40) Working in consultation with a faculty adviser, students formulate a topic and prepare a 30-minute oral presentation to be delivered at the seminar and submit a written paper to be read and critiqued by all participants.

RUSS 577 Russian Folk Literature (5) Examines the artistic forms, varieties, and themes of the Russian folktale, its roots in pre-Christian Slavic religion, connections with myth and legend, adaptation for Soviet and modern Russian literature, film, and music.

RUSS 600 Independent Study or Research (*-)

Slavic

SLAV 101 Introduction to Slavdom: Who are the Slavs? (5) I&S Introduces students to basic concepts regarding the whole body of present-day Slavs as well as the area inhabited by or under the influence of present-day Slavs. Uses latest achievements in technology and in social media advancements to retrieve relevant information from present-day Slavs themselves. Taught in English.

SLAV 110 Introduction to Slavic Linguistics: Slavs and Their Tongues (5) VLPA Introduces the basic concepts of Slavic linguistics. Addresses the origin of the Slavs and major stages of their linguistic history. Considers Slavic languages and their peculiarities in detail. Taught in English.

SLAV 130 Introduction to Slavic Culture and Civilization (5) VLPA Examines the culture of the Slavs, an ethno-linguistic group of peoples living primarily in Central/Eastern Europe. Among nations investigated: the Czech Republic, Russia, Poland, and Ukraine. Student gain a fundamental grasp of major issues and historical events of this region, expressed through culture.

SLAV 175 The Slavic Text and Its Context (2) VLPA A contextual study of a significant work or intellectual movement from a Slavic culture. Study includes literature, film, music, or art. Credit/no-credit only.

SLAV 200 Introduction to Slavic Literature (5) VLPA G. CRNKOVIC Introduces major Slavic literary works of different types (stories, novels, poetry), mostly from the 20th and 21st century, focusing on the intense “close reading” of these texts that identifies their main literary features. Excellent beginning training for the informed reading of any kind of literature. Taught in English.

SLAV 210 Introduction to Bilingualism (5) VLPA/I&S K. DZIWIWREK A multidisciplinary examination of bilingualism as a societal and individual phenomenon. Considers language versus dialect, diglossia, state language policies, language rights, indigenous languages, and linguistic minorities. Explores bilingualism and biculturalism as human experience and as indexes of identity and diversity. Includes a fieldwork project focused on linguistic diversity in the Pacific Northwest. Offered: W.

SLAV 223 East European Cinema (5, max. 20) VLPA Emphasizes international cultural, artistic, and historical diversity by introducing select contemporary Eastern European film directors. Focuses on a single filmmaker and studies his/her opus in depth, both in his/her Eastern European country of origin and abroad. Special attention paid to Eastern European filmmakers in Hollywood.

SLAV 320 The Other Europe: Post-World War II East European Fiction (5) VLPA Crnkovic Introduces post-WWII Eastern European fiction created during and after the communist era, both in Eastern European countries and in exile. Includes works by Polish, Czech, Yugoslav, post-Yugoslav, Hungarian, and Baltic writers. Taught in English.

SLAV 323 Masterpieces of East European Cinema (5) VLPA Crnkovic Studies aesthetically most interesting films from Eastern Europe from the 1950s to present. Includes select films by Polish film icon Andrzej Wajda, the Czech 1960s New Wave, the Zagreb School of Animated Film, works by Eastern European women directors, as well as more recent internationally awarded and acclaimed films.

SLAV 351 History of the Slavic Languages (5) VLPA History of Slavic languages from Indo-European to present time, including development of writing systems and national languages. Principles of historical linguistics: sound change, analogy, semantic change, as well as relevance of historical linguistics to our knowledge of human development, ancestral culture, etc. Prerequisite: either SLAV 110, LING 200, or LING 400.

SLAV 370 What is in a Language Name? The Case of Bosnian, Croatian, Montenegrin, and Serbian (5) VLPA Examines diverse phenomena related to the language known as Serbo-Croatian, and to the Bosnian, Croatian, Montenegrin, and Serbian languages. Explores concepts such as language death, birth, politics, standardization, and codification. The relation between dialect and language is observed in an ecology exhibiting ethnic and religious diversity.

SLAV 401 Research Methods and Writing (2) Introduces writing and research in Slavic studies. Students review secondary literature in their chosen fields, rewrite and revise their own work to bring it up to discipline standard, and work collaboratively to evaluate their own work and that of their peers.

SLAV 423 East European Film (5, max. 15) VLPA Crnkovic Studies major East European film makers who left their countries at some point in their careers. Compares East European and Western production of those directors who worked partially in the West. Offered: jointly with C LIT 423.

SLAV 425 Ways of Meaning: Universal and Culture Specific Aspects of Language (5) VLPA/I&S K. DZIWIWREK Focuses on the diversity of human experience and the social and cultural conditioning of language use. Language as a mirror of culture and national character. Universal and culture/

language specific components in linguistic expression of emotions, courtesy/politeness and rudeness, prejudice and (in)sensitivities, linguistic expression of gender differences in different cultures.

SLAV 426 Ways of Feeling: Expressions of Emotions Across Languages and Cultures (5) VLPA/I&S K. DZIWIWREK Investigate the diversity of human experience by focusing on culture specific aspects of linguistic expression of emotion. Examination of the meaning and form of emotion words in different languages, facial expressions, cultural attitudes to emotion and emotional behavior, and gender-specific emotional expressions.

SLAV 470 Special Topics in Slavic Linguistics (3-5, max. 15) VLPA Augerot, Belic, Dziwerek Special topics in Slavic linguistics. Course offerings based on instructor's specialty and student demand. Offered: AWWSp.

SLAV 481 East European Language in Eastern Europe (5, max. 15) VLPA Daily work in phonetic, grammar, conversation, translation, analytical reading, stylistics, newspaper analysis, and advanced syntax. Provides an opportunity to earn credits while studying in Eastern Europe. Offered: AWWSpS.

SLAV 482 Research Project in Eastern Europe (3, max. 15) VLPA Supervised research in student's selected area of concentration, combined with language instruction tailored to the student's field. Provides an opportunity to earn credits while studying in Eastern Europe. Offered: AWWSpS.

SLAV 483 East European Literature in Eastern Europe (3, max. 15) VLPA Selection of courses on specialized topics in East European literature; specific authors or periods. Provides an opportunity to earn credits while studying in Eastern Europe. Offered: AWWSpS.

SLAV 486 East European Culture in Eastern Europe (3, max. 15) VLPA Lectures on various aspects of Eastern European culture, complemented by visits to places of cultural historical interest. Provides an opportunity to earn credits while studying in Eastern Europe. Offered: AWWSpS.

SLAV 490 Studies in Slavic Literatures (3-5, max. 15) VLPA Topics vary.

SLAV 499 Directed Study or Research (1-5, max. 15) Individual study of topics to meet specific needs. By arrangement with the instructor and the Department of Slavic Languages and Literatures office. Prerequisite: permission of instructor and undergraduate adviser. Offered: AWWSpS.

SLAV 501 Using Slavic Resources (2) Introduction to graduate studies in Slavic languages, literatures, and cultures. Discusses field of study and research materials and techniques employed.

SLAV 518 Foreign Language Teaching Methodology (2) Brandl Current foreign language teaching methods and approaches. Learning and teaching strategies and techniques for the four skills (reading, writing, speaking, listening) including cultural notions. Current and future trends in pedagogy and technology. Offered: jointly with GERMAN 518/NEAR E 518/SCAND 518; A.

SLAV 519 Slavic Language Pedagogy (3, max. 6) Augerot, Belic Introduction to current issues of foreign language pedagogy. Concentrates on the practical classroom application of methodological theory through lectures and micro-teaching presentation. Topics discussed and practiced include testing, proficiency teaching, teaching listening and reading skills, writing, teaching grammar, and computers. Offered: A.

SLAV 520 New Trends in Literary Theory (5) Crnkovic Explores recent theoretical trends which no longer search for a unified theoretical meta-narrative (i.e., post-structuralism or new historicism), but instead explore various literary genres (such as diary or fictional book reviews) and texts as the primary terrain of theory. Bakhtin, Lem, Bruns, Corradifiumara, Crnkovic, and others.

SLAV 550 Synchronic Slavic Linguistics (5) Linguistic analysis of the phonology, morphology, and syntax of Russian

and other Slavic languages. Investigation of current theoretical work in these areas.

SLAV 551 The Introduction to the Study of Slavic Languages (5) History of Slavic languages from Indo-European to present time, including development of writing systems and national languages. Principles of historical linguistics: sound change, analogy, semantic change, as well as relevance of historical linguistics to our knowledge of human development, ancestral culture, etc. Prerequisite: either SLAV 110, LING 200, or LING 400.

SLAV 561 History of the East Slavic Languages (5) Designed to acquaint majors in Slavic linguistics with the details of the historical development of the phonological and morphological structure of the Ukrainian and Byelorussian literary languages.

SLAV 562 History of the West Slavic Languages (5) Designed to acquaint majors in Slavic linguistics with the details of the historical development of the phonological and morphological structure of literary Polish, Czech, Slovak, and Upper and Lower Sorbian languages.

SLAV 563 History of the South Slavic Languages (5) Designed to acquaint majors in Slavic linguistics with the details of the historical development of the phonological and morphological structure of the South Slavic languages.

SLAV 565 Old Church Slavic (5) Rise and development of earliest Slavic literary language and a descriptive study of its orthography, phonology, morphology, and syntax. Readings from normalized texts.

SLAV 566 Readings in Old Church Slavic (4) Reading and grammatical interpretation of a selected group of canonical texts, as well as some examples of the various later recensions of Old Church Slavonic. Prerequisite: SLAV 565.

SLAV 570 Special Topics in Slavic Linguistics (3-5, max. 15) Investigation and discussion of special topics in Slavic linguistics.

Slavic Languages and Literatures

SLAVIC 498 Senior Honors Thesis ([3-9]-, max. 9) VLPA Directed research on a topic approved by department for a thesis presented in partial fulfillment of requirement for degrees “With College Honors” or “With Distinction.” Offered: AWWSpS.

SLAVIC 600 Independent Study or Research (*-)

SLAVIC 800 Doctoral Dissertation (*-)

Slovenian

SLVN 401 Introductory Slovene Language (3/5) Biggins Introduction to spoken and written Slovene language. First in a two course sequence. Prerequisite: either BCS 403, BULGR 403, CZECH 403, GERMAN 103, ITAL 103, POLISH 403, ROMN 403, RUSS 103, RUSS 150, UKR 403, or status as a heritage speaker of Slovene.

SLVN 402 Introductory Slovene Language (3/5) Biggins Introduction to spoken and written Slovene language. Second in a two course sequence. Prerequisite: SLVN 401.

SLVN 404 Second-Year Slovene Language (3/5) Biggins Reinforces and expands foundational knowledge of Slovene language through grammatical topics and exercises, reading of authentic texts, composition, listening, oral presentations, and conversation. Prerequisite: SLVN 402.

SLVN 406 Second-Year Slovene Language II (3-5) VLPA Biggins Consolidates knowledge of Slovene language through advanced grammatical topics, exercises, reading, composition, listening, and conversation. Prerequisite: SLVN 404.

SLVN 499 Directed Study in Slovene (1-5, max. 15) Biggins Individual study of topics in Slovene culture, linguistics, or current affairs to meet specific needs, based primarily on readings of undapated Slovene texts. Offered: AWWSp.

Ukrainian

UKR 320 Introduction to Ukrainian Literature and Culture (5) VLPA Provides an overview of Ukrainian culture: literature, film, music, theatre, art, and architecture, as well as an introduction to Ukrainian cultural life. Taught in English.

UKR 401 First-Year Ukrainian (5) Introduction to spoken and written Ukrainian. First in a sequence of three.

UKR 402 First-Year Ukrainian (5) Introduction to spoken and written Ukrainian. Second in a sequence of three. Prerequisite: UKR 401, which may be taken concurrently.

UKR 403 First-Year Ukrainian (5) Introduction to spoken and written Ukrainian. Third in a sequence of three. Prerequisite: UKR 402, which may be taken concurrently.

UKR 420 Literature, Film, and Culture of Ukraine (5) VLPA Representative prose works by leading Ukrainian authors. Shows originality of Ukrainian literature through acquaintance with the peculiar historical and political situation of Ukraine. Offered in English.

Sociology

211 Savery

The Department of Sociology has a strong commitment to research, publication, and training and is dedicated to providing a rich undergraduate program, both for students majoring in sociology and for others who wish to learn about human society and social relations.

The Department of Sociology offers the following program of study

- The Bachelor of Arts degree with a major in sociology

Bachelor of Arts

Suggested First- and Second-Year College Courses: SOC 110, SOC 212, SOC 240, SOC 270, or any 200-level sociology courses. General coursework developing critical thinking or analytical skills.

Department Admission Requirements

1. *Introductory Courses (10 credits):* Minimum grade of 2.0 in SOC 300 and any additional 5 credit sociology course, one of which may be in progress.
2. Minimum 2.0 grade for each course required for admission. Minimum cumulative UW GPA of 2.0.
3. *Application:* See department website for information required as part of application packet. Exceptions based on special circumstances are reviewed on a case-by-case basis. Application deadlines are the first Friday of each quarter. All applicants who meet the qualifications stated above are admitted in time to register as sociology majors for the following quarter.

Major Requirements

50 credits as follows:

1. *Introductory Courses (10 credits):* SOC 300 and any additional 5 credit sociology course
2. *Statistics and Theory (10 credits):* 5 credits from STAT 220, STAT 311, SOC 221/STAT 221/CS&SS 221, or SOC 321/STAT 321/CS&SS 321; and 5 credits for SOC 316

3. *Upper-Division Sociology Electives (20 credits):* Any 300-level or 400-level sociology courses, excluding SOC 316, SOC 395, SOC 399, SOC 499, and including a maximum of 5 credits of SOC 494

4. *Sociology Electives (10 credits):* Any additional sociology courses, with a maximum 5 credits of either SOC 399 or SOC 499, and a maximum 5 credits of SOC 494

5. *Academic Standards:* Minimum 2.0 grade in any course applied to major requirements. Minimum cumulative 2.50 GPA for courses applied to major requirements. 25 of 50 required sociology credits completed in residence at UW.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* The Department of Sociology's undergraduate degree is designed to teach majors to think systematically about the relationships among individuals, groups, organizations, and societies. Sociology majors engage current research in political sociology, social stratification, race and ethnicity, deviance and social control, demography and other areas, and develop quantitative and analytical skills in research methods and social theory courses.
- *Instructional and Research Facilities:* The Center for Social Science Computing and Research (CSSCR) maintains an extensive data archive, and offers consulting support and computer lab access to students in sociology courses. The Center for Studies in Demography and Ecology (CSDE) and the Center for Statistics and the Social Sciences (CSSS) provide interdisciplinary courses, seminars, and research opportunities for sociology students.
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning:* Sociology majors participate in a variety of internships each quarter. Students can receive academic credit under the supervision of a Sociology faculty member. See adviser for details.
- *Department Scholarships:* None offered.
- *Student Organizations/Associations:* A chapter of the Alpha Kappa Delta International Sociology Honor Society organizes events involving undergraduates with faculty and graduate students.

GRADUATE PROGRAM

Graduate Program Coordinator

211 Savery, Box 353340

(206) 221-3280

socadvis@uw.edu

Sociology seeks to explain social structure, social institutions, and social interaction. There are three emphases in the graduate training program at the University of Washington: understanding and critically evaluating social theory and empirical research; doing theoretically guided research that explores, assesses, and further develops explanatory theories; and developing communication skills (with emphasis on teaching and scholarly writing) that are useful in transmitting sociological knowledge. The department has particular strengths in social and formal demography, deviance and social control, stratification and inequality, health, comparative and historical sociology, family and gender studies, and quantitative methods.

Emphasis is on empirical research aimed at developing explanatory theories. Students are trained in problem formulation, research design, data gathering and analysis,

and bringing data to bear on significant questions. Instruction is offered on various methods: statistical, survey, demographic and ecological, field research, and historical. Students learn social research by participating in faculty projects or developing their own studies.

Master of Arts

Admission Requirements

1. Applicants are evaluated on undergraduate performance, Graduate Record Examination scores, statement of educational plans, recommendations, and samples of written work.
2. *Application Deadline:* December 15. Admission offers are made for autumn quarter only. The UW Graduate Admissions Office strongly recommends that international applicants submit required application materials by November 1
3. *Application Materials:* All information about the University of Washington Department of Sociology graduate program and the application materials are online. The Department of Sociology no longer sends out printed information or application materials. All applicants use the web-based application. Applying to the sociology graduate program involves application to both the University of Washington Graduate School and the Department of Sociology. See departmental website (<http://www.soc.washington.edu>) for more information.

Degree Requirements

The master's program, designed primarily as preparation for PhD work, is not a terminal degree, although it may serve as good training for non-academic research. The MA program consists of three elements:

1. *Substantive Training:* Coursework in substantive areas and social theory
2. *Methodological Training:* Work in social statistics, general social science methodologies, and a data analysis practicum
3. *The Master's Thesis:* Independent empirical research conducted under the supervision of the MA committee.

Students working toward an MA degree must complete 45 graduate credits or more with a minimum cumulative 3.30 GPA:

1. *Sociological Theory:* SOC 510
2. *Statistics:* SOC 504, SOC 505, SOC 506
3. *Logic of Social Inquiry:* SOC 508
4. *Proseminar:* SOC 501
5. *MA Thesis:* SOC 700
6. *Electives:* 18 credits

A minimum of 12 graded elective credits must be in courses offered by the Sociology Department. All courses should be at the 500 level or above, although a student may petition for inclusion of a 400-level course. No more than 3 elective credits may be assigned a letter grade (e.g., S or CR) in place of a numerical grade. Minimum GPA of 3.30.

Doctor of Philosophy

Admission Requirements

Completion of an MA degree in sociology in the UW Sociology Department or elsewhere. Occasionally MA degrees in other fields are accepted. The department encourages applications from minority students.

See above under Master of Arts section for admission requirements.

Degree Requirements

Minimum 90 credits, to include:

45 credits beyond the Master of Arts requirements (above) as follows:

1. Eight graded Sociology courses beyond the required first-year required courses. Electives taken while completing the MA can be counted towards these 8 courses. This is a minimum of 24 credits overall
2. Complete a PhD Training Plan which is a set of 4 methods/skills/knowledge courses focusing on particular advanced methodological skills (broadly defined) or knowledge necessary to undertake the planned dissertation research. Up to 2 of these courses may also count as part of the required 8 graded Sociology courses.
3. 27 dissertation credits

Additionally, students must maintain a GPA of 3.30, pass a comprehensive examination, pass the general examination (prospectus defense), pass the final examination, and submit an approved dissertation to the Graduate School.

Financial Aid

Fellowships, research assistantships, and teaching assistantships are available to qualified graduate students including those in their first year of training.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

SOCIOLOGY

SOC 110 Survey of Sociology (5) I&S Human interaction, social institutions, social stratification, socialization, deviance, social control, social and cultural change. Course content may vary, depending upon instructor.

SOC 111 American Society (5) I&S Explores the power of social structures using examples drawn primarily from the American culture. The impact of social institutions, the emergence of concrete patterns of social relations which organize and regulate social life and the inequality inherent in most social structures.

SOC 195 Study Abroad: Sociology (2-5, max. 10) I&S Lower-division sociology courses for which there are no direct University of Washington equivalents, taken through a University of Washington study abroad program.

SOC 201 Introductory Topics in Sociology (3-5, max. 10) I&S Selected introductory topics of contemporary interest.

SOC 211 Stability and Change in American Society (5) I&S Examines two views of American life that dominate public discourse: one, that the United States is the best country in the world, the other that it is in decline. Addresses questions like: what is the United States really like; what values do Americans share; how do their values affect success and hope for a better society?

SOC 212 Evolution and Revolution: An Introduction to the Study of Comparative Social Change (5) I&S, DIV Examines the major aspects of human societies, including political and economic systems, family structure, social stratification, and demographic patterns as influenced by environmental conditions, technology, cultural traditions, and legacies of prior history and relationships to other societies.

SOC 215 Introduction to Urban Sociology (5) I&S Introduces the field of urban sociology. Focuses primarily on urban dynamics in the United States with attention to the global context in which they operate.

SOC 220 Introduction to Sociological Methods (5) I&S, QSR Familiarizes students with the logic of analysis in social sciences. Students learn to recognize good research design, understand and interpret main arguments employing different methods, and evaluate whether research findings support stated conclusions.

SOC 221 Statistical Concepts and Methods for the Social Sciences (5) NW, QSR Develops statistical literacy. Examines objectives and pitfalls of statistical studies; study designs, data analysis, inference; graphical and numerical summaries of numerical and categorical data; correlation and regression; and estimation, confidence intervals, and significance tests. Emphasizes social science examples and cases. (Students may receive credit for only one of STAT 220, STAT 221, STAT 311, STAT 221/CS&SS 221/SOC 221, and ECON 311.) Offered: jointly with CS&SS 221/STAT 221; AWSp.

SOC 222 Sociology of Sport (5) I&S Weis Introduction to the sociological analysis of sport. Issues discussed include the history, definition, and functions of sport; role of sport in the socialization of children; the relationship between sport and values; athletics within the social organization of education; deviance, crime, and violence in sport; the business and economics of sport.

SOC 223 Sociology of Rock and Roll (5) I&S Sociological analysis of a very influential and popular musical art form, from its origins in the first half of the twentieth century to more contemporary social contexts. Examines the roles of race relations, social class, gender, inequalities, region, genre, commercial exploitation, and technology in the evolution of rock and roll.

SOC 230 Introduction to Racial and Ethnic Health Disparities in the United States (5) I&S, DIV Examines health status and healthcare disparities among racial/ethnic minority groups in the United States. Utilize sociological, demographic, (social) epidemiological, and (social) psychological concepts to introduce students to racial/ethnic health disparities research.

SOC 240 Introduction to Social Psychology (5) I&S Introduction to social psychology with an emphasis on sociological perspectives and problems.

SOC 247 Contemporary Social Movements (5) I&S Introduction to theory and research on national-level collective mobilizations organized for political change. Emphasis on how political, organizational, and cultural factors shape social movement emergence and development, and individual participation.

SOC 260 African American Family (5) I&S, DIV Explores the structures and functioning of various types of black families. Single-parent families, two-parent families, extended families, and consensual families are explored. Their consequences for male/female relationships are linked and critiqued. Offered: jointly with AFRAM 260.

SOC 261 The African American Experience Through Literature (5) VLPA/I&S Scott Instructs students in hermeneutical and sociological methods of analyses. Analyzes selected novels, essays, poems, short stories, and plays with the purpose of understanding the structures and functions of both society and personality. Offered: jointly with AFRAM 261.

SOC 266 Introduction to Labor Studies (5) I&S Conceptual and theoretical issues in the study of labor and work. Role of labor in national and international politics. Formation of labor movements. Historical and contemporary role of labor in the modern world. Offered: jointly with HSTCMP 249/POL S 249.

SOC 270 Social Problems (5) I&S, DIV Processes of social and personal disorganization and reorganization in relation to poverty, crime, suicide, family disorganization, mental disorders, and similar social problems.

SOC 271 Introduction to the Sociology of Deviance and Social Control (5) I&S Examination of deviance, deviant behavior, and social control. Deviance as a social process; types of deviant behavior (e.g., suicide, mental illness, drug use, crime, "sexual deviance," delinquency); theories of deviance and deviant behavior; nature and social organization of societal reactions; and social and legal policy issues.

SOC 275 Murder (5) I&S Weis Introduces topics related to the crime of murder, including: laws of homicide; research on the characteristics of victims, killers, and murders; theories of murder and related violence; investigation strategies; and crime and control policies.

SOC 287 Introduction of the Sociology of Sexuality (5) I&S, DIV Investigates sexuality on the basis of social construction of norms and values, within the context of gender, race, class, and sub-cultures and in the social control of sexuality and why it is so highly regulated. Looks for social rather than biological or personal explanations for why human sexuality is conceptualized or practiced in a certain way.

SOC 292 Who Gets Ahead? Public Schooling in America (5) I&S, DIV Addresses fundamental questions about the relationship between education and society. Examines why some students learn more and advance further than others; what factors shape how schools are run/organized and which materials are taught; how race/class/gender affect students within schools; how schools maintain our economic system and can become more effective.

SOC 299 Sociology Interest Group (2) I&S Provides opportunity for students new to the major, or contemplating the major, to meet twice weekly in a small group to discuss issues relating to two designated five-credit sociology courses. Concurrent enrollment in the two five-credit designated courses required. See department adviser.

SOC 300 Foundations of Social Inquiry (5) I&S Covers what makes social science a science, the components of good research design, and what counts as valid evidence for sociological claims. Pays special attention to links between theory, research questions, and data. Offered: AWSpS.

SOC 301 War (5) I&S Origins and conduct of war; readings from anthropology, political science, economics, and history, as well as novels and some recent works on the arms-control controversy. Modern forms of warfare, including guerrilla war, world war, and nuclear war. Offered: jointly with JSIS B 301.

SOC 316 Introduction to Sociological Theory (5) I&S Introduction to sociological theory. Includes classical theorists Adam Smith, Karl Marx, Emile Durkheim, and Max Weber and their influence on contemporary theoretical debate.

SOC 320 Evaluating Social Science Evidence (5) I&S, QSR A critical introduction to the methods used to collect data in social science: surveys, archival research, experiments, and participant observation. Evaluates "facts and findings" by understanding the strengths and weaknesses of the methods that produce them. Case based. Offered: jointly with CS&SS 320/STAT 320.

SOC 321 Case-Based Social Statistics I (5) I&S, QSR Introduction to statistical reasoning for social scientists. Built around cases representing in-depth investigations into the nature and content of statistical and social-science principles and practice. Hands-on approach: weekly data-analysis laboratory. Fundamental statistical topics: measurement, exploratory data analysis, probabilistic concepts, distributions, assessment of statistical evidence. Offered: jointly with CS&SS 321/STAT 321; W.

SOC 322 Case-Based Social Statistics II (5) I&S, QSR Continuation of CS&SS 321/SOC 321/STAT 321. Progresses to questions of assessing the weight of evidence and more sophisticated models including regression-based methods. Built around cases investigating the nature and content of statistical principles and practice. Hands-on approach: weekly data analysis laboratory. Prerequisite: CS&SS 321/SOC 321/STAT 321, or permission of instructor. Offered: jointly with CS&SS 322/STAT 322; Sp.

SOC 328 Methodology of Sociological Research (5-) I&S, QSR Logic of formulating, testing, and modifying hypotheses. Methods of producing social data (survey research, evaluation research, field observation) and utilizing stored data (census tapes, historical materials). Methods of quantitative data analysis techniques commonly used in

contemporary sociological analysis. Not open for credit to students who have taken SOC 320.

SOC 329 Methodology of Sociological Research (-5) I&S, QSR Logic of formulating, testing, and modifying hypotheses. Methods of producing social data (survey research, evaluation research, field observation) and utilizing stored data (census tapes, historical materials). Methods of quantitative data analysis techniques commonly used in contemporary sociological analysis. Not open for credit to students who have taken SOC 320 or SOC 323.

SOC 330 Human Ecology (5) I&S Factors and forces that determine the distribution of people and institutions.

SOC 331 Population and Society (5) I&S Population growth and distribution, population composition, population theory, urbanization. Determinants and consequences of fertility and mortality trends and migration in economically developed and underdeveloped areas.

SOC 340 Symbolic Interaction (5) I&S Examines the role of language, culture, and the symbolic environment in shaping interpersonal processes.

SOC 341 Tutoring Sociology (2-4, max. 4) Trains students to serve as tutors in designated courses. Teaches how to assist with writing assignments, explain course material, and lead group discussions. Credit/no-credit only.

SOC 344 Cognitive Social Psychology (5) I&S Cognitive structures and processes and their antecedents and consequences, both societal and individual. Reciprocal influences of social roles, social institutions, and social cognition.

SOC 345 Sects and Violence: Cults, Religious Innovation, and Social Conflict (5) I&S Examines controversial religious groups often called cults. Uses sociological lenses to examine cults' occasionally catastrophic conflicts with government authorities, established religious organizations, and anti-cult movements.

SOC 346 Group Processes (5) I&S Systematic analysis of social processes in small groups, including conformity, deviance, cooperation, competition, coalition formation, status and role differentiation, inequity, communication, and authority and power. A variety of methods of research are considered: field studies, field experiments, laboratory studies, and the simulation of social processes.

SOC 347 National Social Movements: Current Trends and Explanations (5) I&S Introduction to theory and research on a specific form of social movement: national-level collective mobilizations organized for political change. Emphasizes how political, organizational, and cultural factors shape social movement emergence and development. Focuses on American activism, New Left, women's movements, the abortion conflict, gay/lesbian activism, and Central American Peace movement.

SOC 351 Intimate Relationships (5) I&S Explores the nature of love, desire, and commitment between heterosexual and homosexual couples, as well as parenting as a dyadic act. Evaluates political and social pressures and preferences on these topics within our society in a comparative context.

SOC 352 The Family (5) I&S The family as a social institution. Historical changes and societal variation in family patterns. Changes over the life cycle. Alternative family forms.

SOC 353 The Family in Cross-Cultural Perspective (5) I&S Scott Form, content, and functions of families through case studies of different countries. Family organization, including family structure, inheritance, sexual division of labor, and socialization with attention given to life-cycle stages.

SOC 355 Social Change in Latin America (5) I&S Explores cultures, identities, political economy, and popular mobilization in Latin America. Examines relations of power and production between social classes and ethnic groups, as well as ideologies and intellectual movements. Offered: jointly with JSIS A 355.

SOC 356 Society and Politics (5) I&S Causes of political change in democratic countries, including public opinion, social movements, interest group activity, and party organization. Offered: jointly with POL S 356.

SOC 357 Sociology of Religion (5) I&S The relations between religion, polity, economy, and social structure; in particular, the political, economic, and social impact of religious beliefs and organizations, as well as the social determination of these beliefs and organizations; the rise of secularism, the rationalization of modern life, and the emergence of political quasi-religions.

SOC 360 Introduction to Social Stratification (5) I&S, DIV Social class and social inequality in American society. Status, power, authority, and unequal opportunity are examined in depth, using material from other societies to provide a comparative and historical perspective. Sociological origins of recurrent conflicts involving race, sex, poverty, and political ideology.

SOC 362 Race Relations (5) I&S Reviews social science perspectives on race and ethnicity. Explores sociological definitions and understandings associated with race and ethnicity and the construction of identities. Examines different issues that impact individuals' and groups' life chances.

SOC 363 Ethnicity, Business, Unions, and Society (5) I&S Scott Interrelationships of ethnicity, business, unions, and the larger society. Examines financial and sociological structure of business and manufacturing sector, how this sector performs, and consequences of performance for selected ethnic groups in United States. Offered: jointly with AES 361.

SOC 364 Women in the Social Structure (5) I&S Gender and social institutions; the family, politics, education, medicine, law, the labor force. Intersection of gender with other minority statuses such as race, age, socioeconomic status, and sexual orientation. Structural, ideological, and historical determinants of gender relations.

SOC 365 Urban Community (5) I&S Guest Comparative and analytic study of organization and activities of urban groups.

SOC 366 Sociology of Organizations (5) I&S Introduction to the sociological study of organizations including what organizations are, where they come from, and how they relate to individuals, other organizations, and other institutions of society.

SOC 368 Sociology of Black Americans (5) I&S Socio-cultural context of the Black person's environment and consequences of interaction with that environment.

SOC 371 Criminology (5) I&S Crutchfield, Matsuoka Survey of legal definitions, types of criminal behavior, trends and patterns, recidivism, characteristics of offenders, environmental influences, diagnostic methods, prediction, theories of crime and delinquency prevention, social policy.

SOC 372 Introduction to Criminal Justice (5) I&S Examines role of police, courts, and corrections in criminal justice. Applies sociological theories and perspectives to issues in law enforcement, adjudication, and corrections. Legislative reforms. Innovations in policy.

SOC 374 Law and Society (5) I&S Introduces major issues of the sociological foundations and implications of legal institutions; examines social life within legal institutions, the individual and collective justice, the malleability of precedent, and truth and the effects of inequality on legal outcomes. Encompasses legal practice and social science.

SOC 375 Sociology of Juvenile Justice (5) I&S Harris Overviews the United States juvenile justice system and related societal issues, including racial and ethnic disproportionality, the criminalization of delinquent offenders, and the future of the juvenile justice system.

SOC 376 Drugs and Society (5) I&S K. BECKETT, J. WENDER Explores the questions of drug use and abuse, social and political factors that shape response to their use, and the

social conditions under which drug use is likely to have adverse consequences. Also covers U.S. drug control policy, the political economy of legal and illegal drugs, and political aspects of drug use. Offered: jointly with LSJ 376.

SOC 377 The American Jewish Community (5) I&S, DIV Burstein Development and current status of American Jewish community; immigration; changes in religious practice, institutions in response to circumstances in American society; creation of new types of secular communal organizations; assimilation; confrontation with antisemitism; family life; social, economic mobility; religious, secular education; intermarriage, and future of community. Offered: jointly with JSIS C 377.

SOC 378 Contemporary Jewish American Identities (5) I&S, DIV Friedman Introduction to the debates about post-Holocaust Jewish identities in multicultural America. Explores whether a distinctive Jewish community is headed toward assimilation, experiencing revival, or merely transforming the multiple ways Jewish experience is lived. Topics include new Jewish immigrants, the new Orthodox, Black Jews, Jewish feminism, children of Holocaust survivors. Offered: jointly with JSIS C 378.

SOC 379 Environmental Sociology (5) I&S/NW S. ASAH Social processes by which environmental conditions are transformed into environmental problems; scientific claims, popularization of science, issue-framing, problem-amplification, economic opportunism, and institutional sponsorship. Examination of social constructs such as ecosystem, community, and free-market economy. Use of human ecology to assess whether the current framing of environmental problems promotes ecological adaptability. Offered: jointly with ENVIR 379/ESRM 371; A.

SOC 395 Study Abroad: Sociology (2-5, max. 15) I&S Upper-division sociology courses for which there are no direct University of Washington equivalents, taken through a University of Washington study abroad program.

SOC 399 Undergraduate Internship (2-5, max. 10) Students serve in approved internships. Credit/no-credit only.

SOC 401 Special Topics in Sociology (5, max. 15) I&S Selected topics of contemporary interest taught by a sociologist active in the field. Topics vary and may be substantive, theoretical, or methodological.

SOC 402 Sociology in Practice: Education Service Program (5, max. 10) I&S Combines an experience in tutoring with critical reflection on practical and theoretical issues in education. Gives practical classroom experience as well as insight into the complexity of public schools and issues in education policy.

SOC 403 Sociology in Practice: Applied Community Research Program (5, max. 10) I&S Participation in a project-based research group for a real-world client, addressing complex and enduring problems of urban life.

SOC 404 Sociology in Practice: Community/Civic Internship Program (5, max. 10) I&S Combines the real-world benefits of an internship with the critical reflection provided by a seminar course. Students participate in internships at local agencies and organizations, and may either come with their own internship or apply for specialized internships through the Sociology Department.

SOC 410 History of Sociological Thought (5) I&S Contributions of individual theorists (from Comte to the present); emphasis on cumulative development of concepts and principles, emergence of sociology as a science, probable future developments.

SOC 415 The City and Neighborhood Dynamics (5) I&S Focuses on a diverse set of topics including the changing social meaning of community, the effects of the urban setting on social interactions and attitudes, urban poverty, residential segregation, and the neighborhood dynamics of crime. Students have the opportunity to contribute directly to research- and policy-related projects.

SOC 416 Sociological Theory (5) I&S Theories of individual action, social order, and institutional change. Cumulative development of solutions rather than on works of given theorists. Theories of social order. How sociological treatments of these issues compare with those offered by economists and other social scientists.

SOC 420 Sociology of Food (5) I&S Provides a historical and comparative overview of what people eat and how this relates to other types of social differentiation.

SOC 430 Social Determinates of Health and Health Disparities (5) I&S, DIV Examine the social conditions related to the health of populations. How patterns of health vary by social class, race/ethnicity, and gender and some mechanisms that produce and maintain these differences.

SOC 432 Population and Modernization (3) I&S Hirschman, Lately Examines role of demographic factors in the process of social modernization and economic growth. The approach is both historical, focusing on populations of developed countries since 1700, and analytic, stressing the attempts made by different disciplines to model demographic relationships, with attention to less-developed regions. Offered: jointly with JSIS D 435.

SOC 434 Demographic Issues in Asia (3-5) I&S Hirschman, Lately Contemporary Asian countries face a number of issues with demographic components, including environmental and resource issues, ethnic rivalries, international migration, and public health. Addresses a set of these issues by focusing on the demography of one or more countries in Asia. Offered: jointly with JSIS A 431.

SOC 440 Comparative Social Problems (5) I&S Examines a variety of social problems from a comparative perspective. Issues such as epidemics, slavery, and genocide within and beyond U.S. borders analyzed with historical and contemporary examples.

SOC 445 Religious Movements: The Sociology of Cults and Sects (5) I&S Investigates the organizational dynamics of new religious movements. Seeks to understand why 'cults' emerge and how they proliferate or decay. Examines conflicts within established churches, counter-movements, and the state.

SOC 447 Social Movements (5) I&S Social movements as collective attempts to change society: why people join; characteristics of successful and unsuccessful movements; consequences of social movement activities.

SOC 450 Political Economy of Women and Family in the Third World (5) I&S Theoretical and empirical aspects of the political economy of women and the family in the Third World during the process of development, with a focus on labor. Main theoretical approaches examined and applied to case studies from Asia and Latin America. Offered: jointly with JSIS D 450.

SOC 451 Theory and Process of Social Change (5) I&S Basic trends in economic and social development; comparative and historical analysis of social and economic changes; the rise of capitalist societies.

SOC 456 Political Sociology (5) I&S Relationships between social change and political change. Focus on selected issues, including social bases of democracy, political organization, elections, and consequences of public policy.

SOC 460 Social Differentiation (5) I&S Analysis of societal organization based on sex, age, residence, occupation, community, class, caste, and race.

SOC 461 Comparative Ethnic Race Relations in the Americas (5) I&S Sketches the ethnoracial systems operating in American society. Studies these systems as systems and examines their institutional and interpersonal dynamics. Compares ethnoracial systems in order to arrive at empirical generalizations about race/ethnorelations in the Americas. Offered: jointly with AES 461.

SOC 462 Comparative Race and Ethnic Relations (5) I&S, DIV Race and ethnicity as factors of social differentiation in a number of Western and non-Western societies in Eu-

rope, Africa, Asia, and the Americas. Offered: jointly with AES 462.

SOC 463 African-American Political Thought (5) I&S Examines the historical and sociological experiences of African-Americans from slavery, emancipation, mobilization, and organization, to present socioeconomic situation. Reviews the political philosophy of black leaders from the early black conventions to today, the black experience in the American education system, and origins and evolution of the black middle class.

SOC 464 Contemporary Society in the People's Republic of China (5) I&S Lately Separate development of rural and urban social institutions in the People's Republic of China since 1949 from a sociological perspective. Family and marriage, social control, educational institutions. Dilemmas of contemporary China and reasons for institutional change. Offered: jointly with JSIS A 464.

SOC 465 Complex Organizations (5) I&S Examination of the structure of complex organizations. Attention to developing generalizations applicable to industrial organizations, businesses, hospitals, prisons, labor unions, governments, universities, armies, and similar formally instituted organizations. The major focus is on empirical research, with some attention to methodological problems in studying such organizations.

SOC 466 Economic Sociology (5) I&S Changing focus of field; cultural variation, work, and the worker; technology, society, and the evolution of industrial forms; types and forms of industrial organizations; industrial organizations as social and technical systems; issues of control, process, and change; the individual in social and technical systems.

SOC 467 Immigration and Ethnicity (5) I&S, DIV Focus on contemporary American diversity - the multiethnic, multi-cultural society created by recent immigrants from Latin America, Asia, and by people of European, African, and American Indian origins; its issues and debates, including ethnic conflict, integration, multiculturalism, and assimilation, as viewed through comparisons with the past and with other societies.

SOC 468 Sociology of Occupations and Professions (5) I&S Frameworks for study of occupations and professions; occupational structure and mobility in American society in relation to adult socialization and career development; occupational and professional associations and society.

SOC 469 Balkan Societies (5) I&S Examination of the roots of Balkan social problems (economic backwardness, minority-group conflicts, peasant problem), the failure of pre-1945 attempts to solve these problems, the post-1945 communist failures, the causes of the upheavals of 1989, and the prospects for success in the 1990s.

SOC 470 Contemporary Southeast Asia (5) I&S Sociological survey of Southeast Asia, including development, demographic changes, family structure, and ethnic relations.

SOC 472 Juvenile Delinquency (5) I&S Factors in delinquency, juvenile courts. Programs of treatment and prevention.

SOC 476 Miscarriages of Justice (5) I&S Examines legal and social factors that shape criminal case outcomes, analyzing how one type of miscarriage of justice - wrongful conviction - occurs. How can cases of wrongful conviction be explained? Why are some people, against whom there is only weak evidence, convicted-and sometimes even executed? Offered: jointly with LSJ 476.

SOC 481 Issues in Analytic Sociology (5, max. 15) I&S Examination of current issues in sociological analysis. Specific content of the course varies according to recent developments in sociology and the interests of the instructor.

SOC 482 Issues in Analytic Sociology (3, max. 9) I&S Examination of current issues in sociological analysis. Specific content of the course varies according to recent developments in sociology and the interests of the instructor.

SOC 483 Issues in Analytic Sociology (1-3, max. 9) I&S Examination of current issues in sociological analysis. Specific content of the course varies according to recent developments in sociology and the interests of the instructor.

SOC 487 Sociology of Gender and Sexuality (5) I&S Addresses the intersection of gender and sexuality in U.S. society, social institutions and movements, families, and the individual. Topics include the history of sexuality as practiced and politicized since colonial times, major theoretical approaches to sexuality, and how gender and other social status characteristics influence the meanings of sexuality.

SOC 490 The Urban Underclass (5) I&S Examines underlying issues which have led to the emergence and perpetuation of an underclass within an affluent society. Explores some of the consequences for these people and for this society. Considers policies that might be used to address problems of the urban underclass.

SOC 492 Sociology of Education (5) I&S Emphasizes the ways in which schools and colleges reproduce, reinforce, and challenge prevailing social, economic, and political relationships. Examines the structures, practices, content, and outcomes of schooling and its relationship to the wider society as well as the rise and dynamics of the modern education system.

SOC 494 Practicum (5, max. 10) I&S Exploration of selected sociological concepts or problems through advanced practical experience in research, internships, or other applications. Topics vary.

SOC 495 Honors Senior Thesis (1-5, max. 5) I&S Preparation of senior Honors thesis. Sociology majors only.

SOC 496 Honors Senior Seminar ([3/5]-) I&S Exploration of selected sociological problems with emphasis on research experience and the interpretation of data. For sociology majors only, primarily for Honors students. Offered: A.

SOC 497 Honors Senior Seminar (-[3/5]-) I&S Exploration of selected sociological problems with emphasis on research experience and the interpretation of data. For sociology majors only, primarily for Honors students. Offered: W.

SOC 499 Undergraduate Independent Study or Research (2-5, max. 10) Credit/no-credit only.

SOC 500 Teaching Sociology as a Teaching Assistant (1) Techniques of quiz section administration, advising of students, and student evaluation important to successful teaching as a Teaching Assistant. Students develop presentations and classroom materials and develop and grade student examinations. Prerequisite: admission to graduate program in sociology. Credit/no-credit only.

SOC 501 Proseminar (1-3, max. 3) Introduction for first-year graduate students to substantive areas of sociology, research and information resources, and issues in graduate education and professional socialization. Credit/no-credit only. Offered: AWSp.

SOC 502 Seminar on Teaching Sociology (3) Techniques of lecturing, leading discussion, evaluating student performance, and other pedagogical skills ancillary to successful teaching. Students develop a course and obtain videotaped feedback of presentations. Prerequisite: completion of MA.

SOC 503 Seminar on Writing Social Science (3) Techniques, skills, and strategies helpful for publishing in the social sciences. Includes writing and revision of own work and evaluation of the writing of other students. Also includes social scientific analysis of writing and other forms of academic communication. Prerequisite: completion of MA.

SOC 504 Applied Social Statistics (3-) Applications of statistics in sociology and related social sciences. Emphasis on problems of analysis with imperfect data. Probability in statistical inference. Analysis of variance; contingency

table analysis, nonparametric procedures; regression analysis in social research.

SOC 505 Applied Social Statistics (-3) Applications of statistics in sociology and related social sciences. Emphasis on problems of analysis with imperfect data. Probability in statistical inference. Analysis of variance; contingency table analysis, nonparametric procedures; regression analysis in social research.

SOC 506 Methodology: Quantitative Techniques in Sociology (3) Applied regression analysis with emphasis on interactive computer graphics techniques and interpretation. Application to typical sociological problems. Offered: jointly with CS&SS 507.

SOC 507 Statistical Classification and Measurement (3) Application of statistical principles and methods to problems of classification and measurement in social research.

SOC 508 Logic of Social Inquiry (3) Study design from problem formulation to the analysis and interpretation of data.

SOC 509 Practicum in Data Analysis (3) Introduction to selected programs for data analysis and practice in their application. Practice in coordination of research problem, data, and mode of analysis into a coherent, interrelated set. Interpretation of results. Offered: A.

SOC 510 Seminar in Sociological Theory (3) Macrosociological theories; functionalism and neoevolutionism; conflict and consensus approach; comparative strategies; models and long-range theories; ideology and sociology. From Marx and de Tocqueville to contemporary literature.

SOC 511 Classical Social Theory (3) Study of classical masters of social theory: Marx, Durkheim, and Weber, their precursors, and their immediate successors.

SOC 512 Review of Mathematics for Social Scientists (1) Reviews basic mathematical skills needed for a meaningful understanding of elementary statistics, data analysis, and social science methodology. Overview of core knowledge required for graduate courses in quantitative methods in social sciences. Topics include discrete mathematics, differential and integral calculus, review of matrix algebra, and basic probabilistic and statistical concepts. Credit/no-credit only. Offered: jointly with CS&SS 505; Sp.

SOC 513 Demography and Ecology (3) *Hirschman* Theories and research on human fertility, mortality, mobility, migration, and urbanization in social/economic context. Comparative and historical materials on Europe, the United States, and the Third World. Offered: jointly with CSDE 513.

SOC 514 Current Theories in Social Psychology (3) Broad graduate-level introduction to the theories in the field of social psychology.

SOC 515 Current Research in Social Psychology (3) *Howard* Broad graduate-level introduction to the research in the field of social psychology.

SOC 516 Organizations (3) Broad graduate-level introduction to the theory and research on complex organizations.

SOC 517 Deviance and Social Control (3) Survey of current research on deviant behavior and mechanisms of social control; definitions and forms of deviant behavior, causal analysis, and legal or other methods of social control.

SOC 518 Social Stratification (3) Intensive preparation in theoretical, methodological, and substantive topics in social stratification.

SOC 519 Fieldwork: Observation and Interviewing (3-) Perspective, logic, and techniques of qualitative social research and analysis. Nature and uses of intensive interviewing, participant observation, and analytic ethnography. Application of field research principles. Research project required in addition to reading and analysis of classic studies.

SOC 520 Fieldwork: Observation and Interviewing (-3) Logic and techniques of qualitative social research and analysis. Intensive interviewing, participant observation, qualitative data analysis (including applications of data

base technology, problem reformulation, and techniques of visual documentation). Results of student work reported and discussed in class.

SOC 524 Master's Thesis Research Seminar (1, max. 3) Facilitates the development of a thesis and its execution. Forum for refining research questions, presenting work in progress, and receiving feedback from instructor and other students on ideas and written work. Credit/no-credit only.

SOC 526 Causal Approach to Theory Building and Data Analysis (3) Theory construction and testing from a causal models perspective. Path analysis, standardized versus unstandardized measures, feedback models, identification problems, estimation in overidentified models, difference equations, differential equations, stability conditions. Multiplicative models as alternatives to additive ones. Causal approach to measurement error.

SOC 527 Measurement of Basic Sociological Concepts (3) Conceptualization and measurement problems in sociology, using major concepts as illustrations of basic issues. Causal approach to measurement to deal with problems of indirect measurement, cross-level measurement problems, aggregation and disaggregation. Consequences of crude measurement for data analyses. Prerequisite: SOC 504; recommended: SOC 506.

SOC 528 Seminar on Selected Statistical Problems in Social Research (3) *Raftery* Prerequisite: SOC 506.

SOC 529 Structural Equation Models for the Social Sciences (3) Structural equation models for the social sciences, including specification, estimation, and testing. Topics include path analysis, confirmatory factor analysis, linear models with latent variables, MIMIC models, non-recursive models, models for nested data. Emphasizes applications to substantive problems in the social sciences. Prerequisite: SOC 504, SOC 505, SOC 506 or equivalent; recommended: either CS&SS 505 and CS&SS 506, or equivalent. Offered: jointly with CS&SS 526.

SOC 530 Urbanism and Urbanization (3) *I&S* Human population distribution and migration patterns. Causes and consequences of world urbanization. Spatial and social patterns in the metropolis. Aggregate population movements and selectivity of migrants.

SOC 531 Fertility and Mortality (3) *I&S* Theories of fertility and mortality, demographic transitions, individual variations. Specific analytic approaches. Familiarity with basic fertility and mortality measures, and with the life table, is assumed.

SOC 533 Research Methods in Demography (3) *I&S* Basic measures and models used in demographic research. Sources and quality of demographic data. Rate construction, standardization, the life table, stable population models, migration models, population estimation and projection, measures of concentration and dispersion, measures of family formation and dissolution.

SOC 536 Analysis of Categorical and Count Data (3) Analysis of categorical data in the social sciences. Binary, ordered, and multinomial outcomes, event counts, and contingency tables. Focuses on maximum likelihood estimations and interpretations of results. Prerequisite: SOC 504, SOC 505, SOC 506, or equivalent; recommended: CS&SS 505 and CS&SS 506, or equivalent. Offered: jointly with CS&SS 536/STAT 536; A.

SOC 537 Modeling Emergence: Social Simulation (3) Seminar and practicum in computational modeling of social processes with emphasis on using agent-based simulation models to investigate and refine theory.

SOC 539 Selected Topics in Demography and Ecology (3, max. 9) Specialized problems in demography or ecology are covered; for example, migration, fertility, mortality, language, race and ethnic relations, metropolitan community. See quarterly announcement for specific problem to be covered.

SOC 542 Selected Topics in Group Processes (3) Theories, methodology, and studies in the area of small-group research. Prerequisite: permission of instructor for nonmajors.

SOC 543 Seminar on Group Solidarity (3) Interdisciplinary perspectives on solidarity, focusing on member commitment, group structure, and contributions to collective goals.

SOC 547 Social Cognition and Attribution (3) Theories and research on social cognition and attribution. Theoretical and methodological debates on cognition. Sociological aspects of attribution. Prerequisite: SOC 514 or equivalent.

SOC 551 Family and Gender Relations (3) Overview of major research findings on marriage, the family, and gender, including demographic trends, the place of children in society, courtship, the internal management of intimate relationships, divorce, and social policy.

SOC 553 Seminar on Gender and Sexuality (3) Research seminar considering theoretical and empirical approaches to sexuality, with particular attention to the importance of gender. Examines the social control of sexuality by the state and by families, as well as social meanings of sexuality within social movements related to various aspects of sexuality.

SOC 554 Seminar in the Sociology of Religion (3) Survey of significant and active areas of theory and research in contemporary social scientific studies of religion.

SOC 555 Methods in Macro, Comparative, and Historical Sociology (3) Systems of conducting research with qualitative methods brought to bear on broad questions.

SOC 559 Seminar on Gender Roles (3) Broad graduate-level introduction to theoretical issues concerning gender and society. Current state of empirical knowledge on the sociology of gender and strategies for research. Cross-cultural variations in conception of gender roles and how gender intersects with social institutions and social interactions.

SOC 560 Hierarchical Modeling for the Social Sciences (4) Explores ways in which data are hierarchically organized, such as voters nested within electoral districts that are in turn nested within states. Provides a basic theoretical understanding and practical knowledge of models for clustered data and a set of tools to help make accurate inferences. Prerequisite: SOC 504, SOC 505, SOC 506 or equivalent; recommended: CS&SS 505, CS&SS 506 or equivalent. Offered: jointly with CS&SS 560/STAT 560.

SOC 562 Seminar in Comparative Race Relations (3) Cross-cultural approach to race and ethnic relations, including case studies from Africa and Latin America. Prerequisite: graduate standing in social sciences.

SOC 565 Inequality: Current Trends and Explanations (3) Discussion of recent growth in economic inequality in the United States and competing explanations for these new trends through examination of labor market demographics, industrial composition and restructuring, and the broader political context that impacts policies like minimum wage, strength of unions, and foreign trade. Prerequisite: SOC 504, SOC 505, SOC 506, or equivalent; recommended: either CS&SS 505 and CS&SS 506, or equivalent. Offered: jointly with CS&SS 565.

SOC 566 Seminar in Complex Organizations (3) Special topic seminars in the field of complex organizations or industrial sociology.

SOC 567 Seminar in Complex Organizations (3) Special topic seminars in the field of complex organizations or industrial sociology.

SOC 568 Social Mobility (3) Description and measurement of social mobility. Determinants of mobility and cross-national comparisons. Consequences of mobility for social behaviors. Emphasizes movement from the socioeconomic position of family of origin to adult position. Prerequisite: SOC 518.

SOC 569 Demographic Studies of Stratification (3) Overview of development of models of socioeconomic achievement ("status attainment" paradigm) in the field of stratification. Begins with work of Blau and Duncan. Covers elaboration of basic models to include race and ethnicity, social psychological variables, class, school and labor market effects, and other structural variables. Prerequisite: SOC 513, SOC 518.

SOC 570 Seminar in Environmental Sociology (3) Offered: jointly with SEFS 570.

SOC 574 Seminar in Methods of Criminological Research (3) Provides training in the technical analysis of published research in criminology; designs and processes studies in parole prediction, prediction of prison adjustment, and prediction of treatment effect.

SOC 575 Social Movements: Politics and Organization (3) Theoretical perspectives and research on the dynamics of national social movements from a macrosociological perspective. Introduces dominant models that stress organizational and political processes, with some examination of approaches that consider the intersection of politics, organization, and culture. Emphasis on the United States.

SOC 581 Special Topics in Theory and the History of Sociological Thought (3, max. 9) Examination of current topics in theory and the history of sociological thought. Content varies according to recent developments in the field and the interests of the instructor.

SOC 582 Special Topics in Research Methods and Statistical Analysis in Sociology (3, max. 9) Examination of current topics in research methods and statistical analysis in sociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 583 Special Topics in Demography and Ecology (3, max. 9) Examination of current topics in demography and ecology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 584 Special Topics in Social Psychology (3, max. 9) Examination of current substantive topics in social psychology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 585 Special Topics in Marriage and Family (3, max. 9) Examination of current substantive topics in marriage and the family. Content varies according to recent developments in the field and the interests of the instructor.

SOC 586 Special Topics in Organization and Industrial Sociology (3, max. 9) Examination of current substantive topics in organizational and industrial sociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 587 Special Topics in Deviance and Social Control (1-3, max. 9) Examination of current substantive topics in deviance and social control. Content varies according to recent developments in the field and the interests of the instructor.

SOC 588 Special Topics in Stratification and Race Relations (3, max. 9) Examination of current substantive topics in stratification and race relations. Content varies according to recent developments in the field and the interests of the instructor.

SOC 589 Special Topics in Macrosociology (3, max. 9) Examination of current substantive topics in macrosociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 590 Special Topics in Sociology (1-3, max. 21) Examination of current substantive topics in sociology. Content varies according to recent developments in the field and the interests of the instructor. Topics covered in courses with this number lie outside those covered by other special topics courses numbered SOC 581 through SOC 589.

SOC 591 Political Sociology (3) Introduction to political sociology, considering the rise of the modern state, power,

political organization, social movements, and other related topics.

SOC 597 Field Seminar in States, Markets, and Societies (5) Hamilton, R. Pekkanen, Radnitz Exposes students to theoretical and empirical debates about engagement of states with their societies and with transnational actors in their historical, political, and social settings. Topics include state formation, social change, development, state-market relations, globalization, identities, ethnicities, gender, revolutions, democratization, corruption, clientalism, civil societies, NGOs, and social movements. Offered: jointly with JSIS 597.

SOC 600 Independent Study or Research (*-) Credit/no-credit only.

SOC 700 Master's Thesis (*-) Credit/no-credit only.

SOC 800 Doctoral Dissertation (*-) Credit/no-credit only.

Speech and Hearing Sciences

210 Eagleson Hall

Speech and hearing sciences concern the processes and disorders of human communication and swallowing. This includes the study of normal typical and atypical hearing, speech, and language, cognitive-communication, and swallowing development, anatomy and physiology of speech, hearing, and swallowing, speech acoustics, speech physiology and perception, hearing, the nature of language, speech, cognitive-communication, swallowing, and hearing disorders in children and adults, social and cultural aspects of communication disorders, and the clinical processes involved in identification, prevention, and remediation of those disorders.

UNDERGRADUATE PROGRAM

Adviser

210 Eagleson, Box 354875

(206) 685-7403

shugadv@uw.edu

The Department of Speech and Hearing Sciences offers the following program of study:

- The Bachelor of Science degree with a major in speech and hearing sciences
- An accelerated, fee-based, Bachelor of Science degree with a major in speech and hearing sciences for candidates with an existing bachelor's degree.

Bachelor of Science

Suggested First and Second-Year College Courses: introductory course in anthropology, public health, psychology, or sociology; introductory biological science course – BIOL 118 recommended; introductory course in physics or chemistry – PHYS 107, PHYS 110, or CHEM 110 recommended; statistics course – STAT 220 or EDPSY 490 recommended.

Department Admission Requirements

Admission is competitive. The admissions committee reviews all applicants based on the following criteria: GPA (minimum 2.50 overall GPA guarantees consideration but not admission); personal statement reflecting an interest in and commitment to speech and hearing sciences; other evidence of a commitment to becoming a speech and hearing sciences major. Students may apply any time after they have earned 60 credits. The application deadline for current UW students is Monday of the third week of the

quarter for admission the next quarter; transfer students may apply to the department (if they are at or near junior standing) and to the University concurrently. Admission is for autumn, winter, or spring quarter. Only students admitted to the UW are eligible for admission to the major. Applicants are notified of the department's decision within four weeks. Applications and additional information are available outside 210 Eagleson and on the department's website.

Students who meet admission requirements are eligible for one of two options:

1. *Option 1, General Academic*, is intended to provide broad perspectives of the discipline, but not to prepare students specifically for careers in clinical speech-language pathology and audiology. It is appropriate for students with interests in education, healthcare, and communication.
2. *Option 2, Speech and Hearing Sciences and Disorders*, is intended for students interested in graduate study in speech and hearing sciences and clinical speech-language pathology and audiology. (Note that graduate study is required for the professional practice a speech-language pathologist and audiologist.)

Major Requirements

Core Requirements for Both Options: 33 credits in the following courses: SPHSC 250, SPHSC 261, SPHSC 302, SPHSC 303, SPHSC 304, SPHSC 320, SPHSC 371, SPHSC 461. A minimum 3.00 cumulative GPA is required in core courses for students following Option 2.

Option 1, General Academic: 67-75 credits as follows:

1. Core requirements listed above (33 credits)
2. 22 credits from the following: SPHSC 305, SPHSC 308, SPHSC 405, SPHSC 406, SPHSC 425, SPHSC 445, SPHSC 462, SPHSC 499 (6 credits maximum)
3. An approved 3-5 credit college-level human- or animal-based biological science, anatomy and physiology, neuroanatomy and neurophysiology, human genetics, or veterinary science course. See adviser for approved list. Laboratory component not required.
4. An approved 3-5 credit college-level psychology, sociology, anthropology, or public health course. See adviser for approved list.
5. An approved 3-5 credit college-level chemistry or physics course. See adviser for approved list.

Option 2, Speech and Hearing Sciences and Disorders: 77-85 credits as follows:

1. Core requirements listed above (33 credits)
2. SPHSC 305, SPHSC 308, SPHSC 405, SPHSC 406, SPHSC 425, SPHSC 445, SPHSC 471, SPHSC 481 (32 credits)
3. An approved 3-5 credit college-level statistics course. See adviser for approved list.
4. An approved 3-5 credit college-level psychology, sociology, anthropology, or public health course. See adviser for approved list.
5. An approved 3-5 credit college-level chemistry or physics course. See adviser for approved list. Laboratory component not required.

Post-Baccalaureate Program

The fee-based postbaccalaureate program is designed for individuals who already have a bachelor's degree or an advanced degree in a discipline other than speech and hearing sciences and wish to obtain the necessary academic background to apply directly to a graduate program. This is an intensive program designed to take five quarters with a mandatory summer start. Postbaccalaureate students have matriculated status as they are working toward a second bachelor's degree in preparation for graduate school.

Admissions Requirements

Postbaccalaureate program admission is based on multiple factors: the overall academic record from the first bachelor's or advanced degree, the personal statement, the letters of recommendation and the perceived commitment to speech, language, and hearing sciences.

Applying to the postbaccalaureate program is a two-part process. The applicant is responsible for ensuring both the UW Office of Admissions and the SPHSC Department receive the application materials by the deadline of February 15. Incomplete applications are not processed. Admission to SPHSC is contingent upon admission to UW. See the program website for details on the two-part admission process.

1. Bachelor's degree or advanced degree outside the area of speech and hearing sciences
2. Statement of purpose
3. All college-level transcripts
4. Three letters of recommendation must be sent to the department. The SPHSC recommendation form is available on the department website, depts.washington.edu/sphsc/. However, a letter is acceptable in lieu of the recommendation form. Students should read and fill out the top section of the recommendation form before giving it to the evaluator.

Degree Requirements

Minimum 65 credits as follows:

1. Summer, 15 credits: SPHSC 250, SPHSC 371, SPHSC 308, SPHSC 261
2. Autumn, 13 credits: SPHSC 303, SPHSC 305, SPHSC 471
3. Winter, 14 credits: SPHSC 302, SPHSC 405, SPHSC 425, SPHSC 481
4. Spring, 15 credits: SPHSC 304, SPHSC 320, SPHSC 461
5. Summer, 8 credits: SPHSC 406, SPHSC 445, SPHSC 449

In addition, the American Speech-Language-Hearing Association (ASHA) requires the following four course requirements for anyone seeking certification in speech-language pathology and audiology. The courses must be taken outside the Speech and Hearing Sciences Department. Courses can be any number of credits and can be taken for a grade or satisfactory/not satisfactory. If students need to complete these courses prior to graduate school, they can be added to the postbaccalaureate program.

1. Statistics course
2. Biological science course (biology, anatomy & physiology, neuroanatomy & neurophysiology, human genetics, or veterinary science)
3. Physical science course (physics or chemistry)
4. Social or behavioral science course (psychology, sociology, anthropology, or public health)

Student Outcomes and Opportunities

- **Learning Objectives and Expected Outcomes:** The graduate (1) has knowledge of the following: mechanisms involved in speech, language, and hearing; societal implications of language differences and of disorders of speech, language, and hearing; opportunities in, and requirements for, careers available to those in the speech and hearing sciences; (2) understands the following: normal acquisition of speech and language; the etiology and nature of communication disorders across the lifespan; principles and procedures for diagnosis and treatment of speech, language, and hearing disorders; the manner in which context (specifically, situation, social/interpersonal, and culture context) influences communication and disorders; social-cultural aspects of communication development and disorders; (3) has

the following abilities: to analyze language in terms of its auditory, phonetic, phonological, morphological, and syntactic properties; to utilize strategies for solving scientific problems; to read and understand relevant literature; (4) have experience with a research project

- **Instructional and Research Facilities:** Classrooms, research laboratories, computer laboratory, and clinic located in the department and in nearby campus buildings.
- **Honors Options Available:** With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- **Research, Internships, and Service Learning:** Faculty welcome undergraduate students into their research labs, offering independent study research opportunities (SPHSC 499), in addition to mentored, year-long honors research projects (SPHSC 498). No formal internship programs offered. See adviser for community-based service learning and internship opportunities.
- **Department Scholarships:** None offered
- **Student Organizations/Associations:** The National Student Speech Language Hearing Association (NSSLHA) UW chapter, 153 Eagleson Hall.

GRADUATE PROGRAM

Graduate Student Services

Eagleson Hall, Box 354875

(206) 685-7402

shgrad@uw.edu

The Department of Speech and Hearing Sciences offers four graduate degree programs that equip students to do research, teach at the college and university level, and provide clinical services to the communicatively impaired.

- The Master of Science in Speech-Language Pathology (MS SLP)
- The Master of Science in Medical Speech-Language Pathology (MS MedSLP)
- The Doctor of Audiology (AuD)
- The Doctor of Philosophy (PhD)

At the Master of Science and Doctor of Audiology level, the specific focus is on the evidence-based clinical procedures involved in the identification, prevention, and remediation of communication disorders. Students granted these degrees meet all the requirements of the Certificate of Clinical Competence (CCC) granted by the American Speech-Language-Hearing Association (ASHA), which is the professional, scientific and credentialing organization for speech-language pathology and audiology professionals.

At the Doctor of Philosophy level, the program consists of a wide range of coursework and seminars providing opportunities for the development of scholarly and professional competence in various areas of specialization: speech and language acquisition, phonetics, speech production, hearing, hearing development, psychoacoustics, physiological acoustics, speech perception, and assessment and treatment of human communication disorders related to language, speech, and hearing.

To complement departmental curricula in various specialization areas, close interdisciplinary relationships are maintained with other University departments and off-campus centers.

Master of Science in Speech-Language Pathology (MS SLP)

Entrance to the program is for autumn quarter only. The department does not accept transfer students, Graduate

non-matriculated (GNM) applicants, or applicants interested in a non-clinical master's degree.

Admission Requirements

1. Complete UW Graduate School between September 15th and by February 1st. Applicants must submit by February 1st:
 - a. Department's supplemental application
 - b. Unofficial transcripts for all schools attended
 - c. GRE scores earned within the last five years
 - d. Three letters of recommendation
 - e. Personal statement
2. A minimum 3.00 GPA during the last 90 quarter credit hours of study (60 semester)
3. Demonstrated English language proficiency as outlined by the UW Graduate School
4. Bachelor's degree from a regionally accredited institution with a major in speech and hearing sciences (communication disorders, communication sciences and disorders, or a similarly named major) or in another major with sufficient undergraduate coursework in speech and hearing sciences (communication disorders, communication sciences and disorders, or a similarly named program)
5. Completed prerequisite undergraduate coursework as dictated by the American Speech-Language-Hearing Association's (ASHA) accreditation standards and guidelines.
 - a. Speech and hearing sciences coursework across these areas of knowledge:
 - i. Linguistics
 - ii. Phonetics/language science
 - iii. Anatomy and physiology of the speech mechanism
 - iv. Speech and language acquisition/development
 - v. Speech and language disorders
 - vi. Hearing science/nature of sound
 - vii. The hearing mechanism
 - viii. Hearing disorders
 - ix. Audiometry
 - x. Aural rehabilitation/management of hearing loss
 - xi. Social cultural aspects of communication
 - xii. Principles of assessment
 - xiii. Principles of treatment
 - b. Basic science and statistics coursework. Applicants must have completed a minimum of one course in each of the following areas:
 - i. Statistics course
 - ii. Biological science course (biology, anatomy & physiology, neuroanatomy & neurophysiology, human genetics, or veterinary science)
 - iii. Physical science course (physics or chemistry)
 - iv. Social or behavioral science course (psychology, sociology, anthropology, or public health)
 - c. Minimum 25 documented, clinical observation hours within the scope of practice of speech-language pathology. Observations must be under the direction of an ASHA certified speech-language pathologist.

Degree Requirements

Minimum 102 credits for Adult emphasis path: 57 didactic, 41 clinical, and 4 emphasis path:

Minimum 107 credits for Pediatric emphasis path: 57 didactic, 41 clinical, and 9 emphasis path:

1. *Didactic*, 57 credits as follows for all students:

- a. SPHSC 500, SPHSC 501, SPHSC 506, SPHSC 529, SPHSC 531, SPHSC 532, SPHSC 533, SPHSC 534, SPHSC 535, SPHSC 536, SPHSC 537, SPHSC 538, SPHSC 539, SPHSC 540, SPHSC 565
 - b. Completion of one of two emphasis paths focused on either adult or pediatric practice:
 - i. *Pediatric Emphasis Path*: Minimum of four didactic courses (9 credits): SPHSC 526, SPHSC 543, SPHSC 550, and one out-of-department elective course of choice
 - ii. *Adult Emphasis Path* requires a minimum of three didactic courses (4 credits): Choice of SPHSC 545, SPHSC 546, SPHSC 541 or SPHSC 548, and two out-of-department elective courses of choice
 - c. *Additional Program Requirements*: Minimum 36 credits of non-practicum graduate work at the 400 level or above. Minimum 18 of the 36 quarter credits in courses numbered 500 and above. No more than 9 credits of courses 500 level and above can be thesis credits. Satisfactory completion of all didactic and practicum requirements detailed above. Satisfactory completion of written thesis and oral defense of the thesis. Minimum 9 quarter credits of thesis (SPHSC 700) for students taking thesis option. Students completing the thesis must take a course in statistics at the 400 level or above.
 - d. Students also satisfactorily complete requirements for the Certificate of Clinical Competence of the American Speech-Language-Hearing Association by registering for the required coursework and practica, pre-internship and internship credits.
2. *Clinical*, 41 credits as follows for all students:
- a. Minimum 41 credits of clinical practicum coursework from the following: SPHSC 591, SPHSC 551, SPHSC 552, SPHSC 555, either SPHSC 601 or SPHSC 602
 - b. Minimum 375 clock hours of supervised clinical experience in the practice of speech-language pathology
 - c. The clinical practicum coursework requirements include completion of a pre-internship and a culminating full-time internship in a community-based clinical facility.
3. *Thesis Coursework (optional)*: Minimum 9 credits of SPHSC 700 required for anyone choosing to pursue a master's thesis. Students must also successfully complete a written document and oral defense of their thesis.
4. *Additional Degree Requirements*: 36 credits of non-clinical practicum graduate work at the 400 level or above. Minimum 18 of the 36 quarter credits in courses numbered 500 and above. No more than 9 credits of courses 500 level and above can be thesis credits. Satisfactory completion of all didactic and practicum requirements detailed above. Students also satisfactorily complete the requirements for the Certificate of Clinical Competence (CCC) of the American Speech-Language-Hearing Association by registering for the required coursework and practica, pre-internship and internship credits.
- b. Unofficial transcripts for all schools attended
 - c. GRE scores earned within the last five years
 - d. Three letters of recommendation
 - e. Personal statement
2. Minimum 3.00 GPA for the last 90 quarter credit hours of study (60 semester)
3. Demonstrated English language proficiency as outlined by the UW Graduate School
4. Bachelor's degree from a regionally accredited institution with a major in speech and hearing sciences (communication disorders, communication sciences and disorders, or a similarly named major) or in another major with sufficient undergraduate coursework in speech and hearing sciences (communication disorders, communication sciences and disorders, or a similarly named program)
5. Completed prerequisite undergraduate coursework as dictated by the American Speech-Language-Hearing Association's (ASHA) accreditation standards and guidelines.
- a. Speech and hearing sciences coursework across these areas of knowledge:
 - i. Linguistics
 - ii. Phonetics/language science
 - iii. Anatomy and physiology of the speech mechanism
 - iv. Speech and language acquisition/development
 - v. Speech and language disorders
 - vi. Hearing science/nature of sound
 - vii. The hearing mechanism
 - viii. Hearing disorders
 - ix. Audiometry
 - x. Aural rehabilitation/management of hearing loss
 - xi. Social cultural aspects of communication
 - xii. Principles of assessment
 - xiii. Principles of treatment
 - b. Basic science and mathematics coursework. Applicants must have completed a minimum of one course in each of the following areas:
 - i. Statistics course
 - ii. Biological science course (biology, anatomy & physiology, neuroanatomy & neurophysiology, human genetics, or veterinary science)
 - iii. Physical science course (physics or chemistry)
 - iv. Social or behavioral science course (psychology, sociology, anthropology, or public health)
 - c. Minimum 25 documented, clinical observation hours within the scope of practice of speech-language pathology. Observations must be under the direction of an ASHA certified speech-language pathologist.

Degree Requirements

Minimum 114 credits; 72 didactic and 42 clinical

1. *Didactic*, 72 credits as follows: SPHSC 500, SPHSC 501, SPHSC 506, SPHSC 507, SPHSC 529, SPHSC 531, SPHSC 532, SPHSC 533, SPHSC 534, SPHSC 535, SPHSC 536, SPHSC 537, SPHSC 538, SPHSC 539, SPHSC 540, SPHSC 541, SPHSC 543, SPHSC 545, SPHSC 546, SPHSC 548, SPHSC 549, SPHSC 565.
2. *Clinical*, 42 credits as follows:
 - a. 42 credits of SPHSC 553 and SPHSC 554
 - b. Minimum of 375 clock hours of supervised clinical experience in the practice of speech-language pathology.
 - c. The clinical practicum coursework requirements include completion of a pre-internship and a culminating

ing full-time internship in a community-based clinical facility.

3. *Thesis Coursework (optional)*: Minimum 9 credits of SPHSC 700 required for anyone choosing to pursue a master's thesis. Students must also successfully complete a written document and oral defense of their thesis.
4. *Additional Degree Requirements*: 36 credits of non-clinical graduate work at the 400 level or above. Minimum 18 of the 36 quarter credits in courses numbered 500 and above. No more than 9 credits of courses 500 level and above can be thesis credits. Satisfactory completion of all didactic and practicum requirements detailed above. Students also satisfactorily complete the requirements for the Certificate of Clinical Competence (CCC) of the American Speech-Language-Hearing Association by registering for the required coursework and practica credits.

Doctor of Audiology

Entrance to the program is for autumn quarter only. The department does not accept transfer students, Graduate non-matriculated (GNM) applicants, or applicants interested in a non-clinical AuD degree.

Admission Requirements

1. Complete UW Graduate School Application between September 15th and February 1st. Applicants must submit by February 1st:
 - a. Departmental's supplemental application
 - b. Unofficial Transcripts for all schools attended
 - c. GRE scores earned within the last five years
 - d. Three letters of recommendation
 - e. Personal statement
2. Minimum 3.00 GPA for the last 90 quarter credit hours of study (60 semester)
3. Demonstrated English language proficiency as outlined by the UW Graduate School
4. Bachelor's degree from a regionally accredited institution
5. *Undergraduate Coursework*: Foundational coursework in speech and hearing sciences, as well as the principles of biological science, physical science, social/behavioral science, and basic math or statistics. All foundational coursework is required for the graduate degree and clinical certification in audiology as dictated by the American Speech-Language-Hearing Association's (ASHA) accreditation standards and guidelines. The department encourages, but does not require, students to complete this foundation coursework prior to starting graduate study.
 - a. Basic science and math coursework. Graduates of any Doctor of Audiology program must complete a minimum of one undergraduate course in each of the following areas in order to be eligible for ASHA certification. See advisor for list of acceptable courses.
 - i. Statistics course
 - ii. Biological science course (biology, anatomy & physiology, neuroanatomy & neurophysiology, human genetics, or veterinary science)
 - iii. Physical science course (physics or chemistry)
 - iv. Social or behavioral science course (psychology, sociology, anthropology, or public health)
 - b. Speech and Hearing Sciences coursework. Graduates of the Doctor of Audiology program must also complete undergraduate coursework that covers the following foundational areas in order to be eligible for ASHA certification:
 - i. Normal development of speech and language

Master of Science in Medical Speech-Language Pathology (MS MedSLP)

Entrance to the program is for autumn quarter only. The department does not accept transfer students, Graduate non-matriculated (GNM) applicants, or applicants interested in a non-clinical MS degree.

Admission Requirements

1. Complete UW Graduate School Application between September 15th and February 1. Applicants must submit by February 1st:
 - a. Department's supplemental application

- ii. Language and speech disorders across the life span
- c. If not completed prior to graduate study, students take one or more of the following speech and language courses during their graduate program: SPHSC 250, SPHSC 304, SPHSC 305, SPHSC 425

Degree Requirements

Minimum 193 credits: 81 didactic, 8 elective, 92 clinical, and 12 capstone as follows:

1. *Didactic*, minimum 81 credits as follows:
 - a. SPHSC 462, SPHSC 503, SPHSC 504, SPHSC 509, SPHSC 521, SPHSC 522, SPHSC 523, SPHSC 542, SPHSC 570, SPHSC 571, SPHSC 572, SPHSC 574, SPHSC 575, SPHSC 576, SPHSC 577, SPHSC 579, SPHSC 580, SPHSC 581, SPHSC 582, SPHSC 583, SPHSC 584, SPHSC 585, SPHSC 586, SPHSC 588, SPHSC 592, SPHSC 593.
 - b. Elective minimum 8 credits as follows: Students are required to take elective coursework that meet the following requirements: (a) 300/400 levels courses are preferred and should taken for a grade (or Satisfactory/Nonsatisfactory), (b) 100/200 level courses approved based on content but must be taken for a grade, (c) elective courses must be a minimum of 2 credits with the exception of SPHSC 563 or permission must be granted from the AuD Graduate Program Advisor, and (d) total elective credits must equal 8 credits by graduation.
2. *Clinical*, minimum 92 credits as follows:
 - a. 2 credits of SPHSC 552
 - b. 50 credits of SPHSC 591
 - c. 40 credits of SPHSC 601
 - d. *Year 4 (30 credits)*: SPHSC 601 (10 credits) for three quarters
3. *Practice Doctorate/Capstone Research Coursework*:
 - a. Minimum 12 credits of SPHSC 801.
 - b. A course in statistics at the 400 level or above (e.g., EDPHY 490).
 - c. Complete a written document and oral defense of their research.
4. *Comprehensive Examinations*: Three comprehensive examinations including two clinical comprehensive examinations (examination one is autumn quarter of year one and examination two is winter quarter of year two). A written comprehensive examination in Winter quarter of year three. Students may retake each comprehensive examination only once.
5. *Additional Degree Requirements*: 36 credits of non-clinical graduate work at the 400 level or above. Minimum 18 of the 36 quarter credits in courses numbered 500 and above. No more than 12 credits of courses 500 level and above can be capstone research credits. Satisfactory completion of all didactic and practicum requirements detailed above. Students also satisfactorily complete the requirements for the Certificate of Clinical Competence (CCC) of the American Speech-Language-Hearing Association by registering for the required coursework and practica credits.

Doctor of Philosophy

Entrance to the program is for summer or autumn quarters only. The department does not accept Graduate Non-matriculated (GNM) applicants.

Admission Requirements

1. Identify and contact a faculty mentor from within the Department of Speech and Hearing Sciences who agrees to support the student's application to the PhD program.

2. Complete UW Graduate School Application between September 15th and February 15. Applicants must submit by February 15th:
 - a. Unofficial transcripts for all schools attended
 - b. GRE scores earned within the last 5 years
 - c. Three letters of recommendation
 - d. Statement of Purpose
 - e. Writing sample or paper
 - f. Department's supplemental application

3. Minimum 3.00 GPA for the last 90 quarter credit hours of study (60 semester)
4. Demonstrated English language proficiency as outlined by the UW Graduate School
5. Bachelor's or master's degree from a regionally accredited institution, depending upon area of interest

Degree Requirements

Minimum 90 credits including: 36 credits of graduate work at the 400 level or above and a minimum 18 of the 36 quarter credits in courses numbered 500 and above.

Academic Coursework: The curriculum for a student in the PhD program is planned on an individual basis in consultation with the student's faculty mentor and committee. Students may concentrate in basic and applied research. Courses, seminars, laboratory experiences, and assistantships are selected to provide preparation for careers in research and university or college teaching.

Although each student's academic plan is customized, every student is required to complete the following courses:

1. Three-quarter introductory level doctoral course sequence in speech, hearing, and language science and disorders (SPHSC 560, SPHSC 561, and SPHSC 562)
2. Research Methods course (SPHSC 504, SPHSC 506, or approved alternative)
3. Minimum four statistics courses (chosen in consultation with advisory committee)
4. Grant-writing course (SPHSC 568)
5. Research seminar (SPHSC 567; registration required autumn, winter and spring quarters, throughout the degree program)

Students entering the program with a degree in a field other than speech and hearing sciences are also expected to complete undergraduate courses in speech science, language science, and hearing science, and one course in the area of communication disorders, to obtain a basic understanding of the discipline. Courses that may be used to meet this requirement are: SPHSC 303, SPHSC 305, SPHSC 320, SPHSC 371, SPHSC 425, and SPHSC 461.

Research Coursework: All students are expected to conduct supervised research by the end of their first year. Students must register for SPHSC 600 to document their research activity. In addition, students complete:

1. A pre-dissertation research project (PDP)
2. Written and oral general examination
3. Written dissertation based on independent research (minimum 27 credits of SPHSC 800, over 3 quarters) with an oral defense

Teaching Experience: Students pursuing an academic career complete a customized teaching experience plan with their advisory committee. Students also enroll in:

1. Instructional Development Forum (SPHSC 563)
2. Teaching Practicum (SPHSC 564)

Financial Aid

PhD students in the Department of Speech and Hearing Sciences are guaranteed financial support as teaching or research assistants: —“graduate service appointees” — during the academic year, as long as they make adequate

progress in the program with an established mentor. In addition, the department has traineeships/fellowships supported by the National Institutes of Health on a competitive basis. Students are strongly encouraged to apply to the National Institutes of Health or other funding agencies for individual fellowships to support dissertation work. Summer support can also generally be arranged, although it is not guaranteed.

Research Facilities

The department's research laboratories, as well as those of the Virginia Merrill Bloedel Hearing Research Center, the Institute for Learning and Brain Sciences, contain sophisticated equipment for the collection and analysis of data related to the study of human communication and its disorders. The University Speech and Hearing Clinic and the Center on Human Development and Disability also provide laboratories to support basic and applied research in speech, language and hearing development and disorders, across the life span.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

SPHSC 100 Voice and Articulation Improvement (3) VLPA

For native speakers of English only. Voice production and the sound system of standard American speech. Speech standards, regional and social dialects, voice quality and basic language-oriented characteristics. Practice for improving speech style. May not be repeated. Offered: AWSpS.

SPHSC 111 The American English Sound System (2, max. 4)

For non-native speakers of English only. Speech sounds of American English. Practice in listening and using American speech sounds and intonation patterns. Credit/no-credit only. Offered: AWSpS.

SPHSC 250 Human Communication and Its Disorders (5)

I&S/NW Overview of normal and impaired human communication, including speech, language, and hearing disorders. Required for majors; open to nonmajors. Offered: S.

SPHSC 261 The Nature of Sound (4) NW

Fundamental principles of sound and vibration with emphasis on examples relevant to the speech and hearing systems. Required for majors; open to nonmajors. Recommended: MATH 120; PHYS 114. Offered: WS.

SPHSC 302 Phonetics (3) VLPA

Introduction to the description and classification of speech sounds with a focus on American English. Phonetic analysis of segmental and suprasegmental properties of speech. Practice using the International Phonetic Alphabet to transcribe normal and disordered speech patterns. Required for majors; open to nonmajors. Prerequisite: either SPHSC 303, LING 200, or LING 400. Offered: W.

SPHSC 303 Language Science (3) VLPA

J. THORNE Introduction to techniques of linguistic analysis used in the study of phonology, morphology, syntax, semantics, and pragmatics. Required for majors; open to nonmajors. Offered: A.

SPHSC 304 Developmental Aspects of Communication (5)

I&S T. COGGINS Patterns of communicative development in English speaking children and adolescents. Introduction to the study of language and communication from a developmental perspective. Application to children with various types of communication impairments. Required for majors; open to nonmajors. Prerequisite: either SPHSC 303, ANTH 203, LING 200, or LING 400. Offered: Sp.

SPHSC 305 Speech and Language Disorders (5) NW

Etiology and nature of developmental and acquired communication disorders across the lifespan. Behavioral characteristics of language delay and disorders, developmental

apraxia of speech, phonological disorders, stuttering, acquired aphasia, apraxia of speech and dysarthria, craniofacial anomalies, and voice disorders. Required for majors; open to nonmajors. Prerequisite: SPHSC 302; SPHSC 304; SPHSC 320. Offered: A.

SPHSC 308 Social-Cultural Aspects of Communication (3) I&S P. DOWDEN Introduction to human communication in context. Exploration of ways communication is influenced by context, including situational, social/interpersonal, and cultural variables. Studies systems and cultural practices as they influence communication. Required for majors; open to nonmajors. Offered: WS.

SPHSC 320 Anatomy and Physiology of Speech (5) NW M. BURNS Anatomy and physiology of the speech and swallowing mechanism, including the respiratory, phonatory, and resonatory systems and the neural control. Examples and laboratory work are directed toward clinical issues in speech-language pathology. Required for majors; open to nonmajors. Offered: Sp.

SPHSC 371 Hearing Disorders (3) I&S/NW K. TREMBLAY Introduction to abnormal hearing. Pathologies of the ear and their treatments. Audiometric correlates, communicative and social consequences of hearing loss. Overview of management of children and adults. Required for majors; open to nonmajors. Offered: AS.

SPHSC 405 Diagnosis of Speech and Language Disorders (3) NW J. THORNE Principles and procedures for the diagnosis of speech and language disorders. Required for majors. Prerequisite: SPHSC 305. Offered: W.

SPHSC 406 Treatment of Speech and Language Disorders (4) NW C. BAYLOR Principles and procedures for planning, implementing, and evaluating treatment for speech and language disorders. Required for majors. Prerequisite: SPHSC 405. Offered: SpS.

SPHSC 411 Perceptual Development (5) I&S/NW Meltzoff Origins and development of perception in human infancy. Object, face, and speech perception; cross-modal relations between touch, vision, audition. Prerequisite: minimum 2.0 grade in either PSYCH 206, PSYCH 306, or PSYCH 414. Offered: jointly with PSYCH 411.

SPHSC 425 Speech, Language, Hearing, and the Brain (4) I&S/NW Addresses the neural bases of topics in speech, language, and hearing with an emphasis on the normal aspects of central nervous system anatomy, physiology, and function. Gives attention to issues relevant to understanding disordered systems and to points of contemporary debate among neuroscientists. May not be repeated. Offered: W.

SPHSC 445 Models of Speech Processing (3) NW Examines models and basic issues concerning how spoken language is processed. Presents current issues, theories, and research relative to the levels of processing entailed in producing and comprehending speech. Required for majors; open to nonmajors. Recommended: SPHSC 302; SPHSC 303; SPHSC 320; SPHSC 425.

SPHSC 449 Special Studies in Speech Pathology and Audiology (*, max. 30) M. BURNS Selected special problems in speech pathology and audiology. Offered: S.

SPHSC 461 Introduction to Hearing Science (5) NW L. WERNER Basic aspects of hearing and the ear and auditory nervous system. How the auditory system constructs an image of the acoustic environment. How attention and memory influence hearing. Effects of damage to the auditory system. Prerequisite: either SPHSC 261 or PSYCH 333. Offered: Sp.

SPHSC 462 Hearing Development (3) NW L. WERNER Description of the changes that occur in human hearing during development. Consideration of the possible explanations for early immaturity. Prerequisite: SPHSC 461; may not be repeated. Offered: A, odd years.

SPHSC 471 Basic Audiometry (5) NW R. FOLSOM Theory and practice of the assessment of hearing function, includ-

ing standard pure-tone audiometry, speech audiometry, and basic impedance audiometry. Required for majors. Prerequisite: SPHSC 371; SPHSC 461; may not be repeated. Offered: A.

SPHSC 481 Management of Hearing Loss (4) NW J. SULLIVAN Introduction to methods of communicative rehabilitation of person with hearing loss. Remediation principles of auditory and visual perception, amplification, communication strategies, and information counseling. Required for majors. Prerequisite: SPHSC 471; may not be repeated. Offered: W.

SPHSC 491 Audiology Practicum in Schools (2) R. FOLSOM Special projects in clinical audiology practicum, offered only in the school setting. Provides an opportunity for students to extend audiology practicum experiences into the school environment. Prerequisite: SPHSC 371. Credit/no-credit only. Offered: AS.

SPHSC 498 Undergraduate Honors Research ([1-5]-, max. 15) Faculty supervised, undergraduate Honors research project. Includes design and implementation, culminating in written thesis and oral presentation. SPHSC Honors Program students only. Offered: AWSpS.

SPHSC 499 Undergraduate Research ([1-5]-, max. 15) Offered: AWSpS.

SPHSC 500 Clinical Methodology for Documenting Change (4) P. DOWDEN Introduction to clinical methodology for conducting efficacious assessment and treatment of individuals with communication problems. Students consider nature of intervention designed to alter communication disorders and types of accountability questions that need to be raised. They learn methodology for collecting and analyzing data for making informed clinical decisions. Offered: A.

SPHSC 501 Neural Bases of Speech, Language, and Hearing (4) Burns, Miller Neuroanatomical and neurophysiological bases of language, hearing, sensory, and motor function. Special emphasis given to brain behavior correlates and behavioral consequences to speech, language, and hearing as a result of neurologic injury or disease. Offered: A.

SPHSC 503 Current Issues in Speech and Hearing Sciences (3) Application of experimental methods to research in speech and hearing sciences. Offered: S.

SPHSC 504 Research Methods in Speech and Hearing Sciences (3) S. KOVER Introduction to empirical methods in the speech and hearing sciences. Offered: W.

SPHSC 506 Research Methods in Speech-Language Pathology (3) S. KOVER Examines empirical methods in speech-language pathology research. Includes evaluation and design of different types of research such as descriptive (e.g., case study, developmental, qualitative, surveys), exploratory (e.g., correlational, differential), and experimental (e.g., single-subject designs, randomized control trials, treatment efficacy studies). Offered: W.

SPHSC 507 Evidence Based Practice (3) P. DOWDEN Prepares students to conduct evaluation and treatment in speech-language pathology according to Evidence-Based Practice (EBP) principles. Examines integration of "internal" and "external" evidence in the context of clinical practice. Prerequisite: graduate status in SPHSC or permission of instructor. Offered: Sp.

SPHSC 509 Advanced Hearing Science (3) Consideration of physiological acoustics and psychoacoustics, the pertinent literature, and the experimental techniques related to study in these areas. Offered: A.

SPHSC 510 Physiological Acoustics (3) Study of pertinent literature and experimental techniques incident to the physiology of the normal and abnormal auditory system. Prerequisite: SPHSC 461 or permission of instructor.

SPHSC 511 Psychoacoustics (3) Review of significant literature and theory pertinent to normal auditory sensitivity,

pitch, loudness, and other attributes of auditory sensation. Prerequisite: SPHSC 461; permission of instructor.

SPHSC 514 Speech Physiology (3) Study of the physiological parameters of acoustic speech production. Prerequisite: SPHSC 320; SPHSC 461.

SPHSC 518 Seminar in Speech and Hearing Sciences (2, max. 50) L. MAX Reviews selected research area and methods in the speech and hearing sciences. Discusses topics related to developing a career in research or academics. Credit/no-credit only. Offered: AWSp.

SPHSC 519 Seminar in Speech Science (2, max. 50)

SPHSC 520 Advanced Instrumentation for Speech and Hearing Sciences (3) Design and use of electronic and electroacoustic devices in the speech and hearing sciences. Four hours of laboratory required each week.

SPHSC 521 Instrumentation for Audiology (4) Introduction to basic instrumentation used in audiology and hearing science; detailed instruction in audiometer calibration including a review of current national and international standards pertinent to audiology; emphasis on use rather than theory. Prerequisite: permission of instructor. Offered: A.

SPHSC 522 Hearing Instrument Modification/Repair (1) M. HARNEY Minor repair and modification of hearing aids, earmolds and associated accessories. Includes operation of hand tools and small power tools used in repair and earmold modification. Familiarity with different materials used to make or repair hearing aids/accessories. Troubleshooting damaged, malfunctioning, or inoperative instruments. Interpreting acoustic and electroacoustic test results to aid in troubleshooting or repair. Credit/no-credit only. Offered: W.

SPHSC 523 Special Topics in Audiology (3, max. 12) K. TREMBLAY Applied and theoretical issues related to audiology. Weekly seminar includes guest speakers discussing current and future trends in science that relate to hearing and the practice of audiology. Offered: W, even years.

SPHSC 525 Speech Signal Processing (3) Theory, evaluation, and use of speech signal processing algorithms such as sampling, filtering, spectral analysis, autocorrelation, and speech synthesis. Laboratory assignments develop skills in using signal analysis and synthesis software applied to normal and pathological speech.

SPHSC 526 Assessment and Treatment of Literacy Disorders (3) L. SNOW Examines the principles and procedures used in the assessment and treatment of literacy disorders with an emphasis on childhood literacy disorders as well as the relationship between verbal language impairment and literacy skills. Prerequisite: SPHSC 536. Offered: S.

SPHSC 529 Assessment and Treatment of Birth-to-4 Communication Disorders (4) T. COGGINS Examination of measurement concepts, standardized reference measures, and non-standardized assessment tools for communication and related skills in young children. Presents theoretical and empirical bases of prelinguistics and early language interventions. Offered: W.

SPHSC 531 Neurogenic Motor Speech Disorders (4) K. SPENCER Examines the nature, assessment, and management of the dysarthrias, acquired apraxia or speech, and childhood apraxia of speech. Prerequisite: SPHSC 501 or permission of instructor. Offered: Sp.

SPHSC 532 Assessment and Treatment of Neurogenic Language Disorders (3) D. KENDALL Provides an overview of the nature, evaluation, and management of acquired disorders of language in adults. Specifically, students learn about language assessment principles and procedures; the nature and treatment of aphasia, alexia, and agraphia; and the systems that support language (e.g. attention, verbal working memory). Prerequisite: SPHSC 501 or permission of instructor. Offered: W.

SPHSC 533 Medical Speech Pathology (3) Nature of speech pathology practiced in medical settings. Prerequisite:

site: SPHSC 501, SPHSC 531, and SPHSC 532, or permission of instructor. Offered: S.

SPHSC 534 Assessment and Treatment of Dysphagia (4) Anatomophysiology bases of function and dysfunction associated with speech-language disorders. Mastication and swallowing problems, their causes, assessments, and management. Prerequisite: SPHSC 501 or permission of instructor. Offered: Sp.

SPHSC 535 Assessment and Treatment of Voice Disorders (4) T. EADIE Physiology, acoustics, and perception of voice quality and speech resonance. Etiology, evaluation, and treatment of voice and resonance disorders. Offered: W.

SPHSC 536 Assessment and Treatment of School-Age Communication Disorders (4) S. KOVER Examines the principles and procedures used in the assessment and treatment of school-aged speech-and-language disorders. Offered: Sp.

SPHSC 537 Fluency Disorders (4) L. MAX Characteristics of fluent speech and the nature and treatment of stuttering in children and adults are studied in relation to normal speech production processes, human learning, principal explanations of stuttering, and treatment systems. Offered: A.

SPHSC 538 Assessment and Treatment of Cognitive-Communication Disorders (3) K. SPENCER Studies right brain injury, dementia, and traumatic brain injury for understanding of the underlying neuropathologies, techniques for assessment, and evidence-based interventions. Offered: A.

SPHSC 539 Childhood Speech and Phonological Disorders (4) Examines patterns of normal speech and phonological development and the nature, assessment, and treatment of speech and phonological disorders of childhood. Offered: A.

SPHSC 540 Augmentative and Alternative Communication Foundations (4) P. DOWDEN Overview of evaluation and intervention for children and adults with severe congenital speech and language impairments, with primary emphasis on individuals with congenital impairments. Overview of the features of multi-modal strategies, including output, selection set, access, and rate enhancement. Prerequisite: graduate SPHSC, REHAB, or EDSPE students, or permission of instructor. Offered: S.

SPHSC 541 Augmentative and Alternative Communication in the Medical Setting (2) P. DOWDEN Evaluation and intervention for severe acquired speech/language impairments. Covers decision-making and treatment for individuals who sustained a CVI, traumatic brain injury, or have degenerative diseases. Solutions include multi-modal strategies, from books to voice output systems. Prerequisite: SPHSC 540 or permission of instructor. Offered: Sp.

SPHSC 542 Counseling and Interactive Skills for Speech-Language Pathologists and Audiologists (3) L. ILLICH Introduction to counseling theory and practice in speech-language pathology, audiology, and related fields. Provides opportunities for learning and practicing counseling skills. Addresses key counseling issues, including professional boundaries, intense emotions, and counselor's feelings and reactions. Prerequisite: graduate standing in SPHSC or permission of instructor. Offered: S.

SPHSC 543 Assessment and Treatment of Pediatric Dysphagia (2) J. DUNLAP Examines principles and procedure used in the assessment and treatment of pediatric swallowing and feeding disorders. Covers clinical and instrumental assessment techniques and evidenced-based intervention strategies applicable to the infant/child across different pediatric practice settings. Prerequisite: SPHSC 501; SPHSC 534; or permission of instructor. Offered: W.

SPHSC 545 Assessment and Treatment of Voice Disorders in Medical Settings (2) T. EADIE, M. NEVDAHL Examines the principles and procedures used in assessment and treatment of voice disorders typically seen in medical settings, with a focus on instrumentation such as use of inter-

pretation of laryngeal imaging, acoustics, and perceptual measures. Prerequisite: SPHSC 535. Offered: A.

SPHSC 546 Advanced Neurological Language Disorders (2) D. KENDALL Advanced study in the nature, assessment, and treatment of acquired language and cognitive-communication disorders. Prerequisite: SPHSC 501; SPHSC 532; or permission of instructor. Offered: W.

SPHSC 548 Traumatic Brain Injury Seminar (2) K. SPENCER Advanced study in the nature, assessment, and management of individuals with traumatic brain injury across the lifespan. Prerequisite: SPHSC 501; SPHSC 538, or permission of instructor. Offered: Sp.

SPHSC 549 Clinical Forum in Speech-Language Pathology (2, max. 50) Study and application of pertinent clinical issues and trends related to the practice of speech-language pathology. Prerequisite: successful completion of all required didactic and clinical practica coursework in the first two years of the medical speech-language pathology graduate program. Credit/no-credit only. Offered: Sp.

SPHSC 550 Public School Speech-Language Pathology and Audiology (3) K. KRINGS Explores administrative, legal, ethical, and clinical issues encountered in implementing programs to remediate communication disorders in the school-aged population in the public school setting. Open to non-matriculated students with permission of instructor. Prerequisite: graduate student status in speech and hearing sciences or permission of instructor. Offered: W.

SPHSC 551 Advanced Practicum in Speech Pathology Evaluation (1-10, max. 50) Laboratory experience in the evaluation of speech and language disorders. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

SPHSC 552 Advanced Practicum in Speech Pathology Management (1-10, max. 50) Laboratory experience in the management of speech and language disorders. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

SPHSC 553 Advanced Practicum in Speech-Language Pathology (2-4, max. 50) Clinical practicum experience, completed under the supervision of UW Speech and Hearing Clinic professionals, focused on the evaluation and treatment of speech, language, cognitive-communication, and swallowing disorders. Offered: AWSpS.

SPHSC 554 Advanced Offsite Practicum in Speech-Language Pathology (2-12, max. 50) Offsite clinical practicum experience, completed under the supervision of community-based clinical professionals, focused on the evaluation and treatment of speech, language, cognitive-communication, and swallowing disorders. Prerequisite: SPHSC 553. Offered: AWSpS.

SPHSC 555 Pre-Internship in Speech and Hearing Sciences (1-10, max. 50) Practicum in speech pathology or audiology designed to teach the clinical regimen of a participating professional center prior to assuming a full internship assignment. Credit/no-credit only. Offered: AWSpS.

SPHSC 556 Advanced Aural Rehabilitation (2, max. 4) J. SULLIVAN Advanced study of auditory rehabilitation and training, including psychosocial issues of individuals with hearing loss. Merges research theories with clinical practice and provides experience with applied auditory training in a community setting. Offered: A.

SPHSC 559 Special Topics in Speech, Language, and Hearing (1-5, max. 30) Guided opportunity for study and advanced discussions in specific areas of speech, language, and hearing science research, theory, and clinical practice. Offered: AWSpS.

SPHSC 560 Speech Science (3) Examines contemporary models and research paradigms in speech science and disorders. Topics include respiratory physiology, laryngeal physiology, aerodynamics of speech production, articulatory dynamics, speech acoustics, and speech perception. Offered: W, odd years.

SPHSC 561 Studies in Hearing Sciences and Disorders (3) Examines contemporary models and research paradigms in the area of hearing science and disorders. Topics include psychoacoustics; amplification; electrophysiological evaluation; physiological acoustics; and perceptual consequences of hearing loss. Offered: A, even years.

SPHSC 562 Studies in Language Science and Disorders (3) Examines research in the area of language science and disorders including word recognition and production; storage of retrieval of word form and meaning; comprehension and production of sentences and discourse; and language in social context. Topics examined relative to development, language impairments, and normal language processing. Offered: Sp, odd years.

SPHSC 563 Instructional Development Forum (1, max. 50) Emphasizes instructional techniques and issues as they relate to teaching in the discipline of communication sciences and its disorders. Topics include course development, grading, student-faculty relations, teaching methods, and diversity. Prerequisite: graduate standing in Speech and Hearing Sciences. Credit/no-credit only. Offered: AW.

SPHSC 564 Teaching Practicum (1-5, max. 50) Provides experience in preparing and giving lectures, leading discussions, preparing and grading assignments and tests, and working directly with undergraduate and graduate students. Prerequisite: doctoral student standing in SPHSC and permission of instructor. Credit/no-credit only. Offered: AWSpS.

SPHSC 565 Speech and Language Pathology Proseminar (1-3, max. 50) Consideration of professional issues and student and faculty research. Credit/no-credit only. Offered: AWSpS.

SPHSC 567 Research Seminar in Speech and Hearing Sciences (1, max. 50) A platform for the presentation and exchange of scientific information (research data, new hardware and hardware development, scientific papers) resulting from ongoing research projects by graduate students and faculty within the Speech and Hearing Sciences Department. Credit/no-credit only. Offered: AWSpS.

SPHSC 568 Grant Writing in Hearing, Language, and Speech Science (3) L. WERNER Design and writing of grant proposals in speech, language, and hearing sciences and disorders. Explanation of the funding process at various agencies, particularly the National Institutes of Health. Students prepare a proposal and review the proposals of their peers. Prerequisite: Enrollment in PhD degree program and permission of instructor. Credit/no-credit only. Offered: W.

SPHSC 570 Assessment of Auditory Dysfunction I (4-) Strategies and procedures in the auditory evaluation of hearing-impaired adults. Use of diagnostic tests in the evaluation of auditory pathologies. Laboratory required. Prerequisite: SPHSC 471 or equivalent. Offered: A.

SPHSC 571 Assessment of Auditory Dysfunction II (-4) Strategies and procedures in the auditory evaluation of hearing-impaired adults. Use of diagnostic tests in the evaluation of auditory pathologies. Laboratory required. Prerequisite: SPHSC 570. Offered: W.

SPHSC 572 Pediatric Audiology (4) L. MANCL Assessment of auditory disorders in infants and young children. Emphasis on behavioral and electrophysiologic techniques and on the role of the audiologist in the clinical management of the young hearing-impaired child. Prerequisite: SPHSC 570 or equivalent. Offered: W.

SPHSC 574 Assessment of Balance Function (4) Examines normal anatomy and physiology of the peripheral and central vestibular system. Reviews peripheral and central vestibular disorders and treatment protocols. Major focus of assessment on electronystagmography with associated lab. Provides overview of rotational and posturography measures of balance function. Prerequisite: SPHSC 571 or permission of instructor. Offered: S.

SPHSC 575 Medical Backgrounds in Audiology (3) Diseases and injuries of the ear resulting in reduced audition.

Prerequisite: SPHSC 571 or permission of instructor. Offered: S.

SPHSC 576 Otoacoustic Emissions (2) *R. FOLSOM* Consideration of otoacoustic emissions and the physiologic techniques used to record them. Includes interpretation of responses in both the normal and disordered auditory system as well as clinical application of emissions in both adult and infant populations. Laboratory required. Prerequisite: SPHSC 571, SPHSC 572, and SPHSC 592, or permission of instructor. Offered: A.

SPHSC 577 Industrial and Community Hearing Conservation (2) Psychophysiological effects of environmental noise on man. Techniques of noise measurement and attenuation, including the planning of hearing conservation programs in industry and in the community. Prerequisite: SPHSC 571 or permission of instructor. Offered: S, odd years.

SPHSC 578 Hearing Screening (2) Consideration of hearing screening programs and the statistical techniques used to evaluate them. Includes history, rationale, and technical aspects of hearing screening as well as current models for developing neonatal, school-age, and adult hearing screening programs. Prerequisite: SPHSC 572, SPHSC 576, and SPHSC 592, or permission of instructor. Offered: S, even years.

SPHSC 579 Geriatric Audiology (2) *S. ANDERSON* Examines the biological, psychological, and social aspects of the aging process. Emphasizes the identification and diagnosis of hearing problems associated with the aging process and its rehabilitation. Prerequisite: SPHSC 571. Offered: Sp.

SPHSC 580 Rehabilitative Audiology (3) *L. ILLICH* Explores technology to enhance communication effectiveness of hearing impaired persons. Selection and training in the use of assistive systems and cochlear implants. Advanced perception assessment and training methodology. Discussion and application of aural rehabilitation in different settings. Explores the Americans with Disabilities Act and assistive listening devices. Prerequisite: SPHSC 571 and SPHSC 583. Offered: W.

SPHSC 581 Management of Hearing-Impaired Children (3) *J. SULLIVAN* Studies pediatric habilitation available for children with hearing impairment and the impact of new technologies on therapy, education, and audiological treatment. Offered: Sp.

SPHSC 582 Hearing Aid Amplification (4) *C. MILLER* Acoustic amplification and methods of determining electroacoustic characteristics. Includes earmold technology. Prerequisite: SPHSC 471 and SPHSC 570 or permission of instructor. Offered: W.

SPHSC 583 Hearing Aid Selection (4) *C. MILLER* Consideration of strategies utilized in selecting and fitting acoustic amplification for the hearing impaired, including review of pertinent research literature. Prerequisite: SPHSC 582 or permission of instructor. Offered: Sp.

SPHSC 584 Advanced Amplification (3) *C. MILLER* Current topics in hearing aids and amplification technology; review of pertinent research articles. Prerequisite: SPHSC 582; SPHSC 583. Offered: A, even years.

SPHSC 585 Pediatric Amplification (2) *L. MANCL* Selection, verification and validation of amplification for infants and children. Consideration of hearing aids and hearing assistance technology including review of pertinent research literature. Prerequisite: SPHSC 582 or permission of instructor. Offered: A.

SPHSC 586 Cochlear Implants (5) *J. BIERER* Covers the history, function, and application of cochlear implants as a clinical tool to enhance or restore human hearing, including fitting procedures, outcomes, and rehabilitation for children and adults. Prerequisite: permission of instructor. Offered: Sp.

SPHSC 587 Ethics (3) Analysis and discussion of ethical considerations in the clinic, and in research, for speech

and hearing professionals. Covers codes of professional organizations.

SPHSC 588 Audiology Proseminar (1, max. 3) *M. HARNEY* Consideration of professional issues, practice management, and externship preparation. Credit/no-credit only. Offered: AWSp.

SPHSC 591 Advanced Practicum in Audiology (1-10, max. 75) Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

SPHSC 592 Electrophysiologic Assessment I (4) *R. FOLSOM, K. TREMBLAY* Consideration of physiologic techniques that may be used to evaluate the normal and disordered auditory system. Outside laboratory required. Prerequisite: SPHSC 461 or equivalent, SPHSC 571. Offered: Sp.

SPHSC 593 Electrophysiologic Assessment II (3) *R. FOLSOM, K. TREMBLAY* Examines event-related potentials including recording techniques, neurophysiological mechanisms, and applications to clinical populations. Prerequisite: SPHSC 592. Offered: W, odd years.

SPHSC 594 Capturing Brain Dynamics: A Combined Neuroscience and Engineering Approach (4) *A. LEE* Introduces methods for capturing brain dynamics using an emerging neuroimaging technique known as magnetoencephalography (MEG). Uses techniques to examine perception and cognitive processes and their implications for future brain-computer-interface (BCI) design. Prepare students for interdisciplinary research in neuroscience and engineering. Offered: jointly with LING 582; W.

SPHSC 599 Research Practicum (*, max. 50) Supervised laboratory experience in experimental approach to problems in speech and hearing sciences. Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 600 Independent Study or Research (*-) Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 601 Internship ([1-10]-, max. 50) Supervised field experiences in settings other than public schools. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

SPHSC 602 Internship in the Schools ([3-10]-, max. 50) Supervised field experience in a public school setting. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

SPHSC 700 Master's Thesis (*-) Offered: AWSpS.

SPHSC 800 Doctoral Dissertation (*-) Offered: AWSpS.

SPHSC 801 Practice Doctorate Project/Capstone ([1-12]-, max. 50) Supervised research experience in the field of audiology that culminates in a final research paper and oral defense. Offered: AWSpS.

Statistics

B309 Padelford

Probability provides the conceptual foundation and mathematical language for the logic of uncertainty and induction. Statistics is concerned with procedures for the acquisition, management, exploration, and use of information in order to learn from experience in situations of uncertainty and to make decisions under risk. Statistical practice includes design of experiments and of sampling surveys; exploration, summarization, and display of observational data; drawing inferences, and assessing their uncertainty; and building mathematical models for systems with stochastic components.

Instruction is enriched through academic contacts with the Foster School of Business; the College of Engineering; the departments of Applied Mathematics, Atmospheric Sciences, Biology, Cardiology, Computer Science, Earth and Space Sciences, Economics, Genetics, Mathematics, Psychology, Radiology, and Sociology; the Quantitative

Ecology and Resource Management program; the Center for Statistics and the Social Sciences; the Applied Physics Laboratory; the Applied Statistics Division of the Boeing Company; Microsoft Research; and Insightful Corporation. The department has an especially close relationship with the Department of Biostatistics; for example, the two departments are jointly developing new curricula in statistical genetics.

UNDERGRADUATE PROGRAM

Adviser

B309 Padelford, Box 354322

(206) 543-8296

The Department of Statistics offers the following programs of study:

- The Bachelor of Science degree with a major in statistics
- In conjunction with the departments of Applied Mathematics, Computer Science and Engineering, and Mathematics, the Bachelor of Science degree with a major in applied and computational mathematical sciences (ACMS).
- A minor in statistics

Bachelor of Science

Suggested First- and Second-Year College Courses: CSE 142; MATH 307, MATH 308, STAT 302 (recommended) or CSE 143, STAT 311. Additional courses in the sciences and quantitative methods add strength to this major.

Department Admission Requirements

Application to the BS degree program in statistics is competitive. Completion of minimum requirements described below does not guarantee admission. All applicants have the right to petition and appeal the department's admission decision. Applications are considered once each academic year and are due on the first Friday of September.

Minimum course requirements for admission applications as follows:

1. MATH 124, MATH 125, MATH 126 (or MATH 134, MATH 135, MATH 136)
2. One of STAT 311 (highly recommended), STAT 390, or an approved substitute. See website for approved list.
3. At least two additional courses from CSE 142, either STAT 302 (recommended) or CSE 143, MATH 307, MATH 308
4. Factors in the admission decision include but are not limited to academic performance as measured by GPA in courses listed above and any additional advanced quantitative courses presented for application consideration.
5. Admission is competitive. Successful applicants typically have a cumulative GPA higher than 3.00 in courses listed above under course requirements, with no individual course grade lower than 2.5.

Major Requirements

Minimum 70 credits, as follows:

1. *Mathematics (30 credits):* Either MATH 124, MATH 125, MATH 126, MATH 300, MATH 307, MATH 308, MATH 327, and MATH 328; or the Honors sequence MATH 134, MATH 135, MATH 136, MATH 334, MATH 335, and MATH 336.
2. *Computing (7-9 credits):* CSE 142; either STAT 302 (recommended), CSE 143, or an approved substitute
3. *Statistics (24-27 credits):* STAT 311 (highly recommended), or STAT 390, or an approved substitute (STAT 220, STAT 221, or STAT 301 which is seldom allowed); either

STAT 340 (highly recommended) or both STAT 394/MATH 394 and STAT 395/MATH 395. (Note that both STAT 394/MATH 394 and STAT 395/MATH 395 are required to replace STAT 340 as a prerequisite for STAT 341.) STAT 341, STAT 342, STAT 421, STAT 423. (Note that STAT 342 is required for enrollment in STAT 421 or STAT 423 by a statistics major; STAT 390 is not sufficient for a statistics major.)

4. *Electives:* At least three courses for a total of at least 9 credits. All elective choices require prior approval by the Statistics undergraduate adviser.
5. Minimum 2.0 grade in all courses used to satisfy major requirements.
6. Minimum 2.50 cumulative GPA for all courses used to satisfy major requirements.

A "Majors Factsheet" is available from the Statistics department.

Minor

Minor Requirements: 26 credits, as follows:

1. MATH 126 or MATH 136 (5 credits)
2. STAT 302, STAT 390/MATH 390, STAT 394/MATH 394, STAT 395/MATH 395 (13 credits)
3. either STAT 425/BIOST 425 or STAT 396/MATH 396 (3 credits)
4. Minimum 5 credits of approved electives. See adviser for approved list.
5. Minimum grade of 2.0 in each course used to satisfy minor requirements
6. At most 5 credits used to satisfy the statistics minor may be applied to a student's major.
7. At least 20 credits used to satisfy the statistics minor must be taken at the UW.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Statistics emphasizes decision making in the face of uncertainty. Tools developed by the major include probability theory, mathematical statistics, experience with data analysis, and use of statistical tools via the computer. Graduates have pursued careers in actuarial science, financial planning, drug development, statistical consulting, teaching, public health, military science, aerospace, computer technology, and forest resources.
- *Instructional and Research Facilities:* Computer workstations are available on a drop-in basis through the College of Arts & Sciences Instructional Computing Laboratory. Tutoring in a set of introductory statistics courses is currently available at the Statistics Tutor and Study Center.
- *Honors Options Available:* For Interdisciplinary Honors, see University Honors Program.
- *Research, Internships, and Service Learning:* A special seminar series for undergraduates is offered in conjunction with the ACMS program.
- *Department Scholarships:* None offered.
- *Student Organizations/Associations:* The Actuary Club at the University of Washington

GRADUATE PROGRAM

Graduate Program Coordinator

B309 Padelford, Box 354322

(206) 685-7306

The graduate programs emphasize both the theory and application of statistics, including probability theory, mathematical statistics, data analysis, statistical computing, and scientific applications. Computing facilities in the De-

partment of Statistics rank among the best of any statistics programs in the country and reflect the department's expertise in the field of statistical computing. An ongoing statistical consulting program provides the students with practical experience in using statistics and in communicating with clients. Under faculty supervision, participants in the program assist members of the University community in applying statistical methodology. The department offers Master of Science and Doctor of Philosophy degrees.

Admission Requirements

Background in mathematics, statistics, or a quantitative field, with 30 or more quarter credits in mathematics and statistics, to include a year of advanced (second-year) calculus, one course in linear algebra, and one course in probability theory; Graduate Record Examination scores (the Advanced Mathematics subject test is encouraged but not required); and three letters of recommendation from appropriate former or current faculty.

Master of Science

Degree Requirements (36-51 credits)

Part-time/Concurrent Track (minimum 36 credits)

In addition to Graduate School requirements, at least twelve approved courses numbered 400 or above with a value of 36 credits or more; of these, at least six courses must be numbered in the 500 series (exclusive of STAT 512, STAT 513) with a value of 18 credits or more, and with a coherent theme. Approved proficiency in statistical computing. Satisfactory participation in statistical consulting and the departmental seminar. Passage of an appropriate final master's examination or successful completion of a master's thesis which can count as up to three courses worth 9 credits but cannot replace any of the six courses in the 500 series mentioned above. All programs must be approved in advance by the departmental Graduate Program Coordinator.

Advanced Methods and Data Analysis Track (minimum 51 credits)

1. *Core Courses:* STAT 502, STAT 504, STAT 512, STAT 513, STAT 534, STAT 536, STAT 570, STAT 571
2. Statistics capstone data analysis: STAT 528
3. Satisfactory participation in at least one quarter of the departmental seminar
4. Passage of the first year MS theory examination

Doctor of Philosophy

Degree Requirements

Minimum 90 credits, to include:

1. In addition to Graduate School requirements, appropriate training in statistics and related sciences.
2. Appropriate general examinations of basic graduate-level knowledge in statistics and probability (including two preliminary examinations).
3. Satisfactory performance in MATH 574, MATH 575, MATH 576.
4. Satisfactory performance in three approved core-course sequences chosen from STAT 570, STAT 571, STAT 572; STAT 581, STAT 582, STAT 583; STAT 521, STAT 522, STAT 523; STAT 534, STAT 535, STAT 538; and STAT 516, STAT 517, STAT 518. (In some circumstances, other graduate-level mathematical science courses may be used as a substitute.)
5. Approved performance in statistical consulting (typically STAT 598 and STAT 599)
6. Demonstration of proficiency in computing
7. 1 credit of STAT 590 per quarter
8. Final examination

The graduation requirements for the PhD tracks in statistical genetics and statistics in the social sciences may replace or be in addition to some of the requirements listed above.

Financial Aid

The department annually awards a limited number of teaching and research assistantships and fellowships for the support of new and continuing graduate students on the basis of academic promise.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

STAT 100 Numbers and Reason (5) QSR Bookstein Surveys the standard ways in which "arithmetic turns into understanding" across examples from the natural and the social sciences. Main concepts include abduction (inference to the best explanation), consilience (numerical agreement across multiple measurement levels), bell curves, linear models, and the likelihood of hypothesis. Offered: A.

STAT 111 Lectures in Applied Statistics (1) NW Weekly lectures illustrating the importance of statisticians in a variety of fields, including medicine and the biological, physical, and social sciences. Credit/no-credit only. Offered: jointly with BIOST 111; Sp.

STAT 220 Principles of Statistical Reasoning (5) NW, QSR Introduces statistical reasoning. Focuses primarily on the what and why rather than the how. Helps students gain an understanding of the rationale behind many statistical methods, as well as an appreciation of the use and misuse of statistics. Encourages and requires critical thinking. (Students may receive credit for only one of STAT 220, STAT 221/CS&SS 221/SOC 221, STAT 311, and ECON 311.) Offered: AWSpS.

STAT 221 Statistical Concepts and Methods for the Social Sciences (5) NW, QSR Develops statistical literacy. Examines objectives and pitfalls of statistical studies; study designs, data analysis, inference; graphical and numerical summaries of numerical and categorical data; correlation and regression; and estimation, confidence intervals, and significance tests. Emphasizes social science examples and cases. (Students may receive credit for only one of STAT 220, STAT 221, STAT 311, STAT 221/CS&SS 221/SOC 221, and ECON 311.) Offered: jointly with CS&SS 221/SOC 221; AWSpS.

STAT 302 Statistical Software and Its Applications (3) NW Introduction to data structures and basics of implementing procedures in statistical computing packages, selected from but not limited to R, SAS, STATA, MATLAB, SPSS, and Minitab. Provides a foundation in computation components of data analysis. Prerequisite: either STAT 311/ECON 311 or STAT 390/MATH 390. Offered: W.

STAT 311 Elements of Statistical Methods (5) NW, QSR Elementary concepts of probability and sampling; binomial and normal distributions. Basic concepts of hypothesis testing, estimation, and confidence intervals; t-tests and chi-square tests. Linear regression theory and the analysis of variance. (Students may receive credit for only one of STAT 220, STAT 221, STAT 311, and ECON 311.) Prerequisite: either MATH 111, MATH 120, MATH 124, MATH 127, or MATH 144. Offered: AWSpS.

STAT 316 Design of Experiments and Regression Analysis (4) NW Kapur Introduction to the analysis of data from planned experiments. Analysis of variance for multiple factors and applications of orthogonal arrays and linear graphs for fractional factorial designs to product and process design optimization. Regression analysis with applications in engineering. Prerequisite: IND E 315. Offered: jointly with IND E 316; W.

STAT 320 Evaluating Social Science Evidence (5) I&S, QSR

A critical introduction to the methods used to collect data in social science: surveys, archival research, experiments, and participant observation. Evaluates “facts and findings” by understanding the strengths and weaknesses of the methods that produce them. Case based. Offered: jointly with CS&SS 320/SOC 320.

STAT 321 Case-Based Social Statistics I (5) I&S, QSR

Introduction to statistical reasoning for social scientists. Built around cases representing in-depth investigations into the nature and content of statistical and social-science principles and practice. Hands-on approach: weekly data-analysis laboratory. Fundamental statistical topics: measurement, exploratory data analysis, probabilistic concepts, distributions, assessment of statistical evidence. Offered: jointly with CS&SS 321/SOC 321; W.

STAT 322 Case-Based Social Statistics II (5) I&S, QSR

Continuation of CS&SS 321/SOC 321/STAT 321. Progresses to questions of assessing the weight of evidence and more sophisticated models including regression-based methods. Built around cases investigating the nature and content of statistical principles and practice. Hands-on approach: weekly data analysis laboratory. Prerequisite: CS&SS 321/SOC 321/STAT 321, or permission of instructor. Offered: jointly with CS&SS 322/SOC 322; Sp.

STAT 340 Introduction to Probability and Mathematical Statistics I (4) QSR

Covers the fundamentals of probability and mathematical statistics; axioms of probability, conditional and joint probability, random variables, univariate and multivariate distributions and densities, and moments; binomial, negative binomial, geometric, Poisson, normal, exponential distributions, and central limit theorem; and basic estimation and hypothesis testing theory. Prerequisite: either STAT 311/ECON 311 or STAT 390/MATH 390; either a minimum grade of 2.5 in MATH 327 or MATH 136. Offered: A.

STAT 341 Introduction to Probability and Statistical Inference I (4) NW

Brief review of: sample spaces, random variables, probability. Distribution: binomial, normal, Poisson, geometric. Followed by: expectation, variance, central limit theorem. Basic concepts of estimation, testing, and confidence intervals. Maximum likelihood estimators and likelihood ratio tests, efficiency. Introduction to regression. Prerequisite: either STAT 340 or STAT/MATH 394 and STAT/MATH 395; either STAT/ECON 311 or STAT/MATH 390; either a minimum grade of 2.5 in MATH 136 or MATH 327. Offered: W.

STAT 342 Introduction to Probability and Statistical Inference II (4) NW

Brief review of: sample spaces, random variables, probability. Distribution: binomial, normal, Poisson, geometric. Followed by: expectation, variance, central limit theorem. Basic concepts of estimation, testing, and confidence intervals. Maximum likelihood estimators and likelihood ratio tests, efficiency. Introduction to regression. Prerequisite: STAT 341. Offered: Sp.

STAT 390 Statistical Methods in Engineering and Science (4) NW

Concepts of probability and statistics. Conditional probability, independence, random variables, distribution functions. Descriptive statistics, transformations, sampling errors, confidence intervals, least squares and maximum likelihood. Exploratory data analysis and interactive computing. Students may receive credit for only one of STAT 390, STAT 481/ECON 481, and ECON 580. Prerequisite: either MATH 126 or MATH 136. Offered: jointly with MATH 390; AWSpS.

STAT 391 Probability and Statistics for Computer Science (4) NW

Fundamentals of probability and statistics from the perspective of the computer scientist. Random variables, distributions and densities, conditional probability, independence. Maximum likelihood, density estimation, Markov chains, classification. Applications in computer science. Prerequisite: minimum grade of 2.5 in MATH 126; 2.5 in MATH 308; either CSE 326, CSE 332, CSE 373, CSE 417, or CSE 421. Offered: Sp.

STAT 394 Probability I (3) NW Sample spaces; basic axioms of probability; combinatorial probability; conditional probability and independence; binomial, Poisson, and normal distributions. Prerequisite: minimum grade of 2.0 in either MATH 126 or MATH 136; recommended: either MATH 324 or MATH 327. Offered: jointly with MATH 394; AWS.

STAT 395 Probability II (3) NW Random variables; expectation and variance; laws of large numbers; normal approximation and other limit theorems; multidimensional distributions and transformations. Prerequisite: minimum grade of 2.0 in STAT/MATH 394. Offered: jointly with MATH 395; WSpS.

STAT 396 Probability III (3) NW Characteristic functions and generating functions; recurrent events and renewal theory; random walk. Prerequisite: minimum grade of 2.0 in either MATH 395 or STAT 395. Offered: jointly with MATH 396; Sp.

STAT 403 Introduction to Resampling Inference (4) NW V.

MININ Introduction to computer-intensive data analysis for experimental and observational studies in empirical sciences. Students design, program, carry out, and report applications of bootstrap resampling, rerandomization, and subsampling of cases. Experience programming in R is beneficial. Credit allowed for STAT 403 or STAT 503 but not both. Prerequisite: either STAT 311/ECON 311, STAT 341, STAT 390/MATH 390, STAT 481/ECON 481, or Q SCI 381 and Q SCI 482; recommended: Q SCI 483, which may be taken concurrently. Offered: jointly with Q SCI 403; Sp.

STAT 421 Applied Statistics and Experimental Design (4) NW

Computer-aided data analyses using comparisons between batches, analysis of variance and regression. Evaluation of assumptions, data transformation, reliability of statistical measures (jackknife, bootstrap). Fisher-Gosset controversy. Prerequisite: either STAT 342 or STAT 481/ECON 481; recommended: MATH 308. Offered: A.

STAT 423 Applied Regression and Analysis of Variance (4) NW

Regression analysis. Problems in interpreting regression coefficients. Estimation, including two-stage least squares. Guided regression: building linear models, selecting carriers. Regression residuals. Analysis of variance. Nonparametric regression. Factorial designs, response surface methods. Prerequisite: either STAT 342, STAT 421, or STAT 481/ECON 481; recommended: MATH 308. Offered: W.

STAT 425 Introduction to Nonparametric Statistics (3) NW

Overview of nonparametric methods, such as rank tests, goodness of fit tests, 2 x 2 tables, nonparametric estimation. Useful for students with only a statistical methods course background. Prerequisite: STAT 390/MATH 390. Offered: jointly with BIOST 425.

STAT 427 Introduction to Analysis of Categorical Data (4) NW

Techniques for analysis of count data. Log-linear models, logistic regression, and analysis of ordered response categories. Illustrations from the behavioral and biological sciences. Computational procedures. Prerequisite: either STAT 342, STAT 362, or STAT 421.

STAT 428 Multivariate Analysis for the Social Sciences (4) NW

Multivariate techniques commonly used in the social and behavioral sciences. Linear models for dependence analysis (multivariate regression, MANOVA, and discriminant analysis) and for interdependence analysis (principal components and factor analysis). Techniques applied to social science data using computer statistical packages. Prerequisite: either STAT 342, STAT 362, or STAT 421.

STAT 480 Sampling Theory for Biologists (3) NW J. SKAL-

SKI Theory and applications of sampling finite populations including: simple random sampling, stratified random sampling, ratio estimates, regression estimates, systematic sampling, cluster sampling, sample size determinations, applications in fisheries and forestry. Other topics include sampling plant and animal populations, sampling distributions, estimation of parameters and statistical treatment

of data. Prerequisite: Q SCI 482; recommended: Q SCI 483. Offered: jointly with Q SCI 480; W, odd years.

STAT 486 Experimental Design (4) NW Emphasizes data modeling using structured means resulting from choice of experimental and treatment design. Examines experimental designs, including crossed, nested designs; block; split-plot designs; and covariance analysis. Also covers multiple comparisons, efficiency, power, sample size, and pseudo-replication. Prerequisite: Q SCI 482; recommended: Q SCI 483. Offered: jointly with Q SCI 486; W, even years.

STAT 491 Introduction to Stochastic Processes (3) NW

Random walks, Markov chains, branching processes, Poisson process, point processes, birth and death processes, queuing theory, stationary processes. Prerequisite: minimum grade of 2.0 in either MATH 395 or STAT 395. Offered: jointly with MATH 491; A.

STAT 492 Stochastic Calculus for Option Pricing (3) NW

Introductory stochastic calculus mathematical foundation for pricing options and derivatives. Basic stochastic analysis tools, including stochastic integrals, stochastic differential equations, Ito's formula, theorems of Girsanov and Feynman-Kac, Black-Scholes option pricing, American and exotic options, bond options. Prerequisite: either MATH 394 or STAT 394; either MATH 395 or STAT 395. Offered: jointly with MATH 492; W.

STAT 495 Service Learning: K-12 Tutoring Experience (1-5, max. 5) Morita

Tutoring mathematics in local K-12 schools. Offered: AWSp.

STAT 498 Special Topics (1-5, max. 15) NW Reading and lecture course intended for special needs of students.

STAT 499 Undergraduate Research (1-5, max. 15) Offered: AWSpS.

STAT 502 Design and Analysis of Experiments (4) Design of experiments covering concepts such as randomization, blocking, and confounding. Analysis of experiments using randomization tests, analysis of variance, and analysis of covariance. Prerequisite: either STAT 342, MATH 390/STAT 390, ECON 481/STAT 481, STAT 509/CS&SS 509/ECON 580 or equivalent; MATH 308 or equivalent. Offered: A.

STAT 503 Practical Methods for Data Analysis (4)

Basic exploratory data analysis with business examples. Data summaries, multivariate data, time series, multiway tables. Techniques include graphical display, transformation, outlier identification, cluster analysis, smoothing, regression, robustness. Departmental credit allowed for only one of 403 and 503. Prerequisite: B A 500 or QMETH 500 or equivalent or permission of instructor. Offered: jointly with QMETH 503.

STAT 504 Applied Regression (4)

Least squares estimation. Hypothesis testing. Interpretation of regression coefficients. Categorical independent variables. Interactions. Assumption violations: outliers, residuals, robust regression; nonlinearity, transformations, ACE, CART; nonconstant variance. Variable selection and model averaging. Prerequisite: either STAT 342, STAT 390/MATH 390, STAT 421, STAT 481/ECON 481, STAT 509/CS&SS 509/ECON 580, or SOC 425; recommended: MATH 308. Offered: jointly with CS&SS 504.

STAT 506 Applied Probability and Statistics (4)

Discrete and continuous random variables, independence and conditional probability, central limit theorem, elementary statistical estimation and inference, linear regression. Emphasis on physical applications. Prerequisite: some advanced calculus and linear algebra. Offered: jointly with AMATH 506.

STAT 509 Introduction to Mathematical Statistics: Econometrics I (5) NW

Examines methods, tools, and theory of mathematical statistics. Covers, probability densities, transformations, moment generating functions, conditional expectation. Bayesian analysis with conjugate priors, hypothesis tests, the Neyman-Pearson Lemma. Likelihood ratio tests, confidence intervals, maximum likelihood estimation, Central limit theorem, Slutsky Theorems, and the

delta-method. (Credit allowed for only one of STAT 390, STAT 481, and ECON 580.) Prerequisite: STAT 311/ECON 311; either MATH 136 or MATH 126 with either MATH 308 or MATH 309; recommended: MATH 324. Offered: jointly with CS&SS 509/ECON 580; A.

STAT 512 Statistical Inference (4) Review of random variables; transformations, conditional expectation, moment generating functions, convergence, limit theorems, estimation; Cramer-Rao lower bound, maximum likelihood estimation, sufficiency, ancillarity, completeness. Rao-Blackwell theorem. Hypothesis testing: Neyman-Pearson lemma, monotone likelihood ratio, likelihood-ratio tests, large-sample theory. Contingency tables, confidence intervals, invariance. Introduction to decision theory. Prerequisite: STAT 395 and STAT 421, STAT 423, STAT 504, or BIOST 512 (concurrent registration permitted for these three). Offered: A.

STAT 513 Statistical Inference (4) Review of random variables; transformations, conditional expectation, moment generating functions, convergence, limit theorems, estimation; Cramer-Rao lower bound, maximum likelihood estimation, sufficiency, ancillarity, completeness. Rao-Blackwell theorem. Hypothesis testing: Neyman-Pearson lemma, monotone likelihood ratio, likelihood-ratio tests, large-sample theory. Contingency tables, confidence intervals, invariance. Introduction to decision theory. Prerequisite: STAT 512. Offered: W.

STAT 516 Stochastic Modeling of Scientific Data (3-) Covers discrete-time Markov chain theory; inference for discrete-time Markov chains; Monte Carlo methods; missing data; hidden Markov models; and Gaussian Markov random fields. Prerequisite: either STAT 342 or STAT 396. Offered: A.

STAT 517 Stochastic Modeling of Scientific Data (-3) Covers Markov random fields; continuous-time Markov chains; birth-death and branching processes; and point processes and cluster models. Procedures for inference for these stochastic processes, including Likelihood methods and estimating equations. Prerequisite: STAT 516. Offered: W.

STAT 518 Stochastic Modeling Project (3) Student in-depth analyses, oral presentations, and discussion of selected research articles focusing on stochastic modeling of, and inference for, scientific data. Prerequisite: STAT 517 and permission of instructor. Offered: Sp.

STAT 519 Time Series Analysis (3) Descriptive techniques. Stationary and nonstationary processes, including ARIMA processes. Estimation of process mean and autocovariance function. Fitting ARIMA models to data. Statistical tests for white noise. Forecasting. State space models and the Kalman filter. Robust time series analysis. Regression analysis with correlated errors. Statistical properties of long memory processes. Prerequisite: STAT 513.

STAT 520 Spectral Analysis of Time Series (4) Estimation of spectral densities for single and multiple time series. Nonparametric estimation of spectral density, cross-spectral density, and coherency for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourier transform. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes and for randomly sampled processes. Techniques of robust spectral analysis. Prerequisite: one of STAT 342, STAT 390, STAT 481, STAT 509/CS&SS 509/ECON 580, or IND E 315. Offered: jointly with E E 520.

STAT 521 Advanced Probability (3) Measure theory and integration, independence, laws of large numbers. Fourier analysis of distributions, central limit problem and infinitely divisible laws, conditional expectations, martingales. Prerequisite: either MATH 426 or MATH 576. Offered: jointly with MATH 521; A.

STAT 522 Advanced Probability (3) Measure theory and integration, independence, laws of large numbers. Fourier analysis of distributions, central limit problem and infinitely divisible laws, conditional expectations, martingales. Prerequisite: either MATH 426 or MATH 576. Offered: jointly with MATH 522; W.

STAT 523 Advanced Probability (3) Measure theory and integration, independence, laws of large numbers. Fourier analysis of distributions, central limit problem and infinitely divisible laws, conditional expectations, martingales. Prerequisite: either MATH 426 or MATH 576. Offered: jointly with MATH 523; Sp.

STAT 524 Design of Medical Studies (3) Design of medical studies, with emphasis on randomized controlled clinical trials. Bias elimination, controls, treatment assignment and randomization, precision, replication, power and sample size calculations, stratification, and ethics. Suitable for graduate students in biostatistics and for research-oriented graduate students in other scientific fields. Prerequisite: BIOST 511 or equivalent, and one of BIOST 513, BIOST 518, STAT 421, STAT 423, STAT 512, or EPI 512; or permission of instructor. Offered: jointly with BIOST 524; Sp.

STAT 527 Nonparametric Regression and Classification (3) *Minin, Raftery, Richardson, Wakefield* Covers techniques for smoothing and classification including spline models, kernel methods, generalized additive models, and the averaging of multiple models. Describes measures of predictive performance, along with methods for balancing bias and variance. Prerequisite: either STAT 502 and STAT 504 or BIOST 514 and BIOST 515. Offered: jointly with BIOST 527; Sp.

STAT 528 Applied Statistics Capstone (3) *McCormick, Sampson, Wakefield* Covers technical and non-technical aspects of applied statistics work, building on methods taught in prerequisite courses. Key elements include: study design, determining the aim of the analysis, choosing an appropriate method, and report writing. Prerequisite: STAT 502; STAT 504; STAT 536; STAT 570. Offered: W.

STAT 529 Sample Survey Techniques (3) Design and implementation of selection and estimation procedures. Emphasis on human populations. Simple, stratified, and cluster sampling; multistage and two-phase procedures; optimal allocation of resources; estimation theory; replicated designs; variance estimation; national samples and census materials. Prerequisite: either STAT 421, STAT 423, STAT 504, QMETH 500, BIOST 511, or BIOST 517, or equivalent; or permission of instructor. Offered: jointly with BIOST 529/CS&SS 529.

STAT 530 Wavelets: Data Analysis, Algorithms, and Theory (3) Review of spectral analysis. Theory of continuous and discrete wavelets. Multiresolution analysis. Computation of discrete wavelet transform. Time-scale analysis. Wavelet packets. Statistical properties of wavelet signal extraction and smoothers. Estimation of wavelet variance. Prerequisite: some Fourier theory and linear algebra; MATH 390/STAT 390, ECON 481 or STAT 481, STAT 509/CS&SS 509/ECON 580, STAT 513, or IND E 315. Offered: jointly with E E 530; Sp.

STAT 533 Theory of Linear Models (3) Examines model structure; least squares estimation; Gauss-Markov theorem; central limit theorems for linear regression; weighted and generalized least squares; fixed and random effects; analysis of variance; blocking and stratification; and applications in experimental design. Prerequisite: STAT 421 or STAT 423; and STAT 513, BIOST 515, and a course in matrix algebra. Offered: jointly with BIOST 533; Sp.

STAT 534 Statistical Computing (3) Introduction to scientific computing. Includes programming tools, modern programming methodologies, (modularization, object oriented design), design of data structures and algorithms, numerical computing and graphics. Uses C++ for several substantial scientific programming projects. Prerequisite: experience with programming in a high level language. Offered: jointly with BIOST 534; Sp.

STAT 535 Statistical Learning: Modeling, Prediction, and Computing (3) Covers statistical learning over discrete multivariate domains, exemplified by graphical probability models. Emphasizes the algorithmic and computational aspects of these models. Includes additional topics in probability and statistics of discrete structures, general purpose discrete optimization algorithms like dynamic programming and minimum spanning tree, and applications to data analysis. Prerequisite: experience with programming in a high level language. Offered: A.

STAT 536 Analysis of Categorical and Count Data (3) Analysis of categorical data in the social sciences. Binary, ordered, and multinomial outcomes, event counts, and contingency tables. Focuses on maximum likelihood estimations and interpretations of results. Prerequisite: SOC 504, SOC 505, SOC 506, or equivalent; recommended: CS&SS 505 and CS&SS 506, or equivalent. Offered: jointly with CS&SS 536/SOC 536; A.

STAT 538 Statistical Learning: Modeling, Prediction, and Computing (3) Reviews optimization and convex optimization in its relation to statistics. Covers the basics of unconstrained and constrained convex optimization, basics of clustering and classification, entropy, KL divergence and exponential family models, duality, modern learning algorithms like boosting, support vector machines, and variational approximations in inference. Prerequisite: experience with programming in a high level language. Offered: W.

STAT 539 Statistical Learning: Modeling, Prediction, and Computing (3) *Meila* Supervised, applied project in statistical modeling, prediction, and computing. Prerequisite: STAT 535; STAT 538; computer programming at intermediate level. Offered: Sp.

STAT 542 Multivariate Analysis (3) Multivariate normal distribution; partial and multiple correlation; Hotelling's T^2 ; Bartlett's decomposition; various likelihood ratio tests; discriminant analysis; principal components; graphical Markov models. Prerequisite: STAT 582 or permission of instructor.

STAT 544 Bayesian Statistical Methods (3) Statistical methods based on the idea of a probability distribution over the parameter space. Coherence and utility. Subjective probability. Likelihood principle. Conjugate families. Structure of Bayesian inference. Limit theory for posterior distributions. Sequential experiments. Exchangeability. Bayesian nonparametrics. Empirical Bayes methods. Prerequisite: STAT 513 or permission of instructor.

STAT 547 Options and Derivatives (4) Covers theory, computation, and statistics of options and derivatives pricing, including options on stocks, stock indices, futures, currencies, and interest rate derivatives. Prerequisite: STAT 506 or permission of instructor; recommended: ECON 424.

STAT 548 Machine Learning for Big Data (4) *Fox, Guestrin* Covers machine learning and statistical techniques for analyzing datasets of massive size and dimensionality. Representations include regularized linear models, graphical models, matrix factorization, sparsity, clustering, and latent factor models. Algorithms include sketching, random projections, hashing, fast nearest-neighbors, large-scale online learning, and parallel learning (Map-Reduce, GraphLab). Prerequisite: either STAT 535 or CSE 546. Offered: jointly with CSE 547; W.

STAT 549 Statistical Methods for Portfolios (4) Covers the fundamentals of modern statistical portfolio construction and risk measurement, including theoretical foundations, statistical methodology, and computational methods using modern object-oriented software for data analysis, statistical modeling, and numerical portfolio optimization. Prerequisite: ECON 424 or equivalent, or permission of instructor.

STAT 550 Statistical Genetics I: Mendelian Traits (3) Mendelian genetic traits. Population genetics; Hardy-Weinberg, allelic variation, subdivision. Likelihood inference, information and power; latent variables and EM algorithm. Pedit-

gree relationships and gene identity. Meiosis and recombination. Linkage detection. Multipoint linkage analysis. Prerequisite: STAT 390 and STAT 394, or permission of instructor. Offered: jointly with BIOST 550; Sp.

STAT 551 Statistical Genetics II: Quantitative Traits (3) Statistical basis for describing variation in quantitative traits. Decomposition of trait variation into components representing genes, environment and gene-environment interaction. Methods of mapping and characterizing quantitative trait loci. Prerequisite: STAT/BIOST 550; STAT 423 or BIOST 515; or permission of instructor. Offered: jointly with BIOST 551; A.

STAT 552 Statistical Genetics III: Design and Analysis (3) Overview of probability models, inheritance models, penetrance. Association and linkage. The lod score method. Affected sib method. Fitting complex inheritance models. Design mapping studies; multipoint, disequilibrium, and fine-scale mapping. Ascertainment. Prerequisite: STAT/BIOST 551; GENOME 371; or permission of instructor. Offered: jointly with BIOST 552; W.

STAT 560 Hierarchical Modeling for the Social Sciences (4) Explores ways in which data are hierarchically organized, such as voters nested within electoral districts that are in turn nested within states. Provides a basic theoretical understanding and practical knowledge of models for clustered data and a set of tools to help make accurate inferences. Prerequisite: SOC 504, SOC 505, SOC 506 or equivalent; recommended: CS&SS 505, CS&SS 506 or equivalent. Offered: jointly with CS&SS 560/SOC 560.

STAT 561 Special Topics in Applied Statistics (1-5, max. 15) Data analysis, spectral analysis or robust estimation. Prerequisite: permission of instructor.

STAT 562 Special Topics in Applied Statistics (1-5, max. 15) Data analysis, spectral analysis or robust estimation. Prerequisite: permission of instructor.

STAT 564 Bayesian Statistics for the Social Sciences (4) Statistical methods based on the idea of probability as a measure of uncertainty. Topics covered include subjective notion of probability, Bayes' Theorem, prior and posterior distributions, and data analysis techniques for statistical models. Prerequisite: SOC 504, SOC 505, SOC 506 or equivalent; recommended: CS&SS 505; CS&SS 506. Offered: jointly with CS&SS 564.

STAT 566 Causal Modeling (4) Construction of causal hypotheses. Theories of causation, counterfactuals, intervention vs. passive observation. Contexts for causal inference: randomized experiments; sequential randomization; partial compliance; natural experiments, passive observation. Path diagrams, conditional independence, and d-separation. Model equivalence and causal under-determination. Prerequisite: course in statistics, SOC 504, SOC 505, SOC 506, or equivalent; recommended: CS&SS 505, CS&SS 506, or equivalent. Offered: jointly with CS&SS 566.

STAT 567 Statistical Analysis of Social Networks (4) Statistical and mathematical descriptions of social networks. Topics include graphical and matrix representations of social networks, sampling methods, statistical analysis of network data, and applications. Prerequisite: SOC 504, SOC 505, SOC 506, or equivalent; recommended: CS&SS 505; CS&SS 506. Offered: jointly with CS&SS 567.

STAT 570 Advanced Regression Methods for Independent Data (3) Covers linear models, generalized linear and non-linear regression, and models. Includes interpretation of parameters, including collapsibility and non-collapsibility, estimating equations; likelihood; sandwich estimations; the bootstrap; Bayesian inference: prior specification, hypothesis testing, and computation; comparison of approaches; and diagnostics. Prerequisite: STAT 512 and STAT 513; BIOST/STAT 533 or STAT 421/STAT 502 and STAT 423/STAT 504; a course in matrix algebra. Offered: jointly with BIOST 570; A.

STAT 571 Advanced Regression Methods for Dependent Data (3) Covers longitudinal data models, generalized

linear and non-linear mixed models; marginal versus conditional models; generalized estimating equations, likelihood-based inference, REML, BLUP, and computation of integrals; Bayesian inference: Markov chain Monte Carlo; covariance models, including models for split plot designs; comparison of approaches; and diagnostics. Prerequisite: BIOST570/STAT 570. Offered: jointly with BIOST 571; W.

STAT 572 Advanced Regression Methods: Project (3) Student presentations and discussion on selected methodological research articles focusing on regression modeling. Prerequisite: STAT 571. Offered: jointly with BIOST 572; Sp.

STAT 576 Statistical Methods for Survival Data (3) Statistical methods for censored survival data arising from follow-up studies on human or animal populations. Parametric and nonparametric methods, Kaplan-Meier survival curve estimator, comparison of survival curves, log-rank test, regression models including the Cox proportional hazards model, competing risks. Prerequisite: STAT 581 and either BIOST 515, STAT 473, or equivalent. Offered: jointly with BIOST 576.

STAT 578 Special Topics in Advanced Biostatistics (*, max. 30) Advanced-level topics in biostatistics offered by regular and visiting faculty. Prerequisite: permission of instructor. Offered: jointly with BIOST 578; AWSpS.

STAT 579 Data Analysis and Reporting (2, max. 8) Analysis of real data to answer scientific questions. Common data-analytic problems. Sensible approaches to complex data. Graphical and tabular presentation of results. Writing reports for scientific journals, research collaborators, consulting clients. Graduate standing in statistics or biostatistics or permission of instructor. Offered: jointly with BIOST 579; AWSp.

STAT 581 Advanced Theory of Statistical Inference (3) Limit theorems, asymptotic methods, asymptotic efficiency and efficiency bounds for estimation, maximum likelihood estimation, Bayes methods, asymptotics via derivatives of functionals, sample-based estimates of variability: (bootstrap and jackknife); robustness; estimation for dependent data, nonparametric estimation and testing. Prerequisite: STAT 513; either MATH 426 or MATH 576. Offered: A.

STAT 582 Advanced Theory of Statistical Inference (3) Limit theorems, asymptotic methods, asymptotic efficiency and efficiency bounds for estimation, maximum likelihood estimation, Bayes methods, asymptotics via derivatives of functionals, sample-based estimates of variability: (bootstrap and jackknife); robustness; estimation for dependent data, nonparametric estimation and testing. Prerequisite: STAT 581. Offered: W.

STAT 583 Advanced Theory of Statistical Inference (3) Limit theorems, asymptotic methods, asymptotic efficiency and efficiency bounds for estimation, maximum likelihood estimation, Bayes methods, asymptotics via derivatives of functionals, sample-based estimates of variability: (bootstrap and jackknife); robustness; estimation for dependent data, nonparametric estimation and testing. Prerequisite: STAT 582. Offered: Sp.

STAT 590 Statistics Seminar (*, max. 15) Prerequisite: permission of graduate program coordinator. Credit/no-credit only. Offered: AWSp.

STAT 591 Special Topics in Statistics (1-5, max. 15) Distribution-free inference, game and decision theory, advanced theory of estimation (including sequential estimation), robustness, advanced probability theory, stochastic processes or empirical processes. Prerequisite: permission of instructor. Offered: A.

STAT 592 Special Topics in Statistics (1-5, max. 15) Distribution-free inference, game and decision theory, advanced theory of estimation (including sequential estimation), robustness, advanced probability theory, stochastic processes or empirical processes. Prerequisite: permission of instructor. Offered: W.

STAT 593 Special Topics in Statistics (1-5, max. 15) Distribution-free inference, game and decision theory, advanced

theory of estimation (including sequential estimation), robustness, advanced probability theory, stochastic processes or empirical processes. Prerequisite: permission of instructor. Offered: Sp.

STAT 598 Techniques of Statistical Consulting (1) Seminar series covering technical and non-technical aspects of statistical consulting, including skills for effective communication with clients, report writing, statistical tips and rules of thumb, issues in survey sampling, and issues in working as a statistical consultant in academic, industrial, and private-practice settings. Prerequisite: entry code. Offered: jointly with BIOST 598; ASp.

STAT 599 Statistical Consulting (*, max. 12) Consulting experience in data analysis, applied statistics. Student required to provide consulting services to students and faculty three hours per week. Prerequisite: permission of Graduate Program Coordinator. Credit/no-credit only. Offered: AWSpS.

STAT 600 Independent Study or Research (*-) Prerequisite: permission of Graduate Program Coordinator. Offered: AWSpS.

STAT 700 Master's Thesis (*-) Prerequisite: permission of Graduate Program Coordinator. Offered: AWSpS.

STAT 800 Doctoral Dissertation (*-) Prerequisite: permission of Graduate Program Coordinator. Offered: AWSpS.

College of Built Environments

224 Gould

Dean

John Schaufelberger

Associate Dean

Jeffrey Ochsner

www.be.washington.edu

The College of Built Environments (CBE) devotes its resources to the tangible improvement of built and natural environments. Four departments comprise the college: architecture, construction management, landscape architecture, and urban design and planning. Each prepares students for professional careers involving the design, planning, production, and sustainability of physical and natural environments, as well as addressing policies and programs that engage problems of urban growth and livable communities.

The College offers a variety of programs and degrees focusing on the environmental design and construction disciplines within a liberal arts education. The undergraduate programs of the Departments of Construction Management and Landscape Architecture lead to professional degrees that serve as the educational credentials for careers in their respective fields. Undergraduate programs in the Departments of Architecture and Urban Design and Planning offer students pre-professional undergraduate majors in Architectural Studies and in Community, Environment, and Planning respectively that prepares students for professional programs in the design and planning disciplines, as well as related leadership roles in society.

The College offers a variety of professional and post-professional Master's degrees: Master of Architecture; Master of Science in Architecture; Master of Science in Construction Management (evening degree); Master of Urban Planning; Master of Landscape Architecture; and Master of Science in Real Estate. Master's students may elect also to work toward the interdisciplinary Certificates in Urban Design and in Historic Preservation. The College offers two interdisciplinary doctoral degrees: the Ph.D. in the Built Environment and the Ph.D. in Urban Design and Planning. All program curricula encompass an appropriate level of design and technical understanding, and include broader social, economic, and cultural issues fundamental to understanding, preserving, and enriching our built and natural environments.

As a part of a major university and metropolis in the Pacific Northwest, the College directly engages this extraordinary setting as a laboratory for study. Faculty members in CBE departments and programs work closely with various professional communities to build curricula and offer experience attuned to the understanding and creation of appropriate built environments.

FACILITIES

Computing Facilities

Mark Baratta, Director

The College provides an extensive computing infrastructure to support student work. Students have easy access to high-speed wired and wireless networking in the College's buildings, computers in labs and studios, a comprehensive collection of software used in our disciplines, specialized hardware (large-format scanning and plotting, laser cut-

ters, 3D printer), an equipment loaner program (laptops, digital cameras (fixed-lens and SLR), camcorders, digital audio recorders, projectors), and consulting. Most classrooms and seminar rooms are equipped with projectors; several have interactive whiteboard displays.

Built Environments Library

Alan Michelson, Librarian

The Built Environments Library, 334 Gould, is the primary location for materials on architecture, landscape architecture, construction management, and urban design and planning. The collection contains 46,745 volumes, 7,500 microforms, and 163 currently-received serial subscriptions and 243 serial titles in total. Access to its collection is provided through the UW Libraries Information Gateway, a single World Wide Web location which encompasses all the library's print and electronic resources as well as tools, services, and the ability to search the library's catalog and a wide range of Internet resources. The Gateway is available in all UW libraries and on the Web at www.lib.washington.edu.

Photography Lab

John Stamets, Lecturer

A large photography laboratory is provided with studio and film darkroom facilities for use by photography classes, design-studio classes, special instruction, and independent activity.

Shop

Penny Maulden, Director

Fully staffed and well-equipped workshops provide students opportunities to design and make projects using wood, metals, concrete, plaster, plastics and other materials. A wide and deep selection of hand-tools, machine-tools and digital fabrication tools support the instructional use of the workshops and adjacent classroom. Coursework and research supported by the workshops include building design, design/build, furniture studios, structures, materials, and digital fabrication courses. Individual projects including thesis and research can also be accommodated.

Visual Resources Collection

Joshua Polansky, Director

The Visual Resources Collection consists of over 80,000 digital images covering architectural, landscape, design and planning, and construction subject matter, supporting the curricular and research needs of the College. They are accessible to students and faculty through an online image database. New materials for lectures and projects are continually added.

UNDERGRADUATE DEGREE PROGRAMS

The College of Built Environments offers the following professional and pre-professional undergraduate degree options and opportunities:

College Bachelor Degree Programs

- Bachelor of Arts in Architectural Studies
- Bachelor of Arts in Community, Environment, and Planning
- Bachelor of Landscape Architecture
- Bachelor of Science in Construction Management

Minors and Dual Degree Options

- Minor in Architecture
- Minor in Landscape Architecture

- Minor in Urban Design and Planning
- Dual Degree option combining the Bachelor of Arts in Architectural Studies with the Bachelor of Science in Construction Management

GRADUATE PROGRAM

The College of Built Environments offers the following professional, post-professional graduate degrees, and doctoral options and opportunities:

College Graduate Degree Programs

- Master of Architecture
- Master of Science in Construction Management
- Master of Landscape Architecture
- Master of Science in Real Estate
- Master of Urban Planning
- Distance Learning Master Program in Construction Engineering
- Distance Learning Master in Infrastructure Planning Management

Interdisciplinary PhD Degree Programs

- PhD in the Built Environment
- PhD in Urban Design and Planning

College-Wide Certificate Programs

Historic Preservation Certificate Program

The College of Built Environments offers education in historic preservation. This approach reflects a conscious choice to emphasize preservation within the context of the individual design professions. Thus, the curriculum offers an awareness and familiarity with issues involved in the identification, designation, interpretation, and preservation of historic places, as well as the restoration, adaptive reuse, and design of sympathetic new construction in historic contexts.

Program Coordinator

Box 355740

206-543-5996

hispres@uw.edu

www.be.washington.edu/certificates/hp.html

Admission Requirements

Open to students accepted into a professional or graduate program in the College of Built Environments, including the M.Arch., M.S. (Arch. History/Theory), B.L.A., M.L.A., M.U.P., and Ph.D. programs. Application is made first for admission to a degree program within the college. Once accepted, a separate "Statement of Interest" form is required. Application is made within the first two weeks of classes for two-year degree programs, and by the end of the first year for three-year programs.

Certificate Requirements

The certificate consists of courses required for the student's degree and an additional, complementary 12-15 credits of preservation study which may not overlap with courses required for students' degrees but which may fall into elective requirements and be part of the total credits required for the degree. We recommend students meet with the program coordinator and Preservation faculty to choose the courses that will best complement their degree program and academic interests in preservation.

1. *Track I:* Requirements for Students in the M.Arch. Degree Program

- a. *Courses Required from the M.Arch. Curriculum:* ARCH 500 (6), ARCH 590 (3), an advanced studio on preservation design or design in an historic context
 - b. *Core Certificate Courses:* ARCH 582 (3) if available; Case Studies, either ARCH 498 (3) or URBDP 587 (3); Preservation Planning, either URBDP 585 (3) or URBDP 586 (4) *Elective Course(s):* Additional electives in areas related to preservation in architecture, landscape architecture, planning, or related design.
 - c. *Thesis:* Thesis topic with content in the area of preservation design or related issues in historic preservation. Thesis committee chaired by a member of the Historic Preservation faculty.
2. *Track II: Requirements for Students in the B.L.A., M.L.A., M.S. (Arch), M.U.P., and Ph.D. Degree Programs*
 - a. *Courses Required from Degree Curriculum:* Any required or "selective" courses with preservation/historical content, and if the degree requires studio work (B.L.A., M.L.A., M.U.P.), choose a studio with preservation content.
 - b. *Core Certificate Courses:* URBDP 585 (3), URBDP 586 (4), one graduate seminar in preservation planning (3).
 - c. *Elective Course(s):* Additional electives in areas related to preservation in architecture, landscape architecture, planning, or related design.
 - d. *Thesis:* Thesis, professional paper, or dissertation topic with content in the area of preservation planning and design or related issues in historic preservation. Thesis must be chaired by a member of the Historic Preservation faculty.

Urban Design Certificate Program

The College of Built Environments offers an interdisciplinary program which leads to the Certificate of Achievement in Urban Design for students in the B.L.A., M.L.A., M.Arch., and M.U.P. professional degrees and to students in the Interdisciplinary Ph.D. in Urban Design and Planning or the Ph.D. in the Built Environment. It is designed to give students in these programs a broad and strong understanding of urban design that they may incorporate into their later professional and scholarly careers.

Program Coordinator

Box 355740

206-543-5996

ud@uw.edu

www.be.washington.edu/certificates/ud.html

Admission Requirements

Any student accepted into the degree programs listed above is eligible and may begin participate in the program by returning a Statement of Interest (this form may be obtained from the program office or the program website). We recommend that students in two-year programs apply at the beginning of their programs and that those in longer programs apply at the beginning of their second year. However, students must possess the necessary design abilities prior to enrollment in advanced studios. Such enrollment is determined by the studio in question (for example, advanced studios may require a prerequisite studio preparatory class and/or previous studios and/or the equivalent as evaluated by the studio instructor).

Certificate Requirements

The certificate consists of courses required for the student's degree and an additional, complementary 12-15 credits of urban design courses, which may not overlap with courses required for students' degrees but which may fall into elective requirements and be part of the total credits required for the degree.

These requirements vary with the students' degree requirements (for example, if a course listed below is required for the students' degree requirements, the student must meet the 12-15 credit requirement by choosing an additional course). We recommend students meet with the program coordinator and Urban Design Program faculty to choose the courses that will best complement their degree program and academic interests in urban design.

1. Core Curriculum

- a. *Introductory Course:* ARCH 590 (M.Arch. and M.L.A. students); L ARCH 362 (B.L.A. students); URBDP 470 (any program); URBDP 500 (M.U.P. students) URBDP 479
 - b. URBDP 580
 - c. Thesis prep as appropriate for students' degree programs
2. *Urban Design Studios:* Three required from ARCH 500-505, L ARCH 402-403, L ARCH 503-505, or URBDP 507-508 as designated by the program each quarter; students must take at least one studio either outside their home department or with a clear interdisciplinary focus) *Mandatory Course Areas*
 - a. *Urban Form and History:* One course from L ARCH 450, L ARCH 451, L ARCH 498 (when history of urban design), URBDP 564, URBDP 565, or others as appropriate
 - b. *Urban Design Methods:* Two courses from L ARCH 341, L ARCH 571, URBDP 474, URBDP 576, URBDP 598, or others as appropriate
 - c. *Urban Studies:* One course from PB AF 527, URBDP 422, URBDP 466, URBDP 500, URBDP 510, URBDP 520, URBDP 530, URBDP 560, URBDP 562, or others as appropriate
 - d. *Urban Development:* One course from URBDP 561, URBDP 552, URBDP 553, URBDP 554, URBDP 555, or others as appropriate
 3. *Thesis:* Students' theses, professional projects, or dissertations must have an urban design component and a member of the Urban Design Program faculty member as their committee chair.

Architecture

208 Gould

Architecture includes the study of building design, representation, computing, structures, construction materials, environmental control systems, history, theory, and professional practice. In its teaching, research, practice, and community engagement, the department addresses the traditions of architecture within the context of social and technological change, a legacy of craft in the making of architecture, an activist and community-based design process, and the principles of ethical action to address human and environmental concerns.

UNDERGRADUATE PROGRAM

Adviser

208 Gould Hall, Box 355720

(206) 543-3043

bainfo@uw.edu

Advising for the first two years of the program is done through the Undergraduate Gateway Center, 171 Mary Gates Hall.

The Department of Architecture offers the following programs of study:

- Bachelor of Arts degree with a major in architecture
- Bachelor of Arts degree with a major in architectural design
- A dual-degree program leading to the Bachelor of Arts degree with a major in architectural design and the Bachelor of Science degree in construction management
- A minor in architecture

The Bachelor of Arts (with a major in architecture) is a four-year, undergraduate degree program in architecture in which students explore the factors that shape our built environment. The program provides a liberal arts foundation in the discipline of architecture, which covers spatial reasoning, aesthetics, political and economic structures, socio-cultural influences, urbanism, landscape, and ecology, and gives students the opportunity to concentrate their studies through a sequence of courses investigating history and theory, materials and making, or sustainable technologies. Students in the Bachelor of Arts (with a major in architecture) program can prepare for graduate study in architecture and related fields such as construction management, landscape architecture, real estate, and urban planning, as well as careers in other fields.

The Bachelor of Arts (with a major in architecture) consists of two, two-year sequences. Years one and two include 14 credits of preparatory architectural coursework in addition to at least 76 credits devoted to satisfying the UW's general education requirements. These include coursework in the Visual, Literary, and Performing Arts (VLPA), Individuals and Societies (I&S), mathematics, science, and other areas of knowledge. The intent of these first two years is to help students build their skills in communication and critical thinking; gain broad exposure to other disciplines in order to make more informed academic and career decisions; and provide the broad academic foundation essential to successful study in architecture. All interested UW students are welcome to participate in this first two-year sequence.

The second two-year sequence begins in the junior year. Upper-division admission to the program requires the completion of architecture prerequisites and a minimum of 90 credits, and occurs through a selection process at the beginning of spring quarter of the sophomore year. Years three and four include 29 credits of required courses, including the capstone, 38 credits of discipline-specific selectives and electives, and 23 credits of upper-division electives. Students can focus their studies by choosing a concentration of history and theory, materials and making, or sustainable technologies, or a combination of these.

The Bachelor of Arts (with a major in architectural design) is a pre-professional degree that prepares candidates for admission with advanced standing to professional architectural programs. It is also good preparation for other roles in society that benefit from an understanding of and exposure to architectural design and problem solving such as government, development, management, planning, art, graphic design, and digital arts. Students develop visual literacy and complex problem solving through the design process, including researching historical precedents, analyzing theoretical texts, and on-site understanding of the physical built and natural environment. International study programs (Rome, Scandinavia, India, Mexico, Japan) provide further opportunities for students to engage built environments within global/local and contemporary/historical cultural contexts. A focus on sustainable technologies and the craft and making of architecture play an important role throughout the program.

The Bachelor of Arts (with a major in architectural design) is for students who are interested in the architecture profession and who may continue their studies by earning a graduate professional degree in architecture. The master's degree in architecture is a professional degree and generally takes two or more years to complete if the student

enters with the pre-professional Bachelor of Arts (with a major in architectural design).

The college also offers a design and construction concurrent degree (Bachelor of Arts with a major in architectural design, BS in construction management), awarded after completion of 227 credits. Students interested in this double degree must complete the prerequisites for the architectural design major, be admitted to architectural design, and then apply to construction management while completing the architectural design major. This is a five-year program. In addition, the College of Built Environments offers three other bachelor degrees: the BLA in landscape architecture, a five-year professional degree; the BS in Construction Management, a four-year professional degree; and the BA in Community, Environment, and Planning, a four-year interdisciplinary degree.

Bachelor of Arts (with a major in architecture)

Suggested First- and Second-Year College Courses: See Department Admission Requirements below.

Department Admission Requirements

Applicants are considered for autumn admission only. Admission is competitive. Admission groups are freshmen/sophomore admission (F/S A) and upper-division admission (UA). Consult department website for more information and application form.

Freshman Admission

The department enrolls freshman-year students directly out of high school, prior to their completion of any university-level prerequisites. All freshmen indicating architecture on their UW application are considered for freshman admission to the BA (with a major in architecture) program; no additional application materials are required. Students admitted as freshmen must complete all preparatory and general education requirements listed under upper-division admission as well as all major requirements in order to earn a degree.

Sophomore Admission

Application deadline is the first Monday of spring quarter. Admission decisions are based on an applicant's academic performance and potential, extent and quality of relevant experience, and personal motivation. Completion of prerequisite requirements does not guarantee admission. Students admitted as sophomores must complete all preparatory and general education requirements listed under upper-division admission as well as all major requirements in order to earn a degree.

Transfer Admission

Transfer students may apply for admission at the beginning of the sophomore year or the beginning of the junior year. Application deadlines are the same as for sophomore or upper-division admission. Admission decisions are based on an applicant's academic performance and potential, extent and quality of relevant experience, and personal motivation. Transfer students must also submit a separate application to the UW.

1. Sophomore-year transfer students must complete all preparatory architectural coursework and general education requirements listed under upper-division admission requirements, as well as all major requirements, in order to earn a degree.
2. Junior-year transfer students must complete all general education requirements and are strongly encouraged to complete all preparatory architectural coursework before entry into the program. These courses can be taken through UW Educational Outreach, on a non-matriculated basis, prior to admission to the UW. These, as well as all major requirements, must be completed in order for a student to earn a degree.

Upper-Division Admission Requirements (UA) Junior Standing (90 or more credits completed by the quarter of admission), to include the following:

- a. *Preparatory Architectural Coursework (19 credits):* ARCH 200, ARCH 231, ARCH 350, ARCH 351, ARCH 352
 - b. *General Education Requirements:* Visual, Literary, and Performing Arts (VLPA) (20 credits); Individuals and Societies (I&S) (20 credits); Natural World (NW) (20 credits), including 5 credits of mathematics (MATH 112, MATH 124); additional Areas of Knowledge (6 credits); electives (3 credits). Composition/writing (10 credits total) may be met by freshman English composition courses and/or other general education courses designated "W," with a minimum 2.0 grade for each course; diversity (5 credits) may be satisfied by general education courses designated DIV.
3. Minimum 2.80 college/university GPA
 4. Department Application (See department website) Transcripts of all college-level work. Unofficial transcripts are accepted.
 5. *Application Deadline:* First Monday of spring quarter. For enrolled UW students, all prerequisite requirements must be completed or under way by the application deadline, and all prerequisite requirements must be completed by the time the student enters the program in autumn quarter. Admission decisions are based on an applicant's academic performance and potential, extent and quality of relevant experience, and personal motivation. Completion of prerequisite requirements does not guarantee admission.

Major Requirements

1. *Coursework (91 or more credits completed during years three and four):* ARCH 331, ARCH 332, ARCH 361, ARCH 362, ARCH 468, ARCH 469. One history and theory selective course (3 credits), one craft and fabrication selective (3 credits), and one sustainable technologies selective (3 credits). Three Department of Architecture areas of knowledge courses (at least 9 credits), two approved electives offered with College of Built Environment programs (at least 6 credits), five approved Department of Architecture electives (at least 15 credits), and at least 23 credits of approved upper-division electives. Selective and areas of knowledge courses are chosen from approved lists maintained by the department.
2. Capstone (ARCH 469) completed in residence at the UW
3. Minimum 2.00 cumulative GPA for all courses presented for the major

Bachelor of Arts (with a major in architectural design)

Department Admission Requirements

1. 90 credits to include the following:
 - a. *Preparatory Architectural Coursework (17 credits):* ARCH 350, ARCH 351, ARCH 352 (9 credits); ARCH 210, ARCH 211 (8 credits). Note: These courses can be taken through UW Extension on a non-matriculated basis, prior to admission to the UW, or they can be taken in the sophomore year on campus.
 - b. *General Education Requirements (70 credits):* English composition (5 credits); Visual, Literary, and Performing Arts (VLPA) (20 credits); Individuals and Societies (I&S) (20 credits); Natural World (NW) (20 credits), including MATH 112, MATH 124, or MATH 145; additional Areas of Knowledge (5 credits).
 - c. Electives (3 credits) While the cumulative GPA is an important factor in the admission evaluation, the committee places emphasis on the evaluation of

performance in the preparatory architectural coursework the student has completed. It is to the student's advantage to take as many of these courses as possible before applying.

2. *Application Deadline:* May 15 for autumn quarter only. Prerequisite courses must be completed by the time the student enters the program in autumn quarter.

Major Requirements

90 credits as follows:

1. *Preprofessional Coursework (69 credits):* ARCH 300, ARCH 301, ARCH 302, ARCH 315, ARCH 320, ARCH 321, ARCH 322, ARCH 380, ARCH 400, ARCH 401, ARCH 402, ARCH 431, ARCH 460, CM 313. One selective course in each of the following areas: (1) graphics/media; (2) history/theory; (3) building science/materials. Selective courses to be chosen from approved lists maintained by the department.
2. 21 credits of approved upper-division electives.
3. The final 45 credits must be completed as a matriculated student in residence at the UW.
4. Minimum 2.50 cumulative GPA for all work done in residence.

Dual-Degree Program

Admission Requirements

Dual-degree majors first apply to the architectural design program and must meet architectural design admission requirements. Admitted architectural design students apply to the construction management program during spring quarter of their junior year (first year in the architecture program). For architectural design students, construction management prerequisites are waived, but such students must take CM 313 and CM 323 prior to the construction management application deadline, April 1.

Dual Degree Program Requirements

139 credits, as follows:

1. *Architecture Foundation Courses (60 credits):* ARCH 300, ARCH 301, ARCH 302, ARCH 315, ARCH 320, ARCH 321, ARCH 322, ARCH 380, ARCH 400, ARCH 401, ARCH 402, ARCH 431, ARCH 460
2. *Architecture Selectives (6 credits):* 3 credits of graphic/media selective chosen from among the following BIM-recommended courses: ARCH 316, ARCH 410, ARCH 412, ARCH 413, ARCH 415, ARCH 418, ARCH 478, ARCH 481, ARCH 482, ARCH 484, ARCH 485, ARCH 486, ARCH 498. 3 credits of history/theory selective from among the following courses: ARCH 441, ARCH 442, ARCH 450, ARCH 452, ARCH 455, ARCH 457
3. *Construction Management Courses (64 credits):* CM 310, CM 311, CM 312, CM 313, CM 321, CM 322, CM 323, CM 331, CM 332, CM 333, CM 334, CM 410, CM 411, CM 412, CM 421, CM 422, CM 423, CM 431 (capstone experience), CM 432, CM 433; either CM 301 or B CMU 301
4. *Construction/Construction Science Electives (6 credits):* Two of the following courses: CM 415, CM 420, CM 425, or ARCH 420
5. *Approved Electives (3 credits):* May be chosen from among CM or ARCH courses
6. Minimum 2.50 cumulative GPA for all work done in residence

Note: A minimum of 225 credits is required to complete a dual degree.

Minor

Minor Requirements: 25 credits to include a minimum of 20 credits in ARCH courses (at least 9 credits at the upper-

division level) and 5 additional upper-division credits from courses in the College of Built Environments.

Student Outcomes and Opportunities

• Learning Objectives and Expected Outcomes:

- The architecture program emphasizes a broad liberal arts foundation followed by a focus on architectural history and theory, materials and making, and sustainable technologies. Specific goals for student learning include an understanding of the sequences and history of human building activities; social, political, legal, and economic influences on design and construction; various architectural theories and current thought about the aesthetics of design; construction materials and their properties; relationships of buildings to their sites and ecological contexts; sustainable technologies used in building construction.
- The architectural design program emphasizes a broad liberal arts foundation followed by a focus on entry-level courses in architectural design, theory, the technology of building, and materials. Specific goals for student learning include an understanding of the organization of three-dimensional space in response to specific human needs; the sequences and history of human building activities; various architectural theories and current thought about the aesthetics of design; construction materials and their properties; building systems and their integration for human comfort; structural principles, relationships of buildings to their sites; social, political, legal, and economic influences of design and construction. Specific goals in the area of personal development include an ability to visualize three dimensions and think spatially; graphic, verbal, and written communication skills for design development and presentation; an ability to think critically and exercise self-criticism.
- **Honors Options Available:** For Interdisciplinary Honors, see University Honors Program.
- **Research, Internships, and Service Learning:** Internships are available and vary according to individual interests within the program. See adviser for details.
- **Department Scholarships:** A limited number of department scholarships are available to eligible students entering their final year of the major.
- **Student Organizations/Associations:** AIAS (American Institute of Architectural Students) *Of Special Note:* Most states require that an individual intending to become an architect hold an architecture degree accredited by the National Architectural Accrediting Board (NAAB). The NAAB accredits three types of degrees (1) the Bachelor of Architecture (BArch), which requires a minimum of five years of architectural study (this degree is not offered at the University of Washington), (2) the Master of Architecture (MArch), which requires a minimum of three years of study following an unrelated bachelor's degree or two years following a related pre-professional bachelor's degree, and (3) the Doctor of Architecture (this degree is not offered at the University of Washington). These professional degrees are structured to educate those who aspire to registration and licensure to practice as architects.

The UW's four-year, Bachelor of Arts degree in architectural design is a pre-professional degree and is not accredited by NAAB. The pre-professional degree is useful to those desiring a foundation in the field of architecture as preparation for either continued education in a professional degree program or for employment options in fields related to architecture.

Architectural education at the University of Washington requires a minimum of six or seven years of higher education to attain the first professional degree, the Master of

Architecture. The Curriculum is divided into three two-year segments of coursework with a pre-professional Bachelor of Arts degree (with a major in architectural design) awarded at the completion of the second two-year segment. The professional degree, Master of Architecture, is awarded only upon completion of the third segment. (Students with the Bachelor of Arts in Architecture or bachelor's degrees in unrelated fields take an additional year of coursework).

GRADUATE PROGRAM

Graduate Program Coordinator

208 Gould, Box 355720

(206) 543-4180

archinfo@uw.edu

The Department of Architecture offers two graduate level degrees: the Master of Architecture (MArch) and the Master of Science in architecture (MS Arch).

The MArch is a National Architectural Accrediting Board (NAAB)-accredited professional degree program that educates students already grounded in the sciences or liberal arts to become registered, licensed architects. Applicants interested in entering the profession of architecture should apply to the MArch program, which has three tracks:

- 2-year accredited MArch for candidates holding a BA or BS in architectural design
- 3-year accredited MArch for candidates holding a bachelor's degree in a discipline other than architecture
- Accredited dual degree, MArch/MLA, for candidates with or without prior architecture or landscape architecture degrees
- MArch in high performance building, a 1-year non-accredited post-professional program for candidates holding an accredited BArch or MArch

The MS Arch is a non-accredited advanced research-oriented degree for candidates who hold a bachelor's degree from a wide range of disciplinary backgrounds. The MS in Architecture has two distinct degree streams:

- MS Arch in design computing
- MS Arch in architectural history and theory

Master of Architecture

The MArch degree, accredited by the National Architectural Accrediting Board (NAAB), is the only professional degree offered by the University of Washington. Completion of the department's 2+year or 3+year MArch degree program satisfies the educational requirement for licensing (and registration as an architect

Candidates for the 2+year MArch degree usually complete seven full-time quarters of study including the master's thesis. This program requires 95 credits of coursework, including: 30 credits of design studio, 31 credits of core courses, 21 credits of electives, 4 credits of thesis preparation, and 9 credits of thesis. MArch students may choose to pursue one of three transcripted degree options: history, theory, and criticism; materials and fabrication; and sustainable systems and design. These options are integral to the 95 credits required for the MArch degree and involve 6 credits of studio, 6 credits of core courses, 9 credits of dedicated electives, and an option-related focus in the 4-credit thesis preparation course. Students may also choose to pursue certificate programs in the Department of Architecture and the College of Built Environments.

Candidates for the 3+year MArch degree begin the program with three quarters (51 credits) of preparatory coursework and an optional paid summer internship administered by the department. They then join the 2+year MArch group to complete the remaining 95 course credits for the degree, as described above.

Students in 2+ and 3+year MArch degree can also pursue a formal concurrent Master of Landscape Architecture (MLA); and can devise other informal concurrent degrees with departments in the College of Built Environments.

Candidates for the post-professional MArch degree in high-performance building usually complete three full-time quarters of study, including the master's thesis. This program requires 46 credits of coursework including: 6 credits of studio, 15 credits of core courses, 12 credits of electives, 4 credits of thesis preparation, and 9 credits of thesis.

Admission Requirements

1. Completed MArch application form
2. Transcripts from baccalaureate (or higher) degree(s). The admissions committee places primary emphasis on more recent and architecturally related coursework and expects a minimum 3.00 (B) (or higher) GPA in the last 90 graded quarter hours or last 60 semester hours.
3. GRE test scores from within the last five years
4. Portfolio of work in visual arts and/or design. The portfolio is of primary significance for all candidates.
5. Statement of purpose describing the candidate's professional aspirations and the extent to which the program can be expected to prepare him or her for those objectives
6. Written recommendations from three persons who can evaluate the applicant's past record and future promise of success in the program

Degree Requirements

95-146 credits, as follows:

1. **Preparatory-year requirements (for students in the 3+year MArch program only):** ARCH 303, ARCH 304, ARCH 305, ARCH 310, ARCH 311, ARCH 312, ARCH 323, ARCH 324, ARCH 331, ARCH 332, ARCH 350, ARCH 351, ARCH 352, ARCH 360
2. **First-year requirements:** ARCH 500, ARCH 501, ARCH 502, ARCH 521, ARCH 531, ARCH 533, ARCH 570, ARCH 590, ARCH 591, one architectural history and theory selective, elective.
3. **Second-year requirements:** ARCH 503, ARCH 504, ARCH 571, ARCH 595 or ARCH 599, one professional practice selective, electives.
4. **Final year requirement:** ARCH 700, and one elective

1-Year MArch in High Performance Building Degree Requirements

46 credits, as follows:

1. **Core Curriculum:** ARCH 503, ARCH 526, ARCH 530, ARCH 533
2. **Selectives:** 6 credits of building technology courses
3. **Electives:** 12 credits of electives
4. **Thesis:** 4 credits of ARCH 599; 9 credits of ARCH 700

Master of Science

The Master of Science (MS) in architecture program offers advanced, specialized study in two areas of specialization: design computing and architectural history and theory.

Candidates in the design computing stream pursue research in areas that include design methods, augmented and virtual environments, building simulation and analysis, digital fabrication, human computer interfaces for design, collaboration and community in design, and other related topics. Students work in the Design Machine Group (DMG), a collaborative research studio that fosters innovation and actively seeks ideas that shape the future of design and information technology. The 45 credits of coursework includes: 11 core credits, 21 credits of design computing

electives, 4 credits of thesis preparation, and 9 credits of thesis.

Candidates in the history and theory stream pursue advanced research on the history and theory of architecture applying a variety of historical and critical lenses. The program is broadly conceived to encompass the architectural, cultural and political forces that have shaped modernity in architecture, including all of its contemporary manifestations. The 45 credits of coursework include: 11 core credits, 21 credits of history and theory electives, 4 credits of thesis preparation, and 9 credits of thesis.

Admission Requirements

1. A completed MS in Architecture application form
2. Transcripts from baccalaureate (or higher) degree(s) with a minimum 3.00 (B) (or higher) GPA in the last 90 graded quarter hours or last 60 semester hours of coursework
3. GRE test scores taken within the last five years
4. A portfolio of work showing evidence of the applicant's preparation for study in design computing, or a writing sample that shows evidence of applicant's preparation for study in the history and theory of architecture.
5. A statement of purpose that clearly articulates the applicant's goals and the extent to which the program can be expected to prepare him or her for those objectives. The statement should also describe the applicant's background and experience appropriate to the program and must also include a proposed research focus.
6. Written recommendations from three persons who can evaluate the applicant's past record and future promise of success in the MS in Architecture program

Design Computing Stream Degree Requirements

45 credits, as follows:

1. *Core Curriculum*: ARCH 587, ARCH 588, ARCH 597
2. *Electives*: 21 credits to be chosen from design computing courses, or other approved courses.
3. *Thesis*: 4 credits of ARCH 599; 9 credits of ARCH 700

History and Theory Stream Degree Requirements

45 credits, as follows:

1. *Core Curriculum*: ARCH 560, ARCH 597, B E 552
2. *Electives*: 21 credits of architectural history and theory courses, or other approved courses.
3. *Thesis*: 4 credits of ARCH 599; 9 credits of ARCH 700

Certificate Programs

Two interdisciplinary certificate programs offered by the College of Built Environments are available to MArch students in the areas of historic preservation and urban design.

The department also offers certificates in design computing and lighting design.

International Studies

The department offers architecture in Rome, Italy, at the University of Washington Rome Center; architecture in Mexico City, Mexico; and architecture in Chandigarh, India. Other programs include travel to Scandinavia, Germany, Japan, and Australia.

Financial Aid

Each spring quarter the department awards scholarships and assistantships for the following academic year. These are more typically available to students already enrolled in the architecture program at the time of awarding, although some financial aid is offered to newly entering students.

Other financial aid and assistantship possibilities may be found through the Graduate School's Fellowships, Assistantships, and Awards and the Office of Student Financial Aid.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

ARCH 100 Introduction to Architecture Study (8) VLPA Introduces design studio instruction to students contemplating architecture as a field of study or career. Studio projects, informed by workshops, lectures, readings, field trips, and in-studio critiques introduce the history, theory, and practice of architecture. Includes instruction in basic design drawing and model making. Offered: S.

ARCH 150 Appreciation of Architecture I (2/3) VLPA Historical survey of the architecture of Western civilization. For nonmajors.

ARCH 151 Appreciation of Architecture II (2/3) VLPA Historical survey of the architecture of Western civilization. For nonmajors.

ARCH 200 Architectural Design and Representation I (5) VLPA Introduces architectural representation as fundamental medium for investigation, analysis, and documentation of objects, processes, and architectural space. Consists of a series of investigative projects that introduce orthographic projection, axonometric, and perspective drawing, through which students develop comprehensive skills in hand-drawing and digital media. Offered: A.

ARCH 201 Architectural Design and Representation II (5) VLPA Introduces the fundamentals of architectural design. Consists of a series of investigative projects that introduce principles of architectural design as well as concepts and skills in architectural and digital representation. Prerequisite: ARCH 200. Offered: W.

ARCH 251 World Architecture Non-Western Cultures (5) VLPA/I&S *Prakash* Introduction to historical and contemporary built environments of non-Judeo-Christian civilizations, primarily Hindu, Buddhist, Islamic, and Meso-American, as manifestations of cultural history and as responses to environmental determinants.

ARCH 300 Introduction to Architectural Design I (6) Studio problems to develop awareness, knowledge, and basic skills needed in the synthesis of building form. Prerequisite: ARCH 201. Offered: A.

ARCH 301 Introduction to Architectural Design II (6) Studio problems to develop awareness, knowledge, and basic skills needed in the synthesis of building form. Prerequisite: ARCH 300. Offered: W.

ARCH 302 Introduction to Architectural Design III (6) Studio problems to develop awareness, knowledge, and basic skills needed in the synthesis of building form. Prerequisite: ARCH 301. Offered: Sp.

ARCH 303 Introduction to Design Studio I (6) Studio problems to develop initial awareness, knowledge, and basic skills needed in synthesis of building form and integrative aspects of architectural design with emphasis on the dwelling place. Limited to students entering the graduate program in architecture with baccalaureate degrees in other fields. Offered: A.

ARCH 304 Introduction to Design Studio II (6) Studio problems to develop initial awareness, knowledge, and basic skills needed in synthesis of building form and integrative aspects of architectural design with emphasis on the dwelling place. Limited to students entering the graduate program in architecture with baccalaureate degrees in other fields. Prerequisite: ARCH 303. Offered: W.

ARCH 305 Introduction to Design Studio III (6) Studio problems to develop initial awareness, knowledge, and

basic skills needed in synthesis of building form and integrative aspects of architectural design with emphasis on the dwelling place. Limited to students entering the graduate program in architecture with baccalaureate degrees in other fields. Prerequisite: ARCH 304. Offered: Sp.

ARCH 310 Architectural Design Drawing I (3) Lectures, demonstrations, and exercises to develop skill in graphic visualization and representation as used in architecture. Concepts, conventions, and techniques of both freehand and technical drawing are used as a vital means to imagine, develop, and represent design ideas. Course material coordinated with ARCH 303 studio to integrate drawing in all phases of the design process. Offered: A.

ARCH 311 Architectural Design Drawing II (3) Lectures, demonstrations, and exercises to develop skill in graphic visualization and representation as used in architecture. Concepts, conventions, and techniques of both freehand and technical drawing are used as a vital means to imagine, develop, and represent design ideas. Course material coordinated with ARCH 304 studio to integrate drawing in all phases of the design process. Offered: W.

ARCH 312 Architectural Design Drawing III (3) Lectures, demonstrations, and exercises to develop skill in graphic visualization and representation as used in architecture. Concepts, conventions, and techniques of both freehand and technical drawing are used as a vital means to imagine, develop, and represent design ideas. Course material coordinated with ARCH 305 studio to integrate drawing in all phases of the design process. Offered: Sp.

ARCH 315 Design Drawing (2) Projects, lectures, demonstrations, and exercises coordinated with studio projects to integrate drawing in all phases of the design process. Lessons in diagramming of design concepts and planning and presenting design solutions. Prerequisite: ARCH 200; corequisite: ARCH 300.

ARCH 320 Introduction to Structures I (3) Static - Force analysis; the study of external forces and force systems and their analytical solutions as applied to bodies at rest (equilibrium). Topic areas include beams, trusses, determinate frames, and load tracing. Offered: A.

ARCH 321 Introduction to Structures II (3) Strength of materials; the study of the properties of materials and cross-sectional shapes of structural elements with respect to their effectiveness in resisting stresses. Topic areas include stress and strain, section properties, analysis and design of beams and columns. Prerequisite: ARCH 320. Offered: W.

ARCH 322 Introduction to Structures III (3) Elementary structural design; synthesis of the previous structures coursework with applications to design of determinate timber and steel structures. Examination of forces on buildings: snow, live loads, wind, and earthquake. An introduction to concept of continuity. Prerequisite: ARCH 321. Offered: Sp.

ARCH 323 Structures I (3) *K. SIMONEN* Covers the design of building structures utilizing the fundamental principles of statics and mechanics of materials. Includes the behavior of beams, trusses, arches, and frames; the structural performance of wood, steel, and concrete; and designing for gravity and lateral loads. First of a two-course sequence. Offered: W.

ARCH 324 Structures II (3) *K. SIMONEN* Covers the design of building structures utilizing the fundamental principles of statics and mechanics of materials. Includes the behavior of beams, trusses, arches, and frames; the structural performance of wood, steel, and concrete; and designing for gravity and lateral loads. Second of a two-course sequence. Prerequisite: ARCH 323. Offered: Sp.

ARCH 331 Energy and Environmental Systems (3) *NW* Describes principles and applications of climate, energy use, and comfort as determinants of architectural form; architectural methods for climate adaptation using non-mechanical means of ventilating, cooling, heating, and light-

ing; and design and performance predictions for passive approaches to solar heating, heat transfer mechanisms, and strategies for climate-responsive design.

ARCH 332 Making and Materials (3-5) VLPA

Introduces the cultures and realities of making and materials through the study of how tools, materials, and cultures interact to produce our built environment at all scales. Includes substantial hands-on physical interactions with real tools and materials.

ARCH 350 Architecture of the Ancient World (3/5) VLPA

Architectural history in the Western world from beginnings to AD 550. Offered: A.

ARCH 351 Romanesque, Gothic, and Renaissance Architecture (3/5) VLPA Architectural history in the Western world from AD 550 to 1750. Recommended: ARCH 350. Offered: W.

ARCH 352 History of Modern Architecture (3/5) VLPA Ochsner Architectural history in the Western world from 1750 to the present. Recommended: ARCH 351. Offered: Sp.

ARCH 360 Introduction to Architectural Theory (3) Function of architectural theory in comprehending and ordering various human purposes in architecture, types of architectural purpose, and types of theories. Current concerns. Offered: W.

ARCH 361 Architecture Colloquium (5) Introduces a wide range of perspectives on architecture, with an emphasis on history and theory, making and materials, and sustainable technologies. Emphasizes the skills of reading, analysis, communication, and writing in the discipline of architecture. Offered: A.

ARCH 380 Computers in Architecture (3) Laboratories, lecture, and demonstrations to introduce computing in environmental design and planning. Offered: Asp.

ARCH 400 Architectural Design IV (6) Offers studio problems in non-residential building design to advance the student's understanding of the ideas and technologies of architecture. Prerequisite: ARCH 302. Offered: A.

ARCH 401 Architectural Design V (6) Offers studio problems in non-residential building design to advance the student's understanding of the ideas and technologies of architecture. Prerequisite: ARCH 400. Offered: W.

ARCH 402 Architectural Design VI (6) Offers studio problems in non-residential building design to advance the student's understanding of the ideas and technologies of architecture. Prerequisite: ARCH 401. Offered: Sp.

ARCH 403 Architectural Problems (6) Offered: S.

ARCH 404 Integrated Design/Build Studio (6) C. DOSSICK Study of the design/build process with emphasis on the synthesis of design and construction considerations. Focuses on developing design and construction concepts to meet program requirements specified in case studies. Offered: jointly with CM 404; W.

ARCH 410 Introduction to Architectural Photography (3/5) VLPA Basic elements and processes of architectural photography to include camera controls, exposure technique, photo processing, and fundamental principles of photographing architecture. Student must provide own 35 mm (or larger) camera with manual operating controls.

ARCH 413 Architectural Photography Projects (3) Students develop in-depth photo essays relating to architecture, the urban movement, or landscape design. Lectures, seminar, and discussion. Prerequisite: ARCH 410.

ARCH 415 Architectural Sketching (3) Exercises in free-hand representational drawing using charcoal, graphite, and conte crayon with emphasis on line, proportion, values, and composition. Studies progress from geometric to nongeometric forms. Recommended: either ARCH 210 or ART 104.

ARCH 418 Watercolor Drawing (3) Introduction to the principles and practice of using transparent watercolor for the naturalistic representation of objects, people, and interior

and exterior space. Recommended: either ARCH 200 or ART 104.

ARCH 425 Life Cycle Assessment and Architecture (3) Explores use of life cycle assessment data and methods within design and construction practices to understand and reduce the environmental impact of buildings.

ARCH 426 Structural Unit Masonry (3) Tawresey Structural behavior and design of reinforced brick, tile, and unit concrete masonry structures. Prerequisite: CEE 377. Offered: jointly with CEE 455.

ARCH 430 Materials and Processes (3) Lectures, field trips, and laboratory sessions directed toward the nature, potentials, and limitations of a variety of materials (wood, metal, plastics, inorganic cementing materials, minerals, rocks, and clay) and the processes involved with their production, fabrication, and system compatibility.

ARCH 431 Environmental Control Principles (3) Daylighting of buildings, reducing noise and enhancing sound for communication, and regulating heat transfer for occupant thermal comfort; description of passive means for environmental control, including presentation of scientific explanations and design guidelines for utilizing these means; design guidelines are intended for use in the preliminary schematic design phase. Offered: AW.

ARCH 434 Color and Light (3) Lectures, demonstrations, exercises, and projects focusing on the use of color applied to the three-dimensional architectural context. Explores color theory with the multiple effects of changing light.

ARCH 435 Principles and Practices of Environmental Lighting (3) Perception-based approach to principles of natural and artificial lighting. Practical considerations of lighting involving environmental evaluations, calculations, and the use of lamps and fixtures. Sketch and model studies for applications. Impact of lighting design on energy conservation. Relation of lighting design process to architectural design concepts. Prerequisite: either ARCH 331 or ARCH 431.

ARCH 436 Building Acoustics (3) NW Description of principles and practices for manipulating and enhancing sound in buildings. Information about sound behavior and the organization of architectural elements (deployment of design features, including various geometries and materials) for the control of sound in enclosed spaces and between adjacent spaces.

ARCH 439 Architectural Lighting Design (3) Concentrates on the use of electric lighting and its effective integration in architecture and the built environment. Includes site visits, demonstrations, lectures, and projects. Prerequisite: ARCH 435.

ARCH 441 Visions of the Japanese House (3) Oshima Explores the origins, derivations, and permutations of the "Japanese house." Outlines underlying principles and paradigms of Japanese domesticity through history and traces its evolution through aspects ranging from the house's expression in media to its constructional materiality. Offered: A.

ARCH 442 Africa and Middle East Seminar (3) VLPA McLaren Advanced introduction to colonial and postcolonial architecture in Africa and the Middle East, beginning with the initial European colonization in the mid-nineteenth century. Provides a historical understanding of the formation of distinctive regional and/or national identities in the architecture of these regions. Offered: Sp.

ARCH 445 South Asian Architecture I (3) VLPA Prakash Advanced introduction to precolonial architecture and urbanism of South Asia. Using methodologies of culture studies, examines select Hindu, Buddhist, and Islamic case studies on a comparative genealogy.

ARCH 446 South Asian Architecture II (3) VLPA Prakash Advanced introduction to colonial and postcolonial architecture and urbanism of South Asia. Using methodologies

of culture studies, covers 1800 to present, emphasizing the years since India's independence in 1947.

ARCH 452 History of Architecture in Seattle and Environs (3) I&S Ochsner Historical development of architecture in Seattle and surrounding areas from the nineteenth century to the present, also touching on issues of urban design and historic preservation.

ARCH 453 Japanese Architecture (3) VLPA Survey of Japanese architecture from its origins to modern times. Although Shinto architecture, tea houses, gardens, and modern developments are discussed, the primary focus is on the development of Japanese Buddhist architecture. Recommended: some background in Japanese art, history, language, or literature. Offered: jointly with ART H 419.

ARCH 455 American Architecture (3) American architecture from indigenous Native American traditions to the present. Recommended: some background in the art, architecture, or history of the period. Offered: jointly with ART H 488.

ARCH 456 Nineteenth-Century Architecture (3) VLPA From late eighteenth century French rationalists, Neoclassicists, to fin de siècle Vienna and Paris. Includes theorists such as Ruskin, Viollet-le-Duc, and Semper; major movements, such as the Arts and Crafts, and the French Ecole des Beaux-Arts method of design. Recommended: some background in the art, architecture, or history of the period. Offered: jointly with ART H 490.

ARCH 457 Twentieth-Century Architecture (3) VLPA Architecture in the twentieth century, mainly in Europe and the United States. Traces roots of Modernism in Europe in the 1920s, its demise (largely in the United States) in the 1960s, and recent trends such as Post-Modernism and Deconstructivism. Recommended: some background in the art, architecture, or history of the period. Offered: jointly with ART H 491.

ARCH 458 Paris: Architecture and Urbanism (3/5) VLPA/I&S Spans the architectural history of Paris, from its Gallic, pre-Roman origins in the second century BCE through the work of twenty-first century architects. Focuses on changing patterns of the physical fabric of the city and its buildings, as seen within the context of the broader political, social, economic, and cultural history. Offered: jointly with ART H 494/JSIS A 433.

ARCH 459 Architecture Since 1945 (3) VLPA Theories and forms in architecture from the end of World War II to present. Includes new wave Japanese architects, recent Native American developments, and non-Western as well as Western trends. Recommended: some background in the art, architecture, or history of the period. Offered: jointly with ART H 493.

ARCH 460 Design Theory and Analysis (3) VLPA/I&S Problematical nature of philosophies of architecture; interaction of philosophical concepts and architectural form and expression. Fundamentals of architectural criticism.

ARCH 462 Spatial Composition in Architecture (3) Advanced introduction to compositional strategies in architecture. Drawing on a historical survey of the development of Western architecture, the seminar investigates different compositional strategies and their relationship to cultural values and systems of meaning. Intended as complement to the design studio.

ARCH 466 Gender and Architecture (3) VLPA/I&S Examines gender in the experience, practice, and theory of architecture and urban space with a focus on modern typologies: skyscraper, home, convent, bachelor pad, street, and closet. Draws from architectural and art history, social studies, design practice and theory, comparative literature, film studies, and queer theory. Offered: jointly with GWSS 466.

ARCH 468 Architecture Capstone Preparation (3) Preparation for the Architecture major capstone project. Offered: W.

ARCH 469 Architecture Capstone (6) Development of the capstone project for the Architecture major. Offered: Sp.

ARCH 475 Residential Architectural Practice (3) Lectures and exercises focused on the operation of a professional architectural practice specializing in residential and smaller-scale projects. Topics include: clients and program development, design strategies and space planning, site considerations, regulatory constraints, consultants, contractors, specialized construction methodology, and issues, ethics, and liability specific to residential project delivery.

ARCH 478 CAD and Working Drawings (4) Intensive introduction to computer-aided design systems for developing construction documentation (working drawings). Lectures and exercises focus on learning the methodology for using CAD to efficiently prepare working drawings, as well as discussions regarding industry-recognized standards and current technology used in the preparation of documentation. Prerequisite: ARCH 380; CM 313. Offered: ASpS.

ARCH 481 3D Modeling and Rendering (3) Lectures and weekly exercises focus on understanding and applying the underlying principles of 3D computer graphics and rendering software. Topics include user-interface, data creation and modeling, lighting models, smoothing, texture mapping, ray tracing, radiosity, animation, and solid modeling. Prerequisite: ARCH 380.

ARCH 482 Web Weaving (3) VLPA B. Johnson Examines the function, limitations, and uses of primary web technologies and fundamental website design and implementation. Participants develop hands-on design/build expertise for website design, implementation, and maintenance, using readily available tools and techniques. Looks beyond today and explores emerging Internet technologies. Offered: A.

ARCH 483 Design of Virtual Environments (3) Explores through a blend of technical exercises constructing computational artifacts, readings, and discussions of relevant literature, the possibilities of online virtual environments. Incorporates a term project or paper based on exercises and readings. Offered: W.

ARCH 484 Design Computing Seminar (3) Weekly colloquium and discussion forum. Discusses design computing research and report on ongoing project progress, with demonstrations and guest speakers. Explores design computing, design thinking and design process, and inventing new computer-aided tools for design. Offered: W.

ARCH 486 Algorithmic Geometry in Architectural Design (3) Introduction to design and implementation of parametric modeling of algorithmically generated geometries using computational elements and real-time computation. Introduces concepts related to computer programming, computational geometry, and 3D modeling with weekly exercises using 2D and 3D computer modeling frameworks, plus a term project. Requires significant amount of hands-on work.

ARCH 487 Fundamentals of Building Information Modeling (3) Introduces students to building information modeling and associated software tools. Students learn the fundamentals of working with BIM software by developing a project using both 3D parametric modeling and the 2D documentation skills essential to communicating ideas effectively in professional practice.

ARCH 489 Simulation Based Design (3) Focuses on computational simulation tools and techniques to evaluate the performance of a design or design alternatives, starting at earliest conceptual design phases to help architects make informed design decisions. Topics include solar, lighting, thermal, and acoustical analysis techniques and their applications.

ARCH 490 Architectural Studies Abroad - Special Topics (*, max. 24) Department-approved, systematic study offered as part of architectural study abroad programs.

ARCH 491 Architectural Studies Abroad - Representation (1-6, max. 12) VLPA Architectural sketching, drawing, mod-

eling, and other presentation techniques in contexts outside the United States.

ARCH 494 Architectural Studies Abroad - Culture (1-6, max. 12) VLPA Studies of language, art, food, music, and other activities that influence architectural and urban form in contexts outside the United States.

ARCH 495 Architectural Studies Abroad - History and Theory (1-6, max. 12) VLPA/I&S Examines history and theory of architecture in study abroad programs.

ARCH 496 Architectural Studies Abroad - Urban Fieldwork (1-6, max. 12) Analysis and interpretation of urban form and architectural contexts through direct observation in locations outside the United States.

ARCH 497 Architectural Studies Abroad - International Practice (1-6, max. 12) Observation and evaluation of architectural practices in contexts outside the United States through firm visits and guest presentations.

ARCH 498 Special Projects (1-12, max. 12) Instructor-initiated and department-approved systematic study and offering of specialized subject matter. Topics vary and are announced in preceding quarter.

ARCH 499 Undergraduate Research (1-6, max. 6)

ARCH 500 Architectural Design Studio I (6) Architectural design, with emphasis on development of professional skills in design synthesis; specifically the design of institutional buildings in response to a context significant for historical and urban characteristics. Analysis includes programming, typology, site and place, and influence of regulatory measures on building form. Concurrent with ARCH 590. Offered: A.

ARCH 501 Architectural Design Studio II (6) Architectural design, with emphasis on development of professional skills in design synthesis, specifically the unique qualities of materials, construction technology, and assembly details in the expression of architectural ideas. Analysis includes the influence of regulatory measures on building form. Concurrent with ARCH 570. Offered: W.

ARCH 502 Architectural Design Studio III (6) Architectural design, with emphasis on development of professional skills in design synthesis, specifically the comprehensive integration of building systems within an ordered design concept. Analysis includes the planning and integration of structural systems, building service systems, and building envelope design as an appropriate architectural expression. Concurrent with ARCH 591. Offered: Sp.

ARCH 503 Architectural Design Studio Options (6) Advanced architectural studios in general architectural design, in special projects examining particular architectural determinants, and in architectural research. Focus and format vary with instructor. Prerequisite: ARCH 502. Offered: AW.

ARCH 504 Architectural Design Studio Options (6) Advanced architectural studios in general architectural design, in special projects examining particular architectural determinants, and in architectural research. Focus and format vary with instructor. Prerequisite: ARCH 502. Offered: AWSp.

ARCH 506 Advanced Architectural Studies (6) Advanced experimental studies dealing with significant architectural relationships that involve scholarly investigation, development, and presentation of results. Offered: S.

ARCH 521 Structural System Design (3) Simonen Studies structural configuration and system selection for building design. Focuses on developing an understanding of structural material, element and system performance, and an ability to integrate structure and architecture to create efficient and elegant design solutions. Offered: A.

ARCH 525 Life Cycle Assessment and Architecture (3) Explores use of life cycle assessment data and methods within design and construction practices to understand and reduce the environmental impact of buildings.

ARCH 527 Introduction to Digital Design and Fabrication (3) Offers an introduction to digital design and manufacturing technologies, with an emphasis on developing appropriate strategies for their use in design and architecture. Students learn to use digital design software and digitally enhanced fabrication tools to support their design strategies. Offered: AW.

ARCH 528 Digital Design for Fabrication and Construction (3) Explores the rapid integration of fabrication, construction, and performance criteria early in the architectural design process, through the use of powerful digital tools. Students test advanced digital tools in architectural production and develop awareness and skills in integrated digital design, analysis, and prototyping. Offered: W.

ARCH 529 Advanced Digital Projects (3) Advanced topics for students who have completed one or more design computing courses and wish to develop a project further. Prerequisite: either ARCH 527 or ARCH 528.

ARCH 530 Integrated Building Systems (3) Miller

Discusses strategies for ordering separate and discreet building systems into integrated architectural schemes. Focuses on systems that affect architectural expression and resolution in buildings including: structural, environmental control, materials, and assembly with an emphasis on sustainable building design. Concurrent with ARCH 502. Offered: Sp.

ARCH 531 Active Control Systems for Building Operation (3) NW Heerwagen Electrical, mechanical (HVAC), plumbing, and fire safety systems for buildings. Descriptions of what these systems do, where they are used, how they are integrated into the overall building design; rules of thumb, design strategies, and short cuts for anticipating system design and use. Prerequisite: either ARCH 331 or ARCH 431. Offered: WSp.

ARCH 532 Construction Materials and Assemblies II (3) Lectures and readings pertaining to a survey of materials, assemblies, and techniques of assembly of concrete and steel frame, commercial exterior envelope, and interior partitioning building construction systems. Prerequisite: either ARCH 332 or CM 313. Offered: A.

ARCH 533 Advanced Environmental Systems (3) Focuses on computational simulation tools and techniques to evaluate the performance of a design or design alternatives, starting at earliest conceptual design phases to help architects make informed design decisions. Topics include solar, lighting, thermal, and acoustical analysis techniques and their applications. Offered: WSp.

ARCH 534 Green Technology (3) Heerwagen Examination and application of various resource-conserving building technologies, particularly within the context of the LEED Rating System. Principles and practices associated with the inclusion of these technologies in buildings.

ARCH 535 Daylighting Design Seminar (3) Focuses on theoretical and applied daylighting principles in conjunction with physical and digital analytical tools. Includes field assessment of constructed buildings and individual projects involving research and design for lighting and daylighting.

ARCH 536 Designing with Living Systems (3) Investigates an integrated approach to urban agriculture and building systems; looks at cyclical ecosystems intrinsically interconnected with buildings, urban infrastructure, and the constructed environment; establishes a thorough understanding of these productive, living systems, which are indispensable for architects and landscape architects in their pursuit of more sustainable design practices.

ARCH 537 Traditional Building Methods: New Adaptations (3) Explores recent developments in traditional building techniques, a resurgence of interest in handmade buildings, and the use of local materials in building construction. Also examines why these materials and methods are becoming critical to communities around the world, and how they can be optimized to meet twenty-first century requirements.

ARCH 538 Building Reuse Seminar: Investigating the Value of Existing Buildings (3) Investigates the repurposing of buildings as a resource and energy conservation strategy and as an alternative to demolition of existing buildings; discusses case study strategies for sustainable retrofits. Students critically observe, record, and analyze structures and discuss building reuse design in the context of sustainable environments.

ARCH 555 Seminar in American Architecture (5) *Clausen* Topics vary. Offered: jointly with ART H 592.

ARCH 556 The Arts and Crafts Movement and Its Legacies (3) *Ochsner* Historical development of the arts and crafts movement focusing primarily on its influence on American architecture from 1870 to the present.

ARCH 558 Seminar in Twentieth-Century Architecture (3/5) Specific focus changes from quarter to quarter. Prerequisite: graduate standing with background in art history, architecture, architectural history, or permission of instructor. Offered: jointly with ART H 591.

ARCH 559 American Utilitarian Architecture (3) Significant American environmental design efforts arising from utilitarian needs, e.g., factories, bridges, skyscrapers, and associated technical building innovations.

ARCH 560 Seminar on Architectural Theories (3) Recent developments in architectural theory, urban design theory, criticism, and the methodology of criticism.

ARCH 561 Urban Design Theory (3) Study of development of nineteenth- and twentieth-century urban design theories and parallel developments in architecture and urban planning. Theoretical premises are related to current practices of urban design in various sociopolitical contexts, European as well as American. Evolutionary nature of theory emphasized. Prerequisite: URBDP 479 or permission of instructor.

ARCH 563 Seminar in Architecture and Cultural Theory (3) Study of contemporary cultural studies and postcolonial writings in terms of their impact on architectural theory and practice. Topical seminar based on reading and individual research.

ARCH 564 Environmental Design and Well-Being (3) Analyzes how environmental design can promote well-being in natural systems and human life worlds. Explores current knowledge about climate change and organism-environment dynamics, theories of health and complexity, ideological barriers and the power of images, new materials, and "high-tech"/"low-tech" alternatives for ecological design and planning.

ARCH 567 Qualitative Research Methods (3) Qualitative research methods covering both the theoretical foundations and practical methodologies of traditional and innovative approaches, including cognitive mapping, open-ended interviews, ethnographic observation, hermeneutics, phenomenology, critical theory, communicative action, grass-roots empowerment, post-structuralism, and self-organization. Offered: jointly with URBDP 519.

ARCH 570 Design Development (3) *Miller* Lectures and case studies emphasizing the design development phase of architectural practice. Concurrent with ARCH 501.

ARCH 571 Professional Practice (4) Introduces the business and ethics of architectural design and building construction, while helping students explore their professional identities and make intentional choices about their career paths. Compares fundamentals of architectural practice against historical evolution of the field and speculation about its future. Offered: AW.

ARCH 574 Design and Construction Law (3) Legal issues arising from design and construction services, focusing on risk management and liability awareness. Topical areas include basic legal doctrines, the design professional/client relationship, contractor selection, the construction process, and professional practice problems. Emphasis on Washington State law. Offered: jointly with CM 500; A.

ARCH 578 Case Studies in Contemporary Architectural Practice (3) Presentations and discussions by local architectural firms examining the issues that influence building design and project delivery in contemporary architectural practice. Focuses on understanding the issues as opportunities rather than impediments to good design. Class visits a different architectural firm each week for an in-depth review of current projects.

ARCH 579 Technical Issues in Preservation Design (3) Issues, practices, and procedures involved in preservation and reuse of old and historic buildings. Technical and esthetic means by which practicing professionals approach the analysis, interpretation, and resolution of problems such work raises. Emphasis on recent and local projects and related experiences.

ARCH 581 Advanced Rendering (3) Provides an in-depth discussion and hands-on experience with technical and qualitative features of computer rendering. Students learn to generate digital images that can mimic the physical world and predict the final appearance of a design.

ARCH 582 Computational Lighting Design (3) Addresses the recent developments in lighting simulation, visualization, and per-pixel measurement techniques. Provides an understanding of the theoretical aspects of computer applications in lighting design; and the practical knowledge of tools that enhance the integration of the lighting analysis into architectural design processes.

ARCH 587 Theory of Design Computing (3) Examines the relationship between theory of design and computational tools for practice. Explores how the emergence of computers as a mainstream tool in design has already changed architectural practice. Discusses how, as with other technologies that revolutionized the practice of architecture, information technologies carry hidden implications about design process and products. Offered: A.

ARCH 588 Research Practice (3) Provides the opportunity for a guided preliminary exploration and refinement of a research topic, prior to thesis proposal. Weekly seminar meetings focus on student work with regular presentations and discussions. Offered: W.

ARCH 590 Urban and Preservation Issues in Design (3) Introduction to recent theory and practice in the fields of urban design and historic preservation primarily in North American urban contexts, including examples of recent projects presented by practicing professionals. Concurrent with ARCH 500.

ARCH 591 Architecture and Landscape (3) Advanced introduction to the relationships between buildings and places in the landscape with an emphasis on Western concepts of nature. A taxonomy of place as nature is developed. Explores ways in which the architect can design places that landscape taxonomy. Concurrent with ARCH 502.

ARCH 595 Thesis Research and Preparation (4) Develops skills for conducting master's thesis research, including writing a major portion of the thesis document. Engages students as a community of peers sharing ideas and resources for completing thesis work. Required for admission to the master's thesis design studio. Credit/no-credit only. Offered: Sp.

ARCH 596 Fieldwork in Professional Practice (*, max. 9) On-location study under the supervision of a practicing professional involved in an aspect of environmental design.

ARCH 597 Research Practicum (5) *Johnson, McLaren* Provides a mentored research opportunity where students apply their research and writing skills and knowledge of methods and theory to an advanced research topic. Offered: Sp.

ARCH 598 Special Topics for Graduate Students (1-6, max. 6) Systematic study and offering of specialized subject matter. Topics vary and are announced in the preceding quarter.

ARCH 599 Independent Thesis Research and Preparation (4) Participants identify a master's thesis research area,

articulate a specific question within the research area, find relevant literature and prepare an annotated bibliography, establish a research method and timetable, pursue preparatory research and analysis for the thesis project, and write, present, and defend a thesis proposal. Credit/no-credit only.

ARCH 600 Independent Study or Research (*-)

ARCH 700 Master's Thesis (*-)

Built Environment

410 Gould Hall

The PhD in Built Environment is a College-wide, interdisciplinary degree program housed within the College of Built Environments. The PhD program provides students a common core of substantial, integrated knowledge concerning the multi-faceted built environment and then offers areas of specialization in three discrete fields of knowledge and practice:

- Sustainable Systems and Prototypes (across a range of scales, from building elements and assemblages, to buildings, site, and neighborhood context, city, and region)
- Computational Design and Research (covering the spectrum of design, planning, and construction processes, practices, and pedagogy)
- History, Theory, and Representation studies (focusing on issues of regional-global modernity)

GRADUATE PROGRAM

Graduate Program Coordinator

410 Gould Hall, Box 355740

(206) 543-5996

bephd@uw.edu

Doctor of Philosophy

Admission Requirements

1. Three letters of recommendation (Please use the downloadable form.)
2. Curriculum vitae
3. An exhibit of work which best illustrates the applicant's interests and abilities in areas related to the built environment. This may be an essay, a paper, a publication, a report, or a project for which the applicant has had major responsibility. The exhibit is not returned and should fit in letter-size files.
4. Statement of Purpose
5. Graduate Record Exam (GRE) scores

Prospective international, immigrant, and permanent resident students whose native language is other than English and who have not received a bachelor's or master's degree from an accredited institution where the native language is English must submit a satisfactory TOEFL (Test of English as a Foreign Language) score. The minimum allowable TOEFL score is 500. Students admitted with scores below 580 are tested for English proficiency upon arrival and are required to complete any assigned ESL courses along with their regular academic program.

Program Requirements

90 credits minimum, to include:

1. Core courses (21 credits):
2. B E 551 (3), B E 552 (3), B E 553 (3)
3. B E 550 (6 quarters at 1 credit each)

4. Research methods and design: choice of 6 credits from list, including both qualitative and quantitative coursework
5. Specialization (minimum 30 credits): One of three fundamental areas (sustainable systems and prototypes; computational design and research; history, theory, and representation). Each student selects one of these areas, within which she or he takes advanced and specialized coursework and, eventually, conducts the dissertation research project. Each student must take 30 credits in the chosen area of specialization during the first several years in the program, before undertaking qualifying examinations. A broad selection of courses, both within the College of Architecture and Urban Planning and in other UW units, is available.
6. Examinations: The qualifying examination consists of written responses to three questions, followed by an oral examination on the material. The written and oral examinations are composed, conducted, and evaluated by the student's formally appointed dissertation committee.
7. Dissertation (30 credits): Involves 30 credits and concludes with a final oral defense.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

B E 498 Special Projects (1-12, max. 12)

B E 550 Colloquium-Practicum on Research-Practice and Teaching-Learning (1, max. 6) A synthetic and interdisciplinary forum for the presentation and peer critique of faculty and student research and practice projects, and a venue for pedagogical issues and skills for effective teaching and learning.

B E 551 The Contemporary Built Environment (3) Covers major or landmark cases of complex built environment projects, emphasizing the multiple dimensions involved and their interconnections.

B E 552 Theories of Knowledge and the Built Environment (3) Systematic examination of alternative epistemological frameworks applicable to studying the built environment; examinations of their differences and similarities and of the possibility of a comprehensive, pluralistic approach.

B E 553 Ethics in Practice, Research, and Teaching (3) Preparation for ethical challenges facing professional practice, research, and teaching in the built environment. Coverage of general and professional ethics, and examination of principles and rules and application through case studies.

B E 597 Directed Readings (*, max. 30) Intensive reading in the literature of the built environment, directed by members of doctoral Supervisory Committee. Credit/no-credit only. Offered: AWSpS.

B E 598 Special Topics (1-6, max. 15) Systematic study of specialized subject matter. Topics vary depending on current interest and needs, and are announced in the preceding quarter.

B E 600 Independent Study or Research (*) Offered: AWSpS.

B E 800 Doctoral Dissertation (*-) Offered: AWSpS.

Construction Management

120 Architecture

Construction management is a diverse discipline focused on the delivery of projects that compose the world's built environment. Included are the determination of project

requirements, management of design, procurement of materials, and management of the construction of the project within cost, time, and design parameters. In terms of dollar value output, the construction industry is the largest single production activity in the U. S. economy -- accounting for almost 10 percent of the gross national product. The construction industry is heterogeneous and enormously complex. The major classifications of construction differ markedly from one another: residential, commercial, industrial, and infrastructure, as well as specialties such as electrical, mechanical, framing, excavation, and roofing. Construction management is the study of how projects are conceived, designed, and built; the types of materials and methods used; techniques for estimating the cost of construction; design and contract law; construction accounting; oral and written communications; safety requirements; project planning and project management.

UNDERGRADUATE PROGRAM

Adviser

120 Architecture, Box 351610

(206) 543-6377

uwcm@uw.edu

The Department of Construction Management offers the following program of study:

- The Bachelor of Science in Construction Management degree

Students take the first two years of study as an undeclared major in the College of Arts and Sciences or a community college, completing program prerequisite requirements. Upon admission to the major, students take the prescribed curriculum shown below.

Bachelor of Science

Suggested First-and Second-Year Courses: M E 123; PHYS 114, PHYS 115, PHYS 117, and PHYS 118; 10 credits of economics; ENGL 131, ENGL 281; ESS 101; MATH 112 or MATH 124; ACCTG 215 and ACCTG 225, CM 250, COM 220, MGMT 200, QMETH 201; chemistry or environmental-science courses.

Department Admission Requirements

Applicants are considered for autumn admission only. Admission is competitive. There are three admission groups: Freshmen Direct, Early Admission (EA), and Upper-Division Admission (UA). Consult department website for more information.

Freshman Direct Admission

The department enrolls a small number of students each year directly out of high school, prior to their completion of any university-level prerequisites. Freshman applicants to the University listing construction management as their intended major are automatically considered. Admission is offered to students with exceptionally competitive academic records, including but not limited to high school GPA and SAT or ACT scores. Freshman Direct students work with the construction management adviser to plan their first two years of coursework before beginning the standard curriculum. Such students are eligible to join the construction management student organizations, apply for scholarships, and participate in student competitions.

Students admitted under the Freshman Direct Admission program must complete all prerequisite course requirements listed under Upper-Division Admission as well as all major requirements to earn their degrees.

Early Admission (EA)

Students may also apply to the department in spring of their freshman year to enter as part of the Early Admission (EA) group in their sophomore year. This admission path is open to students who began their studies at UW as freshmen, have been enrolled no more than three quarters, and have completed at least 27 credits at UW (25 of the 27 UW credits must be numerically graded). Courses completed prior to applying must include: MATH 112 (or MATH 124 or Q SCI 291), PHYS 114 and PHYS 117 (or PHYS 121), and ECON 200. Other courses from the list of upper division prerequisites may be taken to complete the minimum 27 credits.

Application deadline for Early Admission is April 1. Admission decisions are based on an applicant's academic performance and potential, extent and quality of relevant experience, apparent attitude, and personal motivation. Completion of prerequisite requirements does not guarantee admission and all prerequisite requirements must be completed by the April 1 deadline.

Students admitted under the Early Admission program must complete all prerequisite course requirements listed under Upper-Division Admission as well as all major requirements in order to earn their degrees.

Upper Division Admission (UA)

Prerequisite courses: Minimum 88 credits in the following categories (courses must be completed by the beginning of autumn quarter for admission that quarter):

1. Construction Science: M E 123.
2. Business and Management: ACCTG 215 and ACCTG 225; MGMT 200.
3. Individuals & Societies (I&S): 10 credits of economics; 5 additional I&S credits from UW Areas of Knowledge list (CM 250 recommended).
4. Natural World (NW): PHYS 114 and PHYS 117 (or PHYS 121), and PHYS 115 and PHYS 118 (or PHYS 122); MATH 112 (or MATH 124 or Q SCI 291); ESS 101; QMETH 201 (or STAT 220 or STAT 311); 10 additional NW credits from UW Areas of Knowledge list (chemistry or environmental studies recommended).
5. Language Skills: 5 credits from English composition list; 5 credits from "W" courses or English composition list (ENGL 131 and ENGL 281 recommended).
6. Visual, Literary & Performing Arts (VLPA): COM 220; 5 additional VLPA credits (from UW Areas of Knowledge list).

Admission to the major is competitive. Admission decisions are based on an applicant's academic performance and potential, extent and quality of relevant experience, apparent attitude, and personal motivation. Completion of prerequisite requirements does not guarantee admission. Completion of prerequisite requirements is not required in order to apply, but is required prior to being admitted in autumn quarter.

Departmental application deadline: April 1, for the following autumn quarter. Selection for acceptance into the program is made by early May, and all applicants are notified shortly thereafter. Because each application is valid only once, a student whose application for admission is denied must reapply if consideration is desired in any subsequent year.

Major Requirements

92 credits as follows:

1. Foundation Courses (77 credits): ARCH 320, ARCH 321, ARCH 322; MGMT 300; CM 310, CM 311, CM 312, CM 313, CM 321, CM 322, CM 323, CM 331, CM 332, CM 333, CM 334, CM 410, CM 411, CM 412, CM 421, CM 422, CM 423, CM 432, and CM 433

2. Construction/Construction Science Electives (6 credits): Two of the following: CM 404, CM 414, CM 415, CM 420, CM 425, CM 430, or ARCH 420
3. Approved Electives (4 credits): Upper-division construction-related courses. Courses offered by the College of Built Environment or by the Foster School of Business are preferred. Courses not in these two colleges require adviser approval. (CM 413 recommended.)
4. Capstone Experience (5 credits): Minimum 2.0 in CM 431.
5. Additional Degree Requirement: Minimum 2.50 cumulative GPA in upper-division college courses completed in the College of Built Environments

Dual-Degree Program

For requirements of the dual-degree program in architectural studies and construction management, see the Architecture section.

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, contact the departmental adviser or refer to the department website.

Student Outcomes and Opportunities

- **Learning Objectives and Expected Outcomes:** The study of construction management involves an interdisciplinary curriculum that contains a mix of technical, managerial, and business courses to provide graduates the essential skills needed to be successful in the construction industry. Oral and written communication skills are strengthened through written requirements and oral presentations. Construction management skill sets include the ability to read and interpret construction contract documents; the ability to determine appropriate methods for project construction and the proper sequence for each associated construction task; the ability to estimate project costs and time requirements; the ability to evaluate project site safety hazards and take action to minimize the potential for accidents occurring; an understanding of the legal framework associated with contract construction; and the ability to manage the myriad activities associated with constructing a project. Graduates pursue careers with construction companies, design firms, public agencies, homebuilders, consulting firms, real estate developers, and construction material suppliers.
- **Instructional and Research Facilities:** The Built Environments library (located on the third floor of Gould Hall) houses construction management books and periodicals. Additional materials are located in the Engineering Library and the Foster Library (Business School). College resources include a 30-work-station computer laboratory in the basement of Gould Hall.
- **Honors Options Available:** For Interdisciplinary Honors, see University Honors Program.
- **Research, Internships, and Service Learning:** An internship is required for completion of the degree program. Every student is encouraged to seek summer employment in the construction industry, to provide a taste of real-world experience and an opportunity to work for a construction firm. While the department seeks to identify opportunities for internship positions, the responsibility for securing a position rests with each student.
- **Department Scholarships:** A limited number of scholarships are available to eligible students.
- **Student Organizations/Associations:**
 - *Sigma Lambda Chi* is a national student honor society for recognition of outstanding students majoring in construction management. Membership is offered

only to those students in the top twentieth percentile of their class. Each year the student chapter conducts community service activities.

- *Associated Students in Construction (ASIC)* is an umbrella organization for several student chapters of national organizations: Associated General Contractors of America, National Association of Home Builders, Mechanical Contractors Association of America, and the National Electrical Contractors Association. Activities include professional guest lectures, field trips, attendance at professional meetings and seminars, and community service.

GRADUATE PROGRAM

Graduate Program Coordinator

120 Architecture Hall, Box 351610

(206) 616-1917

Master of Science in Construction Management

Admission Requirements

1. Baccalaureate degree (BS or BA) in civil engineering, construction management, building technology, architecture, or similar field from an accredited college or university in the United States, or its equivalent from a foreign institution. Students with undergraduate degrees in an area other than construction management or building technology must demonstrate an understanding of estimating, project planning and control, and project management either by transcript, validation examination, or successful completion of the following courses: CM 410; CM 411; CM 421.
2. Minimum 3.00 GPA, based on last 60 graded semester hours or last 90 graded quarter hours of undergraduate and graduate study.
3. Graduate Record Examination (GRE) scores
4. Statement of goals and objectives
5. Letters of recommendation
6. International applicants whose first language is not English must submit a valid Test of English as a Foreign Language (TOEFL) or Michigan Language Test (MLT) score. A minimum score of 580 (TOEFL) or 237 (TOEFLC) or 90 (MLT) is required for admission.

Degree Requirements

45 credits, as follows:

1. Core Courses (9 credits): CM 500 (3), CM 535 (3), CM 575 (3)
2. Construction Management Elective Courses (15-21 credits): 15 to 21 credits of the following: CM 505 (3), CM 510 (3), CM 515 (3), CM 520 (3), CM 525 (3), CM 530 (3), CM 540 (3), CM 545 (3), CM 550 (3), CM 555 (3), CM 565 (3), CM 570 (3), CM 580 (3), CM 582 (3), CM 584 (3), CM 586 (3), CM 588 (3), CM 590 (2), CM 598, B E 551 (3), B E 552 (3), B E 553 (3)
3. General Elective Courses (12 credits): Other graduate-level courses approved by adviser.
4. Thesis or Research Paper (3 or 9 credits): Research paper -- CM 600 (3); thesis -- CM 700 (9)

Graduate Program in Construction Engineering

Students who complete this online program earn either a Master of Science in Construction Management or a Master of Science in Civil Engineering.

Admission Requirements

1. For construction management, a BS degree in construction management or civil engineering, or other degree with appropriate courses.
2. 3.00 GPA, based on last 60 graded semester or 90 graded quarter credits of undergraduate and graduate study.
3. GRE scores.
4. Statement of goals and objectives.
5. Letters of recommendation. International applicants must demonstrate English language proficiency.

Degree Requirements

45 credits, as follows:

1. Heavy Construction Project Management (12 credits): CM 520, CM 580, CM 582, CM 588
2. Infrastructure Construction (12 credits): CM 584, CM 586, CEE 595, CM 596
3. Other Required Courses (17 credits): CM 500, CM 525, CM 590, CEE 552, CEE 592, CEE 594
4. Graduate Research Report (4 credits)

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

CM 250 Construction and Culture (5) I&S A. *HOLM* Evolution of modern building construction with emphasis on the relationship between the projects built over time and the people who built them. Focuses on the development of building technology, equipment, and materials used by Western civilizations. Offered: W.

CM 301 Construction Communications (4) Applies business writing to the construction industry. Focuses on planning, writing, and editing documents most critical to a construction manager's professional success. Offered: AW.

CM 310 Introduction to the Construction Industry (3) G. *MIGLIACCIO* Introduction to the construction process, including general overview of organization, relationships, practices, terminology, project types, procurement methods, industry standards, contract documents, and career opportunities. Offered: A.

CM 311 Construction Documents (2) Introduction to construction plans and specifications with emphasis on reading and interpreting them. Focuses on architectural/engineering drawings and associated specifications used in building construction. Prerequisite: CM 310; CM 313, which may be taken concurrently. Offered: A.

CM 312 Construction Accounting (3) Introduction to accounting for the contractor, placing emphasis on the analysis and use of financial statements and a job cost accounting system. Offered: A.

CM 313 Construction Methods and Materials I (4) Introduction to basic building materials, with emphasis on techniques for assembly and utilization in residential and light construction, including materials such as concrete, brick, and wood. Offered: AS.

CM 320 Construction Contract Documents (3) Introduction to working drawings, specifications, and other documents designed to enable the student to read and interpret complete set of contract documents for residential and light commercial projects. Emphasis on the organization and uses of architectural/engineering drawings and specifications in the construction process. Offered: S.

CM 321 Mechanical Systems in Buildings (3) Introduction to building heating, cooling, plumbing, and fire protection systems including aspects of design, construction, estimating, and problem solving. Offered: W.

CM 322 Electrical Systems in Buildings (3) Introduction to electrical construction including electrical distribution from generation to consumption, terminology, equipment and applications, electrical contract documents and estimating, and electrical project management theory and practice. Offered: W.

CM 323 Construction Methods and Materials II (5) Analysis of building methods for structural, non-structural, and design and use of temporary structures including method selection, sequencing, and coordination of specialty trades in commercial and industrial construction. Offered: W.

CM 331 Construction Estimating I (4) Introduction to the principles and techniques of estimating construction costs, with emphasis on quantity take-off and pricing elements of work. Prerequisite: CM 323. Offered: Sp.

CM 332 Construction Equipment Management (3) G. MIGLIACCIO Study of the basic principles, practices, and techniques used in the construction industry for selecting and managing construction equipment. Focuses on understanding the time value of money, estimating equipment ownership and operating costs, selecting the proper equipment for specific construction tasks, and estimating equipment production. Offered: Sp.

CM 333 Construction Safety (3) K. LIN Explanation of requirements of the Occupational Safety and Health Act and other related federal and state legislation as applied to the building construction industry. Standards for accident prevention, hazard identification, and responsibility for compliance emphasized. Offered: A.

CM 334 Construction Surveying (2) D. JACOBSON Introduction to construction surveying including layout of construction features, distance and elevation measurement, and use and care of surveying equipment. Offered: Sp.

CM 340 Sustainable Building Design and Construction Practices (3) Examines sustainable standards for design and construction of commercial and institutional buildings focusing on environmental, economic, and social benefits of sustainable buildings. Offered: W.

CM 404 Integrated Design/Build Studio (6) C. DOSSICK Study of the design/build process with emphasis on the synthesis of design and construction considerations. Focuses on developing design and construction concepts to meet program requirements specified in case studies. Offered: jointly with ARCH 404; W.

CM 410 Construction Estimating II (5) Principles and techniques for estimating commercial construction projects including a mock bid day exercise on a commercial construction project. Prerequisite: CM 331; CM 332. Offered: A.

CM 411 Project Planning and Control (3) A. ABDEL AZIZ Introduction to the basic principles, techniques, and practices used as tools by contractors to plan, schedule, and control costs on building construction projects. Prerequisite: CM 331. Offered: A.

CM 412 Construction Practice (3) J. SHAIMAN Introduction to challenges of managing a construction organization. Focuses on ethical behavior, organizational behavior, human resources management, marketing, financial management, and risk management. Prerequisite: CM 421. Offered: Sp.

CM 413 Competitive Business Presentations (1) C. DOSSICK Study and development of skills needed to develop and deliver professional construction management presentations. Includes a series of workshops and practical exercises in construction presentation skills, teamwork, and leadership. Offered: A.

CM 414 Virtual Construction (3) C. DOSSICK Examines the use of building information models for managing the construction process and facilitating collaboration among project participants. Offered: A.

CM 415 Heavy Construction Practices (3) J. SCHAUFELBERGER Introduction to heavy construction with emphasis on highway and bridge construction. Topics include: con-

tract analysis, work breakdown, equipment selection, unit-price cost estimating, site logistics planning, and project scheduling. Prerequisite: CM 332. Offered: A.

CM 416 Residential Project Development (3) Studies the financial, technical, and managerial activities as well as the environmental impact regulations and studies associated with the development of residential projects, including the business and construction practices and marketing strategies needed for a successful project. Offered: A.

CM 420 Temporary Structures (3) S. DANIALI Study of temporary structures used to support construction operations such as concrete formwork, scaffolding systems, shoring systems, cofferdams, underpinning, slurry walls, and construction dewatering systems. Prerequisite: ARCH 322. Offered: Sp.

CM 421 Project Management I (3) Introduction to the organization, management, and administrative functions on construction projects including a hands-on and extensive case study of a commercial construction project, cost control, and introduction to the concepts of Value Engineering, partnering, and Total Quality Management. Prerequisite: CM 410; CM 411. Offered: W.

CM 422 Computer Applications in Construction (2) A. ABDEL AZIZ Introduction to the use of automated programs for planning, scheduling, and controlling construction projects. Focuses on the use of Primavera Project Planner software. Prerequisite: CM 411. Offered: W.

CM 423 Construction Law (3) A. TRAMOUNTANAS Legal issues arising from design and construction services, focusing on risk management and liability awareness. Topical areas include basic legal doctrines, the design professional/client relationship, contractor selection, the construction process, and professional practice problems. Emphasizes Washington state law. Prerequisite: CM 421. Offered: Sp.

CM 425 Concrete Technology (3) K. NEMATI Introduction to the properties and behavior of concrete. Focuses on uses of concrete as a building material and new techniques for concrete construction. Offered: W.

CM 430 Building Code and Environmental Regulations (3) Introduction to the permit process, life-safety requirements, and environmental regulations for designs and construction of buildings as established by the national and local jurisdictions. Prerequisite: ARCH 322. Offered: Sp.

CM 431 Project Management II (5) Capstone project using case studies to apply skills, knowledge, techniques, and concepts developed in prior courses. Emphasis on the concept of integrated project management, including cost estimating and bidding, scheduling, cost control, safety, project organization, and documentation. Prerequisite: CM 421. Offered: Sp.

CM 432 Soils and Foundations (3) S. DANIALI Origin, classification, and physical properties of soil as used in engineering and construction applications, together with loads and stresses of soil on, and from, the more common types of engineering structures. Prerequisite: ARCH 322; CM 323. Offered: W.

CM 433 Construction Labor Relations (3) E. KOMMERS Introduction to construction labor topics, including labor-management organization, legislation, and regulation, collective bargaining, and job site administration. Offered: W.

CM 450 Construction Project Management (5) A. ABDEL AZIZ Examines management of construction projects focusing on construction contracting, cost estimating, project scheduling, and resource management. Offered: S.

CM 481 Facility Life Cycle 1: Planning (3) Introduction to facility management. First in sequence of three built around the principle of the facility life cycle. Defines key terms. Examines topics such as ethics, business context, budgets, cost analysis, and strategic planning. Students work in online teams to develop a course-final project.

CM 482 Facility Life Cycle 2: Design and Construction (5) Second in sequence of three built around the principle of

the facility life cycle. Covers design basics, cost estimates, building materials, project management, and construction administration. Students establish a mentor relationship with a professional facility manager and interview three guest speakers, experts in their fields. Offered: A.

CM 483 Facility Life Cycle 3: Relocation and Operational Issues (4) Final in sequence of three built around the principle of the facility life cycle. Provides an overview of issues related to facility operations and maintenance, including occupancy and start up, inventory and staff management, relocation, disaster planning, emergency preparedness, and security. Offered: W.

CM 498 Special Topics (1-10, max. 12)

CM 499 Undergraduate Research (*, max. 12) Individual or small-group studies. Students may select topics with approval of faculty sponsor and department.

CM 500 Design and Construction Law (3) Legal issues arising from design and construction services, focusing on risk management and liability awareness. Topical areas include basic legal doctrines, the design professional/client relationship, contractor selection, the construction process, and professional practice problems. Emphasis on Washington State law. Offered: jointly with ARCH 574; A.

CM 510 Advanced Construction Techniques (3) C. NEMATI Study of techniques and practices used in complex construction projects, including industrial and high-rise structures, building renovation, and tenant improvements. Offered: A.

CM 515 Innovative Project Management Concepts (3) C. DOSSICK Examination of innovative techniques for planning and managing construction projects including use of time-phased, three-dimensional Building Information Models; sustainable construction techniques; and web-based project management tools. Offered: W.

CM 518 Lean Construction (3) Y. KIM Examines the application of lean production management concepts to the management of construction projects. Offered: Sp.

CM 520 Construction Procurement Systems (3) Study of the different methods used in the procurement and delivery of projects in the construction industry including lump sum, unit price, cost-plus, design-build, and construction management contracts. Offered: A.

CM 525 Cost Analysis and Management (3) Y. KIM Study of cost management procedures applicable to the building process from the conceptual phase through owner operations, including conceptual estimating, project cost analysis and control, and value engineering and life-cycle costing. Offered: W.

CM 530 Project Economics and Risk Analysis (3) A. ABDEL AZIZ Studies the process for delivery of public-private infrastructure projects and risk analysis techniques used in economic/financial project studies. Focuses on understanding public-private project delivery systems, feasibility studies, project financial and economic modeling, and quantitative risk analysis techniques. Offered: Sp.

CM 535 Research Methods in Construction (3) K. LIN

Examination of research methods used in construction studies. Includes an overview of the research process, planning of a successful research endeavor, literature review, qualitative and quantitative research, ethics in research and publishing, and various research methodologies. Offered: W.

CM 540 Sustainable Construction (3) W. BENDER

Study of sustainable construction techniques and best practices. Focuses on use of U.S. Green Building Council's Leadership in Energy and Environmental Design standards to evaluate alternatives and select techniques for constructing sustainable projects. Offered: W.

CM 545 Real Estate Development (3) A. HOLM

A study of the technical issues involved in developing real-estate projects. Tracks project development from initial

conception through closing of the sale. Emphasizes the steps and processes involved in pursuing, analyzing, and closing a real-estate purchase. Offered: S.

CM 550 Residential Project Development (3) Study of the financial, technical, and management activities and environmental impact regulations and studies associated with the development of residential projects, including business and construction practices and marketing strategies for continued profitable operation of a residential construction firm. Offered: S.

CM 555 Construction Firm Management (3) Management of construction company including organization, corporate structure, operation procedures, marketing, and human resources management. Emphasis on safety and loss prevention management, insurance and risk management, financing, accounting, marketing construction services, and bonding requirements for construction company. Other topics include individual and corporate planning and process of strategic planning. Offered: W.

CM 560 Design-Build Project Management (3) Examines the design-build process used for the delivery of construction projects. Involves analysis of project owner requirements and development of a written proposal for design and construction. Offered: Sp.

CM 565 Managing International Projects (3) *K. LIN* Study of processes involved in the selection, acquisition, and management of international construction projects. Emphasis is placed on examining common problems associated with managing construction projects outside the United States, identifying risks involved, and discussing possible solutions. Offered: S.

CM 570 Facilities Management (3) *B. EMAM* Major issues involved in facilities management: facilities planning, financial planning, real estate management, interior space planning and management, facilities operation and maintenance, and emergency preparedness. Offered: Sp.

CM 575 Leadership in Construction (3) *A. HOLM* Studies leadership principles applicable to the construction industry. Addresses both organizational leadership and leadership of construction processes. Offered: A.

CM 580 Temporary Structures (3) *K. NEMATI* Study of materials, methods, and techniques associated with temporary structures used in various construction operations, such as concrete formwork, scaffolding, underpinning, cofferdams, slurry trenches, earth-retaining structures, and dewatering systems. Offered: Sp.

CM 582 Heavy Construction Estimating (3) *A. ABDEL AZIZ* Study of the principles used in developing cost estimates for heavy construction projects. Includes interpretation of contract documents, quantity take-off, pricing, and preparation of unit-price bid documents. Emphasizes developing cost estimates for highway projects. Offered: S.

CM 584 Marine Construction (3) *S. DANIALI* Study of the materials, methods and techniques associated with construction of projects in marine environments, including the impact of site conditions on the selection of appropriate construction techniques. Emphasizes equipment and crew selection, productivity and cost estimation, and construction sequencing. Offered: A.

CM 586 Utility Systems Construction (3) *W. BENDER* Study of the materials, methods, and techniques associated with construction of major utility systems, such as water, sewer, communications, electrical or natural gas. Includes construction of central utility plants as well as major distribution and collection systems. Offered: Sp.

CM 588 Construction Operations and Productivity (3) Study of heavy construction operations with emphasis on productivity enhancement focusing on an integrated approach to planning, modeling, analysis, and design of construction operations, and the use of simulation models and other analytical tools. Offered: W.

CM 590 Research Methods in Construction Engineering (2) *J. SCHAUFELBERGER* Study of the academic research process. Includes development of a research proposal, review of relevant literature, selection of research methodology, collection of data, data analysis, and preparation of research report. Offered: W.

CM 598 Special Topics (1-6, max. 6) Systematic study and offering of specialized subject matter. Offered: AWSpS.

CM 600 Independent Study or Research (*-) An in-depth independent investigation of some facet of construction management. Offered: AWSpS.

CM 700 Master's Thesis (*-) Offered: AWSpS.

Landscape Architecture

348 Gould

Landscape architecture is a professional design discipline that addresses both the built and natural environments. It focuses on the design, analysis, and planning of outdoor spaces across a wide range of scales, with the intent of creating places that are both meaningful and functional. Landscape architects design everything from infrastructure elements, such as roadways, drainage systems, and parks, to prominent cultural monuments and gardens for public and private housing units. The education of a landscape architect includes aesthetic design skills, the development of social and environmental ethics, technical design skills, knowledge of a wide range of natural processes, an awareness of design history, and skills for working with other people. At the University of Washington, the focus is on urban ecological design education, which allows students to make a difference in the future of cities and urban regions all over the world.

UNDERGRADUATE PROGRAM

Adviser

348 Gould, Box 355734

(206) 543-9240, (206) 685-4486

belarc@uw.edu

The Department of Landscape Architecture offers the following programs of study:

- The Bachelor of Landscape Architecture (BLA) degree
- A minor in urban ecological design
- Certificates in Urban Design and Historic Preservation (see College of Built Environments)

Bachelor of Landscape Architecture

Department Admission Requirements

Core courses within the department form a seven-quarter curriculum designed to start autumn quarter of the junior year. Students take a sequence of seven studios, other sequential skills-based courses, theory courses, and directed electives. Admission is competitive. Completion of the requirements listed below does not guarantee admission. Admission is based on academic record, a portfolio of creative work, three letters of recommendation, and other application materials. Refer to the department's website, <http://larchwp.be.washington.edu/> to select "undergraduate program" link from the "admissions" bar for application materials and detailed information on admission, prerequisites, and required coursework.

1. Minimum 70 credits to include:

- a. Departmental Pre-professional Requirements (16 credits): L ARCH 300* (usually offered autumn and summer quarters), L ARCH 352 (autumn quarter), L ARCH 353 (winter quarter)

- *Transfer students: These three courses are available and may be taken through the University's Professional and Continuing Education unit prior to admission to the UW.

b. General Education Coursework: minimum 60 credits to include 5 credits of English composition; 4-5 credits of Quantitative and Symbolic Reasoning; and 50-51 credits selected within the following Areas of Knowledge: Visual, Literary, & Performing Arts (20 credits); Individuals & Societies (20 credits); Natural World (20 credits), of which one course must fulfill prerequisite requirement for ESS 315/ENVIR 313 or ESS 301; plant biology class recommended.

- *L ARCH 300 can be counted toward General Education requirements. Other L ARCH courses which are not required within the BLA program or as admission requirements also may be counted for General Education requirements. Students planning to complete the degree in seven quarters should complete all departmental General Education requirements prior to starting the degree.

2. Application Deadline: Complete applications are due by 5 p.m. on the first day of spring quarter for the following autumn quarter. Students are not admitted at other times. Applications must include the BLA application materials. Students should apply during their second year to make satisfactory progress toward the degree.

Program Requirements

Minimum 182-183 credits, to include:

General Education Requirements (69-70 credits): L ARCH 300 and other L ARCH courses which are not requirements either within the BLA program or as prerequisites may count toward I&S/NW/VLPA requirements.

1. Written and Oral Communication (5 credits): one 5-credit English composition course from the University list. 10 additional writing credits are required, but can be met by major core courses.
2. Visual, Literary, and Performing Arts (VLPA) (20 credits): L ARCH 300; 14 additional VLPA credits; drawing class recommended
3. Individuals & Societies (I&S) (20 credits)
4. Natural World (20 credits): one course listed as prerequisite requirement for either ESS315/ENVIR 313 or ESS 301; additional NW credits to total 20 credits; plant biology class recommended
5. Quantitative and Symbolic Reasoning (4-5 credits)

Major requirements (minimum 113 credits)

1. Studio Classes: L ARCH 301, L ARCH 302, L ARCH 303, L ARCH 402, L ARCH 403, L ARCH 474, L ARCH 475
2. Planting Design: L ARCH 424
3. History: L ARCH 352 and L ARCH 353
4. Theory: L ARCH 341, L ARCH 361, L ARCH 363
5. Graphics: L ARCH 411, L ARCH 440, L ARCH 441
6. Professional Practice: L ARCH 473
7. Construction: L ARCH 331, L ARCH 332, L ARCH 433
8. Soils: L ARCH 432 or other course chosen from approved list maintained by department
9. Plant Identification: either BIOL 331/ESRM 331, BIOL 317, or equivalent course approved by department
10. Managing Plants: either ESRM 473, ESRM 479, or ESRM 480
11. Geology: Either ESS 301 or ESS 315/ENVIR 313
12. Directed Electives to bring major total to 113 credits, chosen from approved lists maintained by the department in the following areas: 3-5 credit course in environmental history; two 3-5 credit courses in ecology and forestry; 3-5 credit course in legislation; 3-5 credit

course in soils; 3-5 credit course in urban design and planning

Minor

Minor Requirements: Minimum 25 credits, consisting of 20 credits of L ARCH courses open to non-majors; 5 credits of courses 200 level and above from within the College of Built Environments or from ESRM or GEOG courses; 2.0 minimum grade in all courses counted toward the minor

Student Outcomes and Opportunities

- **Learning Objectives and Expected Outcomes:** The BLA program provides a professional, accredited degree which enables graduates to practice successfully in design firms, nonprofit organizations, and public agencies. Building from a liberal arts foundation, the program focuses on developing design knowledge, skills, and abilities through a sequence of nine environmental- and community-based design studios.

The goals of the program are to provide students with a broad academic and professional exposure to landscape architecture and design so their creative potential and professional growth are realized, and so they may become leaders in the field. The education includes learning to conceptualize and design through practice on studio projects; fostering creativity; developing graphic, written, and verbal communication skills; facilitating cognitive abilities; and developing applicable computer skills in the design process. Studios use individual, team-oriented, and interdisciplinary projects to develop strong interactive and evaluative skills. Studio education applies knowledge gained in lecture courses which include historic and contemporary concepts in landscape architecture, design theory, site planning, construction, and communications, as well as elective courses in allied disciplines. The studio sequence addresses projects from detailed to neighborhood scales, varied contexts, and with diverse cultures. Overall, the program focuses on the application of ecological design strategies to urban and urbanizing areas, which characterizes the department's focus on urban ecological design.

- **Instructional and Research Facilities:** The Bachelor of Landscape Architecture degree is structured around studio classes augmented by lecture and skills-oriented courses. The program affords some opportunities for independent studies and work in professional settings, beyond the minimum requirements for the major. Departmental courses are complemented by elective courses from other areas, including urban horticulture, soils, geology, urban design and planning, botany, and ecology.

Landscape architecture studio classes are led by departmental faculty or members of the professional community. Studio classes may be taught jointly with faculty from other disciplines. Studio classes address specific areas of inquiry including basic design principles and processes, planting design, materials and craftsmanship, landscape planning for parks or natural areas, neighborhood and civic-space design, urban landscape design, ecological restoration, and culturally-based design. A capstone studio requires students to integrate their knowledge of design theory, practice, and construction in a design-build project for a local community. The department regularly offers Study Abroad programs as well as opportunities to work with local communities and public agencies.

- **Honors Options Available:** For Interdisciplinary Honors, see University Honors Program.
- **Research, Internships, and Service Learning:** Departmental lecture courses address the functioning of natural systems, site planning issues, computer applications, and cultural and sociological forces that influence the profession's work. Advanced studio courses,

including the capstone studio, typically provide service learning experiences in a particular community context. In addition to required coursework, the program encourages students to pursue personal interests through directed and independent study within and beyond the department. Students are encouraged to gain real-world experience through a practicum with professional firms, organizations, or agencies.

- **Department Scholarships:** Limited availability.
- **Student Organizations/Associations:** Student chapter, Washington Chapter of the American Society of Landscape Architects

GRADUATE PROGRAM

Graduate Program Coordinator

348 Gould Hall, Box 355734

(206) 543-9420

cauplarc@uw.edu

Master of Landscape Architecture

The Master of Landscape Architecture program, accredited by the American Society of Landscape Architects, is a professional program that offers training in design and inquiry. The design studios form the core of this program, which is supported by rigorous independent investigation in seminars and in a thesis project. Students are expected to develop a specialty within the discipline, under the professional guidance of the faculty. The curriculum emphasizes the following:

Urban Ecological Design. The rapidly changing environment of the Pacific Northwest offers an excellent opportunity for courses and thesis projects to explore the connections between culture and nature and to test ideas for how social and spatial conflicts between development and conservation might be addressed. Faculty are particularly interested in the changing roles of familiar urban and suburban landscapes, as these areas are increasingly expected to function as part of an ecological infrastructure. At the same time, diverse human cultural communities have developed with differing perceptions of and values for these changing landscapes. The department offers students the opportunity to study the rich cultural resources of these human communities as they develop new relationships to their environments, and to participate in this overlap between natural and cultural processes. The department currently offers study abroad programs in Canada, Mexico, Guatemala, Europe, and East Asia as well as opportunities to work with local communities and public agencies.

Design Leadership. The faculty is committed to training students to be leaders in design practice and education. This includes the education of both children and adults to understand the consequences of human transactions with the natural environment. Courses are offered and research is being conducted on designing outdoor educational environments. Graduate students are also encouraged to develop independent leadership skills which provide them with self-confidence and adaptability in a rapidly changing professional world. The primary areas in which students are encouraged to develop leadership abilities are in the definition and practice of design as a basis for interdisciplinary work, environmental education and the application of ecological concepts to urban design, the use of communication technology to develop creative solutions to cultural and environmental conflicts, and international design-build projects in which students confront the global nature of contemporary development issues.

The graduate program considers applicants with and without previous design education, and encourages applications from persons with diverse academic and professional backgrounds. The faculty is experienced in teaching mature students and seeks to admit those with a range of ages, backgrounds, and interests. Students are encour-

aged to benefit from the location of the department within a broad and excellent research university by adding elective courses in other disciplines to their core curriculum. In addition, graduate students may elect to participate in College-wide certificate programs in Urban Design, and Preservation Planning and Design. See program descriptions in the College of Built Environments section.

Admission Requirements

1. Candidates applying to the Master of Landscape Architecture program must apply both to the Graduate Admissions Office and to the Department of Landscape Architecture by January 15 to be considered for admission the following autumn quarter.
2. Admission to the Graduate School requires (1) a baccalaureate degree from an accredited U.S. college or university, or the equivalent from a foreign institution, (2) a GPA of 3.00 or higher in the last 90 graded quarter hours or the last 60 graded semester hours, and (3) a Graduate Record Examination (GRE) score taken within the past three years.
3. Admission is competitive and priority is given to applicants whose abilities, as determined by the department's admissions committee, enable them to complete the program expeditiously and with a high level of achievement. Contact the department for additional information.

Program Requirements

Minimum 72 credits

Specific program requirements are arranged to fit each student's background. Seminar and field courses help students achieve their educational goals and develop a credible specialty area within landscape architecture. Students with a previous degree in landscape architecture begin coursework with the required graduate curriculum studios, while students from other educational backgrounds begin with the basic core design studios. The required graduate curriculum includes 72 approved credits. In addition, a specialization is developed in the area of a student's individual interests (12 credits), thus encouraging students to deepen their knowledge in a particular area, while maintaining substantial flexibility for each individual.

A thesis is required. This independent project is advised by a committee of faculty, but allows the student to develop greater intellectual maturity and satisfaction by pursuing a topic she or he has selected out of personal interest. The thesis also allows students to demonstrate a professional level of mastery of a specialized subject area. Students complete either a written and graphic product or a purely written product for the thesis, depending on the thesis model they choose to follow. Four models are available: the professional project thesis, the design critique thesis, the research thesis, and the design thesis. Students make choices about the type of thesis and the methods they will use in conjunction with their faculty adviser and committee members.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

L ARCH 200 Landscape Architecture Field Trips (2) VLPA/I&S Five field trips introduce typical landscape architecture projects and demonstrate scope of the landscape architecture field. Visits to major projects in the Puget Sound region include city and county parks, river parks, harbors, downtown redevelopments, streetscapes, campus headquarters, and others. Open to nonmajors.

L ARCH 212 Designing the Future (3) VLPA Johnson, Robertson Investigates design perspectives and trends for the future. Explores the design of physical, social and ecologi-

cal systems and examines design values. Surveys contemporary design and applies integrative and synthetic thinking towards designing the future. Offered: Sp.

L ARCH 300 Introductory Landscape Architecture Design Studio (6) VLPA Introduction to history and environmental influences in field while developing design and graphic skills. Site analyses and drawing to convey design concepts. Relationship of visual perception to drawing, role of values in design, verbal communication, and behavioral analysis of design process. Required for admission to Bachelor of Landscape Architecture program.

L ARCH 301 Design Foundations Studio (6) Introduces site planning and design process, principles, and skills through experiential learning. Examines and applies landscape elements used to design, including plants. Activities foster skill in design process, shaping landscape form and space, creativity, communication, group dynamics, and organization. Includes required fieldtrips. Majors only.

L ARCH 302 Urban Sites Studio (6) Explores application of design ideas and principles to urban sites. Applies theory and research informing the design of human environments and lessons from urban and ecological design precedents to the design of urban places. Includes design across scales to detailed site design studies, including planting design. Majors only. Offered: W.

L ARCH 303 Ecological Systems Studio (6) Project design studies related to ecological systems. Emphasizes the innovative use of ecological processes and patterns in design development to improve designed landscape's performance. Both biophysical and social criteria are used to define performance. Introduces computer-mapping applications. Majors only.

L ARCH 310 Landscape Architecture Field Sketching (2) Introductory level sketching of landscape subjects: natural and urban sites, plants, animals, architectural elements. Emphasis on perspective. Various media, including pencil, charcoal, markers, ink wash, water color.

L ARCH 311 Introduction to Design Graphics (2) Introduction to communication techniques for various phases of the design process. Many techniques are introduced and their suitability and appropriateness for different purposes explored.

L ARCH 322 Introduction to Planting Design (3) VLPA Traditional ways plants are used in landscape design. Composition and design characteristics of plant materials. Technical considerations for selection, climate, cultural suitability, availability, costs, and maintenance. Open to nonmajors.

L ARCH 323 Topics in Planting Design I (1) Explores planting design topics that relate specifically to site, program, and design issues addressed in concurrent studio projects. Identifies and describes native and ornamental trees and shrubs on the UW campus and vicinity. Utilizes tree canopy layers, shrub masses, and ground plane layers as space forms in studio project designs. Concurrent with L ARCH 301.

L ARCH 324 Topics in Planting Design II (1) Explores planting design topics that relate specifically to site, program, and design issues addressed in concurrent studio projects. Utilizes trees, shrubs, and herbaceous plants as space forms in urban contexts. Utilizes plant characteristics of color, texture, and form in studio project design. Considers design principles of unity/diversity, complexity/simplicity, and pattern in studio project design. Concurrent with L ARCH 302.

L ARCH 325 Topics in Planting Design III (1) Explores planting design topics that relate specifically to site, program, and design issues addressed in concurrent studio projects. Considers trees, shrubs, and herbaceous plants of natural and ecosystems human-made plant communities. Considers plant community dynamics and changes over time. Concurrent with L ARCH 303.

L ARCH 331 Landform Grading and Drainage (3) Introduces the concepts and methods behind grading and drainage and how they are used as design and problem-solving tools. Covers the relationship between grading and drainage plan graphics and their actual three-dimensional applications. Presents basic design principles. Considers the ecological and artistic approaches to grading and drainage. Majors only. Offered: Sp.

L ARCH 332 Materials, Craft, and Construction (3) Materials and structures in landscape construction. Design criteria and construction techniques for detail elements of landscape architecture. Working drawings, specifications, cost estimates, and procedures.

L ARCH 341 Site Design and Planning (3) Introduces urban ecological design issues for good site-planning processes, principles, and methods. Linked with L ARCH 301. Addresses planning for people, natural systems in place-making, design for movement with carried land uses. Includes readings, discussions, presentations, campus walks, case studies, graphic and written assignments.

L ARCH 352 History of Landscape Architecture (5) VLPA/I&S Survey of the development of landscape architecture as an art form from Mesopotamia to the present. Relationships to physical landscape, climate, culture, religion, and other arts. Open to non-majors. Offered: A.

L ARCH 353 History of Modern Landscape Architecture (5) VLPA/I&S Development of profession and art of landscape architecture in the United States, Europe, South America, and Japan in relation to prevailing social, economic, political, and cultural factors. Relationships with other professions, especially architecture and urban planning, and other arts, such as painting and sculpture. Open to non-majors. Offered: W.

L ARCH 361 The Human Experience of Place (3) VLPA/I&S Interdisciplinary approaches to exploring the reciprocal relationship between people and the landscapes of everyday life. Through readings, discussion, in-class activities and mini-projects, students study place attachment, relationships to nature, environmental attitudes and perception, personal space, territoriality, urban public space, diversity, participation, and the politics of space. Open to nonmajors.

L ARCH 362 Design of Cities (3) VLPA Introduction to the discourses and debates in the contemporary design of cities. Provides an overview of design theories and examples of historic and contemporary work. Includes discussion of the contesting urban processes: visions and paradigms of city; discourses of nature and the city; contemporary urban changes; public and community process; and everyday place making.

L ARCH 363 Ecological Design and Planning (3) NW Introduction to landscape ecological theory applied to urban environments. Comparison of different vocabularies used to describe landscape structure and function, from the fields of landscape design, urban design, and biology. Discussion of design theories that have sought to re-center landscape planning and design around the goal of achieving ecological sustainability.

L ARCH 401 Urban Recreation Design (1-6, max. 6) VLPA/I&S Special studies in metropolitan, urban, and neighborhood recreation areas; the design, policies, and behavioral studies of existing parks, playgrounds, public places, and commercial areas. Design projects dealing with the play environment for all ages. Open to nonmajors.

L ARCH 402 Neighborhood Design Studio (1-6, max. 6) Studio at neighborhood and site scales, mixed use. Incorporates urban design theory, precedents, neighborhood/project issues, and community clients. Skills in neighborhood and site analysis, programming. Designs are developed in groups and individually. Methods include readings, research, critiques, field studies, and graphic, written, and verbal presentations.

L ARCH 403 Cultural Landscape Studio (1-6, max. 6) Studies of the landscape at various scales and in diversified

contexts. Offers better understanding of visual components of landscapes, designer's capacity to evaluate and change these components, and resultant interaction with, and effect on, landscape user.

L ARCH 406 Individual Design Studio (6) Senior projects in landscape architecture; projects vary according to the student's particular emphasis and needs.

L ARCH 411 Landscape Representation I (3) Introduces fundamental graphic and representation conventions, hand-drawing techniques, and media used in landscape architecture and environmental design. Emphasizes drawing and media skills that support design ability development. Includes lectures, demonstrations, display of examples, drawing from slides, and in-class workshops. Credit/no-credit only.

L ARCH 412 Landscape Representation II (2) Development of advanced skills of visual representation to communicate students' visions for urban ecological design including techniques used during the design process and for presentation.

L ARCH 423 Planting Design Studio (3) Utilization of plants as design elements to manipulate space and modify the landscape for various activities and resolutions of site problems. Factors that determine the appropriate use and arrangement of plant materials in an urban context. Composition, plant selection, planting techniques, and maintenance requirements are major components of this class.

L ARCH 424 Advanced Planting Design Seminar (3) Introduces and investigates the ecological and social functions behind planting design. Introduces conceptual methods to planting design using various 'lenses'. Discusses the relationship between planting plan graphics and their actual three-dimensional applications. Focuses on combining plants into a cohesive, artistic, and ecologically responsible design that responds appropriately to site conditions.

L ARCH 425 Advanced Planting Design Studio (1-6, max. 6) Advanced seminar/studio in planting design. Provides opportunity to explore ecological, technical, and esthetic principles for selecting plants to meet specific site conditions. Project types include historical sites, multifamily housing projects, plazas, landfills, and reclamation sites.

L ARCH 432 Urban Soils and Hydrology (3) Develops basic understanding and skills related to soil properties and their specification for use in horticulture and hydrological performance, and knowledge and skills needed by landscape architects to implement design solutions that manipulate urban hydrological conditions. Majors only. Prerequisite: L ARCH 331. Offered: W.

L ARCH 433 Design Implementation (3) 8L ARCH 440 Digital Media I in Landscape (1-3, max. 3) Spencer Introduces digital applications and methodologies useful in landscape architectures' interpretive, iterative design, production, and presentation processes. Focuses on skills in 2D CAD, 3D visualization, graphic representation, and the integration of manual and digital techniques. Credit/no-credit only.

L ARCH 441 Digital Media II in Landscape (3) Explores Computer Aided Design as a powerful tool in landscape design, analysis, and visualization. Consists of four core units: 2D CAD drafting; digital terrain modeling; 3D solids and surface modeling; and visualization.

L ARCH 450 History of Environmental Design in the Pacific Northwest (3) VLPA Development of landscape architecture, architecture, and urban planning in the Pacific Northwest from nineteenth century to the present, with major emphasis on twentieth century. Open to nonmajors.

L ARCH 451 History of Environmental Design on the West Coast (3) VLPA Development of the environmental arts of landscape architecture, architecture, and urban planning from the eighteenth century to the present, with major emphasis on the twentieth century. Open to nonmajors.

L ARCH 454 History of Urban Landscapes and Environments (5) Explores the history and historiography of urban landscapes and the design of cities with an emphasis on North America in the context of the broader study of cities in China, Japan, and in the Western world from the pre-classical through twentieth centuries in Europe. Offered: S.

L ARCH 463 Urban Recreational Design (3) VLPA/I&S Special recreational studies in metropolitan, urban, and neighborhood areas; the design, policies, and behavioral studies of existing parks, playgrounds, public places, and commercial areas. Design projects dealing with the play environment for all ages. Open to nonmajors.

L ARCH 470 Landscape Architecture Tutorial (2, max. 6) Various aspects of project organization, programming, scheduling of workloads, graphic and verbal communication problems, data collection methods and interpretation, methodologies for landscape planting and design.

L ARCH 473 Professional Practice (3) Professional practice in private office, academic institutions, and public agencies. Evolution of landscape architecture as a profession, possible scenarios for future, variety of practice types and their relationships, ethical and legal/contractual responsibilities of a professional.

L ARCH 474 Advanced Design Studio (1-6, max. 6) Detailed design studies of small-to-medium-scale projects. General focus on public landscape areas and social/psychological uses of site. Specific focus on design development and professional office presentation. Offered: W.

L ARCH 475 Community Design/Build Studio (1-6, max. 6) *Winterbottom* Students design and construct a community based project, synthesizing prior course instruction by going through the design process from concept to schematic design, creating construction documents, and implementing what they have designed. Offered: Sp.

L ARCH 476 Professional Operations (3-6, max. 6) Practicum course for landscape architecture majors for internship and exposure to the profession with working experiences at various levels of professional endeavor. Student apprenticeship in selected private offices and public agencies. Credit/no-credit only.

L ARCH 477 Landscape Architecture Consultancy Studio (3-6, max. 6) Simulation of the professional relationship of the landscape architect as a consultant to University students in other design planning and management disciplines. Focus on site analysis, master planning, schematic designs and detailed design, working drawings, and planting plans associated with student projects.

L ARCH 481 Planning Urban Green Infrastructure Networks for Healthy Cities (5) Explores the planning of green infrastructures to maximize ecosystems services and support more compact and livable communities. Credit/no-credit only.

L ARCH 482 Designing High Performance Landscapes (5) Looks at ways to design 'high performance landscapes' that integrate ecological realities and urban infrastructural needs while expressing an aesthetic of performance. From site analysis to final design, provides hands-on experience in creating green infrastructure assets in the urban environment. Credit/no-credit only.

L ARCH 495 Landscape Architectural Studies Abroad (1-10, max. 30) Studies conducted under faculty supervision in various locations outside the United States.

L ARCH 498 Special Projects (1-10, max. 30) Special projects as arranged. Open to nonmajors.

L ARCH 499 Undergraduate Research (1-9, max. 9) Individual or small-group studies pertaining to special problems, theories, or issues of landscape architecture and environmental issues.

L ARCH 501 Ecological Urbanism Studio I (1-6, max. 6) *Rottle* Applies landscape ecological and urban design theory to multi-scalar urban environments. Focuses on the strategic design of urban green infrastructure, includ-

ing pedestrian and active transport environments, green space and habitat, and integration with natural drainage systems. Credit/no-credit only.

L ARCH 503 Community Design Studio (1-6, max. 6) Methods and techniques for developing physical design solutions and implementation strategies in neighborhoods and small communities. Social, economic, political, and individual forces affecting community development and growth. Comparison of several communities, identifying pertinent landscape issues, potential design solutions, and methods for achieving design goals through the political process.

L ARCH 504 Regional Landscape Planning (1-6, max. 6) Application of landscape ecological theory to the design of urban environments. Focuses on the strategic design of urban infrastructure, including underground drainage systems, roads, parks, transit systems, and on understanding the cumulative performance of urban sites.

L ARCH 505 Landscape Planning Studio (1-6, max. 6) *Yocom* Examines the theory and techniques of landscape planning across a wide range of spatial scales and contexts in the design process. Explores the application of planning techniques and technologies by a specific design or planning project. Offered: A.

L ARCH 506 Landscape Visual Resources (1-6, max. 6) Survey of existing theory/techniques and the generation of new methods to analyze, evaluate, plan, design, and manage the visual resources of the landscape.

L ARCH 507 Art and Landscape Studio (1-6, max. 6) Public art placed in, or developed for, specific landscape settings. Various aspects and benefits of public art, including materials, technologies, philosophies of landscape imagery and meaning. General planning criteria for location for maximum public benefit and identification of objectives for a specific site and artwork.

L ARCH 511 Visual Learning (3) Seminar/laboratory to develop visual learning processes and skills for applying these processes to landscape architecture. Related visualization concepts.

L ARCH 523 Landscape Technology (1-6, max. 6) Studio on rehabilitation of stressed urban landscapes. Focus varies but often deals with an analysis of the potentials in urban watershed and the study of alternative site designs for enhancing a range of landscape functions related to water quality. Taught by an interdisciplinary team.

L ARCH 552 History of Landscape Architecture (5) Surveys the development of landscape architecture as an art form and a practice across diverse cultures and places in the context of developing historiographical approaches and frameworks.

L ARCH 553 History of Modern Landscape Architecture (5) Focuses on building an historic and critical overview of modernism and modernist designs in the practice and discipline of landscape architecture. Focuses on critical readings of historical narratives to explore the emergence of theory in practice.

L ARCH 561 The Human Experience of Place (3) *Manzo* Uses interdisciplinary approaches to explore the reciprocal relationship between people and the landscapes of everyday life. Studies place attachment, relationships to nature, environmental attitudes and perception, personal space, territoriality, urban public space, diversity, participation, and the politics of space. Offered: A.

L ARCH 562 Landscape Art (2) Process of developing and placing artwork in specific landscape settings. Types of artwork and landscape settings; ways for artist and site designer to interpret, alter, and incorporate factors of landscape; viewer's perception and experience; examples of public and private support.

L ARCH 563 Ecological Design and Planning (3) *Yocom* Explores the contemporary theory supporting the practice of ecological design and planning. Examines the potential relationships between ecological theory and design ap-

plications, particularly in urban environments. Topics are supported by a diverse collection of examples and case studies. Offered: Sp.

L ARCH 564 Sustainable Urban Landscapes (2) *Rottle* Introduces contemporary literature on urban sustainability and provides a forum for discussion about theories, applications, and practices towards the planning and design of sustainable and ecological urban environments. Offered: A.

L ARCH 570 Landscape Architecture Theory and Scholarship (3) Covers the nature of scholarship and theory building in landscape architecture. Investigates scholarship related to the design process, design critique, research, and practice. Includes consideration of capstone project topics. Offered: W.

L ARCH 571 Landscape Architecture Research Methods (3) Introduction to and exploration of selected research methods employed in landscape architecture research. Emphasizes how to apply research methods to a research question or problem. Includes exploration of data analysis and interpretation of research results.

L ARCH 590 Seminar in Landscape Architecture (1-3, max. 12) Advanced topics in landscape architecture with focus on unpublished areas of research.

L ARCH 598 Special Topics (1-6, max. 9) Systematic study of specialized regional landscape subject matter, including history, technology, implementation, and other topics depending on current interest/needs. Topics vary and are announced in the preceding quarter.

L ARCH 600 Independent Study or Research (*-)

L ARCH 601 Internship (3-9, max. 9)

L ARCH 700 Master's Thesis (*-)

L ARCH 701 Thesis Studio (1-6, max. 6) Studio designed to support students' independent thesis research and design process by providing a structured framework for regular meetings, studio reviews, peer/committee/guest critiques, and process reflections.

L ARCH 702 Capstone Project Studio (1-6, max. 6) Way Capstone group project studio. Offered: W.

Urban Design and Planning

410 Gould

Urban design and planning deals with critical issues of human settlement and urban development. It provides communities an informed basis for coordinated public- and private-sector action. Urban design and planning constitutes a professional field of growing complexity, responding to the urban complexities of this century. The Department of Urban Design and Planning fosters an integrative approach to education and research in planning the physical environment. The academic program includes the social, behavioral, and cultural relationships between people and the form and quality of their built and natural environment; the financial, administrative, political, and participatory dimensions of planning, design, and development; and the informational base for making deliberate decisions to shape urban areas and regions, bringing analysis together with vision.

Departmental faculty are active participants in interdisciplinary research units, including the Institute for Hazard Mitigation Planning and Research, the Urban Form Laboratory, the Urban Ecology Research Laboratory, the Runstad Center for Real Estate Studies, and the Northwest Center for Livable Communities.

The department is committed to public service and has strong connections to the region and beyond. The approach to urban development is driven by the values of sus-

tainability, livability, economic vitality, and social justice. The department is committed to developing a leading edge urban planning practice with a strong participatory ethos.

UNDERGRADUATE PROGRAM

Urban Design and Planning offers the following programs of study:

- The Bachelor of Arts degree with a major in community, environment, and planning
- A minor in urban design and planning

Community, Environment, and Planning

208Q Gould

Community, Environment, and Planning (CEP) is an interdisciplinary bachelor of arts degree program offered through the College of Built Environments as one of the University's interdisciplinary undergraduate programs. CEP has gained distinction as a model for a highly personalized, collaborative, and active educational experience within a large research institution. CEP students draw liberally from the entire range of courses, faculty, and programs at the UW.

Bachelor of Arts

Suggested First- and Second-Year College Courses: CEP 200.

Department Admission Requirements

1. Minimum 90 credits completed when student begins the program and at least 80 percent of general education requirements fulfilled
2. Minimum 2.50 GPA with additional emphasis on a written essay, demonstration of relevant extracurricular activities, and a final interview
3. Admission is once a year, for autumn quarter. Early admission deadline is February 15. Additional application dates vary each year. See CEP's website for specific dates.

Graduation Requirements

General Education Requirements

1. Written Communication (15 credits): 5 credits English composition; 10 credits additional composition or W courses. W courses, if applicable, may also be counted toward Areas of Knowledge or major requirements.
2. Quantitative or Symbolic Reasoning (4-5 credits): The QSR course, if applicable, may also be counted toward an Area of Knowledge or major requirement.
3. Areas of Knowledge (60 credits): 20 credits Visual, Literary, & Performing Arts (VLPA); 20 credits Individuals & Societies (I & S); 20 credits Natural World (NW). Required CEP courses and other non-CEP courses used to satisfy major requirements may also be counted toward Areas of Knowledge requirements, if applicable.

Major Requirements

77 credits as follows:

1. Core Seminars (30 credits): CEP 301, CEP 302, CEP 303, CEP 460, CEP 461, CEP 462.
2. Methods Courses (25 credits): Upper-division courses within the University, with no more than 15 credits from one department; chosen with guidance and approved by CEP staff and faculty.
3. Diversity Course (5 credits): One course that critically analyzes and addresses social constructs and/or issues from a different perspective than that of our dominant culture. Must be approved by the program adviser
4. Leadership Retreats (4 credits): CEP 300, autumn and spring
5. Governance Practicum (6 credits): CEP 400, quarterly

6. Internship (5 credits): CEP 446, 120- to 150-hour internship
7. Senior Project Capstone (2-6 credits): CEP 490 and CEP 491, autumn and winter
8. Electives to complete minimum 180 credits for degree; varies, depending on how many general education courses apply to more than one requirement.

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, contact the departmental adviser or refer to the department website.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:*
 - A CEP education is founded on the following: students start where they are; articulate and embrace a vision of how they intend to make a difference in the world; construct a plan (with guidance from faculty and peers) of CEP seminars, cross-disciplinary courses, and field experiences; move deliberately with this plan in the final two years of undergraduate education; through first-hand experience and in the context of the CEP community of learners, become acquainted with effective ways for working constructively together to anticipate and address critical issues facing the complex communities and world we inhabit.
 - A CEP education is fully lived, not passively taken. CEP students actively make their education in community with others. CEP class cohorts range from 25-30 students. This group comprises a community of mutual learning that requires commitment, personal investment, and strong teamwork strategies for two years. Through six interconnected, quarterly seminars students engage the core content of the major: community, environment, and planning. These contemporary academic fields and areas of research include the study of community as subject and practice, exploration of the ecological context of all societal life, and an investigation of the potentials of planning for developing strategies for positive change.
 - CEP students have gone on to careers in a variety of interdisciplinary fields such as community planning and organization, urban development, communications, work in for-profit and nonprofit sectors, public administration, education, community and environmental activism, ecology, and government/community relations.

• *Instructional and Research Facilities:* See College of Built Environments section.

• *Honors Options Available:* For Interdisciplinary Honors, see University Honors Program.

• *Research, Internships, and Service Learning:* See College of Built Environments section.

• *Department Scholarships:* Department and program offer specific scholarships. Contact program adviser for details.

• *Student Organizations/Associations:* See College of Built Environments section.

Minor

Minor Requirements: 30 credits to include URBDP 300 (5 credits); minimum 13 additional credits in URBDP-prefix courses; and 12 additional credits in planning-related courses with Urban Design and Planning adviser approval. A 2.0 minimum grade is required for each course counted toward the minor. See departmental adviser for recommended courses.

GRADUATE PROGRAM

Graduate Program Coordinator

410 Gould, Box 355740

(206) 543-4190

udp@uw.edu

The department offers the Master of Urban Planning (MUP) and the Master of Science in Real Estate (MSRE) degrees and its faculty participate in the interdisciplinary Doctor of Philosophy (PhD) in Urban Design and Planning. The MUP is the professional degree for urban planners, and the MSRE is a two-year professional degree that provides students the core and advanced training necessary for successful careers and leadership positions in the real estate industry. The PhD is for persons who desire careers in urban design and planning, primarily in academic research and teaching or advanced professional work.

Master of Urban Planning

The primary objective is to educate professional planners with a broad range of competence in planning and design; a second objective is to provide opportunities for individual studies in selected professional areas.

The Master of Urban Planning program focuses on planning the physical environment and its socioeconomic and political determinants. Advanced students are encouraged to conduct research and studies in one of the following specializations:

- Urban design dealing with physical form, character, and quality issues
- Real estate, designed to provide students a deep foundation and specialized skills to help launch or enhance professional careers in real estate
- Historic preservation, focusing on the specialized skills needed actively to protect historic districts, buildings, and landscapes
- Land-use and infrastructure planning, including its environmental, socioeconomic, legal, information systems, and administrative aspects
- Environmental planning, addressing the interactions between urban systems and natural processes

The Master of Urban Planning degree is the usual educational qualification for professional practice of city and regional planning, including generalist planning, research, urban design, and administrative positions in a wide variety of public agencies and private consulting firms. It is a two-year, or six-quarter, program.

Admission Requirements

Requirements for graduate-level study include a satisfactory academic record and a bachelor's degree from an accredited college or university in one of a variety of disciplines, including urban planning and environmental design or in other appropriate fields, such as geography, economics, or other social sciences; English and other humanities; civil engineering and environmental studies; or architecture and landscape architecture. Students planning to enter the program should have completed at least one college-level course in each of the following areas: micro-economics, mathematics, statistics, and cultural diversity. Students without sufficient background must take these prerequisite courses concurrently with their graduate studies.

Students are admitted to the MUP program primarily in autumn quarter and all application material should be received by the department no later than the preceding January 15 (November 15 for international applicants). Along with the Application for Admission form, the Graduate Record Examination general test scores, three letters of rec-

ommendation, official transcripts for all previous collegiate courses or programs attended, resume, supplemental information form, and a statement of purpose are required. An optional work sample may also be submitted. TOEFL is required for most applicants whose native language is not English. (See the Graduate School's application information page for more details).

Degree Requirements

Minimum 72 credits

Core course requirements include

1. 33 credits covering the history and theory of planning and urban design, urban form, communication methods, quantitative methods, processes and methods of land use planning, comprehensive planning, planning law, research methods, and a planning studio.
2. 14 credits of restricted electives, including courses in advanced methods and advanced studio (both may be in an area of specialization); and courses in urban development economics, and in history/theory of planning.
3. 9-credit thesis or professional project required upon completion of all other degree coursework
4. 16 credits in open electives

The core provides a foundation in urban design and planning for all students. An internship is encouraged for those without previous professional experience. A specialization in one area of planning is required. Five major specialized areas offered in the department include land-use and infrastructure planning, real estate, urban design, historic preservation, and environmental planning.

See program website at urbdp.be.washington.edu/mup.html.

Master in Infrastructure Planning and Management (MIPM)

The Master of Infrastructure Planning and Management (MIPM) program is a two-year, eight-quarter, fully accredited online program degree. The infrastructure systems that underpin our society and ensure our quality of life are constantly at risk. Further, these systems are expanding with growth and technology advances, requiring a new level of professional management. The MIPM program teaches professionals to master the methods and core knowledge required to sustain and ensure resiliency of major infrastructures against both man-made and natural disasters. For further information, see program website at <http://www.infrastructure-management.uw.edu/mipm/>.

Admission Requirements

Satisfactory academic record and bachelor's degree from an accredited college or university in one of a variety of disciplines, including urban planning and environmental design, or in other appropriate fields such as geography, economics, or other social sciences; English and other humanities; civil engineering and environmental studies; or law or criminal justice. Applicants should have completed at least one college-level course in mathematics. A GIS introductory course is recommended for students without experience in that discipline.

Admission is for autumn quarter and all application materials should be received by the department no later than the preceding July 15. Beginning mid-March, applications are reviewed and given an email response within a few weeks. TOEFL is required for most applicants whose native language is not English. (See Graduate School application information page for more details)

Degree Requirements

45 credits. Students take two courses per quarter. The curriculum is broken down into 16 courses. Of these, students take 15, as follows:

1. Four required core courses introduce key concepts about infrastructure, systems thinking, financial planning, and the fundamental aspects of policy making. In addition, students explore the impacts of climate change on infrastructures.
2. Four required methods courses focus on processes related to planning and monitoring infrastructures, general management, and leadership. These processes include advanced geospatial analysis, epidemiology, emergency management, and business continuity planning.
3. Six systems courses focus on components and characteristics that make up infrastructure systems for food, energy, communications, transportation, and more. Students gain a working knowledge of these systems, the hazards confronting them, and preventive measures. Students select five of these six courses.
4. Two required capstone courses help students synthesize knowledge learned across the program and then apply it to a real-world project, conduct research, and develop a case study.

Master of Science in Real Estate

The Master of Science in Real Estate provides students basic knowledge, core skills, and advanced understanding necessary for graduates to assume leadership positions in the real estate industry. The objective is to develop skills in students necessary to create sustainable, market-based real estate solutions that optimize the utilization of scarce resources for balanced public benefit and private gain. An overarching emphasis on interdisciplinary study provides the basis for graduates to engage in collaborative efforts among many fields and to address the complex problem of achieving sustainable cities that balance the immediate needs of current users with those of future generations.

Admission Requirements

Competitive candidates for the MSRE program possess undergraduate or previous graduate degrees in a range of appropriate disciplines, including architecture, business, construction, engineering, geography, public policy, law, or urban planning. Experience working directly in real estate or some closely related field is highly valued. The Runstad Center seeks to admit students whose objectives align with those of the program, which are to

- Apply broad business leadership skills to solve real world problems
- Understand how spatial and capital markets affect creation of value
- Examine the effects of place-bound, three dimensional built forms on cities
- Explore how behavior of decision makers impacts sustainable real estate

Students are admitted to the MSRE program for autumn quarter. Deadline for application is February 1; international applicants are strongly encouraged to submit all application materials by November 1 to allow sufficient time for review. Applicants must submit an application form, resume, statement of purpose, personal history statement, official transcripts from each college or university attended, three letters of reference, official GRE or GMAT scores, and TOEFL scores for international students.

Degree Requirements

Minimum 72 credits

The Master of Science in Real Estate degree, a demanding, interdisciplinary program, combines business management skills with an understanding of how real estate markets work and how the three-dimensional, place-bound attributes of real estate products affect their performance. Overarching these three interdisciplinary areas of study is a focus on how behaviors of those involved in making deci-

sions about real estate investment and development affect desired outcomes.

The curriculum provides basic knowledge, core skills, and advanced understanding necessary for graduates to assume positions of leadership in the real estate industry of tomorrow. Learning leadership skills is integral to everything a student does throughout the two years in the program. Interdisciplinary study provides understanding of techniques and tools used in a broad range of fields essential to real estate, enabling graduates to lead collaborative efforts to solve complex problems of creating sustainable urban environments. The limits imposed by the physical characteristics of real estate have put a premium on understanding behaviors of people involved in creating and managing real estate projects. People make the decisions that drive values of property types. Students explore ethical behaviors leading toward emphasis on using technology to support classroom and case learning and in applying the knowledge and leadership skills learned throughout the program. For curriculum details, see the program website at <http://runstad.be.washington.edu>.

Doctor of Philosophy

Many departmental faculty are part of an interdisciplinary faculty group which offers doctoral study in urban design and planning. The program is located administratively within the Graduate School. For a description of the program, see the Interdisciplinary Graduate Degree Programs section of the catalog.

Certificate Programs

Graduate students may elect to participate in the College-wide certificate programs in urban design and historic preservation. (See program descriptions in the College of Architecture and Urban Planning section).

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crsclat/

Community, Environment, and Planning

CEP 200 Introduction to Community and Environmental Planning (5) I&S Campbell Introduction to central themes of major. Opportunities to engage in community action and planning process, while developing ecological literacy. Lectures, discussions, and critical writing exercises combine to increase knowledge and interest in these fields. Emphasis on developing community of learners in and out of classroom setting. Offered: AW.

CEP 300 CEP Retreat (1, max. 4) Focuses on planning analysis assessment and development of the major. Opportunities for community building and all-major policy deliberation and decisions. Workshops for skill building in consensus, facilitation, and for major-specific activities such as developing individual study plans and study abroad experiences. Prerequisite: Majors only. Credit/no-credit only. Offered: Asp.

CEP 301 The Idea of Community (5) I&S Campbell Theories of community and communal rights and responsibilities. Experience building a learning community within major. Explores struggles for community in every sector of life. Offered: A.

CEP 302 Environmental Response (5) I&S/NW Miller

Explores issues of environmental crisis and societal responses. Readings and reflective analysis from broad selection of authoritative sources to develop grounded perspective in ecological literacy and consciousness. Currently, experiential education in challenges and practical responses to building sustainable society through

participation in community-based environmental effort. Offered: W.

CEP 303 Social Structures and Processes (5) I&S *Abramson, Born, Curry* Investigates use of formal and informal social structures and processes within context of community and environment. Looks at patterns and institutions of social organization and relationships among different sectors. Issues of interrelatedness, citizenship, knowledge, and communication. Offered: Sp.

CEP 400 Governance Practicum (1, max. 6) *Campbell* Emphasizes personal and collective leadership, democratic decision making, and learning through direct action and reflection. Explores and develops students' personal skills as doers and leaders, while also learning how to form and function as effective groups. Credit/no-credit only. Offered: AWSp.

CEP 446 Internship (5, max. 10) *Ryan* Connects core and individual courses with field work. Group and individual readings develop understanding of how students' internships and field placements constitute particular element of community and environmental planning. Explores how what we do for a living is part of our lives as citizens and public service. Credit/no-credit only. Offered: AWSpS.

CEP 460 Planning in Context (5) I&S *Abramson, Born, Curry, Sterrett* Examines theory against backdrop of practice for broad historical understanding of social, political, environmental planning. Critique from viewpoints, e.g., planning history, ethics, ecofeminism, environmental justice, class and capitalism, planning and global economy. Develop personalized history reflecting individual experience, professional experience, and philosophical heritage of planning profession. Offered: A.

CEP 461 Ethics and Identity (5) I&S *Purcell* Examination of personal, societal, vocational, environmental, planning ethics. Readings and discourse on ethical foundations for public life. Individual and group readings on values, human potential. Develops understanding of ecological context, moral responsibility, self-awareness. Constructs positive, diverse view of humanity, environment regardless of race, gender, ethnicity, beliefs. Offered: W.

CEP 462 Community and Environment (5) I&S *Campbell, Ryan* Capstone quarter merges core seminars, disciplinary courses in major, community field experiences for mastery of personal knowledge and skills. Reflection and synthesis of themes in major; engagement with contemporary issues. Compares theoretical definitions of community and environment with individual philosophies and knowledge within thoughtful, applied context. Offered: Sp.

CEP 470 Tools for Sustainable Cities (4) *Sterrett* Examines specific tools used for planning sustainable cities, including hands-on learning, speakers, case studies, and site tours to enrich students' knowledge and experience. Prerequisite: CEP 200 or URBDP 300. Offered: SpS.

CEP 490 Senior Project Prep Seminar I: Research and Project Scoping (1-3) Supports the conceptualization and planning of senior project/capstone work. Focuses on selecting a project, beginning a literature review, finding a mentor, and developing a plan. Credit/no-credit only.

CEP 491 Senior Project Prep Seminar II: Methods and Actualization (1-3) Focuses on implementing the senior project/capstone, including revisions and updates as seen fit. Credit/no-credit only.

CEP 498 Special Topics (1-9, max. 15) I&S Systematic study of specialized subject matter.

CEP 499 Undergraduate Independent Study or Research (1-5, max. 10) Individual reading, research, fieldwork, other special project approved and supervised by faculty adviser most appropriate for the project proposed. Credit/no-credit only. Offered: AWSpS.

Real Estate

R E 552 Real Estate Process (4) Introduces the real estate process including zoning, design, development, appraisal, finance, market research, and feasibility analyses. Helps students understand how to allocate real estate resources to create sustainable, market-based projects drawing on interdisciplinary concepts, perspectives, and processes to optimize spatial solutions. Offered: jointly with URBDP 552; A.

R E 553 Urban Land Economics (4) *Bitter* Introduces urban economics, land markets, and locational decision making; and examines urban spatial structure and the economic, political, social, technological, and historical forces that shape land values and uses. Uses applied spatial analytical tools including geographic information systems and geodemographic software. Offered: jointly with URBDP 553; A.

R E 554 Real Estate Finance (4) Expands on basic financial concepts introduced in the Real Estate Process. Designed to help students understand the financial implications of various real estate decisions. Covers mortgage finance, leverage, cash flow analysis, capital sources, financial engineering, and advanced modeling. Prerequisite: URBDP 552. Offered: jointly with URBDP 554; W.

R E 555 Real Estate Appraisal (4) *Bitter* Discusses valuation theory and the mechanics underlying real estate appraisal practices. Explores the unique market within which property interests are created, allocated or transferred, the dynamic nature of real estate values, and the valuation impacts of various external factors. Offered: jointly with URBDP 555; Sp.

R E 556 Real Estate Investment (4) Focuses on direct real estate investment based on the productive capacity of the total property, debt, and equity components and their impact on the cash returns in the form of positive returns to the property, tax savings potential, alternative leverage effects, and the gains at sale. Offered: jointly with URBDP 556; W.

R E 557 Real Estate Law (4) *Amster* Focuses on the legal principles and issues essential to understanding the workings of the real estate industry, including the fundamentals of real estate transactions and development projects. Offered: jointly with URBDP 557; A.

R E 558 Real Estate Market Analysis (4) Prepares students to conduct and interpret market studies to cover a range of real estate decisions. Exposes students to the market analysis process and various tools and techniques that can be used to analyze and forecast supply, demand, and rental rates. Offered: jointly with URBDP 558; W.

R E 560 Real Estate Feasibility (4) *DeLisle* Applies critical thinking needed to understand the drivers of value of the major property types which covers the "user in search of a site" and "investor in search of involvement" feasibility questions. Applies a combination of qualitative and quantitative analysis to target markets. Offered: jointly with URBDP 568; Sp.

R E 561 Real Estate Capital Markets (4) *Grissom* Studies capital markets, investigating the agents and institutions that channel money from the array of sources of savings to investment projects. Identifies the sources of available capital and uses investment and portfolio tools employed by conduits and intermediaries matches the capital to projects and asset classes. Offered: jointly with URBDP 569; A.

R E 569 Real Estate Portfolio Management (5) *DeLisle* Students develop formal portfolio management strategies that draw on their in-depth understanding of real estate fundamentals, strategic planning and portfolio theory. Working in teams, students prepare cutting-edge portfolio strategies including the policies and procedures for implementation and portfolio management. Offered: jointly with URBDP 559; Sp.

R E 570 Real Estate Project Finance (3) *Rolfe* Introduces financing real property projects developed by public, community, and private entities with a primary emphasis on interim (acquisition/development/construction) and take-out lending for new real estate projects. Offered: jointly with URBDP 577; Sp.

R E 571 Real Estate Development (4) Introduction and survey of processes and people involved in developing real estate, including issues of site control, public/private approvals, feasibility analysis, project financing, design/construction, marketing, and asset management. Prerequisite: URBDP 552. Offered: jointly with URBDP 578.

R E 590 Real Estate Forum I (1) *DeLisle* Provides an opportunity for students to learn about the interdisciplinary nature of real estate from industry leaders. Discusses current issues and opportunities in the industry as well as what it takes to develop a sustainable career path. Offered: jointly with URBDP 590; A.

R E 598 Real Estate Special Topics (1-4, max. 12) *Bitter, DeLisle* Systematic study of specialized subject matter. Prerequisite: permission of instructor. Offered: AWSpS.

Strategic Planning for Critical Infrastructures

SPCI 505 Epidemiology of Biological and Chemical Hazards Mitigation I: Principles (3) Introduction to epidemiology: surveillance for detection of outbreaks, outbreak investigation, and control for infectious agents, toxins, and chemicals. Case studies are drawn from actual outbreaks illustrating these essential epidemiological methods. Examines problem-solving techniques. Credit/no-credit only.

SPCI 506 Strategic Planning Practicum I (3) Uses case-based and problem-based approaches to teach the techniques of planning, decision-making, and analysis common to critical infrastructures.

SPCI 510 Strategic Planning Practicum II (3) Second in a three-course sequence that uses case-based and problem-based approaches to teach the techniques of planning, decision-making, and analysis common to critical infrastructures. Credit/no-credit only.

SPCI 511 Business Continuity Planning (3) Introduces safeguards that organizations can employ to ensure they survive a disaster, using examples from government services, banking and finance. Presents specifics of disaster/crisis management, business impact analysis, contingency planning, continuity of operations, and risk reduction tools. Examines lessons learned from 9/11.

SPCI 513 Strategic Planning Practicum III (3) *Whittington* Uses case-based and problem-based approaches to teach the techniques of planning, decision-making, and analysis common to critical infrastructures. Third in a three-course sequence. Offered: WS.

SPCI 515 Capstone (4) *Whittington* Culminating course where students select one of several problem-solving methods (problem-based case, tabletop exercise, research paper) and complete a final project focusing on a real-world problem. Requires mastery of the methodological skills and infrastructure knowledge taught in the program.

SPCI 598 Special Topics (1-4, max. 12) Systematic study of specialized subject matter. Topics vary for each quarter, depending upon current interest and needs, and are announced in the preceding quarter.

Urban Planning

URBDP 200 Introduction to Urbanization: Planning and Designing Alternative Urban Futures (5) I&S Introduces how cities work and explores alternative ways of planning and designing urban futures. Explores the economic, cultural, political, and social aspects of cities and how we might change them for the better. Also examines numerous case studies from the Global North and South.

URBDP 300 Introduction to Urban Planning (5) I&S Principles and theories of urban structure and institutions. Concepts and logic of planning as a community process and a professional activity. Evolution of planning ideas in response to changing social, economic, and environmental conditions within the American political framework. Complementary nature of public and private responsibilities. Major procedures used by planners.

URBDP 301 Database Management Fundamentals (3) Introduces the tasks and roles that contribute to the management of the design and security of database systems in an organizational context. Students gain a basic understanding of database management systems and administrative practices, as well as hands-on database experience. Credit/no-credit only.

URBDP 370 Reading the City (5) VLPA/I&S Comprehending cities as reflection of individual reader and social/cultural context. Skills for analyzing everyday, visible evidence of the city. Topics include self-identity with place, city, image and perception, visual design analysis; and place as representation of culture. Extensive writing, multiple texts, collaborative work in groups and fieldwork.

URBDP 422 Urban and Regional Geospatial Analysis (5) Principles of GIS applied to problems in urban design and planning, landscape architecture, and environmental and resource studies. Practical problem-solving approaches using contemporary desktop mapping packages and vector and raster GIS systems. Siting, environmental evaluation and inventories, and modeling. Prerequisite: either GEOG 317, GEOG 360, GEOG 461, GEOG 462, GEOG 465, FISH 452, or OCEAN 452. Offered: W.

URBDP 429 Computer-Aided Planning of Urban Systems (3) Survey of online planning applications; use of various on-line systems to solve urban systems design problems; investigations of hardware/software tradeoffs; human factors in man-computer systems design theory as it relates to problem-solving activity. Offered: jointly with CEE 418.

URBDP 446 Practical Experience (4, max. 8) Off-campus internship under academic supervision in situations useful to the education of planners, such as public/private planning and design offices, projects related to the environment, cross-cultural matters, and decision making. Assistance in identifying appropriate projects.

URBDP 450 Introduction to Land Use, Growth Management, and Environmental Planning (3) Provides an understanding of contemporary land use issues (including sprawl, smart growth, new urbanism, transit-oriented development, and Washington's Growth Management Act) and examines their environmental impact and social welfare implications. Analyzes best-practice techniques of growth management.

URBDP 451 Housing (3) I&S Survey of housing and redevelopment problems, theories, standards, and practice. Development of public policies, finance, technological considerations, social factors, and priorities. Prerequisite: 3.0 in URBDP 300.

URBDP 457 Housing in Developing Countries (3) Emphasis on role of the design and planning professional in housing delivery in developing countries. Exploration of issues of culture, political environment, social context, economic circumstances, and other factors which define and limit the manner in which the professional planner and designer can and should function.

URBDP 466 Infrastructure and Community Facilities (4) Issues and methods associated with planning for parks, schools, drainage, sewerage, utilities, libraries, solid waste, and transportation. Covers their relationship to comprehensive plans, project permitting, and impact assessment. Financing, regulating, and relationships to social, environmental, and economic goals are discussed.

URBDP 467 Urban Planning Uses of Remote Sensing (3) Using aerial photographs and satellite image data in urban planning. Urban change analysis, land-use and land cover

classification, and environmental planning applications. Scale and resolution considerations. Development of proficiency through laboratory exercises and use of image-processing software.

URBDP 470 Introduction to Urban Design (3) VLPA/I&S Definitions and examples of urban design; heritage of urban design; theories of city building; the role of urban design in the fields of architecture, landscape architecture, and urban planning.

URBDP 474 Site Planning: Issues and Techniques (3) Introduction to site planning; how it is regulated; why it is important to know; and how to carry out its key tasks, including residential subdivision and mixed-use development layout; basic topographical and hydrological analysis and manipulation; roadways, parking and hierarchies of circulation, and site design detail. Offered: Sp.

URBDP 479 The Urban Form (3) VLPA Elements, patterns, and evolution of urban form. The forces that shaped cities in history. Contemporary trends. Methods of urban morphological analysis as related to urban design and planning practices. Required for MUP graduate students.

URBDP 481 Metropolitan Planning and Development in Developing Countries (3) I&S Examination of the nature and causes of urban planning and management problems in developing countries and exploration of alternative approaches to solve some of these problems.

URBDP 498 Special Topics (1-9, max. 15) Systematic study of specialized subject matter. Topics for each quarter vary, depending upon current interest and needs, and are announced in the preceding quarter.

URBDP 499 Special Projects (1-12, max. 12) Independent/tutorial study for undergraduates. Individual reading, research, fieldwork, or other special project, outlined in advance, approved by, and under the direction of, the faculty adviser most appropriate for the project proposed.

URBDP 500 Survey of Urban Planning (4) Concepts and logic of planning as a professional activity. Evolution of guiding ideas in relation to changing social, economic, and environmental conditions within the American political framework. Major procedures used by planners. Critical appraisal. Open to graduate students in urban design and planning and to graduate students in architecture seeking the urban design certificate.

URBDP 501 Comprehensive Planning and Implementation (3) Whittington Reviews the comprehensive planning process as a part of managing metropolitan growth. Examines federal/state statutes affecting local government comprehensive plans. Includes local government land use regulations and reviews development process. Concentrates on tools to shape land use and development patterns and their effectiveness in creating outcomes specified in comprehensive plans. Offered: W.

URBDP 502 Tools for Sustainable Cities (4) Sterrett Examines specific tools used for planning sustainable cities, including hands-on learning, speakers, case studies, and site tours to enrich students' knowledge and experience. Prerequisite: CEP 200 or URBDP 300. Offered: SpS.

URBDP 503 Communication and Analysis (3) Development of communication skills understanding within the planning and design process. Presentation of communications as a design process with mental, visual, oral, written, and kinesthetic cognitive actions combined to form communications thinking. Offered: W.

URBDP 506 Planning Studio Prep (2) Introduces plan-making process, provides time for background research, issue identification, public involvement, and preliminary analysis.

URBDP 507 General Urban Planning Laboratory (4) Studio/field project in applied professional planning of a comprehensive nature, utilizing a local study area to examine the realities of problem solving in situations of functional and normative conflict. Integration of analysis, program-

ming, implementation, and presentation phases of the planning process.

URBDP 508 Specialized Planning Laboratory (5, max. 10) Studio/field project on a specialized planning problem. Several options are offered each year, such as regional-environmental planning, housing, metropolitan planning, and urban design. Prerequisite: ARCH 500 and ARCH 507. Additional prerequisite for some sections: urban planning seminar or lecture courses.

URBDP 509 Resources for Urban Planning (1) Provides an opportunity for students to explore and discuss issues of professional practice with practicing planners in an informal context. Questions posed by the participants usually emphasize practical aspects of working as planners. Credit/no-credit only.

URBDP 510 Theories and Methodologies of Planning I (4) Survey of the philosophy, methods, and analytical techniques used in planning public actions and policies, with emphasis on the logic and assumptions upon which these are based. Various planning surveys and methods. Open to graduate students in urban design and planning and to graduate students seeking the urban design certificate. Prerequisite: URBDP 500.

URBDP 512 Research Seminar (3) Planning, designing, and undertaking applied research in an urban setting. Framing, critically assessing, managing, and presenting research used in urban planning and design. Conceptual modeling of causal relationships, choice among experimental and quasi-experimental designs, and ethical and political implications of research undertakings. Exercises leading to a complete research design.

URBDP 519 Qualitative Research Methods (3) Qualitative research methods covering both the theoretical foundations and practical methodologies of traditional and innovative approaches, including cognitive mapping, open-ended interviews, ethnographic observation, hermeneutics, phenomenology, critical theory, communicative action, grass-roots empowerment, post-structuralism, and self-organization. Offered: jointly with ARCH 567.

URBDP 520 Quantitative Methods in Urban Design and Planning (4) Born Methods of statistical and mathematical analysis in design and planning. Emphasizes the use of computer packages for analyzing urban data. Regression, matrix methods, cohort-survival populations models with examples solved on microcomputers. Prerequisite: college mathematics and basic course in probability and statistics.

URBDP 525 Evaluation in Urban Planning (3) Methods and techniques for a priori assessment of physical improvement plans, program designs, public policies. Includes cost effectiveness and matrix or goal achievement, as well as more conventional cost-benefit and cost-revenue forms of analysis. Emphasis on understanding the reasoning and issues in evaluation, and gaining a working competence in at least one of the methods treated.

URBDP 536 Health Impact Assessment (2) Examines the use of Health Impact Assessment as a public health tool for informing decision-makers about the potential health impacts of proposed projects and policies. Students learn the steps for conducting HIAs, review case studies, and conduct an HIA of a current local proposed project. Offered: jointly with ENV H 536; Sp.

URBDP 538 Public Health and the Built Environment (2) Examines how the design of communities and land use and transportation decision have positive and adverse effects on health. Considers built environment impacts on physical activity, obesity, air quality, injuries, mental health, social capital, and environmental justice; and explores interventions to promote healthy community design. Offered: jointly with ENV H 538; W.

URBDP 549 Hazard Mitigation Planning (3) A survey of the field of planning for managing risks of natural hazards-earthquakes, floods, coastal/meteorological hazards, and human-caused technological hazards/terrorism. Covers

pre-event mitigation through building and land-use controls; disaster preparedness; post-event response, recovery, and mitigation of future hazards. Emphasizes hazard mitigation as a long-term strategy for achieving sustainability of communities.

URBDP 552 Real Estate Process (4) Introduces the real estate process including zoning, design, development, appraisal, finance, market research, and feasibility analyses. Helps students understand how to allocate real estate resources to create sustainable, market-based projects drawing on interdisciplinary concepts, perspectives, and processes to optimize spatial solutions. Offered: jointly with R E 552; A.

URBDP 553 Urban Land Economics (4) *Bitter* Introduces urban economics, land markets, and locational decision making; and examines urban spatial structure and the economic, political, social, technological, and historical forces that shape land values and uses. Uses applied spatial analytical tools including geographic information systems and geodemographic software. Offered: jointly with R E 553; A.

URBDP 554 Real Estate Finance (4) Expands on basic financial concepts introduced in the Real Estate Process. Designed to help students understand the financial implications of various real estate decisions. Covers mortgage finance, leverage, cash flow analysis, capital sources, financial engineering, and advanced modeling. Prerequisite: URBDP 552. Offered: jointly with R E 554; W.

URBDP 555 Real Estate Appraisal (4) *Bitter* Discusses valuation theory and the mechanics underlying real estate appraisal practices. Explores the unique market within which property interests are created, allocated or transferred, the dynamic nature of real estate values, and the valuation impacts of various external factors. Offered: jointly with R E 555; Sp.

URBDP 556 Real Estate Investment (4) Focuses on direct real estate investment based on the productive capacity of the total property, debt, and equity components and their impact on the cash returns in the form of positive returns to the property, tax savings potential, alternative leverage effects, and the gains at sale. Offered: jointly with R E 556; W.

URBDP 557 Real Estate Law (4) *Amster* Focuses on the legal principles and issues essential to understanding the workings of the real estate industry, including the fundamentals of real estate transactions and development projects. Offered: jointly with R E 557; A.

URBDP 558 Real Estate Market Analysis (4) Prepares students to conduct and interpret market studies to cover a range of real estate decisions. Exposes students to the market analysis process and various tools and techniques that can be used to analyze and forecast supply, demand, and rental rates. Offered: jointly with R E 558; W.

URBDP 559 Real Estate Portfolio Management (5) *DeLisle* Students develop formal portfolio management strategies that draw on their in-depth understanding of real estate fundamentals, strategic planning and portfolio theory. Working in teams, students prepare cutting-edge portfolio strategies including the policies and procedures for implementation and portfolio management. Offered: jointly with R E 559; Sp.

URBDP 560 Inequality, Governance, and Policy in the Metropolitan Region (3/4) Explores national/local urban policy concerning the major problems confronting cities and metropolitan regions today. Economic globalization, income inequality, and metropolitan decentralization shape the urban agenda, the context for urban policy, and the analytic focus of the course. A project allows the exploration of strategies for intervention. Offered: jointly with PB AF 560.

URBDP 561 Urban Economics and Public Policy (3/4, max. 12) Examines the rationale for and consequences of public intervention in urban land, housing, and transportation markets through land use regulations such as zoning and urban growth boundaries, infrastructure investments, and fiscal policies to manage urban development and traffic.

Prerequisite: PB AF 516 or equivalent. Offered: jointly with PB AF 561.

URBDP 562 Introduction to Neighborhood Planning and Community Development (3) Provides introduction to basic practices in neighborhood planning and community development, including theoretical/historical bases; developing neighborhood plans/projects; indicators and evaluation of neighborhood quality; community participation; institutional framework, ethical dilemmas, and professional roles. Addresses current issues, including Seattle's experience, NIMBYism, security, neighborhood character, housing segregation, environmental racism. Offered: jointly with PB AF 562.

URBDP 564 Planning History, Theory, and Ethics (3) Examines major historical landmarks since the Civil War (urban, suburban, and rural, physical and social-economic); theoretical alternatives (rationalism, pluralism-advocacy, critical theory, bio-regionalism, dissipative models); and ethical issues (such as distributive justice and principles of professional conduct).

URBDP 565 American Urban History (3) Intensive lecture/seminar designed to provide students the opportunity for immersion in historical scholarship that addresses social, economic, political, technological, and cultural forces that have shaped the development of American cities.

URBDP 567 Democracy, Citizenship, and Participation in the City (3) Graduate seminar on democracy in cities. Focuses on contemporary ideas, debates, and initiatives.

URBDP 568 Real Estate Feasibility (4) *DeLisle* Applies critical thinking needed to understand the drivers of value of the major property types which covers the "user in search of a site" and "investor in search of involvement" feasibility questions. Applies a combination of qualitative and quantitative analysis to target markets. Offered: jointly with R E 560; Sp.

URBDP 569 Real Estate Capital Markets (4) *Grissom* Studies capital markets, investigating the agents and institutions that channel money from the array of sources of savings to investment projects. Identifies the sources of available capital and uses investment and portfolio tools employed by conduits and intermediaries matches the capital to projects and asset classes. Offered: jointly with R E 561; A.

URBDP 573 Digital Design (4) Uses digital technologies for mapping, drafting, modeling, and communication. Includes real-world case study projects that focus on urban design and planning issues.

URBDP 576 Pedestrian Travel, Land Use, and Urban Form (3) Seminar concentrating on walking as a mode of transportation in cities and city-regions, including social, cognitive, and perceptual dimensions of pedestrian movement and behavior theory. Offered: jointly with CEE 586.

URBDP 577 Real Estate Project Finance (3) *Rolfe* Introduces financing real property projects developed by public, community, and private entities with a primary emphasis on interim (acquisition/development/construction) and take-out lending for new real estate projects. Offered: jointly with R E 570; Sp.

URBDP 578 Real Estate Development (4) Introduction and survey of processes and people involved in developing real estate, including issues of site control, public/private approvals, feasibility analysis, project financing, design/construction, marketing, and asset management. Prerequisite: URBDP 552. Offered: jointly with R E 571.

URBDP 580 Legal and Administrative Framework for Planning (3) Political, legal, and administrative institutions closely related to the planning process. Issues of devolution of authority and public representation and participation. Legal basis for planning and associated regulation.

URBDP 585 Introduction to Historic Preservation Planning (3) Theories, methods, and practices associated with historic preservation planning. Overview of preservation plan-

ning programs at federal, state, and local levels. Introduction to tools and methods needed to identify, document, evaluate, and plan for protection of historic properties. Provides opportunity to learn fundamentals of preservation planning through practical experience.

URBDP 586 Implementation in Preservation Planning (4) Practical experience in identifying, documenting, evaluating and developing strategies for protection of historic resources, building on introductory theories, methods, and practices. Develops skills critical to preservation planning via research, fieldwork, and writing. Prerequisite: introductory course in preservation.

URBDP 587 Preservation and the Vernacular Environment (3) Exploration of theoretical, methodological, and practical issues related to the preservation of vernacular architecture and cultural landscapes in the United States.

URBDP 590 Real Estate Forum I (1) *DeLisle* Provides an opportunity for students to learn about the interdisciplinary nature of real estate from industry leaders. Discusses current issues and opportunities in the industry as well as what it takes to develop a sustainable career path. Offered: jointly with R E 590; A.

URBDP 591 Doctoral Seminar I (4-) Researchable issues and research methodology. Discussion and critique of selected pieces of recent research work. Presentation and critique of research proposed by members of the seminar. Prerequisite: master's degree or equivalent in a planning discipline.

URBDP 592 Doctoral Seminar II (-4-) Researchable issues and research methodology. Discussion and critique of selected pieces of recent research work. Presentation and critique of research proposed by members of the seminar. Prerequisite: master's degree or equivalent in a planning discipline.

URBDP 593 Doctoral Seminar III (-4) Researchable issues and research methodology. Discussion and critique of selected pieces of recent research work. Presentation and critique of research proposed by members of the seminar. Prerequisite: master's degree or equivalent in a planning discipline.

URBDP 598 Special Topics (1-6, max. 15) Systematic study of specialized subject matter. Topics vary for each quarter, depending upon current interest and needs, and are announced in the preceding quarter. Prerequisite: permission of instructor.

URBDP 600 Independent Study or Research (*-)

URBDP 700 Master's Thesis (*-)

URBDP 800 Doctoral Dissertation (*-)

Michael G. Foster School of Business

busadmin@uw.edu

Men and women embarking on business careers have the opportunity to influence many of the social, political, and economic forces in today's world. The Foster School prepares students for professional careers in management and related disciplines in both the private and public sectors.

The Foster School offers an undergraduate program leading to the degree of Bachelor of Arts in Business Administration (BABA) and graduate programs leading to the degrees of Master of Business Administration (MBA), Executive Master of Business Administration (EMBA), Technology Management Master of Business Administration (TMMBA), Master of Professional Accounting (MPAcc), and Doctor of Philosophy (PhD). An evening MBA program is also offered. Additionally, the Foster School offers a Master of Science degree in Information Systems (MSIS).

Business Administration became an independent unit within the University system in 1917. It has been accredited by the American Assembly of Collegiate Schools of Business (now known as the International Association for Management Education) since 1921.

Facilities and Services

Most Foster School classes and activities are in four buildings. Balmer Hall, named for Thomas Balmer, former president of the University Board of Regents, contains classrooms and computer labs. There are four computer labs in Balmer Hall available to Foster School students. Mackenzie Hall, named in memory of Prof. Donald Mackenzie, Chair of the Department of Accounting from 1949 to 1955, contains the Dean's Office, the Undergraduate Program Office, the Graduate Program Office, the PhD Program Office, Business Administration Computer Services (BACS), Office of Development and External Relations, faculty offices, five department offices, and other business administration program offices. Nearby Lewis Hall contains the Business Connections Center and other faculty and administrative offices. A fourth building, on the north side of Balmer, has three distinct components: the Bank of America Executive Education Center (which includes the James B. Douglas Executive Forum), the Boeing Auditorium, and the Albert O. and Evelyn Foster Business Library.

To serve the continuing education needs of middle- and senior-level managers, the Foster School offers a number of certificate programs, either University-initiated or co-sponsored with various community and industry organizations. The management program, a nine-month, one night per week program, strengthens understanding and skills in all areas of management and provides an opportunity for successful managers to learn from a distinguished faculty and each other. Short courses and seminars are offered throughout the year, focusing on topics such as leadership, finance and accounting for non-financial executives, and negotiation skills. In addition, the School develops and runs custom programs under contract with individual companies and organizations. Information on continuing education programs may be obtained from the Office of Ex-

ecutive Programs, (206) 543-8560, fax (206) 685-9236, uwexp@uw.edu.

International Business Programs

International business programs are coordinated and developed by the Foster School's Global Business Center. These activities include special graduate and undergraduate certificate programs, the Global Business Program, seminars, internships, business foreign-language programs, special guest-speaker programs, and study tours. Although the Marketing and International Business Department offers a general curriculum in international business, each of the five academic departments within the Foster School maintains faculty with special international teaching and research expertise. Internationally oriented courses are offered by each department.

At the undergraduate level, the Foster School offers the Certificate of International Studies in Business (CISB) Program. Students in the program complete the same demanding business curriculum as other students and enhance this training with foreign language study, area studies, and an international experience. The program requires that students have a solid foundation in one of five language tracks: Chinese, French, German, Japanese, and Spanish; a sixth custom track for other languages is also an option.

At the MBA level, the Foster School offers opportunities for MBA students to build on the international business foundation that every MBA develops through the first year of the program. In addition to international business electives, the program offers overseas travel through study tours, quarter-long exchange programs, and international internships. MBA students may also participate in the weekly Global Business Forum, which brings top international business leaders to campus to discuss important issues facing their companies and industries.

Questions regarding these programs may be directed to (206) 685-3432 or goabroad@uw.edu.

Entrepreneurship Programs

The focus of the Foster School's entrepreneurship programs is on nurturing skills that generate creative ideas, innovative processes, and new business growth. These skills are developed through special academic certificate programs, internships, a business plan competition, club activities, and consulting opportunities with area businesses.

The Center for Innovation and Entrepreneurship (CIE) is open to both undergraduate and graduate students from the Foster School as well as other University schools and colleges. Through its workshops, events (Entrepreneur Week), and annual competitions (Business Plan Competition, Environmental Innovation Challenge, and Venture Capital Investment Competition), CIE encourages a cross-discipline and collaborative approach to business creation, and nurtures overall entrepreneurial thinking in students. The CIE's Lavin Program is a curriculum for entrepreneurially minded undergraduates that provides the core foundational experience, skills, and know how for developing future business ventures. Graduate students may take the Entrepreneurship Certificate program, which offers real-world experience, technology internships with the UW Center for Commercialization, and mentoring from the Seattle entrepreneurial community. For more information visit www.startup.washington.edu, or contact CIE at (206) 685-9868, or uwcie@uw.edu.

The Business and Economic Development Center (BEDC) matches undergraduate and graduate student consulting teams with small-business owners in Seattle's inner city to implement business development projects. Through courses, independent study options, summer internships, and hands-on projects with inner-city entrepreneurs, students explore the challenges faced by central city businesses, while also providing valuable assistance. Questions about

the Business and Economic Development Center can be directed to the program office at (206) 543-9327.

Consulting Programs

The Business and Economic Development Center (BEDC) matches undergraduate and graduate student consulting teams with small-business owners in Seattle's inner city to implement business development projects. Through courses, independent study options, summer internships, and hands-on projects with inner-city entrepreneurs, students explore the challenges faced by central city businesses, while also providing valuable assistance. Questions about the Business and Economic Development Center can be directed to the program office at (206) 616-1216 or wtutol@uw.edu.

Business Career Center

The Business Connections Center coordinates all MBA and MPAcc career services. These include career counseling and career management workshops, the administration of special career events such as career fairs, company presentations, on-campus MBA and MPAcc recruitment, and a job-listing service. The Business Connections Center also administers alumni and executive mentoring programs. Questions regarding these programs and services may be directed to the center's office, 202 Lewis, (206) 685-2410.

Undergraduate business-career counseling and on-campus recruitment is provided by the UW Center for Career Services, 134 Mary Gates Hall, (206) 543-0535.

Instructional Resources Office

The Instructional Resources Office promotes excellence in teaching by providing resources in current practice and research in teaching and learning. The office serves faculty and teaching assistants with individual consultations, coordinates a teaching preparation program for doctoral students, and offers assistance with instructional innovations. Questions can be directed to the Instructional Resources Office, 317 Lewis, (206) 685-9608.

The Business Writing Center

The mission of the Business Writing Center is to help undergraduates develop the writing skills essential to professional success. The center offers one-on-one tutoring, workshops and peer feedback for special class projects, and opportunities for advanced students to be peer tutors. Questions can be directed to the center's office, 337 Lewis, bwrite@uw.edu.

Honor Societies

Beta Gamma Sigma is the national scholastic honor society in the field of business. Election to membership is available to both undergraduate and graduate students in business. Selection is based on outstanding scholastic achievement.

Beta Alpha Psi is the accounting honor society. Membership is based primarily on scholastic achievement, but some community service is also required. Beta Alpha Psi provides a mechanism for students, professionals, and educators to meet on both formal and informal bases.

The goals and interests of graduate students are served by the MBA Association, Business Consulting Network, Challenge for Charity, Entrepreneurship and Innovation Club, Graduate Consulting Club, MBA Finance Club, Global Business Association, Graduate and Professional Student Senate, MBA Marketing Club, Net Impact, High-Tech Club, MBA Speakeasy, Women in Business, and the Doctoral Association.

bizinfo@uw.edu

The Foster School offers the following programs of study:

- The Bachelor of Arts in Business Administration degree with options in accounting, entrepreneurship, finance, human resources management, information systems, and marketing.

Bachelor of Arts in Business Administration

Suggested First- and Second-Year College Courses: English composition, calculus, ECON 200, ECON 201. In addition, classes to fulfill general education requirements which develop strong writing and analytic skills. ACCTG 215, ACCTG 225, MGMT 200, and Q METH 201 are suggested second-year college work.

Department Admission Requirements

The Foster School offers admission to upper division applicants for autumn and winter quarters. Those UW students who are prepared, as freshmen, to apply for early admission, may do so only for autumn quarter. Students admitted for autumn may elect to take classes during the prior summer quarter.

Applicants are considered in two admission groups: the Freshman Direct Admission Program and the Upper-Division Admission Group (UAG), described below. The following requirements apply to the Upper-Division Admission Group:

1. A minimum cumulative 2.50 GPA for all college coursework
2. A minimum cumulative 2.50 GPA for all required business courses
3. A student who has previously attended the UW also must have GPAs of at least 2.50, both UW cumulative and in UW business courses.
4. Since eligible applicants exceed the space available, acceptance is competitive. Admission is based on evaluation of four factors:
 - a. Overall scholastic record.
 - b. Grades in pre-application courses, described below.
 - c. Written communication skills.
 - d. Evidence of leadership skills, community activities, and the promise of achievement in a business or professional career.

Consideration is also given to such factors as economic and educational disadvantage, significantly higher recent grades, and exceptional extracurricular activities or work experience.

Admission for UAG is offered twice a year, for autumn and winter quarters. Admission for Freshman Direct is offered

once a year, for autumn quarter only. A Foster School application, together with all supporting materials, must be on file by April 5 for autumn quarter admission or October 5 for winter quarter admission. Records of all coursework completed by the deadline must be submitted at the time of application.

Freshman Direct Admission Program

The Foster School enrolls a small number of students each year directly out of high school, prior to completion of any university-level prerequisites. Freshmen applicants to the University listing Business Administration as their intended major are automatically considered. Admission is offered to students with exceptionally competitive academic records, including but not limited to high school GPA and SAT or ACT scores.

Upper-Division Admission Group (UAG)

Students must present a minimum of 60 academic credits at the time of application including the following graded credits: ACCTG 215; ECON 200 or ECON 201; MATH 112, MATH 124, or MATH 134; an approved English composition course, chosen from C LIT 240, ENGL 104-ENGL 105, ENGL 111, ENGL 121, ENGL 131, ENGL 197, ENGL 198, ENGL 199, or ENGL 281, ENGL 297, ENGL 298, or ENGL 299. In addition, the following courses must be completed prior to admission in autumn quarter: ACCTG 225; ECON 200 and ECON 201; MGMT 200; QMETH 201. Applicants should take general education or elective courses to complete the minimum 60 graded credits.

Students admitted to the UW as freshmen are expected to take ACCTG 215, ACCTG 225; MGMT 200; and QMETH 201 in residence.

Qualified applicants with at least 45 credits and a minimum 2.85 GPA who meet University admission requirements, but not Foster School requirements, are eligible to be placed in the College of Arts and Sciences as pre-business majors.

The University of Washington provides equal opportunity in education without regard to race, color, creed, religion, national origin, sex, sexual orientation, age, marital status, disability, or status as a disabled veteran or Vietnam veteran in accordance with UW policy and applicable federal and state statutes and regulations.

Graduation Requirements

180 credits as follows:

General Education Requirements

The following must be selected from the University Areas of Knowledge courses: 20 credits in Visual, Literary, & Performing Arts; 20 credits in Individuals & Societies, including 10 credits in microeconomics and macroeconomics (ECON 200 and ECON 201); 20 credits in the Natural World, including 5 credits in calculus (MATH 112, MATH 124, or MATH 134); most students need precalculus before taking college calculus (some precalculus courses qualify for the Natural World requirement); 5 credits in English composition.

Students from community colleges in Washington should check the Transfer Guide or consult with their community college adviser for equivalent courses. Students from other four-year schools should see an adviser at their school. Students entering the Foster School under the terms of the Associate Degree Agreement may apply courses selected from the community college's breadth list toward the general education requirements.

Foster School Requirements

ACCTG 215, ACCTG 225; QMETH 201; MGMT 200; B ECON 300; MKTG 301; I S 300; I BUS 300; OPMGT 301; FIN 350; MGMT 300; MGMT 320; MGMT 430; and 300- or 400-level business electives (or area of concentration) to bring the total number of business credits to 72; two writing-intensive courses, one from B CMU 301, B CMU 410, ENGL 281, ENGL 381; one from English composition, or from the re-

maining three courses listed immediately above, or from any W course. No more than 6 lower-division business elective credits; a minimum of 90 non-business credits, which may include up to 14 credits of economics and up to 9 credits of statistics but not GEN ST 350; a minimum 2.50 cumulative GPA in all business credits earned at the UW; and a cumulative GPA of 2.50 for all UW credits. No more than 8 credits of business independent research coursework may be applied to the degree and no more than 4 credits of business independent research coursework may be applied to upper-division business electives. No more than 8 credits of internship coursework is applicable to the degree. Business internship credit may not apply to the upper-division business elective requirement. Students must complete six of the nine upper-division core courses, including MGMT 430, and 40 of the 53 required upper-division business credits at the UW. Students who have taken more than three of the nine upper-division core business courses at another school should consult an academic adviser in the Foster School Undergraduate Program Office prior to applying.

Accounting Option

The notation "Accounting" is indicated on the permanent record, or transcript, of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes the following courses with a minimum cumulative GPA of 2.50: ACCTG 301, ACCTG 302, ACCTG 303, ACCTG 311, ACCTG 320, ACCTG 411, ACCTG 421, ACCTG 440, and at least one 400-level accounting elective, excluding ACCTG 401, ACCTG 490, ACCTG 495, and ACCTG 499. Students who have completed ACCTG 505 may not apply to the accounting option. The accounting option requires 186 credits for graduation.

Entrepreneurship Option

The notation "Entrepreneurship" is indicated on the transcript of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes the following courses with a minimum 2.50 cumulative GPA: ENTRE 370, FIN 457, MKTG 455; 8 credits of the following courses: ENTRE 422, ENTRE 432, ENTRE 440, ENTRE 443, ENTRE 459, or ENTRE 472 and ENTRE 473.

Finance Option

The notation "Finance" is indicated on the transcript of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes the following courses with a minimum cumulative GPA of 2.50: one course from FIN 450, FIN 453, FIN 454, or FIN 457; either FIN 460 or FIN 461; four additional courses chosen from the 400-level FIN courses, B ECON 301 or ECON 301, or the 400-level B ECON courses, excluding FIN 490, FIN 495, FIN 499, B ECON 490, and B ECON 499.

Human Resources Management Option

The notation "Human Resources Management" is indicated on the transcript of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes the following courses with a minimum cumulative GPA of 2.50: MGMT 311, MGMT 411, MGMT 412, and two of the following courses: MGMT 323, MGMT 401, MGMT 402, MGMT 403, MGMT 404, or MGMT 413.

Information Systems Option

The notation "Information Systems" is indicated on the transcript of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes the following courses with a minimum 2.50 cumulative GPA: I S 320, I S 410, I S 445, I S 451, and I S 460.

Marketing Option

The notation "Marketing" is indicated on the transcript of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes the following courses with a minimum 2.50 cumulative GPA: MKTG 450, MKTG 460, and three additional MKTG electives, excluding MKTG 490, MKTG 495, and MKTG 499. It is recommended

that students take MKTG 450 and MKTG 460 before they take the other electives.

Operations and Supply Chain Management Option

The notation "Operations and Supply Chain Management" is indicated on the transcript of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes the following courses with a minimum 2.50 cumulative GPA: QMETH 450, OPMGT 443, OPMGT 450, IS 451.

Admission to the options

Students can apply to one option at the same time they apply to the Foster School. Continuing Foster School students can apply during publicized application periods. If demand for the option exceeds the number of spaces available, students are considered based on the factors identified for admission to the Foster School and on their GPA in all previous option-specific courses.

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, contact the departmental adviser or refer to the School website.

Student Outcomes and Opportunities

- **Learning Objectives and Expected Outcomes:** A business education develops important communication and interpersonal skills. The ability to express an idea, negotiate a settlement, motivate others, manage time, and build collaborative networks distinguishes the most successful business people. UW Foster School students learn to recognize and define problems, examine data, and persuasively communicate their ideas to achieve results in organizations and people's lives. Regardless of post-graduation path -- be it climbing up the corporate ladder, starting a company, joining the Peace Corps, entering law school, or becoming a doctor -- a business education helps immeasurably.
- **Instructional and Research Facilities:** The Foster Business Library houses an extensive collection of books, reference tools, and journals necessary to the study of business. Balmer Hall has wireless capabilities for faculty and student use and houses three computer labs with 120 workstations. The virtual NASDAQ trading room equipped with trading and analytical software allows students to simulate stock transactions using real-time market data and stock quotes so they can study diversification, hedging, and other investment strategies. The New Venture Creation Lab represents a new paradigm for integrating entrepreneurial education with technology development and hands-on experience. The lab features computer workstations, proprietary software, online technology and market assessment tools and data to assist student entrepreneurial efforts. The Business Writing Center provides free consultations on business class writing assignments, cover letters, and resumes.
- **Honors Options Available:** Honors students benefit from a sense of community generated by Honors seminars, as well as from the academic challenge associated with more rigorous study. The program requirements are flexible, challenging students to explore business topics in greater depth. Students entering the Honors program become candidates for the degree "With College Honors" or "With Honors."
- **Research, Internships, and Service Learning:** The Foster School encourages student participation in internships to supplement in-class learning experiences. For more information about internship guidelines and a list of undergraduate internship opportunities, visit www.foster.washington.edu/academic/undergrad/Pages/Internships.aspx.

- **Department Scholarships:** The Foster School awards approximately 90 undergraduate scholarships. Some are general scholarships while others are specific to options or areas of concentration. Only students admitted to both the UW and the Foster School are eligible to receive awards. Applicants are considered for all scholarships for which they meet the minimum qualifications and specific criteria. Although financial need is not a requirement for all business scholarships, most are awarded on the basis of need. (The FAFSA must be filed with the Office of Student Financial Aid.) The Foster School scholarship application is due April 5.
- **Student Organizations/Associations:** Chapters of Alpha Kappa Psi, Association of Black Business Students, Undergraduate Entrepreneurship Club, International Association of Students in Economics and Business (AIESEC), American Marketing Association, Business Information Technology Society, Dow Dawgs Investment Club, Hispanic Business Association, Society for Human Resources Management, Business and Economic Development Program Leadership Team, Undergraduate Finance Club, Undergraduate Management Consulting Association, University Sales Club, and Undergraduate Leadership Forum provide opportunities for undergraduate students to meet informally and to participate in a variety of projects and events.

Double Baccalaureate and Second Baccalaureate

Students who wish to earn more than one baccalaureate degree should consult an academic adviser in the Foster School Undergraduate Program Office, either during or before their junior year. Persons seeking a second baccalaureate should apply at the University's Office of Undergraduate Admissions. To be considered, applicants must complete by quarter of entry the same prerequisites for admission as applicants for the first baccalaureate degree. Since the number of eligible applicants exceeds available space, acceptance is competitive, based on the criteria listed above for selection of first baccalaureate degree applicants. The Foster School uses the GPA for the last 90 credits earned.

Undergraduate Diversity Services

Director, Jai-Anna Elliott

Recruitment, admissions counseling, advising, and support services are available for minority students underrepresented at the University, and students from educationally and economically disadvantaged backgrounds. Special scholarships are also available for underrepresented minority students. Academic advisers have information on this program.

GRADUATE PROGRAMS

Associate Dean for Master's Degree Programs

David Burgstahler

Admission

Qualified students who are graduates of the University of Washington or other accredited colleges or universities may be admitted to graduate degree programs. GPA, Graduate Management Admission Test score, work experience, educational and professional objectives, and other factors are considered in the admission process. Inquiries concerning the details of admission should be made to the specific degree program of interest, University of Washington, Foster School of Business, Mackenzie Hall, Box 353200, Seattle, WA 98195.

Application Procedure

Applications to the MBA, EMBA, and PhD programs are considered for entry in autumn quarter only. Applications to

the Technology Management MBA and Master of Science in Information Systems program are considered for entry in winter quarter only. The formal deadlines for application are February 1 for the PhD program; December 1, January 1, February 1, and March 1 for domestic applicants for the MBA; February 1 for international applicants for the MBA; April 1 for Evening MBA; and April 15 for the Executive MBA and MPAcc programs. Students are encouraged to apply as early as possible for the programs.

The Foster School of Business offers programs of study leading to the advanced degrees of Master of Business Administration, Master of Professional Accounting, Master of Science in Information Systems, and Doctor of Philosophy. Four programs can lead to an MBA degree: the full-time program, the evening program, the Technology Management (TMMBA) program, and the Executive MBA program.

Master of Business Administration

Executive Director

Dan Poston

110 Mackenzie Hall, Box 353200

(206) 543-4661

mba@uw.edu

Degree Requirements

96 credits (80 credits for evening MBA)

The full-time Master of Business Administration degree program has been designed for students preparing for a professional career in management. A period of two academic years, or 96 academic credits, is required for most students to complete the MBA program. The first year of the program consists of 48 credits of required courses: B A 500, B A 501, B A 502; three of the following bridge elective options: EBIZ 509 (required for EBIZ certificate), ENTRE 509 (required for CIE certificate), FIN 509 (prerequisite for most finance electives), I BUS 509, MGMT 579 (2-4, max. 12), or MKTG 509. The second year of the program is 48 credits of elective courses. The student may take no more than 24 credits in any one elective area.

The evening MBA program is targeted toward fully employed college graduates who seek a management degree that can be earned outside their regular working hours. Instruction takes place two evenings per week and students typically take two courses per quarter. The program consists of 80 academic credits, with normal completion of degree requirements in ten quarters. The course requirements are as follows: ACCTG 500, ACCTG 501, B ECON 500, B ECON 501, FIN 502, I S 504, MGMT 500, MGMT 502, MGMT 505, MKTG 501, OPMGT 502, QMETH 500, QMETH 501, 34 credits of electives

Special Programs

Within the MBA program, there are options for special study: Global Business Program; E-Business Program, and the Program in Entrepreneurship and Innovation. The following concurrent degree programs are also available: MBA/JD with the School of Law, MBA/MAIS with the Henry M. Jackson School of International Studies, MBA/MSE with the College of Engineering's Program in Engineering and Manufacturing Management, and MBA/MHA with the School of Public Health.

Executive Master of Business Administration

Director

Louise Kapustka

(206) 685-1333

emba@uw.edu

Since the autumn of 1983, the Executive MBA Program has provided an additional pathway to the Master of Business Administration degree. The EMBA program provides

an intensive executive-development experience to a select group of midcareer managers who continue to work full-time while pursuing the MBA degree. Candidates for this two-year program should have seven or more years of increasingly successful work experience including three to four years in management, and currently hold mid- or top-level management positions. They are typically sponsored by their organizations and have been identified as employees with high potential to advance as general managers. Students are selected to ensure diversity of industry, functional areas, and organizational size.

The Executive MBA degree program is offered in two scheduling options. Both run for two academic years, September through June. (1) The Regional Program meets on campus for a full day once a week, on alternating Fridays and Saturdays. In addition, students attend spring and fall residence sessions each year. (2) The North America Program meets on campus once a month, generally for three consecutive days, Thursday through Saturday. Between monthly sessions, students continue to interact with faculty and classmates online via the Internet and interactive groupware. This format is designed for individuals from the greater Northwest as well as those from the Puget Sound area whose schedules preclude weekly attendance.

While the scope of the curriculum is comparable to that of the regular MBA program, the pace is more intense and the perspective is that of a general manager. There are 21 required courses and no electives.

Admission Requirements

1. Letter of Endorsement: Candidates must be sponsored by their employing organizations and endorsed by senior management as potential general managers. In sponsoring EMBA candidates, organizations agree to release them on class days and, in some cases, to cover the program fee. Individuals not sponsored by a company need to submit an additional letter of recommendation in place of the Letter of Endorsement.
2. Three letters of recommendation
3. Graduate Management Admission Test (GMAT) scores
4. Two sealed copies of official transcripts from all degree-granting institutions attended

Applications are accepted throughout the year, with an application deadline of April 15 for the class beginning each autumn. Late applications are handled on a space-available basis.

Degree Requirements

68 credits

The 21-month, 68-credit curriculum builds a solid foundation of business fundamentals. Case studies and group projects link theory with current business practice. Themes based on current trends in business, including the impact of technology and globalization, are threaded through the entire curriculum.

Students frequently use their own organizations as laboratories, applying lessons learned in the classroom and then bringing the results back to the class for further discussion.

The following are the required courses: EMBA 502, EMBA 503, EMBA 504, EMBA 505, EMBA 506, EMBA 510, EMBA 511, EMBA 512, EMBA 520, EMBA 521, EMBA 529, EMBA 530, EMBA 531, EMBA 532, EMBA 533, EMBA 534, EMBA 540, EMBA 551, EMBA 552, EMBA 558.

Technology Management Master of Business Administration

Director

(206) 221-6995

tmmba@uw.edu

The Technology Management MBA program is designed for professionals who are employed in technology companies or who work in technology jobs in more traditional businesses. The curriculum combines the essential components of management education with a specialized focus on high-tech industries. It is structured for individuals who want to play a broader role in management and are seeking the necessary management skills and business knowledge. The program is focused on real-world projects and analyses, collaborative learning in study groups, and extensive participant interaction in the classroom. Candidates for this 18-month program have technology experience and upward career progression.

The Technology Management MBA program provides an intensive educational experience to professionals who continue to work full-time while pursuing their MBA degree. The TMMBA program runs six consecutive quarters of instruction beginning every January and ending the next year in June. Three-hour sessions are held once a week on a mid-week evening and six-hour sessions are scheduled two Saturdays per month. There are 68 required credits of which 6 are electives. Additionally, two residential sessions are offered one at the beginning of the program and one at the end. Candidates may be sponsored by their organizations or apply on their own.

Admission Requirements

1. Applicants should hold a professional position and have a minimum of five years of work experience. Applicants must demonstrate a career trend of increased responsibilities or promotions. Supervisory or management experience is not required, but applicants should demonstrate leadership potential. Candidates' work accomplishments and letters of recommendation should provide evidence of their potential for senior management.
2. Applicants must hold a baccalaureate degree from an accredited college or university.
3. Personal statement
4. Three letters of recommendation and evaluations
5. Resume
6. Interview
7. GMAT scores
8. Two sealed copies of official transcripts
9. *Additional requirement for permanent residents:* Proof of English language proficiency (if applicable)
10. *Additional requirements for international applicants:* International Graduate Admissions Application, Proof of Financial Ability form, photocopy of current visa (if applicable), notice of action (if applicable), proof of English language proficiency (if applicable)

Each year approximately 50 students are accepted into the TMMBA Program. Applications are accepted throughout the year. Contact the TMMBA office to find out application deadlines for the upcoming class.

Degree Requirements

68 credits, as follows:

TMMBA 500, TMMBA 501, TMMBA 502, TMMBA 503, TMMBA 505, TMMBA 507, TMMBA 510, TMMBA 512, TMMBA 515, TMMBA 516, TMMBA 517, TMMBA 520, TMMBA 521, TMMBA 522, TMMBA 528, TMMBA 530, TMMBA 551, 6 credits of electives

Master of Professional Accounting

Managing Director

Francine Shafer

231 Mackenzie

(206) 616-4964

The Master of Professional Accounting (MPAcc) prepares students for high-level careers with major accounting and consulting firms, governmental agencies, and industry. Students with undergraduate degrees in accounting may complete the program in three quarters. Students with no prior business background must take an expanded version of the program. Enrollment is limited to 25 to 30 students in each of two tracks - Accounting and Assurance (A&A) and Taxation. MBA students with a strong interest in accounting and taxation may earn a joint MBA/MPAcc degree.

Admission Requirements

1. Satisfactory completion of prerequisite courses (see website for list of prerequisite courses)
2. Scores from the GMAT exam
3. International TOEFL scores
4. Well written essays
5. Work experience
6. Volunteer and student activities

Degree Requirements, Auditing and Assurance Pathway

48 credits, as follows:

1. ACCTG 521, ACCTG 523, ACCTG 527, ACCTG 576, ACCTG 566, ACCTG 577, ACCTG 579
2. *Internship:* ACCTG 575. If no internship, complete four approved elective classes: ACCTG 420, ACCTG 524, ACCTG 525, ACCTG 562 ACCTG 564

Degree Requirements, Taxation Pathway

48 credits, as follows:

ACCTG 530, ACCTG 531, ACCTG 533, ACCTG 534, ACCTG 535, ACCTG 536, ACCTG 537, ACCTG 538, ACCTG 539, ACCTG 541, ACCTG 541, ACCTG 543, ACCTG 547

Doctor of Philosophy

Program Coordinator

Jaime Banaag

baphd@uw.edu

The PhD program in business administration is research-based and designed to train scholars interested in academic careers, although this training is also useful for individuals seeking research positions in business and government, as well as in consulting firms.

With the guidance of faculty members who have similar interests, PhD students complete a program of formal coursework (minimum of 18 courses) and participate in doctoral seminars, independent study, and research. A Faculty Supervisory Committee is appointed early in the program to assist each student in constructing a course of study that fits that individual's background and interests. Students select one major area of specialization and complete requirements in two or three additional minor areas that support their major area of specialization (including areas outside the Foster School, such as economics, psychology, and mathematics). Throughout the program, doctoral students receive support and training that hone their skills as teachers and course developers.

Major areas of concentration include accounting, finance, human resource management and organizational behavior, marketing, information systems, operations management, operations research, and strategic management. All doctoral students are required to have research methods as one of their minor areas.

Doctoral study is full-time and year-round, and students are admitted autumn quarter only. Most candidates require four to five years to complete the program. The school's goal is to make financial aid available, in the form of research and teaching assistantships, to all of its doctoral students. In addition to service appointments, fellowships are available on a competitive basis to support students engaged in their dissertation research during the final part of their programs.

Special Requirements

Applicants to graduate business programs are required to submit scores on the Graduate Management Admission Test. Those admitted to the MBA program must demonstrate understanding of the fundamental concepts of calculus.

DEPARTMENTS

Accounting

Accounting involves development and communication of financial and operational information for business and nonprofit economic entities. The curriculum includes understanding accounting information systems, using accounting information in managerial decision making, preparing and auditing financial statements under generally accepted accounting and auditing standards, and understanding the fundamental aspects of personal and corporate taxation. Elective courses provide in-depth instruction in managerial and financial accounting, not-for-profit accounting, and taxation. Courses provide a foundation for careers in accounting (public, industrial, private, or governmental), for a general business career, or for other professions such as law.

For more information, see the Department of Accounting website.

Finance and Business Economics

Finance and Business Economics address the financial and economic aspects of business decision making. The finance curriculum focuses on financial management and the financial markets within which firms and individual investors operate. Business economics courses concern the economic behavior of firms, including factors that determine costs and prices, and real and monetary forces (such as government policies) that affect the national and international economic environment.

For more information, see the Department of Finance and Business Economics website.

Management and Organization

Management and Organization provides an understanding of the processes and structures of organizations through three distinct programs. The Human Resource Management and Organizational Behavior (HRMOB) courses address personnel and industrial-relations topics such as selection, performance appraisal, compensation, and negotiations, as well as behavioral topics such as leadership, motivation, and group dynamics. They prepare students for managing an organization's human resources effectively. The Organization and Environment (O E) courses examine organization theory, organization design, and management of technology and innovation, as well as the social, political, legal, and ethical environments in which organizations operate. They give students the knowledge, perspective, and analytical tools to deal effectively with organization-environment interactions. The Business Policy (B POL)

courses focus on organizational effectiveness from the viewpoint of top management. Emphasis is placed on an integrated view through strategic management and control, planning, decision making, and entrepreneurship.

For more information, see the Department of Management and Organization website.

Information Systems and Operations Management

The Department of Information Systems and Operations Management consists of three sub-areas: Information Systems (I S), Operations Management (OPMGT), and Quantitative Methods (QMETH). The information systems area focuses on the management of computer-based information systems. The I S curriculum is designed to give students a basic understanding of I S technology and its impact on all phases of an organization. Specific areas of study include telecommunications and network design, systems analysis and design, database management, expert systems, and applications programming. The operations management area of study refers to the functional area of management which produces goods or services in an organization. Specifically, the OPMGT curriculum focuses on the many changes which have occurred in the past ten years in the way that managers think, plan, and operate manufacturing and service facilities. The area includes courses in logistics, quality, inventory and supply-chain management, project management, and waiting lines, among others. The quantitative methods area focuses on the theory and application of mathematical and statistical tools in the modeling and analysis of business problems. The QMETH curriculum includes courses in statistics and data analysis as well as courses in operations research (e.g., linear programming, forecasting, and using spread-sheets to construct decision support models).

For more information, see the Information Systems and Operations Management website.

Marketing and International Business

Marketing (MKTG) provides knowledge of concepts and relationships in the areas of consumer behavior, channels of distribution, measurement and analysis of markets, pricing, physical movement of goods, product development, promotion, and sales administration. Marketing careers may involve specialization in Internet marketing, product or brand management, advertising, selling, sales management, marketing research, retailing, wholesaling, and international marketing for a wide spectrum of firms and industries. International Business (I BUS) includes trade, payments, and multinational corporate systems and activities. The area prepares students for international responsibilities in domestic business firms, governmental agencies, and overseas business. Courses in Business Communications (B CMU) stress writing in organizations to accomplish goals, oral reporting, business plan presentation, and the use of computer graphics in communication.

For more information, see the Department of Marketing and International Business website.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

Business Administration

B A 300 Foreign Study-Business Administration (3-5, max. 15) For participants in approved foreign-study programs where equivalent UW business administration courses are not available.

B A 390 Business Honors Seminar (2-5, max. 5) Special topics in business. Required for Honors students in Business Administration.

B A 490 Special Topics in Business (1-6, max. 8)

B A 500 Business Administration I (16) Coordinated series consisting of accounting, business economics, business ethics, business policy, finance, information systems, international business, legal environment of business, management, and organizational behavior, marketing, operations management, and quantitative methods for management. Prerequisite: permission of the Foster School of Business.

B A 501 Business Administration II (14) Coordinated series consisting of accounting, business economics, business ethics, business policy, finance, information systems, international business, legal environment of business, management, and organizational behavior, marketing, operations management, and quantitative methods for management. Prerequisite: permission of the Foster School of Business.

B A 502 Business Administration III (8) Coordinated series consisting of accounting, business economics, business ethics, business policy, finance, information systems, international business, legal environment of business, management, and organizational behavior, marketing, operations management, and quantitative methods for management. Prerequisite: permission of the Foster School of Business.

B A 505 Global Business Fundamentals (16) An intensive overview of the fundamental core business topics: financial accounting, managerial accounting, business economics, statistics, management, macroeconomics, finance, marketing, operations management, quantitative methods, and strategy. Prerequisite: permission. Offered: S.

B A 541 Environmental Management I (4) Survey of environmental ethics, environmental laws and regulation, the economics of environmental decisions, and the relationship of business to public policy and the environment. Must be taken concurrently with B A 544. Prerequisite: permission of instructor.

B A 542 Environmental Management II (4) Applications of the functional areas of business to environmental concerns. Major federal legislation affecting these concerns applied to business problems in the areas of accounting, finance, marketing, management information systems, and organizational behavior. Must be taken concurrently with B A 544. Prerequisite: B A 541 or permission of instructor.

B A 543 Environmental Management III (4) Case studies that integrate the fundamentals of business and environmental management to address such issues as plant siting, regulatory compliance, production line changes, and innovative, proactive responses to environmental issues. Case studies include results of student consulting projects and a capstone case in environmental management. Must be taken concurrently with B A 544. Prerequisite: B A 542 or permission of instructor.

B A 544 Environmental Management Seminar (1, max. 3) Guest lecturers from academia, business, government, and advocacy groups discuss environmental science, ethics, law, regulation, economics, finance, accounting, and policy issues. Seminar topics supplement course material in B A 541, B A 542, B A 543, which are to be taken concurrently.

B A 545 The Global Business Forum: Current Issues in Global Business (1, max. 3) Discussion of current trends in the global business environment and of international issues facing companies. Leaders from international businesses and other organizations, as well as faculty members from various departments and specializations, invited to share their perspectives with seminar participants. Topics change each quarter.

B A 560 Cooperative Education in Business (1) Business practicum: internship with approved business or governmental agency. Open only to students who meet requirements of internship program. Internship credit may not be

applied to fulfill specific course requirements or to credits required for graduation. Credit/no-credit only. Offered: S.

B A 571 Research Reports (4-) Independent study in business administration; critical evaluation of business analysis and research methods. Effective communication of ideas emphasized. Methods and content of independent research studies subjected to critical evaluation. Open only to MBA non-thesis students. Prerequisite: instructor's approval of preliminary research topic outline.

B A 572 Research Reports (-4) Independent study in business administration; critical evaluation of business analysis and research methods. Effective communication of ideas emphasized. Methods and content of independent research studies subjected to critical evaluation. Open only to MBA non-thesis students. Prerequisite: B A 571.

B A 578 Practicum in Business Management (2) Provides an opportunity for first-year MBA students to apply the skills learned in the classroom to real world problems. Students participating in the Business Consulting Network (BCN) partner with client firms on an applied learning project that offers additional training opportunities not possible in the classroom. Credit/no-credit only.

B A 580 Problems in Microeconomics (4) Study of microeconomic intuition, directed toward Business School Ph.D. students, showing the interconnections between formal, mathematical analysis and the unstructured economic questions posed by the world. Emphasis on setting up problems and examining the intuition behind the analysis of them. Many applications to specific business issues.

B A 700 Master's Thesis (*-)

B A 800 Doctoral Dissertation (*-)

Accounting

ACCTG 199 Accounting for Problem Solving (2, max. 4) Supplementary lectures, discussions, and problem-solving sessions in introductory accounting. Enrollment priority to EOP students and others by permission. Credit may not be applied to fulfill specific program requirements. Corequisite: ACCTG 215. Credit/no-credit only. Offered: AWSp.

ACCTG 215 Introduction to Accounting and Financial Reporting (5) Nature and social setting of accounting; uses of accounting information; introduction of basic accounting concepts and procedures; interpretation of financial statements. May not be repeated. Offered: AWSpS.

ACCTG 225 Fundamentals of Managerial Accounting (5) Analyses and evaluation of accounting information as part of the managerial process of planning, decision making, and control. Concentrates on information useful to enterprise managers. Prerequisite: ACCTG 215; ECON 200; may not be repeated. Offered: AWSpS.

ACCTG 275 Accounting and Finance Essentials (3) QSR Paperman Explores the economic foundations of accounting systems. Discusses the short-term and long-term implications of using accounting information to evaluate performance, create budgets, and analyze financial statements. Not open for credit to students pursuing a business degree. Offered: Sp.

ACCTG 301 Intermediate Accounting I (4) Concepts and principles of financial accounting. Analysis of controversies and problems related to the measurement of enterprise income and asset and liability valuation. Prerequisite: minimum grade of 2.0 in ACCTG 225; may not be repeated. Offered: AWSpS.

ACCTG 302 Intermediate Accounting II (4) Concepts and principles of financial accounting. Analysis of controversies and problems related to the measurement of enterprise income and asset and liability valuation. Prerequisite: minimum grade of 2.0 in ACCTG 301; minimum grade of 2.0 in B CMU 301; may not be repeated. Offered: AWSp.

ACCTG 303 Intermediate Accounting III (4) Concepts and principles of financial accounting. Analysis of controversies and problems related to the measurement of enterprise

income and asset and liability valuation. Prerequisite: minimum grade of 2.0 in ACCTG 302; may not be repeated. Offered: AWSp.

ACCTG 311 Cost Accounting (4) Introduction to the theory of cost accounting; job order, process, and standard cost systems; overhead accounting; problems in accumulation and allocation of costs; decision making with cost data. Prerequisite: minimum grade of 2.0 in ACCTG 225; may not be repeated. Offered: AWSpS.

ACCTG 320 Introduction to Accounting Information Systems (4) Concepts of accounting information systems in organizations. Processes of analyzing and designing accounting information systems, with emphasis on those using computer facilities. Internal controls and auditing considerations. Prerequisite: minimum grade of 2.0 in ACCTG 225; I S 300 which may be taken concurrently; may not be repeated. Offered: AWSpS.

ACCTG 321 Tax Effects of Business Decisions (4) Issues in taxation, including tax considerations in business decision making, tax effects of business transactions, taxation of compensation, fringe benefits, capital gains, fixed asset transactions, disposition of business distribution from corporations. Prerequisite: minimum grade of 2.0 in ACCTG 301; may not be repeated. Offered: AWSpS.

ACCTG 375 Topics in Financial Reporting (4) Critical examination of the uses and limitations of general purpose financial statements that have been prepared in accordance with generally accepted accounting principles. Not open for credit to accounting majors or to students who have completed ACCTG 301. Prerequisite: minimum grade of 2.0 in ACCTG 225; may not be repeated.

ACCTG 411 Auditing Standards and Principles (4) Intensive introduction to the attest function in society today. The environment, the process, and the report of the public auditor are analyzed. Potential extensions of the attest function are examined. Prerequisite: minimum grade of 2.0 in ACCTG 303; 2.0 in ACCTG 320; may not be repeated. Offered: AWSpS.

ACCTG 420 Database Management for Accounting (4) Continuation of ACCTG 320, covering database and processing architectures, database reliability, database recovery, database security, database administration, internets and intranets, and network security. Not available for credit to information systems majors or to students who have completed I S 410 and I S 445. Prerequisite: minimum grade of 2.0 in ACCTG 320; may not be repeated.

ACCTG 440 Accounting and Financial Management Decisions (4) Business financial planning with an emphasis of the role of accounting information in financial decisions. Topics include the accounting and finance aspects of business valuation, short and long term financing, short and long term investments, alternative types of debt and equity financing, and related topics. Prerequisite: minimum grade of 2.0 in ACCTG 303; 2.0 in ACCTG 311; 2.0 in ACCTG 321; FIN 350; may not be repeated. Offered: AWSp.

ACCTG 450 Business Taxation (4) Issues of taxation for entities other than individuals, including corporations, subchapter S corporations, partnerships, estates, and trusts. Includes corporate distributions, liquidations, and reorganizations. Prerequisite: minimum grade of 2.0 in ACCTG 321; may not be repeated. Offered: WSp.

ACCTG 451 Individual Income Taxation (4) Political, economic, and social forces influencing federal income taxation, role of taxation in personal decisions. Coverage of individual income tax matters, including business and investment income, business and personal deductions, property transactions, and tax issues of employees. Prerequisite: minimum grade of 2.0 in ACCTG 321; may not be repeated. Offered: Sp.

ACCTG 460 Advanced Cost Accounting (4) Advanced analysis of cost and management accounting problems; special applications of cost accounting techniques for management planning and control; current developments in cost

accounting. Prerequisite: minimum grade of 2.0 in ACCTG 311; may not be repeated. Offered: Sp.

ACCTG 471 Fraud Examination (4) Provides a comprehensive introduction to the concepts and techniques of the fraud examination process. Prerequisite: ACCTG 225; MGMT 200; QMETH 201.

ACCTG 480 Accounting for Not-for-Profit Organizations (4) Fund and budgetary accounting as applied to public sector organizations, such as governments, foundations, hospitals, and colleges. Prerequisite: minimum grade of 2.0 in ACCTG 302; may not be repeated. Offered: WSp.

ACCTG 485 Advanced Financial Accounting (4) Accounting for partnerships, accounting for business combinations, parent-subsidiary and branch relationships, foreign exchange. Prerequisite: minimum grade of 2.0 in ACCTG 303; may not be repeated. Offered: A.

ACCTG 490 Special Topics in Accounting (1-6, max. 6) Special topics of current concern to faculty and students. Offered only when faculty is available and student interest is sufficient. Class is announced in advance of scheduled offerings.

ACCTG 495 Accounting Internship (1-4, max. 8) One quarter's internship with a certified public accounting firm, industrial organization, or government agency. Prerequisite: ACCTG 301. Credit/no-credit only. Offered: AWSpS.

ACCTG 499 Undergraduate Research (1-6, max. 9) Arranged and supervised by individual members of the faculty.

ACCTG 500 Financial Accounting (4) Introduction to concepts and procedures underlying determination and presentation of information for financial decisions by investors and other decision makers outside the business enterprise. Study of problems of valuation, income determination, and financial reporting.

ACCTG 501 Managerial Accounting (4) Study of the generation and the use of accounting information within the firm for purposes of planning and controlling operations. Topics covered include cost concepts, responsibility accounting systems, cost control, and the use of accounting information in short- and long-term management decision problems. Prerequisite: ACCTG 500.

ACCTG 503 Introduction to Accounting for Managers (4) Provides potential managers with a basic knowledge of financial and managerial accounting. Focuses on the use, not the preparation, of accounting information. Examples presented for a variety of for-profit and nonprofit organizations.

ACCTG 505 Intensive Analysis of Accounting Principles and Practices (18) Covers the subjects in the required core for undergraduate accounting majors: intermediate accounting, advanced accounting, cost accounting, auditing, and tax accounting. Credits do not count toward MBA degree. Prerequisite: ACCTG 215 and ACCTG 225 or equivalent, or permission of instructor.

ACCTG 506 Intensive Analysis of Accounting Principles and Practices I (6) First of an intensive three-course program. Emphasizes the practical application of accounting concepts in a business setting. Credits do not count toward MBA degree. Prerequisite: ACCTG 215; ACCTG 225 or equivalent, or permission of instructor; recommended: experience in accounting practice. Offered: A.

ACCTG 507 Intensive Analysis of Accounting Principles and Practices II (6) Second of an intensive three-course program. Covers the third part of financial accounting, accrual-based financial statements, and cost accounting for decision-making. Credits do not count toward MBA degree. Prerequisite: ACCTG 506. Offered: W.

ACCTG 508 Intensive Analysis of Accounting Principles and Practices III (6)

ACCTG 510 Introduction to Financial Statement Analysis (4) Extension of the core financial accounting material, focusing on the use of financial statements to assess the

financial position and prospects of companies. Examines the critical financial reporting issues that influence interpretation of financial statements. Prerequisite: either B A 500, ACCTG 500, or permission of instructor.

ACCTG 511 Advanced Financial Statement Analysis (4) Covers accounting issues related to firm valuation and use of financial statement information to assess the risks and rewards of various firm strategies. Prerequisite: ACCTG 510 or permission of instructor.

ACCTG 513 Tax Effects of Business Decisions (4) Importance of tax considerations in making business decisions. Covers regulatory and economic impacts of the U. S. tax system. Prerequisite: either B A 500, ACCTG 500, or permission of instructor.

ACCTG 515 Problems in Managerial and Cost Accounting (4) Extension of the core management accounting material. Uses cases and discussion to analyze costing techniques, use of accounting data in planning and evaluation of managerial performance, and use of accounting data in short-run and long-run decisions. Prerequisite: either B A 502, ACCTG 501, or permission of instructor.

ACCTG 521 Cases and Issues in Information Quality and Assurance Services (4) Analysis of cases and discussions of current issues dealing with assurance services.

ACCTG 523 Advanced Financial Analysis (4) Explores the use of published financial reports by decision makers external to the firm (e.g. investors and creditors). Emphasis is on traditional and statistical analyses of financial statements for the purposes of making economic decisions.

ACCTG 524 Individual Taxation (4) Political, economic, and social forces influencing federal income taxation, role of taxation in personal decisions. Coverage of individual tax matters, including business and investment income, business and personal deductions, property transactions, and tax issues of employees.

ACCTG 525 Business and International Taxation (4) Issues of taxation for entities other than individuals, including corporations, subchapter S corporations, partnerships, estates, and trusts. Includes corporate distributions, liquidations, and reorganizations. International dimensions of business taxation introduced. Prerequisite: ACCTG 524.

ACCTG 526 Principles of Taxation for Auditors (4) Raises level of understanding of the tax law and enables intelligent conversation about business income tax topics. Covers flow-through entities (partnerships, S. Corps & LLCs), corporate taxation, non-taxable exchanges, and planning techniques.

ACCTG 527 Communications in Professional Accounting (4) Introduction to the communications practices of professional accountants. Development of effective written and oral skills employed in accounting presentations such as audit reports. Study of results of organizational communications research applicable to accounting firms and units within firms.

ACCTG 528 Communications, Marketing, and Interpersonal Skills for Auditors (4) Emphasizes improving interpersonal skills and students' abilities to market their firm.

ACCTG 529 Business Ethics and Law for Accountants (4) Explores basic legal and ethical principles underlying the practice of accounting. Special attention devoted to spotting legal and ethical issues as they arise in a commercial and professional context.

ACCTG 530 Tax Issues in Property Ownership (4) Analysis of gain and loss realization, recognition, and characterization of such. Detailed exploration of statutory and case law regarding acquisition, ownership, and disposition of assets. Treatment of capital and ordinary gains and losses. Timing issues regarding deferral transactions and installment reporting are analyzed. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 531 Timing and Periods of Taxation (3) Analysis of the cash and accrual methods of accounting, choice of taxable period and multi-period transaction analysis. Consideration of statute of limitations and mitigation thereof. Details of passive activity losses. Prerequisite: undergraduate accounting concentration or equivalent.

eration of statute of limitations and mitigation thereof. Details of passive activity losses. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 533 Procedural and Policy Issues (3) Analysis of the procedures of federal taxation: assessment, collection, and refund claims. Detailed exploration of the rules governing the statute of limitations and the mitigation thereof. An introduction to tax policy considerations is given. Tax penalties are explored. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 534 Fundamentals of Corporate Taxation (3) Detailed analysis of contribution of assets to corporations. Calculation of recognized gains and basic effects of asset contributions. Treatment of income and deduction items of corporate operations. Analysis of distribution of assets to shareholders with respect to their stock. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 535 Advanced Issues in Corporate Taxation (3) A continuation of ACCTG 534. Fundamentals of moving assets out of and within corporate solution. Basics of corporate reorganizations: acquisitive and divisive. The details of the election to obtain (or avoid) the Section 338 election are explored in detail. Prerequisite: undergraduate accounting concentration or equivalent; ACCTG 534 or permission of instructor.

ACCTG 536 Advanced Issues in Corporate Taxation (3) Continuation of ACCTG 534 and ACCTG 535. Study of complex issues in corporate taxation planning. Substantial portion of course involves resolving case studies to improve analytic skills and to interrelate disparate corporate planning opportunities. Corporate reorganizations are analyzed in detail. Prerequisite: undergraduate accounting concentration or equivalent; ACCTG 535 or permission of instructor.

ACCTG 537 Income Taxation of Conduits I (3) Tax consequences to owners and entity from formation, operation, distributions from, and liquidation of partnerships and S corporations. Study of taxable and tax-free formations, nature of "bottom line" income and separately stated items, changes to owners' tax basis, basics of non-liquidating and liquidating distributions. Prerequisite: undergraduate accounting concentration or equivalent. Offered: W.

ACCTG 538 Income Taxation of Conduits II (3) A continuation of ACCTG 537. Study of complex issues in partnership and S corporation taxation. Substantial portion involves resolving case studies to improve analytic skills and interrelate partnership and S corporation planning issues. Sections 751(b) and 736 examined in detail. Prerequisite: undergraduate accounting concentration or equivalent; ACCTG 537 or permission of instructor.

ACCTG 539 Tax Research and Decision Making (4) Decision-making processes in relation to problems of taxation. Tools of tax analysis and research and the communication of conclusions flowing from professional tax work. Role of the professional accountant in client business transactions and in negotiations with taxing authorities is highlighted and simulated on the basis of actual case histories. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 540 Communications for Taxation Professionals I (4) Focuses on internal communications in an accounting firm setting. Evaluation of difficult tax question and practice communicating advice and explanations to colleagues and managers.

ACCTG 541 Communications for Taxation Professionals II (4) Introduction to the communications forms and to practices of professional accountants and accounting managers. Development of effective written and oral skills employed in accounting presentations, such as audit reports and consultants' reports. Study of results of organizational communications research applicable to accounting firms and/or units within firms. Prerequisite: undergraduate accounting concentration or permission of instructor.

ACCTG 542 Communications for Taxation Professionals III (4) Development of oral and written skills associated with

the tax accountant's role as a client advocate. Develop communication production related to the various stages of a tax case. Prerequisite: ACCTG 541.

ACCTG 543 Income Taxation of Trusts and Estates (3) Development of fundamental skills regarding income taxation of trusts and estates. Calculation of distributable net income and the distribution deduction for the fiduciary entity. Basic analysis of the throwback rules. Case studies. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 547 Estate and Gift Taxation (3) Development of fundamental knowledge of the unified transfer tax on the transfer of property from one person to another. Calculation of gross estate, adjusted gross estate, and taxable estate. Calculation of gift and estate taxes owing. Discussion of estate planning concepts. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 548 Speaker Forum-Tax (3) Covers topics such as state and local taxation, international taxation, interperiod tax allocation, qualified and nonqualified stock options, the R&D credit, and IRS audit issues presented by practicing professionals in the industry.

ACCTG 549 Tax Planning (4) Advanced issues in tax planning. Think strategically about tax planning. Adjunct lecturers simulate client interviews and simulate presenting factual concepts and planning ideas to clients.

ACCTG 564 Governmental Accounting (4) Budgetary and financial accounting/reporting as applied at the state, local, and special-purpose governments; financial accounting and reporting for not-for-profit organizations.

ACCTG 566 Issues in International Accounting (4) Insights into the conceptual, managerial, professional, and institutional issues of international accounting. Focus on current topics in international accounting and on the cultural, managerial, and governmental forces that shape both internal and external accounting in specific countries.

ACCTG 575 Internship (14) Professional internship in graduate accounting program. Prerequisite: enrollment in MPAcc program, accounting and assurances track.

ACCTG 576 Independent Research Project Proposal (2-) Topic identification and development for research project to be completed in ACCTG 577. Prerequisite: enrollment in MPAcc program, accounting and assurances track.

ACCTG 577 Independent Research Project Proposal (-4) Development and completion of independent research project. Topic identification and proposal approval completed in ACCTG 576. Prerequisite: enrollment in MPAcc program, accounting and assurances track; ACCTG 576.

ACCTG 579 Special Topics in Accounting (2/4, max. 12) Accounting topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offering. Prerequisite: permission of instructor.

ACCTG 580 Doctoral Seminar: Introduction to Accounting Research (4) Examination of research problems and techniques in accounting. Interdisciplinary nature of accounting research emphasized. Work in finance, economics, and psychology used to develop current trends in accounting research. Prerequisite: doctoral student status.

ACCTG 581 Doctoral Seminar in Managerial Accounting (4) Critical examination of conceptual and practical issues of cost and managerial accounting. Specific topics may change from quarter to quarter, and they include application of behavioral, quantitative, and economic models to managerial accounting problems. Prerequisite: ACCTG 511 or permission of instructor.

ACCTG 582 PhD Research Seminar: Introduction to Selected Research Topics (4) Introduces first-year and second-year accounting PhD students to the research areas and methodologies of the current account faculty. Research areas include financial, managerial, audit, and

tax. Research methodologies include analytical, archival, experiments, and surveys.

ACCTG 596 Doctoral Seminar in Financial Accounting Research (4) Review and critical analysis of research strategies and methods applied to problems in financial reporting practice and financial accounting standard setting. Prerequisite: doctoral student status and ACCTG 580 or equivalent or permission of graduate office.

ACCTG 597 Doctoral Seminar in Managerial Accounting Research (4) Critical analysis of current managerial accounting research, both published and unpublished. Prerequisite: doctoral student status and ACCTG 581 or equivalent or permission of graduate office.

ACCTG 599 Doctoral Seminar in Accounting (1, max. 12) Study and research in advanced topics of accounting. Generally concerned with unpublished areas of research as well as research methodology and philosophy. Conducted by departmental faculty and occasional distinguished visiting faculty. Prerequisite: doctoral student status.

ACCTG 600 Independent Study or Research (*)

Administration

ADMIN 510 Fundamentals of Business Administration ([1-15]-, max. 15) Includes materials basic to study and application of business theories and practice; accounting; business economics and financial control; and business strategy; commercial law; human resources and negotiations; marketing; operations management. Faculty team-teaching approach. Not open to master of business administration majors. Credit/no-credit only.

Business Administration Research Methods

BA RM 580 Applied Econometrics I (4) Emphasizes the application of econometric methods rather than the mathematical proofs of statistical procedures. Introduction to the linear regression model, interpretation of summary statistics, bias and precision of regression estimates, analysis of the residuals, and hypothesis testing. Prerequisite: STAT 342 or STAT 395 or STAT 481, or permission of instructor.

BA RM 581 Applied Econometrics II (4) Continuation of BA RM 580. Measurement errors, distributed lags, and simultaneous equation models. Prerequisite: BA RM 580.

BA RM 590 Behavioral Research Methods - Theory and Design (4) Philosophy of science, development of scientific method, and meaning of behavioral research. Historical perspective of scientific investigation and the evaluation of research. The development of theory and its relationship to research. Various strategies and designs in behavioral research. Prerequisite: STAT 361, STAT 362, or permission of instructor.

BA RM 591 Behavioral Research Methods - Approaches and Applications (4) Considers alternative research approaches, such as laboratory and field experimentation, simulation, and surveys, with data-gathering techniques appropriate for each approach. Primarily concerned with developing alternative approaches to research problems and with discussing specific applications. Builds upon a background of specific statistical tools and techniques and an understanding of theory development and research design. Prerequisite: STAT 361, STAT 362, or permission of instructor.

Business Communication

B CMU 301 Strategic Business Communication (4) Strategic approach to communications as a management tool. Analysis of the psychology, semantics, planning, and principles of effective business writing, presenting, and interpersonal and team communication. Practical applications include written and oral messages, inform and persuade, individual and team presentations, and tools and processes to increase collaboration among members of a team.

B CMU 410 Business Reports and Other Specialized Communications (4) Covers internal and external, written and oral business reporting. Considers communications strategies within the context of rapidly changing technologies. Students learn to apply primary and secondary research to quarter-long, individual projects resulting in a variety of reports: proposals, progress reports, feasibility studies, business plans, etc. Prerequisite: B CMU 301 or B CMU 302.

B CMU 490 Special Topics in Business Communications (1-6, max. 12) Students and faculty focus on current topics of concern. Prerequisite: either B CMU 301 or B CMU 302.

B CMU 499 Research in Business Communications (1-6, max. 9)

B CMU 509 Finding your Voice (2) Develop a leadership communication style by discovering core values and learning how to translate those values into effective messages. Students give speeches as well as critique speeches of classmates, produce written evaluation of speeches given in class and receive instructor feedback. Prerequisite: B A 501.

B CMU 510 Business Communications for Managers (4) Develops understanding of communication theories, describes strategies for planning managerial communications, and builds skills in oral and written reporting and persuading. Looks at how new technologies are changing the way people in business communicate, and the implications those changes have for organizations. Prerequisite: B A 501.

B CMU 579 Special Topics in Business Communication (2/4, max. 12) Business and managerial communication topics of current interest to faculty and students.

B CMU 600 Independent Study or Research (*) Offered: AWSp.

Business Economics

B ECON 300 Managerial Economics (4) Analysis of economic factors affecting decisions made by business firms. Demand and cost analysis, and alternative policies from the firm's point of view. Prerequisite: ACCTG 225; ECON 201; either MATH 112, MATH 124, MATH 125, MATH 127, MATH 134, MATH 145, or Q SCI 291; either IND E 315, QMETH 201, Q SCI 381, PSYCH 315, PSYCH 318, STAT 220, STAT 221, STAT 311, or STAT 390; may not be repeated. Offered: AWSp.

B ECON 301 Intermediate Macroeconomics (4) Analysis of economy with attention to the business cycle, output of goods and services (GNP), inflation, unemployment, and government's fiscal and monetary policies. How the economy affects individuals and firms and how to deal effectively with the economic environment. Prerequisite: ECON 201; may not be repeated. Offered: AWSp.

B ECON 420 Financial Markets (4) Analysis of the structure and functions of the money and capital markets; the saving-investment process and financial intermediaries; supply and demand for lendable funds and the level and structure of interest rates, role of Federal Reserve and Treasury in money market developments. Prerequisite: either B ECON 300 or ECON 300; may not be repeated. Offered: Asp.

B ECON 426 Competing in the Global Economy (4) Examines the global environment for business and the challenges facing managers in this environment. Explores the implications of the common phrase "think global - act local." Prerequisite: either B ECON 300 or ECON 300; recommended: either B ECON 301 or ECON 301. Offered: W.

B ECON 427 International Finance (4) Asset choice and institutional operations in international finance, foreign exchange problems, the impact of international financial problems and operations on business, short- and long-term international financing. Prerequisite: either B ECON 300 or ECON 300; either B ECON 301 or ECON 301; may not be repeated. Offered: Sp.

B ECON 490 Special Topics in Business Economics (1-6, max. 6) Study and research on topics of current concern to faculty and students. Only offered when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings.

B ECON 499 Undergraduate Research (1-6, max. 9) Research in selected areas of business economics. Recommended: either ECON 301 or B ECON 300 and B ECON 301.

B ECON 500 Introduction to Business Economics (4) Factors underlying the determination of cost and prices for the industry and the firm, demand and supply analysis and firm behavior. The relation of the economic environment to the microeconomic decisions of the firm.

B ECON 501 Analysis of Global Economic Conditions (4) Analysis of real and monetary factors affecting national and international economics, supply and demand for money, interest rates and stabilization problems and policies, in relation to government policy effects on business and individual affairs. Focuses on global macroeconomic issues. Prerequisite: MBA core microeconomics.

B ECON 520 Financial Markets (4) Analysis of the structures and functions of financial markets and institutions; the behavior of interest rates through time; the cross-sectional structure of interest rates; and the roles of the Federal Reserve and Treasury in financial markets. Prerequisite: MBA Core Finance.

B ECON 526 Competing in the Global Economy (4) Examines the global environment for business and the challenges facing managers in this environment. Explores the implications of the common phrase "think globally - act locally." Offered: WSp.

B ECON 527 International Finance (4) Study of selected problems in financing, international trade, investment, and foreign business operations; international aspects of money markets; problems of evaluation of foreign investments. Prerequisite: MBA core finance; recommended: MBA core macroeconomics.

B ECON 579 Special Topics in Business Economics (2/4, max. 12) Business economics topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offering. Prerequisite: permission of instructor.

B ECON 600 Independent Study or Research (*)

Entrepreneurship and Innovation

ENTRE 370 Introduction to Entrepreneurship (4) Introduction to entrepreneurial practices with an emphasis on learning how to find business ideas, how to evaluate their potential, and how to recognize the barriers to success. Exposure to the stresses of a start-up business, the uncertainties that exist, and the behavior of entrepreneurs. Prerequisite: ACCTG 225; ECON 200; ECON 201. Offered: AWSp.

ENTRE 401 Leadership, Critical Thinking, and Decision Making (4) The manager as leader and decision maker. Various leadership theories, styles, and behaviors. Decision-making models and techniques. Offered: jointly with MGMT 401.

ENTRE 422 Innovation Strategy (4) Focuses on starting a hardware or software company. Includes guest entrepreneurs, lawyers, and financiers discussing market identification and analysis; planning the business; financing; and typical operating and administrative problems.

ENTRE 432 Software Entrepreneurship (4) Explores the opportunities and challenges of launching a software company. Issues include an overview of the industry, trends and emerging opportunities, funding, technology transfer, industry challenges, and cutting-edge software practices.

ENTRE 440 Business Plan Practicum (2) Enables students interested in new venture creation to explore their entrepreneurial aptitude, formulate their ideas, validate the op-

portunity, develop a business plan, and demonstrate the depth of their knowledge by preparing an executive summary and competing in the UW Business Plan Competition. Credit/no-credit only. Offered: W.

ENTRE 443 Environmental Innovation Practicum (2) Focuses on developing innovative solutions to real-world environmental problems and creating new business opportunities. Speakers include experts from the clean-tech community, environmental start-ups, the public sector, as well as corporate environmental strategists. Themes include water, energy, green building, and transportation. Includes the opportunity to participate in the UW Environmental Innovation Challenge.

ENTRE 455 Entrepreneurial Marketing (4) Examines the skills and tools entrepreneurs need for bootstrap marketing in their start-up firms. Students learn to identify target market segments, position their products, estimate demand, set prices, gain access to channels, and manage the issues of rapid growth. Prerequisite: MKTG 301; may not be repeated. Offered: jointly with MKTG 455; AWSp.

ENTRE 457 Entrepreneurial Finance (4) Explores financial issues that face entrepreneurs, including the stages of financing, business cash flow models, and strategic positioning of the early-stage company. Examines the role of business angels, venture capital funds, institutional investors, strategic alliances, licensing agreements, and exit strategies. Prerequisite: FIN 350; either B ECON 300 or ECON 300. Offered: jointly with FIN 457; AWSp.

ENTRE 459 Venture Investing (4) Analyzes and makes recommendations on investment opportunities through learning the fundamentals of venture investing and performing due diligence on real companies. Explores the venture investing process from the entrepreneur's and the investor's point of view. Students present their recommendations to the Investment Committee of the W Fund. Offered: jointly with FIN 459.

ENTRE 472 Creating a Company I (4-) Two-course sequence with ENTRE 473. Working in teams, students develop a business plan for a new venture, present their plans to a panel of investors, obtain funding, run the business, and exit the firm at the end of the second quarter. Prerequisite: ENTRE 370. Offered: AW.

ENTRE 473 Creating a Company II (-4) Two-course sequence with ENTRE 472. Working in teams, students develop a business plan for a new venture, present their plans to a panel of investors, obtain funding, run the business, and exit the firm at the end of the second quarter. Prerequisite: ENTRE 472. Offered: WSp.

ENTRE 490 Special Topics in Entrepreneurship (1-6, max. 6)

ENTRE 499 Undergraduate Research (1-6, max. 9) Independent research in selected areas of entrepreneurship; new venture strategy and investment; market analysis and financial forecasts; and corporate issues under faculty supervision. Prerequisite: ENTRE 370.

ENTRE 509 Foundations of Entrepreneurship (2) Evaluation of new market opportunities and starting a new venture; focuses on identifying and evaluating new venture opportunities, developing and testing market strategies, evaluating test market performance, and evaluating business plans. Emphasizes the interplay between marketing, manufacturing, finance, accounting, and team management. Prerequisite: Permission of Foster School of Business. Offered: Sp.

ENTRE 510 Entrepreneurial Strategy (4) Uses the tools of competitive strategy to analyze the success and failure of entrepreneurial ventures, identifying general strategic principles that might increase the probability that an entrepreneurial venture will succeed. Draws heavily on the principles of microeconomics and strategy. Prerequisite: B A 500; B A 502.

ENTRE 521 Corporate Entrepreneurship (4) Focuses on entrepreneurial activities in large, established corporation.

Introduces the theory and best practices on the process of converting new ideas to commercial products and new businesses. Prerequisite: B A 500; B A 501; B A 502.

ENTRE 522 Innovation Strategy (4) Explores how firms tap into external sources of innovation, focusing on user communities, universities, and entrepreneurial ventures. Demonstrates how open, collaborative, community-based models of innovation create successful business options. Offered: jointly with MGMT 522.

ENTRE 530 Entrepreneurial Decision Making (4) Song Provides an overview of the major decisions entrepreneurs face when creating a business. Covers the startup lifecycle from idea generation and opportunity recognition to entry strategy, growth, and exit. Prerequisite: B POL 509; B A 501. Offered: W.

ENTRE 531 Developing Business Models for Emerging Technologies (4) Focuses on the commercialization of emerging technologies. Topics include conducting feasibility assessments of intellectual property landscape, evaluating business opportunities, analyzing competition, developing business models and strategies, constructing a professional quality business plan, and presenting business plan, transforming a new technology into a market-ready technology-based business. Offered: W.

ENTRE 532 Software Entrepreneurship (4) A case- and project-based course, focusing on starting a software or hardware company. Guest entrepreneurs, lawyers, and financiers discuss market identification and analysis, planning the business, financing, and typical operating and administrative problems.

ENTRE 540 Business Plan Practicum (2, max. 4) Gives student entrepreneurs the opportunity to network with the founders/CEOs of companies, explore their entrepreneurial aptitude, and work through the details of their own start-ups. Provides structure, tools, and resources to start of company, and compete in the UW Business Plan Competition. Credit/no-credit only.

ENTRE 541 Technology Commercialization Practicum (4) Provides the experience of researching and creating a commercialization plan for a promising technology. Designed to apply the skills and perspectives of students in cross-disciplinary teams so they learn how to work effectively with peers in assessing complex and potentially ambiguous situations. Offered: S.

ENTRE 542 Venture Capital Investment Practicum (2) Provides overview and teaches the mechanics of the venture capital industry and culminates in intramural venture capital competition. Students assume the role of investors in a venture capital firm and real entrepreneurs pitch to them for investment dollars. Teams defend their allocation decisions before a judging panel of venture capitalists. Credit/no-credit only. Offered: A.

ENTRE 543 Environmental Innovation Practicum (2) Focuses on developing innovation solutions to real-world environmental problems and creating new business opportunities. Speakers include experts from the clean-tech community, environmental start-ups, the public sector, as well as corporate environmental strategists. Themes include water, energy, green building, and transportation. Students have the opportunity to participate in the UW Environmental Innovation Challenge. Offered: A.

ENTRE 555 Entrepreneurial Marketing (4) Examines the skills and tools entrepreneurs need for bootstrap or guerrilla early-stage companies. Covers how to target market segments, position products, estimate demand, set prices, gain access to channels, and manage issues of rapid growth. Prerequisite: B A 501, MKGT 501 or equivalent. Offered: jointly with MKTG 555.

ENTRE 557 Entrepreneurial Finance (4) Analyzes the unique financial issues facing entrepreneurial firms. Topics include assessing financial performance, financial forecasting and planning, financial management of rapidly growing businesses, start-up ventures, valuation, sources

of financing, venture capital, initial public offerings, and the decision to harvest. Prerequisite: MBA core courses. Offered: jointly with FIN 557.

ENTRE 579 Special Topics in Entrepreneurship (2-4, max. 12) Topics vary. Offered only when faculty members are available and there is sufficient student interest.

ENTRE 581 Theoretical Foundations of Entrepreneurship (4) Focuses on theoretical overview, entrepreneurs, environment and organizational founding, entrepreneurship's links with other disciplines, venture capital and venture capitalists, new venture strategy and performance, growth processes and challenges, and entrepreneurial networks and alliances. Offered: A.

ENTRE 582 Technology, Innovation, and Entrepreneurship (4) Explores issues of how a knowledge-based economy competes and performs using technological innovations and entrepreneurship. Explores research on capabilities of broader entities; processes of learning at the firm, industry, technology, economy-level; development of know-how as evolutionary process; and explorations by firms, sectors and economies exploring new technologies and techniques. Offered: W.

ENTRE 590 New Venture Research Practicum (4) Exposes students to new venture creation phenomena. Teaches how to think about and understand empirical research methods such as case studies, participant-observation, and other field methods while contributing to on-going cumulative data collection process.

ENTRE 600 Independent Study or Research (*-)

Finance

FIN 350 Business Finance (4) Evaluating and funding projects within the firm. Time value of money, inflation, capital budgeting; risk and return in the financial markets, stocks, bonds, portfolios and diversifiable risk, market efficiency and the balance between debt and equity to fund the firm. Prerequisite: ACCTG 225; ECON 201; either MATH 112, MATH 124, MATH 125, MATH 134, MATH 145, or Q SCI 291; either IND E 315, MATH 390, QMETH 201, Q SCI 381, PSYCH 315, PSYCH 318, STAT 220, STAT 221, STAT 311, or STAT 390. Offered: AWSpS.

FIN 423 Banking and the Financial System (4) Role of banks and nonbank financial institutions in the financial system; asset choices of banks and nonbank financial institutions; problems in the management of financial institutions with emphasis on commercial banks. Prerequisite: FIN 350; either B ECON 300 or ECON 300; may not be repeated. Offered: AWSp.

FIN 425 Introduction to Real Estate Finance and Investment (4) T. SESLEN Introduction to valuing, financing, and investing in real estate with emphasis on those topics that distinguish real estate from other investments, including valuation techniques, lease structures, loan options, equity partnerships, risk management, and taxation. Prerequisite: FIN 350.

FIN 428 International Financial Management (4) Analysis of financial problems facing businesses engaged in international activities. Financing foreign investment, financial control of foreign operations, and working capital management including foreign exchange positions using cases and readings. Prerequisite: FIN 350; either one 400-level FIN course, B ECON 301 or ECON 301. Offered: WSp.

FIN 435 Introduction to Real Estate Capital Markets (4) T. SESLEN Examines who the real estate capital providers are, how that capital is priced, and why the markets operate as they do. Provides a toolbox for sound decision-making, either as an investor seeking funding or as a noteholder in the secondary market. Prerequisite: FIN 350. Offered: AWSp.

FIN 450 Problems in Corporate Finance (4) Case problems in corporate financial management. Includes cases on management of current assets, obtaining short-term loans, raising long-term capital, capital budgeting, and

dividend policy. The management point of view is stressed. Prerequisite: FIN 350; either B ECON 300 or ECON 300. Offered: WSp.

FIN 453 Financial Theory and Analysis (4) Business financial strategic planning. Topics include business valuation and financing, performance evaluation, risk analysis, capital budgeting, and inflation and taxes. Emphasizes tools with real-world applications while incorporating modern finance concepts. Prerequisite: FIN 350; either B ECON 300 or ECON 300; may not be repeated. Offered: AWSp.

FIN 454 Business Valuation, Investment, and Financing (4) Key issues in financial management using both analytical and case study illustrations. Valuation of public and private companies; cost of capital estimation; investment complications, such as taxes, inflation, risk, project interdependencies, and financing-investment interactions; leasing; mergers; spin-offs and carve-outs. Prerequisite: FIN 350; either B ECON 300 or ECON 300. Offered: AW.

FIN 457 Entrepreneurial Finance (4) Explores financial issues that face entrepreneurs, including the stages of financing, business cash flow models, and strategic positioning of the early-stage company. Examines the role of business angels, venture capital funds, institutional investors, strategic alliances, licensing agreements, and exit strategies. Prerequisite: FIN 350; either B ECON 300 or ECON 300. Offered: jointly with ENTRE 457; AWSp.

FIN 459 Venture Investing (4) Analyzes and makes recommendations on investment opportunities through learning the fundamentals of venture investing and performing due diligence on real companies. Explores the venture investing process from the entrepreneur's and the investor's point of view. Students present their recommendations to the Investment Committee of the W Fund. Offered: jointly with ENTRE 459.

FIN 460 Investments (4) Introduction to the nature, problems, and process of evaluating particular securities and portfolio construction and administration. Special attention is directed to the risk and rate-of-return aspects of particular securities portfolios, and total wealth. Prerequisite: FIN 350; either B ECON 300 or ECON 300; may not be repeated. Offered: AWSp.

FIN 461 Financial Futures and Options Markets (4) Introduction to financial futures and options markets. Institutional aspects and social functions of these markets, pricing of options and futures, and risk shifting by hedging. Prerequisite: FIN 350; either B ECON 300 or ECON 300; may not be repeated. Offered: AWSp.

FIN 462 Management of Financial Risk (4) Modern tools for managing financial risk. Fixed income securities and interest rate risk, credit risk, foreign currency risk, and insurance. Emphasis on use of futures, forwards swaps, and option contracts. Prerequisite: FIN 350; either B ECON 300 or ECON 300; FIN 461. Offered: Sp.

FIN 466 Alternative Investments: Hedge Funds and Private Equity (4) Brogaard Examination of the market for alternative investments including the investment strategies employed by hedge funds and private equity firms, the risk-return tradeoffs of those strategies, and the legal and economic environments in which alternative investment firms operate. Prerequisite: FIN 350; either B ECON 300 or ECON 300.

FIN 490 Special Topics in Finance (1-6, max. 6) Study and research on topics of current concern to faculty and students. Only offered when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings.

FIN 495 Finance Internship (1-4, max. 8) Internship with a private firm, nonprofit organization or government agency, where work experience involves substantial application of finance concepts learned in classroom. Prerequisite: FIN 350. Credit/no-credit only. Offered: AWSpS.

FIN 499 Undergraduate Research (1-6, max. 9) Research in selected areas of business finance, money and bank-

ing, or investments, with permission of instructor. Recommended: FIN 350; either B ECON 300 or ECON 300.

FIN 502 Business Finance (4) Financial management of the firm, including capital budgets, working capital analysis, and financing policy. Prerequisite: ACCTG 500, B ECON 500, QMETH 500.

FIN 528 International Financial Management (4) Analysis of financial problems facing businesses engaged in international activities: financing foreign investment, financial control of foreign operations, and working capital management including foreign exchange positions using cases and readings. Prerequisite: B A 502 or FIN 509.

FIN 530 Financial Management of Banks (4) Analysis of problems in the financial management of commercial banks and other financial institutions. Loan and investment policies, liability management, capital policies, and other selected issues are discussed. Prerequisite: B ECON 520 or permission of graduate office.

FIN 550 Advanced Business Finance (4) Systematic coverage of key theoretical issues in financial management. Application of quantitative analysis to financial problems of the firm that are important in practice, including issues related to financing and investment. Prerequisite: MBA Core Finance.

FIN 551 Problems in Business Finance (4) Uses case studies to examine a broad range of financial management topics, including forecasting financial statements, use of bank credit, working capital management, public and private securities issues, capital budgeting, and business valuation. Credit allowed for only one of FIN 551 and FIN 552. Prerequisite: B A 502.

FIN 552 Problems in Corporate Planning and Financing (4) Uses case studies to examine business financing. Topics include financial statement analysis, financial planning and forecasting, banking relationships, and financing sources, including the use of derivative securities, venture capital, and private equity. Credit allowed for only one of FIN 551 and FIN 552. Prerequisite: either B A 501 or FIN 502.

FIN 553 Problems in Capital Investment Planning (4) Case discussions used to examine corporate resource allocation decisions. Topics include capital budgeting techniques, estimation of capital costs, capital budgeting systems, strategic investment decisions, and financial restructurings. Prerequisite: either B A 501 or FIN 502.

FIN 555 Financing Decisions, Payout Policy, and Corporate Control (4) Analysis of business financing methods, payout policy, management compensation, ownership structure, and the distribution of control rights. Covers the major issues critical to structuring contracts within the corporation. Prerequisite: MBA Core Finance.

FIN 556 Business Valuation and Investment Analysis (4) Valuation of business enterprises, evaluation of financial performance, analysis of complex investment opportunities, business taxation, leasing, and business acquisitions. Emphasis on complications encountered in practice. Prerequisite: MBA Core Finance.

FIN 557 Entrepreneurial Finance (4) Analyzes the unique financial issues facing entrepreneurial firms. Topics include assessing financial performance, financial forecasting and planning, financial management of rapidly growing businesses, start-up ventures, valuation, sources of financing, venture capital, initial public offerings, and the decision to harvest. Prerequisite: MBA core courses. Offered: jointly with ENTRE 557.

FIN 558 Mergers and Acquisitions (4) Advanced finance topics focusing on providing the necessary training to value, structure, and close acquisitions. Additional topics include antitrust issues, the legal environment governing mergers, and antitakeover defense.

FIN 560 Investments (4) Introduction to the nature, problems, and process of evaluating particular securities and portfolio construction and administration. Special atten-

tion is directed to the risk and rate of return aspects of particular securities, securities portfolios, and total wealth. Prerequisite: MBA Core Finance.

FIN 561 Financial Futures and Options Markets (4) Overview of futures markets and options markets. Analysis of pricing of futures contracts and options; comparison of futures, forward, and options contracts; risk management with hedging; alternative investment strategies; and review of empirical evidence. Prerequisite: MBA Core Finance.

FIN 562 Management of Financial Risk (4) Modern tools for managing financial risk. Fixed income securities and interest rate risk, credit risk, foreign currency risk, and insurance. Emphasis on use of futures, forwards, swaps, and option contracts. Prerequisite: MBA Core Finance.

FIN 563 Real Options (2) Short overview of option pricing theory, followed by applications of option analysis in evaluating complex investment projects by business firms. Prerequisite: B A 502.

FIN 566 Alternative Investments: Hedge Funds and Private Equity (4) Brogaard Examination of the market for alternative investments including the investment strategies employed by hedge funds and private equity firms, the risk-return tradeoffs of those strategies, and the legal and economic environments in which alternative investment firms operate.

FIN 579 Special Topics in Finance (2/4, max. 12) Finance topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offerings. Prerequisite: permission of instructor.

FIN 580 Doctoral Seminar in Financial Economics (4) Study of the financing of the corporation, including recent theoretical and institutional developments. Extensive reading and discussion in designated areas covering problems relating to financial management and to the social and economic implications of the financial process. Prerequisite: ECON 500 or permission of instructor.

FIN 590 Doctoral Seminar in Capital Market Theory (4) Decision making under uncertainty, information and capital market efficiency, portfolio theory, capital asset pricing model, arbitrage pricing model, and options pricing model. Prerequisite: ECON 500 or permission of instructor.

FIN 591 Doctoral Seminar in Corporate Finance (4) Principles of intertemporal choice, alternative valuation models, theory of investment under uncertainty, impact of dividend and financing decisions on firm valuation in perfect and imperfect markets, and theory of firm organization and agency costs. Prerequisite: FIN 590 and BA RM 581 or ECON 582 or permission of instructor.

FIN 592 Doctoral Seminar in Financial Research (4) Empirical research in finance with emphasis on methodology and scientific method. Empirical research in market efficiency, capital asset pricing model, options pricing model, and impact of firm's dividend and financing decisions on firm value. Prerequisite: FIN 590 and BA RM 581 or ECON 582 or permission of instructor.

FIN 599 Doctoral Seminar in Finance (1, max. 12) Study and research in advanced topics of finance. Generally concerned with unpublished areas of research, conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

FIN 600 Independent Study or Research (*-)

Information Systems

I S 300 Introduction to Information Systems (5) Fundamentals of information systems, what they are, how they affect organizations. Technical and organizational foundations of information systems, building information systems, managing information system resources. Laboratory emphasizes using computer to analyze, coordinate, solve organizational decision-making problems. Prerequisite: ACCTG 225; ECON 200; either MATH 112, MATH 124,

MATH 125, MATH 134, MATH 135, or MATH 145; either ECON 311, IND E 315, QMETH 201, Q SCI 291, Q SCI 381, PSYCH 315, PSYCH 318, STAT 220, STAT 221, STAT 311, or STAT 390; may not be repeated. Offered: AWSpS.

I S 310 Fundamentals of Business Information Technologies (4) Exposure to fundamental programming and scripting concepts, conceptual data modeling, database management, and XML Applying data types and control structures. Continues the concepts of I S 300 of entity-relationship diagrams and record structure diagrams. Database management component includes relational databases, basic SQL, data architecture issues. Prerequisite: I S 300. Offered: AWSp.

I S 320 Fundamentals of Application Programming (4) Fundamental programming concepts including data types, control structures, modularization, and structure programming. Developing solutions for problems in interactive business applications. Introduction to data and file structures. Extensive use of an event-driven programming language. Prerequisite: I S 300, which may be taken concurrently; may not be repeated. Offered: AWSp.

I S 410 Business Data Communications (5) Technology and applications of business data communications including characteristics of data, fundamentals of transmission, communications hardware and software, network configurations (LAN, MAN, WAN), management, and security. Laboratory provides hands-on experience with these applications. Prerequisite: I S 300, which may be taken concurrently; may not be repeated. Offered: AWSp.

I S 445 Database Management (4) Examines the business need for database processing. Discusses database design, development, and administration. Students practice real-world database design and implementation using SQL. Discusses issues related to transaction management, data warehouse, etc. Prerequisite: I S 320, which may be taken concurrently; may not be repeated. Offered: AWSp.

I S 451 Data Mining for Business Intelligence (4) *Tan* Introduces data mining concepts and techniques, including associations rules, decision trees, cluster analysis, classification, logistic regression, text mining, and web analytics. Includes real-work applicants in information systems, supply chain management, and marketing. Prerequisite: I S 300; OPMGT 301. Offered: AWSp.

I S 460 Systems Analysis and Design (4) Analysis and design of business information systems. Concentrates on the analysis phase of systems development. Covers systems development life cycle, feasibility studies, analysis of user requirements, and development of logical system models. Prerequisite: I S 410; I S 445; both of which may be taken concurrently; may not be repeated. Offered: WSP.

I S 461 Systems Implementation (4) Develops business information systems integrating knowledge gained in previous 400-level I S courses. Topics include software project management, system/database design, GUI, software testing, systems implementation/support/maintenance, user training, integrating web, and business environments. Prerequisite: I S 445; I S 460; may not be repeated.

I S 490 Selected Topics in Information Systems (1-6, max. 20) Topics of current concern to faculty and students. Potential topics include networks and distributed information-processing systems, office automation, artificial intelligence and knowledge-based systems, new approaches to systems development, fourth- and fifth-generation languages, economics of information systems. Prerequisite: I S 320.

I S 495 Practical Experience in Information Systems (1-4, max. 8) Undergraduate substantive I S internship and mentorship. Internships can be repeated up to two quarters for maximum of 4 credits; grades based on weekly status reports, paper, demonstration of knowledge. Mentorship program (maximum 1 credit/quarter) allows student to be matched with I S executive; grade based on status reports, other participatory events. Offered: AWSpS.

I S 499 Undergraduate Research (1-6, max. 12) Selected problems in information systems and computer applications. 504.

I S 504 Computer-Based Information Systems for Management (3) Introduction to information systems and computer technology. Covers concepts of information use in decision making. Use of decision-support problem-solving tools (e.g., spreadsheet, database software). Management's responsibility in defining, developing, using information systems is focal point.

I S 530 Management of Information Systems Resources (4) Topics include general control problem in organizations; performance evaluation of data processing managers; technology and cost trends; software cost estimation; capacity planning; short term utilization; queuing and associated externalities; issues in centralization and decentralization of the information system facilities. Prerequisite: B A 501 or I S 504 or equivalent.

I S 545 Database Systems and Applications (4) Logical data models, relational database systems, structured query language (SQL), conceptual modeling, database design, Web-connected databases, transaction management, distributed and heterogeneous systems, data warehousing, data mining, database administration issues. Focuses on the use/management of business data in areas such as finance. Prerequisite: B A 502 or I S 504.

I S 560 Information Systems Development (4) Offers comprehensive look at information systems development. Covers user requirements analysis, logical and physical system models, system implementation and maintenance, project valuation and management. Additional topics include object-oriented approach, systems development in online environments, and financial information systems. Prerequisite: B A 501 or permission of instructor.

I S 570 Business Data Communications and Networking (4) Networking basics, Internet/web-based services, client-server architecture, fundamentals of transmission, networking protocols, physical layer, data-link layer, local-area networks, backbone networks, internetworking devices, metropolitan and wide-area networks, wireless networking, network security, network analysis and management. Combines technical, operational, and management issues in data communications. Prerequisite: B A 502 or I S 504.

I S 579 Selected Topics in Information Systems (2/4, max. 12) Topics of current concern to faculty and students. Potential topics include networks and distributed information-processing systems, office automation, artificial intelligence and knowledge-based systems, new approaches to systems development, fourth- and fifth-generation languages, economics of information systems. Prerequisite: B A 501 or I S 504 or permission of instructor.

I S 580 Advanced Research Topics in Information Systems I (4) Overview of research problems and techniques in information systems. Focuses on application of microeconomic theories, mathematical, statistical, and operations research methods. Extensive reading and discussion in current and emerging research topics. Prerequisite: doctoral student or permission of instructor.

I S 581 Advanced Research Topics in Information Systems II (4) Advanced topics of current interest of faculty in heterogeneous database, temporal database, data warehousing, data uncertainty, active and deductive database systems, database design, and formal database languages. Prerequisite: doctoral student or permission of instructor.

I S 582 Advanced Research Topics in Information Systems III (4) Potential topics include information systems design, software engineering, decision support and expert systems, empirical methods, optimal control theory. Prerequisite: I S 580 or doctoral student or permission of instructor.

I S 599 Doctoral Seminar (1, max. 12) Advanced topics of information systems. Generally concerned with unpublished areas of research and conducted by visiting profes-

sors and departmental faculty. Prerequisite: doctoral student status.

I S 600 Independent Study or Research (*-)

Information Systems Master of Science

MSIS 501 Information Technology and Organizational Strategy (3) Discusses the role of information technology (IT) in the development and execution of business strategy that takes into account competitors, customers, and firm competencies (including IT capabilities). Examines the impact of IT on two sets of strategic issues for a company - where to compete and how to compete. Helps students develop tools to use IT in aiding strategy. Offered: SpS.

MSIS 502 Business Data Analysis (2) Covers statistical techniques for managerial decision making. Includes hypotheses testing, regression, and analysis of variance. Offered: SpS.

MSIS 503 Operations and Business Process Management (3) Presents a framework to understand organizational processes, offers tools to improve these processes. Covers process improvement methodologies such as reengineering, TQM, six-sigma, simulation, and collaboration. Focuses on discussing application and implementations of improvement programs in a wide variety of settings, including operations processes related to inventory and scheduling, service, and quality assurance. Offered: SpS.

MSIS 504 Business Decision Models (2) Covers formulating and modeling business decision problems. Includes risk analysis, simulation, linear programming, and extensions. Offered: SpS.

MSIS 510 Introduction to Data Mining and Analytics (3) Covers managerial decision-making and business intelligence. Topics include naive Bayesian classifier, decision trees, rule covering, and other classification techniques, as well as issue related to data cleaning, design, testing, and validation. Special attention given to embedded intelligence in modern business processes and applications. Offered: AS.

MSIS 511 Digital Transformation of Organizations (3) Studies the impact of digital technologies within an organization, an industry, and an economy. Discusses system architecture that enables business process and provides foundation for management and use of information systems within organizations. Covers issues related to workflow process changes, efficiency and effectiveness, innovation, convergence, competitive advantage, and sustainability. Offered: A.

MSIS 512 Information Security and Assurance in a Networked World (3) Explores technical and managerial aspects of information security and assurance within a networked environment. Includes inspection and protection of information assets, detection of and reaction to internal and external threats, determining the levels of protection needed, and design of a consistent and reasonable information security architecture along with an implementable process. Offered: AS.

MSIS 521 Information Technology and Marketing in the New Economy (3) Explores issues related to marketing models based on social networking/computing, such as concepts and applications of search engine optimization (SEO), viral marketing, web analytics, user generated content, the wisdom of crowds, and prediction markets. Students work in teams on real-world projects to develop marketing strategies for maximizing online traffic to business sites. Offered: AS.

MSIS 522 Advanced Business Data Mining (2) Covers managerial decision-making and business intelligence. Topics include association rule mining and regression. Special attention given to embedded intelligence in modern business processes and applications. Offered: AW.

MSIS 523 Compliance and Legal Issues in Information Technology (3) Covers the overall framework of information technology (IT) compliance, both generic and indus-

try-specific. Includes intellectual property rights, privacy, copyright protection, trade secrets, and other legal issues relevant to IT. Offered: AW.

MSIS 524 Managing Information Technology Projects (3) Explores issues related to analyzing and managing complex information technology (IT) projects in a globalized and networked world. Covers topics such as life-cycle models, use case point estimation, function point analysis, COCOMO, scheduling and budgeting, project risk analysis, monitoring and control, contract design, outsourcing, and capability maturity model (CMM). Students manage a real-world information technology project in a simulated environment. Offered: AW.

MSIS 526 Enterprise Systems and Integration (3) Provides an overall understanding of the complex role of information systems in transforming organizational processes and integrating them as part of an enterprise system. Topics include the concept of process-enabling information technologies and enterprise resource planning systems that support organizational manufacturing, customer service, and human resource management. Offered: SpS.

MSIS 541 Advanced and Unstructured Data Mining (2) Advanced topics in data mining, focusing on unstructured data, web mining, and text mining. Students learn and apply unstructured data mining tools on real-world unstructured data. Offered: WSp.

MSIS 542 Advanced Development Frameworks (2) Introduces object-oriented principles and key web-based system development tools. Topics include object-oriented modeling, object-oriented programming languages, and advanced user interface design. Students use object analysis and design, modern programming languages, and advanced database technology to develop business applications. Offered: WSp.

MSIS 543 Advanced Database Systems and Data Warehouses (2) Extends and enhances understanding of enterprise databases to design, implement, and support business intelligence (BI) solutions. Topics include DBMS extensions for data warehousing, data warehouse and data mart design, loading and extracting data, performance tuning, and cloud-based BI application design. Emphasizes agile techniques to efficiently produce optimal solutions that meet business requirements and increase competitive advantage. Offered: WSp.

MSIS 544 Managing Information Technology Resources (2) Covers issues related to managing operations of the information (IT) department in an organization. Topics include IT budgeting, systems implementation/support/maintenance, user training, hardware replacement strategies, performance evaluation, technology cost estimation and trend forecasting, capacity planning, website utilization and traffic load balancing, and coordination with other functional departments. Offered: WSp.

MSIS 545 Technology Entrepreneurship (2) Examines the issues involved in creating an organizational environment that recognizes, nurtures, and grows technology-related entrepreneurial activities, the practice of selecting and monitoring ventures, and the capital process within a firm. Offered: WSp.

MSIS 546 Information Systems Economics (2) Examines basic concepts of economics as it pertains to information technology and systems. Includes the value of information, cost-benefit analysis, economies of scale, network effects, pricing of digital goods, information uncertainty in electronic markets, risk-return trade-offs, and other related topics. Offered: WSp.

MSIS 550 MSIS Leadership Series (1-, max. 5) Provides the capstone learning experience. Includes seminars by information technology leaders. Seminar topics and speakers chosen based on the progression of other courses in the program. Credit/no-credit only. Offered: AWSpS.

MSIS 579 Contemporary Topics in Information Systems (2) Contemporary topics in Information Systems. Offered: WSp.

International Business

I BUS 300 Global Business Perspectives (4) Prepares students to understand the most important aspects of the international political economy. Emphasis on the important relationships among nations and business and economic institutions that influence students' performances as managers, consumers, and citizens. Prerequisite: ECON 200. Offered: AWSpS.

I BUS 330 Business Environment in Developing Nations (4) The international environment for transnational trade, investment, and operations in the less-developed countries; survey of the economics of underdevelopment; analysis of foreign economic, cultural, and political environments and their impact on international business; foreign investment in the development process; case studies. Prerequisite: I BUS 300; may not be repeated. Offered: A.

I BUS 340 Business Environment in Industrial Countries (4) Factors and conditions affecting business operations and behavior in developed countries, international integration, business relations among nation states and integrated supranational systems, direct investment and multinational industrial activities, analysis of sources and causes of international change. Prerequisite: I BUS 300; may not be repeated. Offered: Sp.

I BUS 440 Business in Asia (4) Major aspects of the Asian business environment and how Asian enterprises are managed. Problems and opportunities of foreign corporations in Asia. Prerequisite: I BUS 300; may not be repeated. Offered: Sp.

I BUS 461 Science, Technology, and Innovation Policies in East Asia (5) I&S Anchoroguy Role of state and technological change in economic development. Analyzes state and corporate technology policies historically. Basic technology concepts, institutions, and policies in Japan, South Korea, Taiwan, and China. Examines sources of Asia's rise in world of technology and explores whether conditions for its success will continue. Recommended: one JSIS course. Offered: jointly with JSIS A 472.

I BUS 462 Japanese Business and Technology (5) I&S Anchoroguy Examination of Japan's postwar enterprise system in its historical context. Topics include corporate and financial structure, production and distribution, trade and investment policies, government-business relations, system of innovation, technological developments, prospects for the future. Offered: jointly with JSIS A 478.

I BUS 470 Management of International Trade Operations (4) Integrated study of international trade functions, practices, concepts, management, strategy, and policy. The approach utilizes lectures, case studies, research, guest speakers, and extensive practical application. Prerequisite: I BUS 300. Offered: A.

I BUS 480 Multinational Operations Management (4) Case studies in foreign operations management: planning international objectives and strategies; developing multinational company structures and executives; adapting administrative practices and operating policies to international diversities. Prerequisite: I BUS 300; may not be repeated. Offered: W.

I BUS 490 Special Topics in International Business (1-6, max. 12) Students and faculty focus on current topics of concern. Offered when faculty, student interest, and availability allow. Prerequisite: I BUS 300.

I BUS 491 CISB Track Seminar (1, max. 9) Students meet with business community leaders to discuss international aspects of their companies. Allows for networking and sharing experiences with other students as well as practicing foreign languages. Credit/no-credit only.

I BUS 495 International Business Internship (1-4, max. 8) An internship with a company, not-for-profit organization,

or government agency in an international business capacity. Prerequisite: IBUS 300. Credit/no-credit only. Offered: AWSpS.

I BUS 496 International Business Practicum (4) Offers students opportunity to apply principles, concepts, and skills learned previously to actual business situation. Projects provide students an exposure to the issues and choices facing managers operating in an international business environment. Prerequisite: I BUS 300. Offered: Sp.

I BUS 499 Undergraduate Research (1-6, max. 9) Prerequisite: I BUS 300.

I BUS 520 International Trade Policy (4) Examines issues important to trade policy. Topics include trade policy basics, tariffs and non-tariff barriers, safeguards, voluntary restraints, dumping, subsidies and strategic trade theory, agricultural trade, developing country rules, regionalism, and services. Prerequisite: B A 500 or course in international economics, trade, or international finance, or permission of graduate office.

I BUS 530 International Business in Less Developed Countries (4) Understanding the economic, sociocultural, and political environment in the less developed countries. Problems of international trade and investment, north-south relations, commodities, technology transfer, foreign aid, and capital flows. Prerequisite: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 540 International Business in Industrialized Countries (4) Understanding the economic, sociocultural, and political environment in developed, industrialized countries. Problems of international trade and payments relations, economic integration, national policies, and supranational organizations' impact on managerial environments. Prerequisite: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 545 Cases in Sustainability (4) Stearns Examines components of corporate sustainability- financial, social, and environmental - in cases and articles format. Tackles rigorous global cases using triple bottom line framework. All topics are augmented by executive experts. Students research and critique strategic and executional and intent actions of companies as they face twenty-first century challenges and shareholder demands.

I BUS 550 International Business Consulting (4) Research, analysis, and report on a specific international business project with an existing organization involved with international trade. Possible tasks include identifying most viable foreign target markets, developing best market entry strategies, establishing international terms and conditions of sale, and completing a preliminary marketing or business plan for clients.

I BUS 560 Multinational Business Management (4) Managerial responses to problems of international business organizations and operations. Strategy formulation in an international context; design and control of multinational organization; adaptation of management systems and policies to different economic, sociocultural, and political environments. Prerequisite: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 561 Science, Technology, and Innovation Policies in East Asia (5) Anchoroguy Role of state and technological change in economic development. Analyzes state and corporate policies historically. Technology concepts, institutions, and policies in Japan, South Korea, Taiwan, and China. Examines sources of Asia's rise in world of technology and explores conditions for its successful continuation. Recommended: one JSIS course. Offered: jointly with JSIS A 581.

I BUS 562 Japanese Business and Technology (5) Anchoroguy Examination of Japan's postwar enterprise system in its historical context. Topics include corporate and finan-

cial structure, production and distribution, trade and investment policies, government-business relations, system of innovation, technological developments, prospects for the future. Offered: jointly with JSIS A 578.

IBUS 570 International Study Tour (2) Educational international study tour. Includes pre-tour and post-tour activities. Prerequisite: B A 502 and permission of Foster School of Business.

IBUS 572 Cross-Cultural Conversations on Contemporary Issues (1, max. 4) Creates opportunities for students from across the globe to share information and perspectives on contemporary issues important to international business. In weekly, facilitated, small-group conversations, students improve their ability to formulate and express ideas and opinions, and practice persuasion and facilitation skills. Credit/no-credit only.

IBUS 575 Business Studies Abroad (*, max. 24) Research and study of foreign business problems in the country or countries where the firms are located. Limited to students who have the approval of their major adviser and a faculty member who has agreed to direct their work in accordance with a definite program of studies. Credit/no-credit only.

IBUS 579 Seminar: Special Topics in International Business (2/4, max. 12) Application of international business principles to the analysis of a specific issue in trade or resource transfer, or to the business conditions in a particular country. Japan and other Pacific Rim countries are frequent topics. Prerequisite: B A 500 or permission of instructor.

IBUS 600 Independent Study or Research (*-)

Management

MGMT 200 Introduction to Law (5) I&S Legal institutions and processes; law as a system of social thought and behavior and a frame of order within which rival claims are resolved and compromised; legal reasoning; law as a process of protecting and facilitating voluntary arrangements in a business society. Offered: AWSp.

MGMT 275 Management Essentials (3) I&S McPherson Explores management and leadership through understanding individuals, teams, and organizations. Discusses relevant concepts and applications of strategic planning, problem solving, conflict management, negotiation, change management, and control systems. Also covers current issues regarding ethical behavior, social responsibility, and diversity. Not open for credit to students pursuing a business degree. Offered: W.

MGMT 300 Leadership and Organizational Behavior (4) Focuses on how managers become effective leaders. Examines basic principles of managing people, making use of theories that transcend the workplace, including the psychology of individual and group behavior. Emphasizes leadership, strategic thinking, team building, and performance. Offered: AWSpS.

MGMT 311 Managing Human Resources (4) The personnel/industrial relations function from a managerial perspective. Selection, compensation, performance appraisal, and training and development. Special emphasis on union-management relations and relevant behavior science research. Offered: A.

MGMT 312 Career Development Workshop (2) Develops career goals in business administration and guides students toward the academic training that achieves their goals. Emphasizes development of the personal skills necessary to market oneself in a competitive marketplace and present oneself to potential employers.

MGMT 320 Business, Government, and Society (4) Political, social, and legal environment of business. Critical managerial issues from historical, theoretical, ethical perspectives; their impact on organization. Corporate political power, boards of directors, capitalism, industrial policy, business ethics and social responsibility, alternative corporate roles in society. Offered: AWSpS.

MGMT 323 Business Ethics and Corporate Social Responsibility (4) Philosophical and pragmatic perspectives, including values and social/ethical premises in organizational decision making. Several issues covered in depth; investments abroad, hazardous products, bribery, industry practices, and others. Offered: Sp.

MGMT 401 Leadership, Critical Thinking, and Decision Making (4) The manager as leader and decision maker. Various leadership theories, styles, and behaviors. Decision-making models and techniques. Offered: jointly with ENTRE 401.

MGMT 402 Deal-Making and Negotiations (4) The art and science of negotiations with the goal of making students more effective negotiators in a variety of business situations, such as budget negotiations, buying and selling, contracts, and merger negotiations. Concept and skill development. Offered: AWSp.

MGMT 403 Motivating High Performance (4) Various strategies for influencing employee motivation and performance. Reward systems, goal-setting procedures, and various techniques to enlarge and enrich one's job. Effects of these formal and informal strategies on job attitudes. Offered: ASp.

MGMT 411 Recruiting and Hiring Talent (4) Affirmative action, recruitment, testing, interviewing, placement, promotion, and overall human resource planning. Prerequisite: MGMT 311. Offered: W.

MGMT 412 Performance Appraisal and Compensation (4) The various kinds of systems used by organizations to evaluate and reward employee performance. Job analysis, job evaluation, setting performance standards, giving appraisal feedback, designing incentive systems, administering a salary plan. Prerequisite: MGMT 311. Offered: Sp.

MGMT 430 Strategic Management (4) Develops strategic thinking skills for balancing opportunities and risks of business competition to generate superior value for stakeholders. Performs in-depth analyses of industries and competitors, predicts competitive behavior, and explores how firms develop and sustain competitive advantage over time. Prerequisite: FIN 350; MKTG 301; either HRMOB 300 or MGMT 300; recommended: OPMGT 301. Offered: AWSpS.

MGMT 440 Business Consulting (4) Integrates knowledge and tools from the undergraduate business core curriculum with a focus on consulting. Students learn theoretical frameworks and develop proficiencies in a wide range of skills. Students gain practical experiences working in teams and assisting local organizations to solving immediate business issues. Offered: Sp.

MGMT 445 Multicultural Marketing and Business Development (4) DIV Integrates tools from marketing, consulting, and multi-cultural business management to provide consulting services to small business in economically-distressed communities. Working in teams with assistance from industry mentors and alumni from the course, students gain practical experience in multi-cultural marketing, consulting, and managing a business. Prerequisite: MKTG 301. Offered: jointly with MKTG 445; W.

MGMT 490 Special Topics in Management (1-6, max. 6) Topics of current interest to faculty and students. Offered when allowed by faculty availability and sufficient student interest. Content announced in advance of scheduled offerings.

MGMT 495 Management Internship (1-4, max. 8) Internship with a private firm, nonprofit organization, or government agency, where work experience involves substantial application of management concepts learned in classroom. Prerequisite: MGMT 300. Credit/no-credit only. Offered: AWSpS.

MGMT 499 Undergraduate Research (1-6, max. 9) Independent research in selected areas of human resource management, organizational behavior, and business strategy under faculty supervision. Prerequisite: MGMT 300; MGMT 320.

MGMT 500 Management and Leadership (4) Behavioral aspects of management with emphasis on leadership, motivation, and decision making. May include communication, conflict management, group dynamics, and organizational change.

MGMT 502 Business Strategy (4) Policy decisions and strategic leadership from the general management point of view. Determination of corporate product-service objectives, development of a network of internal operating policies and methods to achieve objectives at a cost satisfactory to the consumer and to society. Prerequisite: all first-year required courses in MBA curriculum.

MGMT 504 Ethical Leadership (4) Examines the ethical aspects of conducting business. Topics include ethical decision-making, the ethical aspects of leadership and culture, stakeholder management, corporate social responsibility, sustainability, and corporate governance. Prerequisite: first-year MBA required courses. Offered: W.

MGMT 509 Global Strategy (2) Develops a broad overview of many of the issues that global managers face including government-MNE relations, global strategy, entry modes, country analysis, national culture, and the social responsibility of a global enterprise. Prerequisite: permission of School of Business Administration.

MGMT 510 Developing Leadership Skills ([0-2]-, max. 2) Assessment, instruction, and coaching to develop leadership abilities. Emphasizes team building and collaboration, written, oral, and interpersonal communication, and applied leadership activities.

MGMT 511 Leadership and Coaching Practicum (2, max. 4) Gives Leadership Fellows a venue to analyze and assess their coaching activities with first-year MBA student teams, receive feedback from the instructor and their fellow coaches, discuss readings on leadership, coaching, collaboration, and communication, and hear guest speakers on related topics. Credit/no-credit only.

MGMT 520 Designing a Corporate Strategy (4) Addresses the broad question: what business(es) should we compete in? Focuses on decisions related to an appropriate level of diversification and the means by which that diversification is implemented. Includes the following issues: mergers and acquisitions, strategic alliances, joint ventures, LBOs, and spin-offs.

MGMT 521 Strategic Management of Technology and Innovation (4) Examines how innovative firms often experience rapid and disruptive levels of growth and change and how without effective management of new technologies, the boom can quickly turn to bust. Investigates the micro-economic drivers of competition in technology industries, explores how technological change affects competition, and examines the implications for competitive strategy.

MGMT 522 Innovation Strategy (4) Explores how firms tap into external sources of innovation, focusing on user communities, universities, and entrepreneurial ventures. Demonstrates how open, collaborative, community-based models of innovation create successful business options. Offered: jointly with ENTRE 522.

MGMT 523 Business Ethics in a High Technology Environment (4) Examines business ethics from philosophical, theoretical, and pragmatic perspectives. Explores ethical theory and values in business. Attempts to place ethical concepts into a framework useful to practicing managers. Places emphasis on the ethical implications of rapidly changing hi-tech environments such as e-commerce and biotech.

MGMT 526 Competing in the Global Economy (4) Dewenter, Steensma Examines the global environment for business and the challenges facing managers in this environment. Explores the implications of the common phrase "think globally - act locally." Offered: WSp.

MGMT 530 Entrepreneurship (4) Entrepreneurship, both in the form of (1) establishment of new independent businesses owned largely by those who manage them and (2)

initiation of new enterprises having exceptional autonomy within larger organizations that finance and own them. Basic knowledge in accounting, marketing, and finance is assumed.

MGMT 531 Managing Intellectual Property Rights (4) Comprehensive analysis of the issues pertinent to the various forms of intellectual property, including how to recognize, develop, maintain, and capitalize on them.

MGMT 540 Managing Human Capital (4) Covers principles and techniques for recruiting, selecting, and developing employees, appraising their performance, and rewarding their contributions. Explores key topics primarily through case studies, readings, class discussion, and fieldwork. Reviews legal and regulatory issues that surround these methods. Intended for both general managers and human resource professionals.

MGMT 544 Managing Effectively Across Cultures (4) *Chen* Examines how, with increasing globalization of business, employees at all levels of corporations often work and interact with people from different nations, cultures, and how they need an understanding of cross-cultural management and challenges of international settings. Focuses on international organizational behavior and international human resource issues, practices. Offered: W.

MGMT 545 Leading and Managing High-Performance Organizations (4) Focuses on the nature and function of effective leadership in high-performance systems. Includes visionary and transformational leadership, decision-making and empowerment, power and influence in organizations desiring flexibility and innovation, and leading organizational change. Places emphasis on leadership of emerging forms of organization such as learning organizations, virtual organizations, and networks.

MGMT 546 High Involvement Employees (4) Focuses on two domains: (1) how managers can lead and motivate their people; and (2) how actual organizations, particularly high technology and entrepreneurial firms, employ these strategies. Specific topics include commitment, involvement, enthusiasm, effort, participation, citizenship, and performance. Student teams investigate how local companies utilize these ideas.

MGMT 547 Successful Negotiations (2) Focuses on a broad array of conflict resolution skills needed for effective management in a constantly changing business environment. Examines methods of conflict resolution - bargaining, distributive and integrative negotiation, mediation, and arbitration. Applies these tools to managerial challenges such as employment contracts, buyer-seller agreements, and mediated and arbitrated agreements.

MGMT 548 Dealmaking in High Velocity Ventures (2) Focuses on negotiations in ventures that lack conventional customers, suppliers, employees, joint-venture partners, strategic allies, and money. Analyzes negotiations with early potential customers and essential suppliers, sources of funding (e.g., "angels" and venture capitalists), critical partners and/or strategic allies (including established firms), and key employees. Prerequisite: MGMT 547.

MGMT 549 Dealmaking in the Global Arena (2) For students who expect to engage in significant international business negotiations. Includes deal-structuring skills needed in a range of cross-border transactions and relationships. Individual segments develop broad analytical themes, cross-cultural dimensions, and distinctive national approaches to corporate governance and their impact on negotiating strategy. Prerequisite: MGMT 547.

MGMT 579 Special Topics in Management (2/4, max. 12) In-depth study and research on topics of special interest to faculty members and students in the fields of human resources management, organizational behavior, and strategic management. Offered on an ad hoc basis. Content announced before scheduled offering.

MGMT 580 Psychological Foundations of Organizational Behavior (4) Focuses on attributes the individual brings to

the organization. Covers important performance-related processes such as learning, motivation, and decision-making as well as an understanding of personal attitudes and personality traits.

MGMT 581 Social Processes in Organizations (4) Focuses on ways in which the individual and the organization get things done through working with others. Includes leadership, social influence, and the use and abuse of power, with attention given to positive organizational activities such as citizenship behavior and extra role activities.

MGMT 582 Contemporary Organizational Behavior Research (4) Facilitates understanding of empirical foundations of theory development and testing in contemporary organizational behavior research. Focuses on assessing ways in which the empirical tradition has evolved in organizational behavior with special attention paid to emerging research areas and research methodologies.

MGMT 583 Special Topics in Organizational Behavior Research I (4) Focuses on the psychological, social psychological, and sociological factors that shape organizations and their members. Covers concepts such as cognition, emotions, identity, communication, group dynamics, team development, organizational culture, global culture, behavioral ethics, etc.

MGMT 584 Special Topics in Organizational Behavior Research II (4) Focuses on the psychological, social psychological, and sociological factors that shape organizations and their members. Covers concepts such as cognition, emotions, identity, communication, group dynamics, team development, organizational culture, global culture, behavioral ethics, etc. in more depth.

MGMT 590 Economic Foundations of Strategic Management (4) Reviews the economic theories that support strategies pursued by firms and explores the links between market processes, firm strategy, and firm performance. Topics include agency theory, transaction cost economics, resource dependence, population ecology, and neo-Austrian economics.

MGMT 591 Sociological Foundations of Strategic Management (4) Explores the sociology of organizations from multiple perspectives while introducing fundamental sociological questions and preparing students for conducting research in organizations. Emphasis on structural contingencies, institutions, resource dependence, population ecology, negotiated order and culture, organizational learning and decision making, organizational power and politics, networks, and inter-organizational relations.

MGMT 592 Contemporary Strategic Management Research (4) Facilitates understanding of empirical foundations of theory development and testing in contemporary strategic management research. Focuses on evaluation of ways in which the empirical tradition has evolved in the strategic management area. Attention to evaluating research methodologies used in the field.

MGMT 593 Special Topics in Strategic Management I (4)

MGMT 594 Special Topics in Strategic Management II (4) Focuses on the social and political factors that help shape corporate strategy using stakeholder management as an integrating concept. Topics include corporate governance, corporate political activity, governmental regulation, comparative political economy, and normative aspects of strategic management, including ethics and corporate social responsibility.

MGMT 599 Doctoral Seminar in Management (1, max. 12) Advanced topics in the fields of human resources management and organizational behavior. May be used by visiting faculty members to present topics of interest to students.

MGMT 600 Independent Study or Research (*-)

Marketing

MKTG 275 Marketing Essentials (3) *I&S Beard* Explores marketing principles and their usefulness in diverse busi-

ness and organizational settings. Discusses controllable and uncontrollable factors in making marketing decisions, and the implications of product life cycle for decision-making. Develops working knowledge of marketing strategy. Not open for credit to students pursuing a Business degree. Offered: A.

MKTG 301 Marketing Concepts (4) Tools, factors, and concepts used by management in planning, establishing policies, and solving marketing problems. Marketing concepts, consumer demand and behavior, location analysis, marketing, functions, institutions, channels, prices, and public policy. Prerequisite: ECON 200. Offered: AWSpS.

MKTG 335 Principles of Selling (4) Focuses on selling from salesperson's perspective, role of persuasion in professional selling and other organizational settings. In addition to coursework in such areas as consumer behavior, negotiation, and communication, students practice sales skills in role plays, presentations, and other exercises requiring practical application of selling theory. Prerequisite: MKTG 301. Offered: AWSpS.

MKTG 340 Advertising (4) Management of the advertising function and its integration with other forms of promotion. Planning the program, determining the most effective approach, evaluation of media and budget, advertising research, advertising institutions, economic and social aspects. Prerequisite: MKTG 301; may not be repeated. Offered: AWSp.

MKTG 370 Retailing (4) Profit planning and business control; buying, stock control, pricing, promotion; store location, layout, organization, policies, systems; coordination of store activities. Prerequisite: MKTG 301; may not be repeated. Offered: WSp.

MKTG 410 Product Management (4) Covers the critical decisions and analyses associated with the management of successful products. A comprehensive simulation exercise provides an important context for application of product management strategies. Prerequisite: MKTG 301; may not be repeated. Offered: AW.

MKTG 411 Business to Business Marketing (4) *Caldieraro* Covers the integrated marketing approach that enables a supplier firm to understand, create, and deliver value to other businesses, governments, and institutional customers. Case-based and project-oriented approach to studying marketing management in the business-to-business market that brings the fundamental concepts to life with practical example. Prerequisite: MKTG 301. Offered: A.

MKTG 412 Consumer Marketing and Brand Management (4) *Forehand* Focuses on how consumers develop brand attitudes and how these attitudes guide behaviors. Devotes specific attention to the psychological processes that underlie brand attitude formation and the strategies necessary to build enduring brands. Case discussion and projects and real brands are heavily featured. Prerequisite: MKTG 301. Offered: Sp.

MKTG 415 Foundations of Pricing Strategy (4) *Shulman* Examines theoretical and applied perspectives in pricing strategy. Explores how firms optimally capture value and profit in the revenues that companies earn. Provides a rigorous foundation in making better pricing decisions. Prerequisite: MKTG 301. Offered: W.

MKTG 430 Sales Force Management (4) Focuses on the role of the sales manager within the organization. Includes distribution planning, sales organization, management of the sales force, methods of sales, cost and financial analysis, and performance analysis. Prerequisite: MKTG 301; may not be repeated. Offered: AWSp.

MKTG 445 Multicultural Marketing and Business Development (4) *DIV* Integrates tools from marketing, consulting, and multi-cultural business management to provide consulting services to small business in economically-distressed communities. Working in teams with assistance from industry mentors and alumni from the course, students gain practical experience in multi-cultural marketing,

consulting, and managing a business. Prerequisite: MKTG 301. Offered: jointly with MGMT 445; W.

MKTG 450 Consumer Behavior (4) Theory and practice pertinent to marketing decisions; utilization of theories from behavioral sciences in marketing research; theories of fashion, characteristics of goods, shopping behavior, product differentiation, market segmentation, and opinion leadership; application of concepts to management of advertising, personal selling, pricing, and channels of distribution. Prerequisite: MKTG 301; may not be repeated. Offered: AWSp.

MKTG 455 Entrepreneurial Marketing (4) Examines the skills and tools entrepreneurs need for bootstrap marketing in their start-up firms. Students learn to identify target market segments, position their products, estimate demand, set prices, gain access to channels, and manage the issues of rapid growth. Prerequisite: MKTG 301; may not be repeated. Offered: jointly with ENTRE 455; AWSp.

MKTG 460 Marketing Research (4) Examines marketing research process; steps of research design, questionnaire construction, sampling, data analysis, evaluation/presentation of findings, online research, and web surveys. Class project provides practical application. Prerequisite: MKTG 301; either ECON 311, QMETH 201, STAT 220, CS&SS 221/SOC 221/STAT 221, STAT 301, STAT 311, or MATH 390/STAT 390; may not be repeated. Offered: AWSp.

MKTG 470 International Marketing (4) Focuses on assessing international marketing opportunities, formulating and implementing international marketing strategies. Examines how to use marketing analyses and deductive decision modeling in assessing international marketing opportunities. Uses marketing tools and concepts in the planning, preparation, and presentation and discussion of cases and class project. Prerequisite: MKTG 301; may not be repeated. Offered: W.

MKTG 485 Strategic Market Management (4) Strategically analyzes important marketing issues by combining basic models of marketing with powerful spreadsheet analysis. Case discussions and projects provide valuable application exercises. Prerequisite: MKTG 301. Offered: Sp.

MKTG 490 Special Topics and Issues in Marketing (1-6, max. 12) Contemporary topics and issues in marketing: marketing in nonprofit organizations, marketing of services, marketing in the public sector, and marketing in an economy of scarcity. Ordinarily only one topic area is addressed in any one quarter. Course content reflects contemporary developments and the current interests of instructors and students. Prerequisite: MKTG 301.

MKTG 495 Marketing Internship (1-4, max. 8) An internship with a company, not for profit organization, or government agency in a marketing capacity. Prerequisite: MKTG 301. Credit/no-credit only. Offered: AWSpS.

MKTG 496 Marketing Practicum (4) Rhodes Offers opportunities to apply principles, concepts, and skills learned previously to actual business situations. Participation in class part-time and in an internship with a business employer part-time. Prerequisite: MKTG 301. Offered: Sp.

MKTG 499 Undergraduate Research (1-6, max. 9) Prerequisite: MKTG 301.

MKTG 501 Marketing Management (4) Analysis and management of customer satisfaction in goods and services markets by profit and nonprofit organizations. Buyer behavior, market segmentation and product positioning, product policy, pricing, distribution, sales force and advertising management, and market research in the contexts of strategy development, decision making, implementation, and control.

MKTG 505 Marketing Strategy (4) Focuses on the role of analytical marketing tools and competitive dynamics in strategy formation. Accentuates the integrative nature of marketing strategy through development of a strategic marketing plan and use of simulation software. Prerequisite: MBA core marketing.

MKTG 510 New Product Development (4) Integrates business, design, and engineering functions in the presentation and application of structures, tools, and methodologies important for successful new product development. New product development projects are accomplished with a cross-functional team emphasis. Prerequisite: MBA core marketing.

MKTG 511 Business-to-Business Marketing (4) Integrated approach to product marketing management in the business-to-business marketplace. Analysis of core competencies, competitive environment, positioning and segmentation strategies, cost structure, and customer satisfaction. Case-based and project-oriented approach to studying marketing management in the business-to-business market. Prerequisite: MBA core marketing or permission of instructor.

MKTG 512 Consumer Marketing and Brand Management (4) Analysis of marketing strategies for consumer products and services. Focuses on consumer satisfaction and brand management including product line and brand developments, pricing strategies, channel and retail relationships, and marketing communication strategies for consumer goods and services. Prerequisite: MBA core marketing.

MKTG 515 Pricing Strategies and Tactics (4) *Shulman* Examines theoretical and applied perspectives in pricing strategy and tactics. Explores how firms optimally capture value and profit in the revenues they earn. Provides students with a rigorous foundations from which to make better pricing decisions at the managerial level. Prerequisite: MKTG 501.

MKTG 520 Marketing Channels (4) Channels of distribution decisions for goods and services in profit and nonprofit organizations. Considers methods of optimizing the number, quality of institutions and activities employed in dealing with exchange, and space and time aspects of channel management. Relates management of marketing channels to marketing mix, organizational objectives. Prerequisite: MBA core marketing.

MKTG 530 Managing the Sales System (4) Examines the revenue generation function of a firm from a system-wide perspective. Topics include strategic and tactical considerations related to customer acquisition and retention, end-to-end sales and support operations, strategic partnerships, and continuous performance monitoring. Emphasis on case studies and team projects. Prerequisite: MBA core marketing.

MKTG 540 Advertising and Promotion Management (4) Management of advertising and promotional activities and their integration with other elements of the marketing mix. Topics include: understanding the communication process, analyzing markets, working with suppliers, establishing objectives, determining budgets, selecting media, measuring and evaluating effectiveness, using publicity and promotions. Legal, social, and economic consequences are considered. Prerequisite: MBA core marketing.

MKTG 550 Managing Customer Relationships Through Direct Marketing (4) Management of customer relationships through the lens of direct marketing. Topics include direct marketing creative activity, strategy, and execution; media and segmentation; direct marketing budgeting and financials; targeting, database, and predictive modeling; catalogue marketing; relationship marketing; business-to-business complex sales; privacy. Prerequisite: MBA core marketing.

MKTG 555 Entrepreneurial Marketing (4) Examines the skills and tools entrepreneurs need for bootstrap or guerrilla early-stage companies. Covers how to target market segments, position products, estimate demand, set prices, gain access to channels, and manage issues of rapid growth. Prerequisite: B A 501, MKTG 501 or equivalent. Offered: jointly with ENTRE 555.

MKTG 560 Research for Marketing Decisions (4) Methods and applications of marketing research to solve marketing

problems. Deals with: problem definition, research design, questionnaire construction, sampling, and data analysis using SPSS. Introduces promising new developments in online research, web surveys, and data analysis. Class research project provides practical application. Prerequisite: MBA core marketing.

MKTG 565 Data Driven Marketing (4) Provides tools and methods targeting data available to marketers deciding on issues such as pricing, online advertising, or other data-driven marketing strategies. Explores how to leverage data correctly to achieve goals of firms. Focuses on secondary data originating from consumer behavior. Prerequisite: B A 500 or MKTG 501.

MKTG 570 International Marketing (4) Analysis of the marketing strategies and tactics of multinational corporations. Choice of entry strategies for foreign markets, analyzing international competition at home and abroad, and developing global marketing strategies. Prerequisite: MBA core marketing; recommended: one I BUS course.

MKTG 575 Marketing High-Technology Products (4) Management of the marketing requirements of high-technology products. Examines how markets for high-tech products involve shortened product life cycles, demand for continual product updates, perceived risk of adoption by customers, requirements for intensive customer service and relationships, and growing reliance on business partners. Prerequisite: MBA core marketing.

MKTG 579 Special Topics in Marketing (2/4, max. 12) Marketing topics of current concern to faculty and students. Offered only when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings. Prerequisite: MBA core marketing.

MKTG 581 Doctoral Seminar in Consumer Behavior (4) Survey of the field of consumer behavior introduces fundamental topics in consumer behavior including cognitive processes, emotion, and consumer satisfaction. Provides exposure to a variety of research methods including experiments, surveys, and phenomenological research.

MKTG 582 Doctoral Seminar in Multivariate Analysis for Marketing Research (4) Survey of methods useful for empirical evaluation of multivariate marketing phenomena and relationships. Includes an overview of measurement theory and practice; multidimensional scaling; conjoint analysis; cluster, factor, and discriminant analyses; multivariate analysis of variance; structural equation modeling; and other methods commonly encountered in academic marketing research.

MKTG 583 Doctoral Seminar in Marketing Strategy (4) Study of factors influencing business performance and role of marketing in achieving competitive advantage. Analysis of prevailing, and emerging, theories underlying strategic thinking and competitive process. Examination of empirical research regarding measurement, level, and persistence of business success and implications of findings for theory and strategy development. Prerequisite: BA RM 580.

MKTG 584 Doctoral Seminar in Research Issues in Marketing (4) Examination of research problems and issues in marketing. Specific topics vary depending on the interest of faculty and students.

MKTG 591 Doctoral Seminar in Consumer Behavior Research Topics (4) Investigates research topics of current interest in consumer behavior. Considers the processes used by consumers to acquire and evaluate marketing information including advertising, publicity, word of mouth, packaging, product description, price, and retail outlets, and examines ways the principles in social perception influence consumers' individual responses to marketing-related activities.

MKTG 593 Doctoral Seminar in Marketing Models (4) Focuses on modeling research efforts in various areas of marketing. Discussion of mathematical and statistical modeling approaches which contribute to scientific devel-

opment in the marketing area and ways in which modeling is used to characterize and summarize the nature of general marketing situations in complex environments.

MKTG 599 Doctoral Seminar in Marketing (1, max. 12) Study and research in advanced topics of marketing. The seminar is generally concerned with unpublished areas of research and conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

MKTG 600 Independent Study or Research (*)

Operations Management

OPMGT 301 Principles of Operations Management (4) Examines problems encountered in planning, operating, and controlling production of goods and services. Topics include: waiting-line management, quality assurance, production systems, project management, and inventory management. Computer and quantitative models used in formulating managerial problems. Prerequisite: ACCTG 225; ECON 200; either MATH 112, MATH 124, MATH125, MATH 134, or MATH 145; either ECON 311, IND E 315, QMETH 201, Q SCI 381, PSYCH 315, PSYCH 318, STAT 220, STAT 301, STAT 221, STAT 311, or STAT 390. Offered: AWSpS.

OPMGT 402 Introduction to Logistics (4) Logistics studies of the efficient delivery of goods and services. A total-cost approach recognizes this involves not only the obvious vehicle-routing issues but also shipment size and mix, warehouse location, product design, and customer services. Includes study of real companies' logistics problems. Prerequisite: OPMGT 301.

OPMGT 443 Inventory and Supply Chain Management (4) Examines modeling and analysis of global supply chains in order to improve service and decrease cost. Covers tools and methods for managing inventory of items with different demand and supply characteristics. Topics include forecasting, Just-in-Time production, deterministic and stochastic inventory models, Materials Requirements Planning; and supplier management. Prerequisite: OPMGT 301. Offered: AW.

OPMGT 450 Introduction to Project Management (4) Focuses on management principles, methods, and tools to effectively plan and implement complex projects. Includes project selection, preparation, planning, and monitoring. Covers classical techniques and new methodologies; spreadsheet-based tools; and probabilistic project simulation from strategic, tactical, and operational perspectives. Prerequisite: OPMGT 301. Offered: ASP.

OPMGT 490 Special Topics in Operations Management (1-6, max. 20) Operations management topics of current concern to faculty and students. Potential topics: logistics management, project scheduling, manufacturing strategy, site and location analysis, management of service operations. Prerequisite: OPMGT 301.

OPMGT 495 Operations Management Internship (1-4, max. 8) Internship with a private firm, nonprofit organization, or government agency, where work experience involves substantial application of analysis techniques and management concepts learned in classroom. Prerequisite: OPMGT 301. Credit/no-credit only. Offered: AWSpS.

OPMGT 499 Undergraduate Research (1-6, max. 9)

OPMGT 502 Introduction to Operations Management (3) Managerial decision making in operations problems, including application of quantitative analysis and use of computers. Production of goods or services in any type of organization. Inventory management, scheduling, facility location, management of service systems, and quality assurance. Prerequisite: QMETH 500.

OPMGT 550 Project Management (4) Management of complex projects, and tools and techniques (e.g., CPM and PERT) developed to aid the planning, scheduling, and control of projects. Includes work breakdown structures, precedence networks, Gantt charts, resource leveling and allocation, and the use of microcomputer programs. Prerequisite: B A 502 or OPMGT 502 or equivalent.

OPMGT 570 Operations Strategy (4) Strategic management of operations and manufacturing in domestic and international companies. Developing and implementing a coherent strategy based on continuous improvement of quality, productivity, products, processes, and customer services. Facilities, capacity, process/work-force planning, organization, people, systems integration, coordination between operations, marketing, engineering, and R&D. Prerequisite: B A 502 or OPMGT 502 or equivalent.

OPMGT 579 Special Topics in Operations Management (2/4, max. 12) Major topics in operations management and systems analysis. Emphasis on research and, where appropriate, application of quantitative analysis and computers. Topics vary, including workforce planning, project management, research and development management, quality assurance, technology planning and forecasting, systems analysis of complex organizations, and urban systems analysis. Prerequisite: B A 502, OPMGT 502, or equivalent.

OPMGT 581 Advanced Research Topics in Operations Management I (4) *Wagner* Overview of research problems and techniques in operations management. Focuses on emerging and ongoing research relating to current issues in the field, including readings and discussions of literature dealing with subjects of special interest to participants. Prerequisite: doctoral student or permission of instructor. Offered: A.

OPMGT 582 Advanced Research Topics in Operations Management II (4) *Moinzadeh* Overview of research problems and techniques in operations management. Focuses on emerging and ongoing research (beyond those discussed in OPMGT 581) relating to current issues in the field, including readings and discussions of literature dealing with subjects of special interest to participants. Prerequisite: doctoral student or permission of instructor. Offered: W.

OPMGT 583 Advanced Research Topics in Operations Management III (4) *Mamani* Examine interdisciplinary research in operations and supply chain management. Focuses on one specific application area of interest each quarter including: healthcare, sustainability, marketing, game theory, economics, etc. Prerequisite: doctoral student or permission of instructor. Offered: Sp.

OPMGT 584 Fundamentals of Operations Management Research (4) *Klasterin* Surveys basic areas that form the foundations for much of the research in operations management today. Topic areas include facility location, scheduling, project management, and supply chain management. Prerequisite: QMETH 580. Offered: W.

OPMGT 587 Advanced Topics in Inventory Management (4) Survey of literature in inventory/production control with emphasis on current research. Topics include single-echelon deterministic and probabilistic models and multi-echelon stochastic models. Prerequisite: QMETH 592 and course in probability theory and in stochastic processes.

OPMGT 599 Doctoral Seminar in Operations Management (1, max. 12) Study and research in advanced topics of operations management. Concerned with unpublished areas of research and conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

OPMGT 600 Independent Study or Research (*)

Quantitative Methods

QMETH 201 Introduction to Statistical Methods (4) NW, QSR Survey of principles of data analysis and their applications for management problems. Elementary techniques of classification, summarization, and visual display of data. Applications of probability models for inference and decision making are illustrated through examples. Prerequisite: either MATH 112, MATH 124, MATH 125, MATH 134, or MATH 145. Offered: AWSpS.

QMETH 450 Spreadsheet Models for Managerial Decision Making (4) Formulation and solution of business problems using operations research techniques in a spreadsheet

environment. Techniques of linear and integer programming, decision analysis, network optimization, queuing, and simulation. Applications from marketing, finance, and operations. Prerequisite: I S 300. Offered: ASP.

QMETH 490 Special Problems in Quantitative Analysis (1-6, max. 20) Specialized quantitative techniques useful for solving business problems. Topics from operation research, statistics, computer methods. Emphasis on application. Prerequisite: either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

QMETH 499 Undergraduate Research (1-6, max. 9) Research in selected problems in business statistics, operations research, decision theory, and computer applications.

QMETH 500 Statistical Data Analysis for Management (4) Statistical models, techniques, and tools for aiding management decisions. Use of spreadsheets in basic business problems. Probability distributions, random sampling and standard errors, hypothesis testing, multiple regression, ANOVA, chi-square tests. Prerequisite: preparation in elementary calculus and successful completion of University-administered proficiency exam.

QMETH 501 Decision Support Models (2) Introduction to computer-based modeling techniques for management decision making. Linear programming, decision analysis, and simulation. Formulation and interpretation. Prerequisite: QMETH 500, B A 500, or equivalent.

QMETH 503 Practical Methods for Data Analysis (4) Basic exploratory data analysis with business examples. Data summaries, multivariate data, time series, multiway tables. Techniques include graphical display, transformation, outlier identification, cluster analysis, smoothing, regression, robustness. Departmental credit allowed for only one of 403 and 503. Prerequisite: B A 500 or QMETH 500 or equivalent or permission of instructor. Offered: jointly with STAT 503.

QMETH 520 Managerial Applications of Regression Models (4) Data exploration and inference using regression models for business forecasting and management. Models include simple, multiple, logistic, and nonlinear regression, use of dummy variables, transformations, variable selection, and diagnostics. Prerequisite: QMETH 500 or B A 500.

QMETH 528 Survey Sampling Applications (4) Introduction to design and implementation of sample surveys with emphasis on business applications. Simple random, stratified, cluster, multistage sample methods. Probability sampling, optimal allocation of sampling units. Mail, telephone, interview methods. Estimation methods, Questionnaire design. Non-response. Prerequisite: QMETH 500 or B A 500 or equivalent or permission of instructor.

QMETH 530 Forecasting Models in Business (4) Introduction to time series analysis and forecasting. Topics include seasonal adjustment, decomposition, exponential smoothing, moving average, and autoregression as well as model identification, estimation, diagnostics, and adaptive forecasting illustrations using real data. Prerequisite: QMETH 500 or B A 500.

QMETH 551 Modeling with Spreadsheets (4) Advanced formulation and modeling of business problems in a spreadsheet environment. Techniques of linear, integer, and nonlinear programming, multi-objective goal programming, and simulation. Applications from finance, marketing, and operations. Prerequisite: B A 502 or QMETH 501 or equivalent.

QMETH 579 Special Topics in Quantitative Methods (2-4, max. 12) Presentation of topics of current concern to students and faculty in operations research and applied business statistics. Potential topics include applications and extensions of mathematical programming, stochastic processes, discrete programming, networks models, and the application of statistical techniques.

QMETH 580 Mathematical Programming (4) Advanced survey of mathematical programming with applications

to business problems. Includes linear, integer, stochastic, nonlinear, and dynamic programming and network optimization. Treatment includes formulation, optimality conditions, duality theory, solution algorithms. Applications to production, scheduling, marketing, finance, and equipment replacement. Prerequisite: B A 501 or equivalent and doctoral student or permission of instructor.

QMETH 592 Stochastic Models: Queuing and Simulation

(4) Application of stochastic processes to business problems. Focuses on development and application of queuing theory and discrete event simulation. Prerequisite: stochastic processes, knowledge of high level programming language, and doctoral student or permission of instructor.

QMETH 599 Doctoral Seminar in Operations Research

(1, max. 12) Study and research in advanced topics of operations research. Concerned with unpublished areas of research and conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status. Credit/no-credit only.

QMETH 600 Independent Study or Research (*-)

School of Dentistry

Dean

Joel Berg

D322 Health Sciences

Established in 1945, the University of Washington School of Dentistry offers courses leading to a Doctor of Dental Surgery (DDS) degree, and advanced education leading to a Master of Science in Dentistry degree and/or a certificate of proficiency in endodontics, oral medicine, orthodontics, pediatric dentistry, periodontics, and prosthodontics. Residency training is available in oral and maxillofacial surgery and general practice. The Department of Oral Biology offers a Master of Science (MS), an MS non-thesis degree for dental hygiene educators, and a doctoral degree (PhD). Postdoctoral study is available in various disciplines.

Opportunities to earn other degrees concurrently (MS or PhD in the School of Dentistry's Department of Oral Biology and other schools) may be arranged on an individual basis.

These educational programs are enriched by the School's strong commitment to Research and the presence of a Regional Clinical Dental Research Center, the Northwest Center to Reduce Oral Health Disparities, Northwest PRECEDENT, an affiliation with the Institute of Translational Health Sciences (ITHS,) and a fellowship Research training program for predoctoral and postdoctoral students. The mission of the Regional Clinical Dental Research Center is to foster clinically relevant Research that advances dentistry's knowledge base, improves patient care, and promotes oral health. The Disparities Center performs Research aimed at reducing oral health disparities in the Pacific Northwest. Northwest PRECEDENT is the Practice-based Research Collaborative in Evidence-based DENTistry. Founded in 2005, this network of dental practices has established the infrastructure to perform a wide variety of oral health Research studies across a five-state region covering Idaho, Montana, Oregon, Utah, and Washington. The mission of the ITHS is to create, enable, and sustain innovative translational Research and Research collaborations across disciplines and professions which accelerates the development of concepts and tangible products that improve human health. State-of-the-art clinical Research facilities are available for faculty and student use.

School of Dentistry Mission Statement: "The School of Dentistry shares the University's overall mission to generate, disseminate, and preserve knowledge and serve the community. The School is an integral part of the Warren G. Magnuson Health Sciences Center and is an oral health-care center of excellence serving the people of the state of Washington and the Pacific Northwest. The primary mission, through educational, Research, and service programs, is to prepare students to be competent oral health-care professionals. The School's Research programs contribute to the fundamental understanding of biologic processes and to the behavioral, biomedical, and clinical aspects of oral health. The service mission is to improve the health and well-being of the people of the community and the region through outreach programs that are especially attentive to minority and underserved populations. The School values diversity in its students, staff, faculty, and patient populations. It seeks to foster an environment of mutual respect where objectivity, imaginative inquiry, and the free exchange of ideas can flourish to facilitate personal development, professionalism, and a strong sense of self-worth." (August 2002)

The following departments participate in the curriculum for the School's programs:

- Dental Public Health Sciences is concerned with the social, legal, political, economic, and psychological aspects of dental healthcare delivery as well as the epide-

miology of oral diseases and the application of biostatistical methods in studying them.

- Endodontics offers training in the diagnosis and treatment of diseases and injuries of the tooth pulp and periradicular tissues.
- Oral and Maxillofacial Surgery trains students in the procedures used for all types of operations in the oral cavity and all phases of dental pain control.
- Oral Biology encompasses the study of basic biological mechanisms in normal and diseased oral tissues and structures.
- Oral Medicine provides training in diagnostic techniques and nonsurgical treatments of oral disease.
- Orthodontics provides training in the prevention and correction of malocclusion of the teeth.
- Pediatric Dentistry provides students with a broad understanding of prevention, diagnosis, and treatment of most dental needs from infancy through adolescence with emphasis on the psychological and educational requirements of the patient and parent.
- Periodontics offers training relative to the periodontium and dental implants, with emphasis placed on diagnosis, prevention, treatment, and maintenance.
- Restorative Dentistry offers training in the restoration or replacement of tooth structure and study of the form and function of the masticatory structures, and fabrication and maintenance of removable, complete, immediate, and partial dentures and dental implants.

UNDERGRADUATE PROGRAM

The dental hygiene program is not accepting new applicants. Please contact the program for further information.

GRADUATE PROGRAMS

Through their respective departments, the graduate faculty members of the School offer programs leading to the degrees of Master of Science in Dentistry, Master of Science, and Doctor of Philosophy, as well as postgraduate certificate programs.

Master of Science in Dentistry/ Postgraduate Certificates

Fields of study for the MSD programs include endodontics, oral pathology, oral medicine and orofacial pain, orthodontics, pediatric dentistry, periodontics, and prosthodontics. Although students may enroll in a graduate certificate program only, they may elect to pursue an MSD. Programs are planned to prepare students to think independently, to evaluate their own services and the literature of the programs, and to develop clinical skills to a level to permit successful clinical practice, teaching, or Research in their chosen specialty. Emphasis is placed on the basic principles of diagnosis and treatment. The purpose of the programs is not only to train students in their respective specialties but also to encourage preparation for academic careers or for Research. Research may be undertaken in basic or applied science. Opportunities for collaborative Research are available with the cooperation of other colleges, schools, or departments of the University.

Postgraduate certificate programs are not administered by the Graduate School, and no thesis is required. The course content may vary somewhat from the MSD program, although the same academic standards are applied in both

programs. Tuition and fees are assessed at the graduate level for both programs.

Master of Science in Dentistry

Admission Requirements

- Either a baccalaureate or a professional degree from a dental or medical school.
- Completed application and application fee of \$65
- Three letters of recommendation
- 200-300 word statement of educational and professional objectives which includes a general area of Research interest and academic goals. Optional: a personal statement that addresses the relationship between personal background and aspirations
- A brief biographical sketch in a resume/CV format
- Official transcripts, sent directly to the department
- GRE General Test scores
- TOEFL:** Required for international students. The minimum TOEFL score required is 237 computer, 580 paper, iBT 70 (based only on listening, reading, and writing sections).

Degree Requirements

50 credits, to include:

- Required Courses (Approximately 35 credits from this list):** ORALB 564, ORALB 565, ORALB 566, ORALB 569, PERIO 575, ORALB 570, ORALB 575, ORALB 579; either ORALB 591, ORALB 592, or DPHS 568; for foreign-trained dentists and non-dentists: ORALB 572, PATH 544
- Recommended Electives (Approximately 15 credits from this list):** DPHS 569, MEBI 520, ORALB 562, ORALB 574, PATH 501, PATH 552
- Research:** Fulfilled by either a report on experimentation carried out by the student in one of the laboratories, or a case report with review of the literature. Students interested in a more Research-intensive experience should consider enrolling in the MS in Oral Biology (thesis) program.
- Teaching:** Students are encouraged to take elective courses offered through the Department of Medical Education and Graduate School.
- Note:** At present, this program is not certified by the American Board of Oral Pathology.

Master of Science in Dentistry, Endodontics

Admission Requirements

- Professional degree from a dental school
- Completed application and application fee of \$65
- Three letters of recommendation
- A personal statement that addresses the relationship between the student's personal background and aspirations
- Brief biographical sketch in a resume/CV format
- Official transcripts, sent directly to the Department of Endodontics (international applicants must also send official transcripts to the Graduate School)
- GRE General Test, required only from applicants who graduated from a non-ADA-accredited dental school
- TOEFL:** Required for international students. The minimum TOEFL score required is 237 computer, 580 paper, iBT 70 (based only on listening, reading, and writing sections).

Degree Requirements

Minimum 148 credits, to include:

1. Students who have adequate backgrounds in required courses may, on presentation of appropriate documentation, be excused from required courses at the discretion of the program director.
2. **Required Core Courses:** ENDO 561, ENDO 580 through ENDO 587, ENDO 590, ENDO 593, ENDO 594, ENDO 600, ENDO 658, ENDO 660, DENT 565, DENT 568, DPHS 568, DPHS 569, ORALB 569, ORALB 574, ORALB 579, ORALB 591, ORALB 592, ORALM 580, ORTHO 580, PERIO 567, PERIO 582, PERIO 585, PERIO 586
3. **Non-thesis Research:** A non-thesis research study is required. During the first year, each student is encouraged to gain familiarity with Research in progress and to help identify an area of special interest. Then, a preceptor and Research advisory committee is appointed and the student begins Research work. The master's defense is concerned with the Research subject matter and is conducted as an open seminar followed by examination by the advisory committee.
4. **Teaching:** Students audit predoctoral lecture courses in endodontics, assist with teaching in the predoctoral endodontics laboratory course, and supervise predoctoral dental students working in the endodontic clinic.

Master of Science, Oral Biology

Admission Requirements

1. Either a baccalaureate or a professional degree from a dental or medical school
2. Completed application and application fee of \$65
3. Three letters of recommendation
4. 200-300 word statement of educational and professional objectives which includes a general area of Research interest and academic goals. Optional: a personal statement that addresses the relationship between the student's personal background and aspirations
5. Brief biographical sketch in a resume/CV format
6. Official transcripts, sent directly to the Department of Oral Biology
7. GRE General Test
8. **TOEFL:** Required for international students. The minimum TOEFL score required is 237 computer, 580 paper, iBT 70 (based only on listening, reading, and writing sections)

Degree Requirements

Minimum 70 credits, to include:

1. Minimum 70 credit hours (including at least nine credits of thesis), of which at least 7 credits must be from science courses outside the Department of Oral Biology. Students who have adequate backgrounds in required courses may, on presentation of appropriate documentation, be excused from required courses; up to six hours of transfer credit may be granted at the discretion of the Graduate School.
2. **Required Core Courses:** ORALB 569, ORALB 575, ORALB 578, ORALB 579, ORALB 581, ORALB 591, ORALB 592, ORALB 600, ORALB 700, DPHS 568
3. **Electives:** 7 credits from science courses outside oral biology
4. **Recommended:** One class on educational methods
5. **Thesis Research:** A research thesis is required. During the first year, each student is encouraged to spend time in several laboratories to gain familiarity with Research in progress and to help identify an area of special interest. Then, a preceptor and thesis advisory committee is appointed and the student begins thesis work. The final examination is concerned with the subject matter of the

thesis and is conducted as an open seminar followed by examination by the advisory committee.

6. **Teaching:** Students are encouraged to take elective courses offered through the Department of Medical Education and Graduate School.

Master of Science in Dentistry, Prosthodontics

Admission Requirements

1. Professional degree from a dental school
2. Complete electronic application to the Graduate School, including \$65 application fee
3. Complete the Questionnaire to Applicants for Postdoctoral Training (available for download at the School's website, www.dental.washington.edu)
4. Class Standing form (available for download at the School's website, www.dental.washington.edu)
5. Waiver form
6. Three letters of recommendation or Evaluation of Applicant forms (available for download at the School's Website, www.dental.washington.edu)
7. A personal statement explaining why the student wishes to pursue an education in prosthodontics
8. A CV or Resume
9. Official transcripts, sent directly to the Department of Prosthodontics (all applicants must also send official transcripts to the Graduate School)
10. GRE General Test (required only for applicants who graduated from a non-ADA-accredited dental school outside the US or Canada)
11. TOEFL required for international students; the minimum TOEFL score required is 237 computer, 580 paper, iBT 70, (based only on listening, reading, and writing sections).

Degree Requirements

Minimum 108 credits, to include:

1. **Required Core Courses:** PROS 560, PROS 562, PROS 563, PROS 564, PROS 572, PROS 660 (minimum 16), PROS 665, RES D 570, RES D 580, RES D 585, RES D 588, RES D 589, RES D 590, RES D 600 (minimum 14), RES D 660 (minimum 24), DENT 565, DPHS 568, DPHS 569, ORALM 570, ORALM 580, ORALB 574, ORTHO 580, ORTHO 582, PERIO 561, PERIO 580, PERIO 582, PERIO 585, PERIO 586
2. **Non-thesis Research:** A non-thesis research study is required for the MSD. During the first year, each student is encouraged to gain familiarity with Research in progress and to help identify an area of special interest. After the student identifies an area of interest, a Research committee is established. The master's defense is concerned with the Research subject matter and is conducted as an open seminar followed by examination by the committee.
3. **Teaching:** Second- and third-year students supervise predoctoral dental students working in the prosthodontics and restorative clinics.

Master of Science, Dental Hygiene

Admission Requirements

1. Either a baccalaureate or a professional degree from a dental or medical school
2. Completed application and application fee of \$65
3. Three letters of recommendation
4. 200-300 word statement of educational and professional objectives which includes a general area of Research interest and academic goals. Optional - a personal

statement that addresses the relationship between the student's personal background and aspirations

5. Brief biographical sketch in a resume/CV format
6. Official transcripts, sent directly to the Department of Oral Biology
7. GRE General Test
8. TOEFL required for international students. The minimum TOEFL score required is 237 computer, 580 paper, iBT 70 (based only on listening, reading, and writing sections).

Degree Requirements

70 credits, to include:

1. **Coursework:** 48 credits, as follows: CONJ 401, CONJ 402, CONJ 403, PATH 544, PERIO 575, ORALB 520, ORALB 561, ORALB 572, ORALB 575; at least one of the following: PERIO 517, DPHS 568, DPHS 569, or O S 532; at least two of the following: MEBI 520, MEBI 521, GRDSCH 630, ORALB 562, D HYG 595.
2. **Electives:** 22 credits of electives. Recommended electives: ORALB 569, ORALB 574, ORALB 578, ORALB 579, ORALB 600, DENT 534, DPHS 550, DPHS 569, ORTHO 580, O S 520, PHCOL 434, PHCOL 435, ORALM 520
3. Clinical opportunities may be available in the DECOD (Dental Education in Care of Persons with Disabilities) and the Dental Fears Clinics.

Doctor of Philosophy

Admission Requirements

1. Either a baccalaureate or a professional degree from a dental or medical school
2. Completed application and application fee of \$65
3. Three letters of recommendation
4. 200-300 word statement of educational and professional objectives which includes a general area of research interest and academic goals. Optional: a personal statement that addresses the relationship between the student's personal background and aspirations
5. Brief biographical sketch in a resume/CV format
6. Official transcripts, sent directly to the Department of Oral Biology
7. GRE General Test
8. TOEFL required for international students. The minimum TOEFL score required is 237 computer, 580 paper, iBT 70 (based only on listening, reading, and writing sections).

Degree Requirements

Minimum 90 credits, to include:

Through coursework, students are expected to gain proficiency in one or more basic biologic sciences and to master modern biological approaches in addition to gaining expertise in the subject area of oral and craniofacial sciences. At least 15 credit hours must come from science courses in departments other than oral biology. These include courses offered through the School of Medicine and courses selected to match the basic science interests of the student. Cross-disciplinary training in bioengineering is also available. All graduate students attend and participate in departmental seminars (ORALB 575).

1. **Required Core Courses:** ORALB 569, ORALB 575, ORALB 578, ORALB 579, ORALB 581, ORALB 591, ORALB 592, ORALB 600, ORALB 800, DPHS 568
2. At least 6 credits from the following School of Medicine courses: CONJ 524 through CONJ 558 and PABIO 537
3. Strongly recommended: at least one class on educational methods

Residency Training

Residency training programs are available in oral and maxillofacial surgery and the general practice of dentistry. Both programs provide for rotation through several of the University-affiliated hospitals. Each is a fully accredited program that grants a certificate upon successful completion of the training. Stipends are provided.

The oral and maxillofacial surgery program is four years in duration and provides broad exposure to all aspects of the practice of oral and maxillofacial surgery. Application, selection, and administration of this training program is provided through the Department of Oral and Maxillofacial Surgery. Applicants to the program must be graduates of an accredited U.S. or Canadian Dental School, demonstrate proficiency in the English language, submit National Dental Board Examination scores for Part 1, and register and participate in the Postdoctoral Dental Matching Program. Further information can be obtained by contacting the Residency Program Coordinator, Department of Oral and Maxillofacial Surgery, Box 357134, University of Washington, Seattle, WA 98195-7134, (206) 543-7722.

The General Practice Residency (GPR) is a one-year training program with a second optional year that emphasizes the general dentist's role in a hospital setting and the management of medically, physically, and mentally compromised patients. It also provides multiple resources for enhancement of dental clinical skills in the dental setting, applying management techniques through minimal, moderate sedation and general anesthesia in the operating room. Applicants to the program must be graduates of an ADA-accredited dental school, submit National Dental Board Examination scores for Part 1, and register and participate in the Postdoctoral Application Support Service (PASS) and Postdoctoral Dental Matching Program (MATCH). Further information can be obtained by visiting the website at dental.washington.edu/departments/gpr/general-practice-residency.html.

Postdoctoral Fellowships

Postdoctoral training fellowships are available in behavioral or public-health Research in dentistry in addition to those in oral biology. Programs vary in duration and many accommodate degree-seeking or Research fellows pursuing an academic career. NIH-sponsored partial tuition and a stipend for up to three years are provided for U.S. citizens, noncitizen nationals, and those foreign nationals with permanent-residency status in the United States. Members of ethnic minorities and women are especially invited to apply. Application, selection, and administration of the program are provided through the Departments of Dental Public Health Sciences and Oral Biology.

Graduate Training in Dental Public Health

Opportunities exist for pursuing graduate degrees in public health which emphasize applications to Research in dentistry. Master of Public Health (MPH) programs in the Departments of Epidemiology and Health Services of the School of Public Health can be pursued in conjunction with postdoctoral training in the School of Dentistry's Department of Dental Public Health Sciences. Didactic coursework is taken in the School of Public Health and Community Medicine, augmented with independent study and thesis Research on selected topics in the School of Dentistry. Similar opportunities exist for pursuing the PhD in epidemiology or biostatistics with an emphasis on Research in dentistry. Further information may be obtained from the Office of Academic Affairs, Box 357480, School of Dentistry, University of Washington, Seattle, WA 98195-7480, (206) 221-6887.

The Office of Continuing Dental Education, School of Dentistry, offers programs and courses throughout the year to provide dentists, auxiliary personnel, and others involved in healthcare with current scientific knowledge and methodology of patient treatment. Utilizing local, national, and

international experts, these programs provide a broad spectrum of information relevant to the needs of dental-health professionals. The instructional program consists of lectures, clinical courses, study clubs, extended clinical training, correspondence, and participation courses, some of which are offered in the simulated-patient laboratory. Various programs are presented throughout the year in the Pacific Northwest, Alaska, and Hawaii.

A list of courses offered may be obtained from the Office of Continuing Dental Education, Box 357137, University of Washington, School of Dentistry, Seattle, WA 98195-7137, (206) 543-5444, dental.washington.edu/cde/current-course-listings.html.

PROFESSIONAL PROGRAM

Doctor of Dental Surgery

The Doctor of Dental Surgery (DDS) curriculum provides students opportunities to learn the fundamental principles significant to the entire body of oral health. Students (approximately 63 per class) learn the basic health sciences, attain proficiency in clinical skills, develop an understanding of professional and ethical principles, and develop reasoning and critical decision-making skills that enable implementation of the dental knowledge base. The first year is divided among lecture, laboratory, and preclinical activities in basic sciences, dental anatomy, occlusion, and dental materials. There are also early clinical experiences in preventive dentistry and periodontics. In the second year, students develop additional preclinical skills, learn how basic science principles are applied to the clinical setting, and begin clinical patient treatment. In the third and fourth years, students primarily concentrate on providing clinical treatment and attend lectures that refine diagnostic and technical skills. Additionally, students are required to participate in elective clinical and didactic courses. Students choose elective courses offered by all departments, including opportunities in independent study, Research, seminars on various topics, and specialty clinical topics.

The DDS curriculum extends for 42 months or 14 quarters, including two summer quarters. Twelve of the academic year quarters are ten weeks of instruction and one week of examination, while the two required summer quarters following years two and three are each nine weeks long. If needed, students may be allowed additional time to complete required coursework beyond 42 months.

Admission

Requirements include all undergraduate courses listed below; Dental Admission Test; personal interview. The Admissions Committee encourages diversity in majors. Courses in the social sciences and the humanities are included in the committee evaluation. Dental experience, community service, and non-cognitive factors are given consideration as part of the whole file review.

The School of Dentistry is a state-supported institution and participates in the student exchange program provided by the Western Interstate Commission for Higher Education (WICHE) which supports students from western states without dental schools. Although all applications are carefully reviewed, preference in admission is given to residents of Washington and WICHE states, followed by residents of other states.

Required Courses: General chemistry - two quarters or one semester; organic chemistry - two quarters or one semester; general biochemistry - two quarters or one semester; general physics - three quarters or two semesters; general biology or zoology - three quarters or two semesters; general microbiology - two quarters or one semester. Recommended: medical microbiology.

Transfer Applicants: The school rarely, and only under exceptional circumstances, admits transfer students from other dental schools.

Foreign Applicants: The school does not provide a special program for foreign-trained dentists.

Health Sciences Minority Student Programs: To increase diversity of students, the school participates in the Health Sciences Minority Student Program. In addition to advising and career counseling, this office works with Health Sciences schools to provide student development and support programs, networking opportunities, and summer Research programs. The HSMSP office activities include participation on several health sciences and campus-wide committees for purposes of collaborating and exchanging strategies on effective methods for recruiting and retaining a diverse student body, as well as promoting and celebrating diversity.

Regional Initiatives in Dental Education (RIDE) is a strategic expansion of the University of Washington School of Dentistry in conjunction with Eastern Washington University, designed to help meet the oral health needs of rural and underserved communities in the Northwest. RIDE creates regional training sites in areas lacking dental schools by partnering with regional universities, dentists and dental associations, community health centers, and others. Student admission to the RIDE program in Spokane is limited to residents of Washington State.

The School belongs to the American Association of Dental Schools Application Service (AADSAS). November 1 of the year prior to matriculation is the AADSAS priority filing deadline. Only applications received in the AADSAS Washington, D.C. office by the priority filing date are forwarded to the UW for consideration by the Admissions Committee. There are no exceptions. AADSAS applications are available online at www.adea.org. The UW Dental School's DAT deadline is October 31 of the year prior to matriculation. Information regarding the Dental Admission Test may be found at www.ada.org.

For information on admission to the UW School of Dentistry, contact the Office of Student Life and Admissions, School of Dentistry, University of Washington, Box 356365, Seattle, WA 98195-6365, (206) 543-5840, askuwsod@uw.edu, or www.dental.washington.edu (click on the "prospective student" link). University of Washington undergraduates may contact the Predental Advising Office, University of Washington, 141 Mary Gates Hall, Box 353760, Seattle, WA 98195-3760.

Once the AADSAS application has been received, a preliminary screening determines if an applicant meets the Admissions Committee's criteria to receive a supplemental application and request for the following materials:

1. A supplementary application which includes a short personal statement
2. A non-refundable application fee of \$35
3. Three letters of recommendation are required: one from a science instructor who can evaluate the applicant's academic and intellectual qualifications, a second from a dentist who is familiar with the applicant's knowledge of and motivation toward the dental profession, and a character reference from someone who can indicate the applicant's contribution to the community, etc.
4. If a predental committee exists on the applicant's campus, a combined recommendation from that committee may be used to replace all three recommendations. The School of Dentistry accepts letters of recommendation processed by AADSAS, or directly from recommenders.
5. Dental Admission Test scores. **Test must be taken by October 31 of the year prior to entry.**
6. Transcripts from all higher education institutions attended
7. A list of current and future courses
8. Acknowledgment of having read, understood, and being able to meet, with or without reasonable accommodation, the Essential Requirements of Dental Education at

the University of Washington School of Dentistry (to be sent with the supplemental application form)

9. **Conviction/criminal history information.** Washington state law requires that all faculty, students, and staff disclose background information concerning crimes and offenses against vulnerable populations. A complete copy of the law is available from the School's Office of Student Life and Admissions and is forwarded upon request. Applications are not considered until completed disclosure forms have been returned to student admissions.

The application is considered complete once all materials noted above (1-9) are returned. Upon receipt of the completed application, invitations for an interview are sent to applicants based on an additional screening of the whole file. The interview is an opportunity for an open, friendly discussion of the applicant's interests, background, and reasons for selecting dentistry as a profession. During the interview day, applicants have numerous opportunities to learn about UW programs, faculty, and student life. In addition to the interview, the School provides the applicant with financial aid and cost information. During the lunch hour, applicants meet with enrolled students and tour the School. Applicants also meet with the deans to learn about programs, Research, and cultural opportunities.

The admissions committee, composed of faculty and community dentists, determines admission status after considering the following:

1. **Grades.** Overall GPA and GPA in required pre dental science courses. Committee members look for a strong, consistent GPA without withdrawals, incompletes, repeated courses, or non-graded options. Grade trends are reviewed.
2. **DAT (Dental Admission Test).** The test, sponsored by the American Dental Association, covers several areas: reading comprehension, quantitative reasoning, survey of natural sciences (including biology, general, and organic chemistry), and perceptual ability (including form development, apertures, angles, cubes, and orthographic projections). At the UW, scores are reviewed to identify an applicant's areas of strength. The test must be taken no later than October 31, one year prior to admission.
3. **Level of Pre-professional Education.** The majority of applicants have completed a baccalaureate degree by the time of entry. Consideration is given to applicants who have not or do not expect to complete a baccalaureate degree, but who have completed all pre dental requirements, have a highly competitive academic record, and a minimum of three years' full-time coursework.
4. **Dental Knowledge.** Includes knowledge of the field of dentistry through volunteer experience in a dental setting (dentist's office, clinic, etc.), introductory dental coursework, and exploration of the dental literature. A qualified applicant has a clear understanding of the profession, a demonstrated interest in the field, and a minimum of 100 volunteer hours in a dental setting.
5. **Contribution to Diversity.**
6. **Unique Life Experiences.** Among other things, Research and teaching efforts, travel, and work experience are some of the life experiences considered.
7. **Personal Attributes.** In addition to motivation, the applicant's poise and communication skills are examined. Personal attributes such as integrity, responsibility, leadership, initiative, community service, perseverance, and diversity of interests are important.
8. **Demonstrated Community Service.**

Interviews begin in October and typically end in February. The American Dental Association Traffic Rules allow dental schools to begin making offers of acceptance on December 1. The School uses a "rolling admission" format, so

interviews and committee decisions continue to be made between December and March.

The Admissions Committee makes one of three decisions:

1. **Offer of Acceptance.** Admission application has been accepted. The applicant has a specified time to reply to reserve enrollment in the entering first-year class. In addition, enrollment is contingent on timely submission of the following: registration deposit, transcripts showing completion of all required pre dental courses, registration for autumn quarter of the upcoming academic year, and completion of required immunizations.
2. **Alternate Status.** Applicant is offered a position on the alternate list. The applicant has a specified time to reserve a position on this list, maintained until the beginning of the school year.
3. **Denial of Admission.** The Committee has considered the application but cannot offer a position or alternate status.

Accepted applicants receive follow-up information about registration procedures, financial aid, and the orientation program throughout the spring and summer. Attendance at orientation is mandatory and provides an opportunity for newly enrolled students to learn about the upcoming curriculum, student rights and responsibilities, financial aid information, student organizations, challenge examinations, and the start of academic coursework. Orientation begins in late August. New students attend an off-campus student retreat to interact with peer advisers and meet classmates in an informal setting.

Western Interstate Commission for Higher Education (WICHE): The school participates in a program administered by WICHE for students who reside in western states not served by a dental school (Alaska, Arizona, Hawaii, Montana, New Mexico, North Dakota, and Wyoming). Such students should seek requests for certification and information about benefits of the program from the WICHE commission office in their state of residence.

Projected costs can be found at dental.washington.edu/prospective-students/projected-costs.html.

Information on loans and scholarships may be obtained from the Director of Financial Aid, D323 Health Sciences, Box 356365. Information relating to student life, including the Academic Regulations Manual and Professional Ethics Code may be obtained from the Associate Dean for Student Life and Admissions, D323 Health Sciences, Box 356365.

Degree Requirements

285-333 credits minimum, as follows:

1. **Year 1 (71 credits, plus electives):** B STR 431, B STR 530, B STR 541; DENT 610; DPHS 510; ORALB 510 (3, 3), ORALB 520; ORALB 521; ORALM 513, ORALM 514, ORALM 515; ORALM 516, ORALM 517; P BIO 505; P BIO 506 (4, 4); PATH 544 (3, 2); PERIO 517; RES D 510 (1, 2), RES D 511, RES D 515, RES D 516, RES D 517, RES D 519
2. **Year 2 (86 credits, plus electives):** DENT 520; DENT 521, DENT 522; DENT 523; ENDO 521; O S 520; ORALM 520 (2, 2, 2), ORALM 525, ORALM 526, ORALM 527, ORALM 528, ORALM 529; ORTHO 520, ORTHO 521, ORTHO 522; PEDO 520, PEDO 525; PERIO 525, PERIO 526 (2, 2); PERIO 620; PHCOL 434, PHCOL 435; PROS 520, PROS 523, PROS 525; RES D 520, RES D 521, RES D 522 (3, 3, 3); RES D 525, RES D 526, RES D 527 (3, 3, 3); RES D 620
3. **Year 3 (74 credits, plus electives):** DENT 533, DENT 534 (1, 1), DENT 537, DENT 543; DENT 551, DENT 552, DENT 553, DENT 554; DPHS 535, ENDO 534, ENDO 535, ENDO 630 (1, 1, 1, 1); O S 530 (1, 1, 1), O S 532, O S 630 (2, 2); ORALM 531, ORALM 532, ORALM 533; ORALM 630 (1, 1, 1, 2); ORTHO 630; ORTHO 631; PEDO 630 (1, 1, 1, 1); PERIO 530, PERIO 531; PERIO 630, PERIO 631, PERIO 632; PERIO 639; PROS 630 (1, 1, 1, 2);

RES D 530, RES D 531, RES D 532; RES D 535, RES D 630 (2, 3, 3), RES D 635

4. **Year 4 (55 credits, plus electives):** DENT 547, DENT 548, DENT 549 (2, 2, 2); DENT 555, DENT 556, DENT 557 (1, 1, 1); DENT 640, DENT 645; DPHS 541, DPHS 640; ENDO 630 (1, 1, 1); O S 630; ORALB 540; ORALM 540 (2, 2), ORALM 545 (1, 1), ORALM 640 (1, 1, 1); PEDO 630 (1, 1, 1); PERIO 540; PERIO 640, PERIO 641, PERIO 642 (1, 1, 1); PROS 640 (1, 1, 1); RES D 540, RES D 541, RES D 542, RES D 640 (3, 3, 3)

5. **Electives:** A minimum of two elective courses must be taken during the course of the program. Elective credits may not exceed a total of 50 credits.

Facilities

School clinics, teaching laboratories, and lecture halls are up-to-date, well maintained, and periodically renovated. Clinical modules are assigned to students for use in patient treatment. The D-1 Simulation Clinic is a state-of-the-art teaching facility used for preclinical and laboratory courses.

School Accreditation and Licensure

The school is fully accredited by the Commission on Dental Accreditation, the recognized accrediting body for dentistry and the related dental fields. For information, write to the Commission on Dental Accreditation, 211 East Chicago Ave., Chicago, IL 60611-2678. Admission to the practice of dentistry in any state is conditional upon meeting the requirements of the individual state dental licensure requirement. In order to practice in the State of Washington, the candidate for licensure must have a dental degree from a U.S. or Canadian dental school, and have successfully completed the American Dental Association National Board Examinations and the Western Regional Examining Board Examination. Additional information about licensure requirements should be requested from the Washington State Department of Health, Dental Quality Assurance Commission, PO Box 1099, Olympia WA 98504-1099, (360) 586-6898.

Health Care and Immunization Policy

Enrolled students at the UW School of Dentistry are eligible for healthcare services provided by the Hall Health Primary Care Center. In addition, the University has arranged for an Accident and Sickness Insurance Plan specifically designed for students, their dependents, and their domestic partners for which the Hall Health Primary Care Center is the preferred provider. The UW Health Sciences Center requires that its students, staff, and faculty show documentation of protection against a number of vaccine-preventable diseases. Additional information is available via the Hall Health Primary Care Center website at depts.washington.edu/hhpcweb/

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crsclat/

Dentistry

DENT 520 P-Clinical Practice Management 1 (1) Designed to provide the student with the knowledge required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, authorized treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines. Offered: S.

DENT 533 Introduction to Interprofessional Education and Collaborative Practice ([0-1]-, max. 1) Kim, Phillips Case

based sessions that address the Interprofessional Education Collaborative competencies. Includes opportunities to gain knowledge about different health professions, team and teamwork, and develop skills in team communication provided by working with health professions students on a variety of cases to develop a team based plan of care. Credit/no-credit only. Offered: AWSp.

DENT 534 P-Geriatric Dentistry (1, max. 2) Part 1: Physiological, sensory, and cognitive changes that occur with aging. Part 2: Dental treatment of geriatric patients considering their special needs and economic constraints. Offered: WSp.

DENT 537 P-Hospital Dentistry (1) Introductory course presenting hospital procedures and protocol and the role of the dentist in the hospital. Offered: Sp.

DENT 540 Pharmacology Updates (1) *Grubbs* Review of the current 50 most prescribed drugs on the market with examples of patient, case-based, pharmacology. Prerequisite: PHCOL 434; PHCOL 435. Offered: Sp.

DENT 547 Dental Practice Administration (2) Material essential to persons entering dentistry in a time of rapid change in health care systems, including practice management, career opportunities, and starting out in a private practice. Offered: Sp.

DENT 548 Dental Practice Administration (2) Material essential to persons entering dentistry in a time of rapid change in health care systems, including practice management, career opportunities, and starting out in a private practice. Offered: A.

DENT 549 Dental Practice Administration (2) Material essential to persons entering dentistry in a time of rapid change in health care systems, including practice management, career opportunities, and starting out in a private practice. Offered: W.

DENT 550 P-Special Studies in Dentistry (*, max. 12) Offered by the various departments from which students may elect study in areas of special interest to them. Includes subject matter applicable to all phases of dentistry. Credit/no-credit only. Offered: AWSpS.

DENT 551 P-Clinical Practice Management 2 (1) Designed to provide the student with the experience required to manage a patient pool during the clinical program and in future dental practice including obtaining a patient pool, treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 552 P-Clinical Practice Management 2 (1) Designed to provide the student with the experience required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 553 P-Clinical Practice Management 2 (1) Designed to provide the student with the experience required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 554 P-Clinical Practice Management 2 (1) Designed to provide the student with the experience required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 555 P-Clinical Practice Management 2 (1) Designed to provide the student with the experience required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 556 P-Clinical Practice Management 2 (1) Designed to provide the student with the experience required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 557 P-Clinical Practice Management 2 (1) Designed to provide the student with the experience required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 562 Elective Offering in Advanced Cardiac Life Support (1) Introduction to airway management (masking/intubation/oropharyngeal airways/nasopharyngeal airways/cricothyrotomy), 12-lead EKG recognition and diagnosis, cardiac physiology and pathophysiology, and pharmacologic action of several different medications. Students who pass AHA guidelines for completion of an ACLS course are awarded ACLS certification. Credit/no-credit only. Offered: W.

DENT 563 Elements of Conscious Sedation (1-2) Details theory and techniques for rendering oral, inhalation, transmucosal, intramuscular, and intravenous forms of conscious sedation. Focuses on pharmacology and pharmacokinetics of nitrous oxide, benzodiazepines, narcotics, and barbiturates. Addresses usual applications, special considerations, legal issues, and proper record keeping. Emphasizes prevention and management of emergencies. Credit/no-credit only. Offered: A.

DENT 565 Dental Photography (1) Provides student with sufficient knowledge and experience to select and use correct photographic equipment for photographing patients (facial and interoral), casts, instruments, x-rays, charts, and objects. Credit/no-credit only. Offered: A.

DENT 566 Physical Diagnosis (1) Seminar on performing complete physical examination including basic assessment of overall patient, vital signs, cardiac, pulmonary, abdominal, extremities, neurologic, and head/neck. Examination techniques include observation, auscultation, percussion. Writing findings and interpreting physical examinations. Offered: S.

DENT 568 Internal Medicine for Dentistry ([1-3]-, max. 6) Review of major organ systems, including normal anatomy and physiology, common pathophysiologies, medical interventions. Details modifications necessary for dental treatment and medical emergency management. Credit/no-credit only. Offered: S.

DENT 569 Contemporary Dental Practice Management (1) Didactic study designed to update dental graduate students in recent developments in the management of a modern dental practice. Focuses on the business and legal aspects of dental practice. Credit/no-credit only. Offered: A.

DENT 610 Introduction to Clinical Dentistry (2) Introduction to clinical dental training including infection control, personal dental hygiene, oral anatomical landmarks, medical histories, fluoride application, fabrication on athletic mouth guards, and professional ethics. Students participate in classroom exercise followed by rotations in functioning dental clinics. Offered: W.

DENT 613 Summer Rural and Underserved Opportunities Program (1-6, max. 6) Provides students a 2-6 week clinical training opportunity and early exposure to provision of dental care in rural and underserved locations in Washington state. Offers an opportunity for students to gain an understanding of how community health care systems function for provision of dental care. Credit/no-credit only.

DENT 640 P-Extramural Clinics in Geriatric Dentistry (2) Extramural geriatric clinical experience, including three days at a nursing home or senior center dental clinic. Credit/no-credit only. Offered: AWSpS.

DENT 641 Service Learning Rotation (6) *Nagasawa* Students practice clinical dentistry for 4 weeks at a designated rural and/or underserved community health center. The student further develops an understanding of cultural competence by analyzing and reflecting on the social and cultural factors that contribute to the oral health needs of these diverse populations. Credit/no-credit only. Offered: AWSpS.

DENT 650 P-Extramurals (*, max. 12) Extramural sites arranged to provide dental students, at varying levels of their education, with opportunities to treat a wide variety of patients in the delivery systems outside the school. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

DENT 651 P-Anesthesia Rotation (6) 1.5-month rotation in anesthesia at one of three local hospitals. Objectives: administration of anesthesia, management of emergency situations and airway problems, familiarization with pharmacology of anesthetic drugs; increased efficiency with venipuncture. Credit/no-credit only. Offered: AWSpS.

DENT 652 P-Clinical Medicine Clerkship (4) One-month clinical rotation in clinical medicine at a local hospital. Objective is to increase the student's ability in physical evaluation of patients as well as to give in-depth knowledge of hospital procedures and commonly prescribed medications. Credit/no-credit only. Offered: AWSpS.

DENT 655 Medical Emergency Management: Basic Life Support (1) Review of principles and practical applications for the management of medical emergencies in dental practice in conjunction with training and certification in Basic Life Support. Offered: S.

DENT 657 Comprehensive Clinic (1-10, max. 10) Clinical comprehensive care for patients. Offered: S.

DENT 659 Comprehensive Clinic (1-10, max. 10) Clinical comprehensive care for patients. Credit/no-credit only. Offered: S.

DENT 660 Temporomandibular Joint Diagnosis and Treatment (2, max. 8) Seminar and clinic sequence for comprehensive examination, diagnosis, and treatment of patients with temporomandibular joint problems. Includes management of dysfunction and morphologic alterations in associated muscles and occlusion. Prerequisite: permission of instructor. Offered: AW.

DENT 690 P-Extended Clinical Dentistry (1) Educational experiences in clinical dentistry. Available to students who have successfully completed the University of Washington Doctor of Dental Surgery curriculum and seek additional supervised experience in the delivery of oral health care services within three quarters of graduation and prior to licensure. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

DENT 700 Master's Thesis (*-) Offered: AWSpS.

Dental Hygiene

D HYG 500 Dental Hygiene Program Seminar (1-3, max. 15) Credit/no-credit only.

D HYG 501 Dental Hygiene Capstone I ([2-8]-, max. 8)

D HYG 502 Dental Hygiene Capstone II (-[2-8]-, max. 8)

D HYG 503 Dental Hygiene Capstone III (-[2-8], max. 8)

D HYG 594 Principles of Teaching for Oral Health Professionals (3) Application of principles of learning to teaching methods and techniques used in education, with opportunity for course planning, demonstration, and practice teaching. Prerequisite: graduate program admission.

D HYG 595 Internship (*, max. 12) Clinical and/or didactic teaching experience or program administration. Teaching and administration responsibilities assigned according to student's previous experience, education needs, and interest. Seminar required. Prerequisite: D HYG 494 or D HYG 594 and permission of instructor. Offered: AWSpS.

Dental Public Health Sciences

DPHS 201 Planning a Career in Dentistry for the Future (2) *Weinstein* Future-oriented overview of important concepts in dental science, contemporary modes of patient treatment, and dental-care delivery systems. Provides firsthand exposure to practice of dentistry and prerequisite materials in oral anatomy, epidemiology, and other basic sciences subjects. Open to all second-, third, and fourth-year undergraduate students. Offered: Sp.

DPHS 449 P-Directed Studies in Dental Public Health Sciences (*) Students and faculty with common academic interests pursue them together within the curriculum by means of independent study and a tutorial student-faculty relationship. Credit/no-credit only. Offered: AWSpS.

DPHS 510 Social and Historical Perspectives in Dentistry (2) *Chi* Examines dental care problems involving biological, behavioral, and community elements using a problem-based learning approach. Students develop hypotheses regarding nature and complexity of problem, set objectives, seek resources and information, and contribute to development of outcomes. Offered: A.

DPHS 531 P-Ethics in Dentistry (2) *Coolidge* Seminar improving ethical reasoning skills and conveying ethical and legal standards of the profession. Offered: S.

DPHS 535 P-Scientific Literature in Clinical Decision Making (1) *Hujoel* Introduction to critical reading of individual articles in professional journals and integrating the findings of several articles. Use of the literature to assist the practicing dentist in making clinical decisions. Offered: Sp.

DPHS 550 P-Directed Studies in Dental Public Health Sciences (*, max. 17) Students and faculty members who have common academic interests can pursue them together within the curriculum by means of independent study and a tutorial student-faculty relationship. Credit/no-credit only. Offered: AWSpS.

DPHS 568 Biostatistics in Dentistry (3) *Spiekerman* Introduction to concepts and methods of descriptive and inferential statistics with applications in dentistry emphasized. Topics include comparison of means and proportions, hypothesis testing, confidence intervals, non-parametric methods, linear regression, and correlation. Prerequisite: enrollment in School of Dentistry or permission of instructor. Offered: jointly with BIOST 510; S.

DPHS 569 Clinical Epidemiology and Study Design in Dentistry (2) *Hujoel* An introduction to epidemiological methods as they relate to dental research. Topics covered include the estimation of dental disease occurrence at patient level and site level and the design and analysis of clinical trials with special emphasis on designs unique to dentistry, such as split-mouth designs. Offered: S.

DPHS 640 P-Professional Issues: Clinical Management of the Fearful and Phobic (1) *Heaton* Introduction to assessment process and treatment strategies for successful management of anxious, fearful, or phobic patient, combined with clinical observation of diagnostic and treatment appointments of active patients. Offered: AWSp.

DPHS 650 P-Community Dentistry Clinical Electives (*, max. 12) Credit/no-credit only.

DPHS 660 Dental Fear Clinic (2) *Weinstein* Clinical instruction in the care of the severely anxious or phobic adult or child. Strategies from behavioral and cognitive psychology. Prerequisite: graduate standing in dentistry or permission of instructor. Credit/no-credit only. Offered: AWSpS.

Endodontics

ENDO 521 Introduction to Clinical Endodontics (4) Lecture component covers the biology, pathology, diagnosis, treatment, and outcome of the dentin-pulp complex and pulpal-related periradicular pathology. Preclinical laboratory component covers endodontic treatment techniques on extracted and artificial teeth from different tooth groups as practice for clinical cases. Offered: Sp.

ENDO 534 P-Endodontic Clinical Procedures (1) Lecture course dealing with clinical procedures particular to endodontics, diagnosis and treatment of endodontic emergencies, and surgical management of endodontic problems. Offered: A.

ENDO 535 P-Clinical Management of Endodontic Treatment Problems (1) Management of a variety of technical problems frequently encountered in the treatment of endodontic cases and the diagnosis and treatment of impact injuries to teeth. Offered: W.

ENDO 545 Honors Endodontics (2, max. 4) Seminar discussions of advanced endodontic diagnosis and treatment planning issues as well as clinical sessions on treatment of calcified negotiable canals, alternate instrumentation procedures and obturation systems. Credit/no-credit only.

ENDO 550 P-Directed Studies in Endodontics (*, max. 6) See DPHS 449 for course description. Credit/no-credit only.

ENDO 560 Advanced Endodontic Diagnosis and Treatment (2) Current concepts are presented and discussed relating to the diagnosis and treatment of pulpal and periapical pathosis. Criteria for evaluation of success or failure of root canal therapy are presented.

ENDO 561 Anatomical Basis for Clinical Endodontics (2) Root canal anatomy of significance in clinical endodontics is discussed in a seminar format. Offered: S.

ENDO 562 Anatomical Bases for Surgical Endodontics (2) Diagnosis and treatment of acute symptoms of dental origin, surgical endodontic therapy, traumatic dental injuries, and the relationship between periodontal and pulpal pathosis, including differential diagnosis and appropriate treatment planning.

ENDO 563 Radiographic Interpretation (2) Various aspects of radiographic interpretation of particular relevance to endodontics, including interpretation of normal structures, acquired and developmental abnormalities, infections, sialoliths, dysplasias, cysts, malignant lesions, benign tumors, and various diseases other than tumors.

ENDO 566 Advanced Radiographic Interpretation (2) Various aspects of radiographic interpretation of particular relevance to endodontics, including malignant lesions, benign tumors, various diseases other than tumors, soft-tissue calcifications, and radiographic technique.

ENDO 568 Endodontic Practice Management (1) Essential elements for establishing and managing a successful specialty practice in Endodontics. Prerequisite: ENDO 562.

ENDO 580 Endodontic Seminar (2) Ongoing weekly seminar devoted to review of endodontic and related literature and discussion of research methods. Offered: S.

ENDO 581 Endodontic Seminar (2) Ongoing weekly seminar devoted to review of endodontic and related literature and discussion of research methods. Offered: A.

ENDO 582 Endodontic Seminar (2) Ongoing weekly seminar devoted to review of endodontic and related literature and discussion of research methods. Offered: W.

ENDO 583 Endodontic Seminar (2) Ongoing weekly seminar devoted to review of endodontic and related literature and discussion of research methods. Offered: Sp.

ENDO 584 Endodontic Seminar (2) Ongoing weekly seminar devoted to review of endodontic and related literature and discussion of research methods. Offered: S.

ENDO 585 Endodontic Seminar (2) Ongoing weekly seminar devoted to review of endodontic and related literature and discussion of research methods. Offered: A.

ENDO 586 Endodontic Seminar (2) Ongoing weekly seminar devoted to review of endodontic and related literature and discussion of research methods. Offered: W.

ENDO 587 Endodontic Seminar (2) Ongoing weekly seminar devoted to review of endodontic and related literature and discussion of research methods. Offered: Sp.

ENDO 590 Treatment Planning Seminar (2, max. 16) Weekly seminar to discuss controversial treatment problems, difficult diagnostic cases, and presentation of endodontic treatment cases. Offered: AWSpS.

ENDO 593 Clinical Practice Teaching (1, max. 3) Closely supervised experience in teaching clinical endodontics to the undergraduate dental student. Offered: SpS.

ENDO 594 Current Endodontic Literature (1) A review and critical evaluation of the current literature relative to endodontics. Credit/no-credit only. Offered: AWSpS.

ENDO 595 Endodontic Surgery (2) Reviews biological and technical aspects of endodontic surgery with emphasis on both the classic and current scientific surgical literature. Lectures and topic seminar discussion along with surgical case presentations.

ENDO 597 Endodontics Teaching Seminar (2) Weekly seminars devoted to an examination of general problems of teaching and learning and specific problems of endodontics teaching.

ENDO 598 Endodontics Teaching Seminar (2) Weekly seminars devoted to an examination of general problems of teaching and learning and specific problems of endodontics teaching.

ENDO 600 Independent Study or Research (*-) Prerequisite: permission of Graduate Program Adviser. Offered: AWSpS.

ENDO 630 P-Clinical Endodontics (1-, max. 7) Student is required to complete endodontic treatment of anterior, premolar, and molar teeth. In addition to nonsurgical treatment of several endodontic cases, the student assists with a periapical surgery. Student must complete seven quarters of ENDO 630 and all course requirements before a grade is awarded. Offered: AWSpS.

ENDO 658 Endodontic Emergency Rotation (1) Clinical experience in managing and treating patients in pain. Credit/no-credit only. Offered: AWSpS.

ENDO 659 P-Endodontics Extended Learning (*, max. 4) Supplemental work in endodontics to correct an area of student deficiency. Credit/no-credit only.

ENDO 660 Clinical Endodontics (4, max. 32) Clinical diagnosis and treatment of pulpal pathosis and related sequelae. Offered: AWSpS.

Oral Biology

ORALB 449 Undergraduate Research Topics in Oral Biology (*, max. 30) Individual research on topics selected in collaboration with a faculty member. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

ORALB 510 P-Development, Structure, and Function of Oral Tissues (3-, max. 6) *Popowics* Development, microscopic and submicroscopic structure, functional aspects of hard and soft oral tissues. Embryonic development of head and neck; morphodifferentiation of face and oral structures. Structure-function relationships in descriptions of development and histology-ultrastructure of oral tissues

by integration of traditional oral histology and oral physiology topics. Offered: WSp.

ORALB 520 P-Molecular Microbiology and Oral Diseases (3) *Darveau* Applies students' background knowledge in basic sciences to an understanding of the molecular bases of the interactions between microorganisms and oral tissues that lead to plaque formation and dental diseases. Principles of clinical asepsis and diagnosis of caries and periodontal diseases also covered. Offered: A.

ORALB 521 Medical Microbiology and Immunology (2) Bacterial structure, physiology and genetics. Viral structure and function. Bacterial and viral diseases of the respiratory tract, skin, GI tract, UG tract. Innate and adaptive immunity. Immune responses to infection, immunodeficiencies, and autoimmunity. Offered: Sp.

ORALB 540 P-Clinical Care of Oral and Maxillofacial Pathology (2) *Chang* Presents the clinical treatment modalities used to care for patients with various diseases that present in the oral and maxillofacial area. Offered: jointly with O S 540; A.

ORALB 550 P-Directed Studies in Oral Biology (*, max. 12) Selected readings and seminars on a topic chosen by individual arrangement in collaboration with a faculty member. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

ORALB 561 Oral Tissue Development, Structure, and Function (3, max. 6) *Popowics* Selected readings and discussions explore recent advances in cellular and molecular biology relevant to oral biology and medicine. Special emphasis on craniofacial and dental development, oral mucosa and periodontal tissues, salivary gland function, and olfaction and gustation. Prerequisite: permission of instructor. Offered: WSp.

ORALB 562 Supervised Teaching in Oral Biology (1-5, max. 10) Directed and guided experience in selected topics in teaching techniques, teaching philosophy, and design of courses given by the Department of Oral Biology. Students are required to participate in lecture and laboratory teaching under the supervision of the course director. Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 564 Clinical and Histopathological Correlation I (1-3, max. 10) *Oda* Four quarter advanced oral pathology course designed to interpret the clinical changes of a disease through the lenses of a microscope. Covers around 200 soft tissue disease of the mouth to include epithelial and mesenchymal reactive and neoplastic conditions. Offered: jointly with O S 564; AWSpS.

ORALB 565 Clinical and Histopathological Correlation II (1-3, max. 10) *Oda* Three quarter advanced oral pathology course designed to interpret the clinical changes of a disease through the lenses through a microscope. Covers around 200 jaw bone and soft tissue disease to include cysts and neoplasms of the jaws and blood diseases of the jaws and soft tissue. Prerequisite: permission of instructor. Offered: jointly with O S 565; AWSpS.

ORALB 566 Surgical Oral Pathology (2-4, max. 16) Students are trained to interpret microscopic slides of lesions from the oral cavity and related areas, and to correlate these with the clinical findings. Each student is responsible for the grossing of specimens and the preparation of histology reports. Primarily designed for students with DDS, MD, or DVM. degrees. Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 569 Advanced Oral Microbiology (2) *Darveau* Viral, bacterial classification; physiology; toxicity mechanisms reviewed. Formation and composition of plaque and calculus, and chemical methods of control discussed. Specific microbial floras of acute and chronic gingivitis, early onset forms of periodontitis, and adult periodontitis studied. Principles of antibiotic use reviewed. Offered: W, even years.

ORALB 572 P-Oral Pathology (3-, max. 6) *Oda* Survey of the diseases of the oral facial regions in lecture and laboratory sessions. Diseases of teeth and their supporting

structures and diseases of the oral and paraoral soft tissues and bones. Correlations between clinical findings and histopathologic features. Attendance in the laboratory is required. Offered: jointly with O S 521; AW.

ORALB 574 Clinical Stomatology (3) *Oda* Diseases of the oral cavity and jaw are presented as the practitioner encounters them - detailed clinical pictures, laboratory tests, radiographic findings, surgical exploration for the establishment of a therapeutic diagnosis. Offered: jointly with O S 574; Sp.

ORALB 575 Oral Biology Seminar (1-3, max. 30) *Presland* Presentation and discussion of current research problems by members of the staff, investigators from other departments in the University, visiting scientists, and trainees. Prerequisite: permission of instructor. Offered: AWSp.

ORALB 578 Research Techniques in Oral Biology (2-4, max. 15) Introduction to biochemical, analytical, or morphological techniques employed in biochemical cytology or molecular pathology as well as in vitro techniques of tissue and organ culture. Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 579 Molecular Biology (2) *Presland* Applications of molecular biology and recombinant DNA methodologies to oral biology topics of interest in dental sciences. Prerequisite: BIOC 405 or BIOC 406 or equivalent, and permission of instructor. Offered: S.

ORALB 580 Introduction to Molecular Biology Laboratory (4) *Presland* Includes laboratory experiences involving use of restriction enzymes, cloning of DNA into plasmid vectors and plasmid DNA isolation, RNA isolation from cells and tissues, PCR, DNA sequence analysis, and web-based DNA, and protein sequence analysis. Prerequisite: either BIOC 405, BIOC 406, or permission of instructor. Offered: A, even years.

ORALB 581 Secretory Process in Exocrine Glands (1-3, max. 3) *Jeffrey* Biostructural, physiological, and biochemical aspects of individual secretory systems as integrated units. Faculty members with appropriate expertise participate in discussions and presentations during each of the three quarters. Offered: Sp.

ORALB 591 Advanced Topics in Oral Biology I - Teeth and Bones (1-2, max. 2) *Herring* Covers aspects of biology basic to the dental sciences. Focuses on developmental biology of the craniofacial region, structure and function of teeth, bone, and the periodontium, and dental/oral sensation and pain. Offered: jointly with ORTHO 591; W.

ORALB 600 Independent Study or Research (*-) Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 700 Master's Thesis (*-) Offered: AWSpS.

ORALB 800 Doctoral Dissertation (*-) Offered: AWSpS.

Oral Medicine

ORALM 404 Considerations in Care of the Patient with a Disability (*, max. 6) Role of auxiliaries in dental treatment of the special patient, including psychosocial issues, communication techniques, wheelchair transfers; dental prevention, medical and dental management of specific disabilities; drug therapy, sedation, and anesthesia. Offered: AWSpS.

ORALM 460 Clinical Management of Patients with Disabilities (*, max. 10) Participation in chair/bedside dental treatment of a broad range of disabled populations, including homebound and institutionalized patients. Offered: AWSpS.

ORALM 465 Dental Care of the Disabled Literature Review (1) Review of the current scientific literature pertaining to disability issues, research, clinical management, resources, and legislation relating to oral health of persons with disabilities. Credit/no-credit only. Offered: AWSpS.

ORALM 513 Communication Skills I - Techniques (1) Different aspects of verbal and non-verbal communication, recognizing obstacles to effective communication, and de-

veloping strategies to overcome communication obstacles. Clinical interviewing exercises.

ORALM 514 Communication Skills II - Cultural Competency (1) Continuation of basic communication skills. Credit/no-credit only. Offered: A.

ORALM 515 Communication Skills III - Interviewing and History-taking (1) Provides early clinical experience, and develops skills necessary to learn from patients what the practitioner needs to know about their social, medical, and dental histories to effectively understand the "whole patient" so as to diagnose, plan, and provide appropriate treatment. Credit/no-credit only. Offered: A.

ORALM 516 Physical Exam I (1) Addresses techniques of initial patient assessment including general survey of the patient and vital signs assessment. Includes development of skills through participation in clinical sessions. Credit/no-credit only. Offered: W.

ORALM 517 Physical Examination II (2) Lectures, clinical rotations, and seminars addressing techniques of patient assessment including history-taking, physical examination, and interpretation of findings. Includes development of skills through participation in clinical sessions.

ORALM 520 P-Introduction to Oral Radiology (2) Physical, biological, technical, and diagnostic aspects of dental x-ray procedures. Offered: AWSp.

ORALM 525 Physical Examination III (1) Intensive review and application of techniques of patient assessment including history-taking, physical examination, and interpretation of findings. Includes development of skills through participation in clinical sessions.

ORALM 526 General Medicine (2) Addresses medical, physical, and psychological conditions that impact the practice of dentistry. Provides information regarding collection of appropriate medical and physical data and integration of information into plans and practices relevant to the routine management of patients in dental practices. Instruction occurs via lectures, videos, assigned readings, and case scenarios.

ORALM 527 Introduction to Treatment Planning (1) Problem-oriented record system with basic concepts of treatment planning. Students prepare treatment plans in advance of seminar. Offered: Sp.

ORALM 528 Dental Education and Care of the Disabled (1) Addresses the special needs and dental management of patients with developmental disabilities such as Down's syndrome, cerebral palsy, mental retardation, and other conditions such as head trauma. Utilizes instructional videos.

ORALM 529 Stomatology (4) Focuses on ability to recognize, diagnose, and treat non-dental oral diseases and conditions that are commonly encountered in clinical practice. Rotations through the oral medicine undergraduate clinic where students take history and examine patients presenting for comprehensive care or urgent care. Interpretation and management of non-dental oral pathology and medical/psychological issues. Offered: S.

ORALM 531 P-Acute and Chronic Orofacial Pain (1) Essential clinical and technical information and skills for diagnosis and treatment of acute and chronic pain, including differential diagnosis, and behavioral factors. Offered: A.

ORALM 532 P-Acute and Chronic Orofacial Pain (1) Essential clinical and technical information and skills for diagnosis and treatment of acute and chronic pain, including differential diagnosis, and behavioral factors. Offered: W.

ORALM 533 P-Acute and Chronic Orofacial Pain (2) Essential clinical and technical information and skills for diagnosis and treatment of acute and chronic pain, including differential diagnosis, and behavioral factors. Offered: Sp.

ORALM 540 P-Oral Medicine Senior Seminar (2-, max. 4) Clinical conference devoted to case presentations of patients with dental treatment needs and complicating medical problems. Offered: AW.

ORALM 545 P-Clinical Conference in Oral Medicine (1-, max. 2) Clinical pathologic conference utilizing interdisciplinary approach to patient care and emphasizing basic science application. Offered: AW.

ORALM 550 P-Directed Studies in Oral Diagnosis (*, max. 12) See DPHS 449 for course description. Credit/no-credit only. Offered: AWSpS.

ORALM 560 Advanced Diagnostic Techniques (2) Advanced diagnostic procedures used to identify oral and perioral diseases. Included are in-depth discussions of history analysis, methods for psychologic evaluation, soft and hard tissue diagnostic procedures, neurologic, salivary gland, and other tissue analyses requiring special procedures. Offered: AWSpS.

ORALM 564 Dental Care of the Disabled I (*, max. 10) Advanced topics in rehabilitation dentistry including psychosocial issues; characteristics and needs of patients with specific disabilities; patient management and use of portable equipment; drug therapy, sedation and anesthesia; dental prevention, and emergency procedures. Seminars and self-directed study. Prerequisite: permission of instructor. Offered: AWSpS.

ORALM 565 Oral Medicine Clinical Conference (*, max. 16) Clinical conference in which diagnostic data concerning patients seen in the oral medicine clinic are presented for evaluation. When possible, the patient is present with laboratory findings, radiographs, and the results of special tests. Offered: AWSpS.

ORALM 567 Adult Psychopathology (2) Overview of adult psychopathology and illness behavior as it relates to psychosomatic concepts and chronic pain. review of assessment and behavioral management strategies for the dental practitioner. Open to graduate students, postdoctoral fellows, residents in dentistry, medicine, psychology. Offered: Sp.

ORALM 570 Oral Medicine and Therapy (2-, max. 6) Lecture directed toward the presentation and discussion of oral diseases and oral manifestations of systemic disease. Primarily the clinical manifestations' relationship to generalized disease processes and patient management with in-depth discussions of therapy. Offered: AWSpS.

ORALM 576 Oral Medicine Literature Review (1) Seminar analyzes the recent literature concerning the area of oral medicine, diagnosis, and therapy for oral disease. Offered: AWSpS.

ORALM 578 Dental Care of the Disabled Literature Review (1, max. 3) Review of the current scientific literature pertaining to disability issues, including research, clinical management, resources, and legislation pertaining to oral health of persons with disabilities. Credit/no-credit only. Offered: AWSpS.

ORALM 580 Current Concepts in Oral Radiology (2) Lecture/seminar covering current concepts in oral radiology including technical factors, radiation risks, observer characteristics and variation, radiographic localization, interpretation, and overview of current extraoral techniques. Offered: AWSpS.

ORALM 581 Advanced Seminars in Oral Radiology (2, max. 8) Explores aspects of oral and maxillofacial radiology and related fields. Offered: AWSpS.

ORALM 584 Dental Care of the Disabled III (*, max. 10) Field practice in community outreach to facilities and agencies serving disabled populations. Includes observation, dental screenings, patient education and in-service training of direct care staff. Prerequisite: ORALM 404 or ORALM 664. Offered: AWSpS.

ORALM 600 Independent Study or Research (*-) Credit/no-credit only. Offered: AWSpS.

ORALM 601 Oral Medicine Research Seminar (1, max. 10) Presentation and discussion of current research problems by graduate students, faculty, and investigators from other

departments in the university. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

ORALM 630 P-Clinical Diagnosis and Oral Medicine ([1/2]-, max. 5) Develops skills in assessment of patients requiring comprehensive dental care. Includes interviewing and physical examination, radiographic interpretation, problem list formation, and chart documentation. Students participate in diagnosis and treatment of patients requiring emergency and specialized dental care. Offered: AWSpS.

ORALM 640 Advanced Clinical Diagnosis and Oral Medicine ([1/2]-, max. 3) Advanced instruction in diagnosis and management of patients requiring emergency and specialized care. Includes participation in clinical rotations to oral medicine specialty clinics. Offered: AWSpS.

ORALM 650 P-Oral Medicine Clinical Elective (1-6, max. 6) Opportunities for students to work in various clinical activities at local hospitals or other sites outside the school. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

ORALM 651 Oral and Systemic Health Issues in the Homeless in Seattle (1-, max. 12) Addresses oral and systemic health issues in the homeless in Seattle. Service based learning and includes presentations, readings, reflections, health education, and dental care delivery with the goal of preparing dental students to work in an interprofessional environment with other healthcare providers. Credit/no-credit only. Offered: AWSpS.

ORALM 660 Rotations in Medical Disciplines (1-4, max. 24) Clinic, oriented to the hospital practice of oral medicine, deals with examination and nonsurgical therapy of hospital patients. The conditions treated include primary oral diseases, oral manifestations of systemic diseases, and oral defects resulting from medical treatment of serious systemic disease. Credit/no-credit only. Offered: AWSpS.

ORALM 663 Introduction to Educational Methods in Dentistry (2) Principles of teaching and learning, their applications in dental education. Basic principles include learning theory and cognitive processing, identifying prerequisite knowledge of learners, determining objectives of outcomes of learning, selecting appropriate methods and materials, using evaluation procedures. Increases understanding of instruction process to provide a sound foundation for teaching. Offered: AWSpS.

ORALM 664 Dental Care of the Disabled II (*, max. 10) Practicum in chair/bedside delivery of dental care to different disabled populations. Includes rotations to institutions, long-term care facilities, and homebound service, using mobile equipment. Prerequisite: ORALM 564 and permission of instructor. Offered: AWSpS.

ORALM 665 Clinical Oral Medicine (*, max. 33) Clinic involving the diagnostic evaluation of patients with difficult and unusual oral diseases. The student diagnoses and treats the patient. Types of therapy include medications and chemical agents, functional physical therapy, and counseling. Offered: AWSpS.

ORALM 670 Clinical Oral Medicine Teaching (1-4, max. 16) Clinic designed to give the student experience and instruction in the teaching of clinical oral diagnosis. Treatment of emergency dental problems as well as routine and special diagnostic procedures is emphasized. Offered: AWSpS.

Oral Surgery

O S 520 P-Local Anesthesia (2) Pharmacology, physiology, anatomy, and techniques of local anesthesia for dental students. Offered: W.

O S 521 P-Oral Pathology (3-, max. 6) Oda Survey of the diseases of the oral facial regions in lecture and laboratory sessions. Diseases of teeth and their supporting structures and diseases of the oral and paraoral soft tissues and bones. Correlations between clinical findings and histopathologic features. Attendance in the laboratory is required. Offered: jointly with ORALB 572; AW.

O S 523 Medical Emergencies in the Dental Setting (1) Initial emergency training, focusing primary upon recertification in BLS (Basic Life Support). Emphasizes intellectual and psychomotor skills for universal treatment of emergencies (including BLS). Credit/no-credit only. Offered: A.

O S 530 Oral Surgery: Didactic (1, max. 3) Covers the scope of oral and maxillofacial surgery as practiced in the United States today. Introductory course for predoctoral dental students. Offered: AWSpS.

O S 532 P-Sedation and Pain Control (2) Techniques of sedation (oral, inhalational, intravenous) and pain control. Offered: A.

O S 540 P-Clinical Care of Oral and Maxillofacial Pathology (2) Chang Presents the clinical treatment modalities used to care for patients with various diseases that present in the oral and maxillofacial area. Offered: jointly with ORALB 540; A.

O S 543 Medical Emergencies in the Dental Setting III (1) Comprehensive review/refreshment of medical emergency training, including recertification in BLS. Students review intellectual and psychomotor skills for emergency care situations. Credit/no-credit only. Offered: S.

O S 550 P-Directed Studies in Oral Surgery (*, max. 16) See DPHS 449 for course description. Credit/no-credit only.

O S 564 Clinical and Histopathological Correlation I (1-3, max. 10) Oda Four quarter advanced oral pathology course designed to interpret the clinical changes of a disease through the lenses of a microscope. Covers around 200 soft tissue disease of the mouth to include epithelial and mesenchymal reactive and neoplastic conditions. Offered: jointly with ORALB 564; AWSpS.

O S 565 Clinical and Histopathological Correlation II (1-3, max. 10) Oda Three quarter advanced oral pathology course designed to interpret the clinical changes of a disease through the lenses through a microscope. Covers around 200 jaw bone and soft tissue disease to include cysts and neoplasms of the jaws and blood diseases of the jaws and soft tissue. Prerequisite: permission of instructor. Offered: jointly with ORALB 565; AWSpS.

O S 574 Clinical Stomatology (3) Oda Diseases of the oral cavity and jaw are presented as the practitioner encounters them - detailed clinical pictures, laboratory tests, radiographic findings, surgical exploration for the establishment of a therapeutic diagnosis. Offered: jointly with ORALB 574; Sp.

O S 630 P-Clinical Oral Surgery (2, max. 6) Clinical experience in simple and complex dentoalveolar and pre-prosthetic surgery. A problem-based course using an auto-tutorial approach covering the extraction of teeth, impaction surgery, medications, surgical complications, treatment of infections, bone cysts, maxillary sinus complications, and salivary gland and mucosal pathology. Credit/no-credit only. Offered: AWSpS.

O S 645 P-Hospital Rotation (2) Clinical experience that puts into practice the material presented in DENT 537. The student is involved in hospital procedures and protocol and in dental care of the hospital patient as well as after-hours call duty. Offered: AWSpS.

O S 651 P-Harborview Clerkship (2-10, max. 10) Four to six-week rotation at Harborview Medical Center, including intensive instruction in oral surgery procedures and observing and assisting oral and maxillofacial surgery in the operating room. Prerequisite: permission of the Director of Harborview Medical Center's Oral and Maxillofacial Surgery Department. Credit/no-credit only.

Orthodontics

ORTHO 449 Directed Studies in Orthodontics (*) Students and faculty with common academic interests pursue them together within the curriculum by means of independent

study and a tutorial student-faculty relationship. Credit/no-credit only. Offered: AWSpS.

ORTHO 520 P- Growth and Development of the Face and Dentition (2) Covers basic concepts in orthodontic work. Exposes students to the growth and development of the dento-facial structures and how orthodontists can predict and use growth to treat malocclusion. Reviews concepts from basic biology and covers specific topics related to orthodontic tooth movement and orthopedic treatment. Offered: A.

ORTHO 521 Diagnosis and Treatment Planning in Orthodontics (3) Basic principles of pre and postnatal growth and development integrated with the recognition, analysis, and treatment of planning of problems encountered in dental and skeletal malocclusions.

ORTHO 522 P-Beginning Adjunctive Orthodontics (2) Lecture/laboratory instruction fabrication of orthodontic study models, clinical photography, and construction and use of removable and fixed orthodontic appliances. Prerequisite: ORTHO 520. Offered: S.

ORTHO 550 P-Directed Studies in Orthodontics (*, max. 6) See DPHS 449 for course description. Credit/no-credit only. Offered: AWSpS.

ORTHO 551 Review of Selected Literature in Orthodontics (1) Students select a topic for review, review appropriate literature, and prepare written critique. Credit/no-credit only. Offered: WSp.

ORTHO 552 Journal Club (1, max. 6) Graduate students review the current orthodontic literature. Credit/no-credit only. Offered: AWSp.

ORTHO 560 Orthodontics Seminar (1-5, max. 25) Methods of diagnosis, analysis, and treatment planning of malocclusion; analysis of methods and theoretical principles used in the treatment of malocclusion. The student presents a detailed case analysis and plan of treatment for each clinical patient supervised. Offered: AWSpS.

ORTHO 562 Orthodontic Theory (1) Lecture-seminar sequence dealing with interpretation and application of orthodontic principles and concepts. Pertinent literature, research findings, and current orthodontic theory are analyzed in depth. Offered: AWSpS.

ORTHO 563 Orthodontic Theory (2) Lecture-seminar sequence dealing with interpretation and application of orthodontic principles and concepts. Pertinent literature, research findings, and current orthodontic theory are analyzed in depth. Offered: AWSpS.

ORTHO 564 Orthodontic Theory (2) Lecture-seminar sequence dealing with interpretation and application of orthodontic principles and concepts. Pertinent literature, research findings, and current orthodontic theory are analyzed in depth. Offered: AWSpS.

ORTHO 565 Orthodontic Theory (2) Lecture-seminar sequence dealing with interpretation and application of orthodontic principles and concepts. Pertinent literature, research findings, and current orthodontic theory are analyzed in depth. Offered: AWSpS.

ORTHO 566 Orthodontic Theory (2) Lecture-seminar sequence dealing with interpretation and application of orthodontic principles and concepts. Pertinent literature, research findings, and current orthodontic theory are analyzed in depth. Offered: AWSpS.

ORTHO 570 Roentgenographic Cephalometry (2) Basic principles, history, and techniques of roentgenographic cephalometry. Offered: AS.

ORTHO 575 Interceptive and Preventive Orthodontics (1, max. 10) Seminar for clinicians in limited-goal treatment of children. Emphasizes public health implications of interceptive orthodontics in reducing disparities and improving compromising malocclusions. Teaches rationale and mechanics of orthodontics in the mixed dentition; and insight to treatment of child. Topics include professional responsi-

bility, cultural competence, nutrition, government aid, and child development. Offered: AWSpS.

ORTHO 580 Functional Cranial Anatomy (2) *Herring* Lecture and laboratory dissection concentrating on clinical and functional anatomy of the head and neck. Offered: S.

ORTHO 582 Adult Orthodontics Seminar (1) Seminar for orthodontic, periodontic, and restorative dentistry graduate students in comprehensive, integrated diagnosis and treatment planning of the dental problems of the adult patient. Offered: AWSpS.

ORTHO 584 Clinical Management of Cleft Lip and Palate and Craniofacial Anomalies (1) Management of these complex patients involves members of a dedicated, highly specialized multidisciplinary team. Insight gained into specific evaluation and treatment modalities of each discipline through lectures, seminars, assigned readings. Integrated approach to management is illustrated by attendance at craniofacial staffing and clinics. Prerequisite: enrollment in graduate orthodontics program. Credit/no-credit only. Offered: AW.

ORTHO 585 Surgical Orthodontic Diagnosis and Treatment Planning (1) Seminar for orthodontic graduate students and oral surgery residents in comprehensive, integrated diagnosis, and treatment planning for patients with major facial deformities. Offered: AWSpS.

ORTHO 587 Management of Debilitated Dentitions (1-, max. 2) Integrated diagnosis and treatment planning for patients with edentulous spaces, emphasizing use of osseointegrated implants and temporary anchorate devices. Offered: SpS.

ORTHO 589 Applied Psychology in Orthodontics and Pediatric Dentistry (1) Application of psychological theories, research, and intervention strategies to orthodontics and pediatric dentistry. Topics include the principles of behavior change, patient compliance with therapeutic regimens, and motivations for orthodontic treatment. Prerequisite: graduate standing in dentistry or permission of instructor. Offered: A.

ORTHO 590 Scientific Methodology in Dental Research (2) Formulates and discusses hypothetical research projects related to orthodontics. Includes review of the scientific method, evaluation of the dental literature, and discussion of proposed master's degree research projects.

ORTHO 591 Advanced Topics in Oral Biology I - Teeth and Bones (1-2, max. 2) *Herring* Covers aspects of biology basic to the dental sciences. Focuses on developmental biology of the craniofacial region, structure and function of teeth, bone, and the periodontium, and dental/oral sensation and pain. Offered: jointly with ORALB 591; W.

ORTHO 597 Preclinical Technique (2) Techniques of construction and manipulation of appliances used in orthodontic therapy for graduate students. Offered: S.

ORTHO 598 Archwire Formation (1) Principles of wire bending and the use of orthodontic pliers. Offered: ASpS.

ORTHO 599 Biomechanics (1) Principles of biologic reactions to application of orthodontic forces. Credit/no-credit only. Offered: W.

ORTHO 600 Independent Study or Research (*-) Managing the experimental protocol; data collection and analysis; and preparation and writing of a thesis or publishable manuscript. Prerequisite: permission of instructor. Offered: SpS.

ORTHO 630 P-Introduction to Clinical Orthodontics (1, max. 6) Direct clinical application of principles of orthodontic diagnosis and treatment planning for simple orthodontic appliances to modify tooth position in preparation for definitive restorative and/or periodontal therapy. Prerequisite: ORTHO 522. Offered: AW.

ORTHO 631 Minor Orthodontic Treatment (1) Clinical treatment of minor orthodontic problems suitable for the general dentist, i.e., direct clinical application of principles of orthodontic diagnosis and treatment planning for simple

orthodontic appliances to modify tooth position in preparation for definitive restorative or periodontal therapy. Offered: AWSpS.

ORTHO 660 P-Clinical Orthodontics (1-6, max. 24) Clinical application of the techniques in the treatment of malocclusion. Prerequisite: students enrolled in the graduate orthodontics program. Offered: AWSpS.

ORTHO 682 Adult Orthodontics Clinic (1) Clinic for orthodontic graduate students in the treatment of the dental problems of the adult patient. Offered: AWSpS.

Pediatric Dentistry

PEDO 520 P-Pediatric Dentistry (4) Introduction to clinical pediatric dentistry, including behavior management, oral diagnosis, preventive dentistry, dental anomalies, radiography, anesthesia, restorative procedures, pulpal therapy, interceptive orthodontics, and traumatic dental injuries of the child patient. Offered: S.

PEDO 550 P-Directed Studies in Pediatric Dentistry (*, max. 6) See DPHS 449 for course description. Credit/no-credit only. Offered: S.

PEDO 560 Fundamentals of Pediatric Dentistry (1) Pre-clinical laboratory, lecture course covering fundamentals of primary care in pediatric dentistry, including behavior management, dental emergencies, prevention, diagnosis and treatment planning, and infection control. Offered: S.

PEDO 570 Pediatric Dentistry Seminar I (2) Series of seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: S.

PEDO 571 Pediatric Dentistry Seminar II (2) Series of seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: A.

PEDO 572 Pediatric Dentistry Seminar III (2) Series of seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: W.

PEDO 573 Pediatric Dentistry Seminar IV (2) Series of seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: Sp.

PEDO 574 Pediatric Dentistry Seminar V (2) Series of MCH (Maternal and Child Health) seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical,

cal, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: S.

PEDO 575 Pediatric Dentistry Seminar VI (2) Series of MCH (Maternal and Child Health) seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: A.

PEDO 576 Pediatric Dentistry Seminar VII (2) Series of MCH (Maternal and Child Health) seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: W.

PEDO 577 Pediatric Dentistry Seminar VIII (2) Series of MCH (Maternal and Child Health) seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: Sp.

PEDO 580 Developmental Disabilities Seminar (1) Multidisciplinary approach to managing children with developmental disabilities. Offered: S.

PEDO 581 Developmental Disabilities Seminar (1) Multidisciplinary approach to managing children with developmental disabilities. Offered: A.

PEDO 582 Developmental Disabilities Seminar (1) Multidisciplinary approach to managing children with developmental disabilities. Offered: W.

PEDO 583 Developmental Disabilities Seminar (1) Multidisciplinary approach to managing children with developmental disabilities. Offered: Sp.

PEDO 584 Pediatric Dentistry Seminar (2) In-depth knowledge and understanding of the topics related to, and supportive, of, the clinical practice of pediatric dentistry.

PEDO 600 Independent Study or Research (*-) Prerequisite: permission of instructor. Offered: AW.

PEDO 610 Clinical Pediatric Dentistry (3) Major clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered for the length of the program (two or three years) in the University of Washington pediatric dental program.

PEDO 630 P-Clinical Pediatric Dentistry (1-, max. 7) Educational experiences in comprehensive clinical pediatric dentistry. Students register third and fourth years for 24 sessions in the pediatric dentistry clinic, a 3-day rotation at a community clinic, computer assisted clinical simulations, behavioral change projects, and a written analysis of videotaped patient/student clinic encounters. Offered: AWSpS.

PEDO 650 P-Pediatric Dentistry Extramurals (1-6, max. 6) Clinical extramurals in the field of children's dentistry. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

PEDO 660 P-Clinical Pediatric Dentistry (1-3, max. 3) Clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered: S.

PEDO 661 P-Clinical Pediatric Dentistry (1-3, max. 3) Clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered: A.

PEDO 662 P-Clinical Pediatric Dentistry (1-3, max. 3) Clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered: W.

PEDO 663 P-Clinical Pediatric Dentistry (1-3, max. 3) Clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered: Sp.

PEDO 664 P-Clinical Pediatric Dentistry (1-3, max. 3) Clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered: S.

PEDO 665 P-Clinical Pediatric Dentistry (1-3, max. 3) Clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered: A.

PEDO 666 P-Clinical Pediatric Dentistry (1-3, max. 3) Clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered: W.

PEDO 667 P-Clinical Pediatric Dentistry (1-3, max. 3) Clinical experience for graduate pediatric dental students in basic through advanced pediatric dentistry. Offered: Sp.

PEDO 668 Clinical Clerkship in Pediatric Dentistry: Yakima Valley (*, max. 5) Comprehensive dental care for economically-disadvantaged children in a rural community health center. Offered: AWSpS.

PEDO 669 Supervised Clinical Teaching (1-3, max. 4) Graduate pediatric dental students provide clinical instruction for predoctoral dental students by supervising clinical sessions. Offered: AWSpS.

PEDO 670 Hospital Pediatric Dentistry (1-3, max. 3) Diagnosis, management, and treatment of patients with disabilities in Seattle Children's Hospital Dental Clinic. Offered: S.

PEDO 671 Hospital Pediatric Dentistry (1-3, max. 3) Diagnosis, management, and treatment of patients with disabilities in Seattle Children's Hospital Dental Clinic. Offered: A.

PEDO 672 Hospital Pediatric Dentistry (1-3, max. 3) Diagnosis, management, and treatment of patients with disabilities in Seattle Children's Hospital Dental Clinic. Offered: W.

PEDO 673 Hospital Pediatric Dentistry (1-3, max. 3) Diagnosis, management, and treatment of patients with disabilities in Seattle Children's Hospital Dental Clinic. Offered: Sp.

PEDO 674 Hospital Pediatric Dentistry (1-3, max. 3) Diagnosis, management, and treatment of patients with disabilities in Seattle Children's Hospital Dental Clinic. Offered: S.

PEDO 675 Hospital Pediatric Dentistry (1-3, max. 3) Diagnosis, management, and treatment of patients with disabilities in Seattle Children's Hospital Dental Clinic. Offered: A.

PEDO 676 Hospital Pediatric Dentistry (1-3, max. 3) Diagnosis, management, and treatment of patients with disabilities in Seattle Children's Hospital Dental Clinic. Offered: W.

PEDO 677 Hospital Pediatric Dentistry (1-3, max. 3) Diagnosis, management, and treatment of patients with disabilities in Seattle Children's Hospital Dental Clinic. Offered: Sp.

PEDO 679 Care of the Disabled Pediatric Patient (1) Clinical experiences in the management of disabled patients. Offered: S.

PEDO 680 Pediatric Dentistry under General Anesthesia (1-4, max. 4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: S.

PEDO 681 Pediatric Dentistry under General Anesthesia (1-4, max. 4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: A.

PEDO 682 Pediatric Dentistry under General Anesthesia (1-4, max. 4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: W.

PEDO 683 Pediatric Dentistry under General Anesthesia (1-4, max. 4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: Sp.

PEDO 684 Pediatric Dentistry under General Anesthesia (1-4, max. 4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: S.

PEDO 685 Pediatric Dentistry under General Anesthesia (1-4, max. 4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: A.

PEDO 686 Pediatric Dentistry under General Anesthesia (1-4, max. 4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: W.

PEDO 687 Pediatric Dentistry under General Anesthesia (1-4, max. 4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: Sp.

PEDO 690 Craniofacial Anomalies Clinic (1-4, max. 4) Multidisciplinary clinic in which children with craniofacial anomalies are evaluated and complex treatment plans developed and assessed. Offered: A.

PEDO 691 Craniofacial Anomalies Clinic (1-4, max. 4) Multidisciplinary clinic in which children with craniofacial anomalies are evaluated and complex treatment plans developed and assessed. Offered: W.

PEDO 692 Craniofacial Anomalies Clinic (1-4, max. 4) Multidisciplinary clinic in which children with craniofacial anomalies are evaluated and complex treatment plans developed and assessed. Offered: Sp.

PEDO 693 Craniofacial Anomalies Clinic (1-4, max. 4) Multidisciplinary clinic in which children with craniofacial anomalies are evaluated and complex treatment plans developed and assessed. Offered: S.

PEDO 694 Craniofacial Anomalies Clinic (1-4, max. 4) Multidisciplinary clinic in which children with craniofacial anomalies are evaluated and complex treatment plans developed and assessed. Offered: A.

PEDO 695 Craniofacial Anomalies Clinic (1-4, max. 4) Multidisciplinary clinic in which children with craniofacial anomalies are evaluated and complex treatment plans developed and assessed. Offered: W.

PEDO 696 Craniofacial Anomalies Clinic (1-4, max. 4) Multidisciplinary clinic in which children with craniofacial anomalies are evaluated and complex treatment plans developed and assessed. Offered: Sp.

PEDO 697 Craniofacial Anomalies Clinic (1-4, max. 4) Multidisciplinary clinic in which children with craniofacial anomalies are evaluated and complex treatment plans developed and assessed. Offered: S.

PEDO 699 Pediatric Orthodontic Clinic (1-4, max. 4) Clinical orthodontic care for pediatric patients. Offered: AWSpS.

Periodontics

PERIO 449 Directed Studies in Periodontics (*) See DPHS 449 for course description. Credit/no-credit only.

PERIO 517 Introduction to Periodontics (2) Epidemiology, natural history, etiology, histopathology, and genetics of various periodontal diseases. Offered: Sp.

PERIO 525 P-Prevention/Periodontics (2-) Introduction to periodontal therapy. Offered: W.

PERIO 526 P-Prevention/Periodontics (-2) Overview of preventive dentistry, introduction to periodontal therapy. Offered: Sp.

PERIO 530 P-Principles of Periodontics (2-) Helps to develop an understanding of types of periodontal diseases, natural course of periodontitis, clinical assessment of periodontal diseases, decision making in the management of

periodontal diseases, adjunctive treatments to non-surgical periodontal therapy, concepts of periodontal surgery, management of advanced periodontal lesions, biology of periodontal regeneration, and evidence based approach in treatment planning. Prerequisite: PERIO 525-PERIO 526 and PERIO 527. Offered: A.

PERIO 531 P-Principles of Periodontics (-2) Helps to develop an understanding of diagnosis and management of furcation invasion, clinical and anatomical outcomes of periodontal therapy, supportive periodontal therapy, diagnosis and management of periodontitis associated with endodontic lesions, diagnosis and management of periodontal emergencies, diagnosis and management of non-plaque induced gingival diseases, management of gingival recessions, biologic width considerations in restorative dentistry, pre-orthodontic considerations, diagnosis and management of periimplant diseases, and periodontal treatment planning as an inherent part of integrated dental care. Offered: W.

PERIO 540 Advanced Periodontics (1) Designed to improve the understanding of sequencing of patient care and providing periodontal therapy into the perspective of a comprehensive care system. Offered: A.

PERIO 550 P-Directed Studies in Periodontics (*, max. 6) See DPHS 449 for course description. Credit/no-credit only.

PERIO 561 Periodontal Case Management (2-, max. 8) Didactic presentation of clinical periodontics to provide a comprehensive view of the field and a grasp of modern therapeutics. Offered: AWSp.

PERIO 566 Practice Management (1) Aspects of setting up and administering a private periodontal practice. Financing, insurance, office design, equipment, employees, professional forms, marketing strategies, and patient management. Prerequisite: PERIO 561. Credit/no-credit only. Offered: S.

PERIO 567 Oral Medicine Case Studies (1, max. 3) Weekly seminar discussing series of unknown oral and perioral conditions. Discussion of history taking, differential diagnoses, relevant tests, therapeutic approaches, and outcomes. Offered: AWSp.

PERIO 574 Periodontal Microbiology (2) Viral, bacterial classification; physiology; toxicity mechanisms reviewed. Formation and composition of plaque and calculus, and chemical methods of control discussed. Specific microbial floras of acute and chronic gingivitis, early onset forms of periodontitis, and adult periodontitis studied. Principles of antibiotic use reviewed. Offered: A.

PERIO 575 Immunologic Aspects of Oral Diseases (2) Acquaints students with basic concepts of immunology and immunopathology. Topics include elements of innate and acquired immunity, genetic bases of antibody structure and function, immunopathologic mechanisms, transplantation immunology, immunologic manifestations in mucocutaneous oral lesions, caries and periodontal disease, principles of vaccination, and critical evaluation of the dental stem cells potential for oral tissue engineering. Offered: A.

PERIO 576 The Molecular and Cellular Biology of the Periodontium (2) Nucleic acid, protein, and carbohydrate biochemistry reviewed. Roles of collagens and proteoglycans in gingival tissues and the organization of oral epithelia discussed. Structures of human and animal periodontal lesions compared. Cellular and molecular inflammatory and immunological mechanisms in periodontal disease discussed. History, classification, and epidemiology of periodontal diseases described. Offered: Sp.

PERIO 577 Review of Literature (2, max. 16) Concise review of the scientific periodontal literature with specific focus on studies of periodontal diagnosis, wound healing, periodontal regeneration, microbiology, and implant procedures. Offered: AWSpS.

PERIO 578 Implant Literature Review (1) *Verardi* Reviews several topics related to dental implantology such as: his-

tory of dental implants, osseointegration, properties of materials, bone healing, bone augmentation procedures, success rates, pathogenesis of implant failures, and aesthetics in implantology. Discusses the relationship between surgical and restorative treatment phases. Credit/no-credit only. Offered: AWSp.

PERIO 580 Foundations in Implant Dentistry (1) *London, Raigrodski* Details the core surgical and prosthetic considerations in dental implant patient care. Topics include case planning, anatomy, radiography, surgery, componentry, occlusion, and applications for implant dentistry. Offered: S.

PERIO 582 Periodontic Treatment Planning Seminar (1-, max. 12) Weekly seminar involved with the presentation, discussion, and tentative solution of moderate to complex problems in diagnosis and treatment. Offered: AWSpS.

PERIO 585 Periodontal Therapy Seminar (1-, max. 12) Weekly seminar utilizing the case review method and dealing with the treatment of moderate to advanced periodontal disease. Offered: AWSpS.

PERIO 586 Longitudinal Evaluation of Periodontal Therapy (1-, max. 9) Helps to develop in-depth knowledge and analytical skills in estimating prognosis, assessing comprehensive treatment plans, evaluating long-term treatment outcomes, and evidence-based clinical decision making. Offered: AWSp.

PERIO 592 Prescription Surgery (1-, max. 3) Clinical course in periodontal surgery in which surgical procedures are performed on prescription basis for patients undergoing therapy in the undergraduate dental clinic. Exposes student to a wider spectrum of patients and simulates an environment in which the student can encounter the problems in communication and patient management that occur in the private sector.

PERIO 600 Independent Study or Research (*-) Prerequisite: permission of Graduate Program Adviser.

PERIO 620 P-Introduction to Clinical Periodontics (1) Clinical periodontics, with emphasis on examination, assessment, and treatment planning. Credit/no-credit only. Offered: S.

PERIO 630 P-Periodontics (1-) Students diagnose periodontal disease and plan and perform periodontal therapies, treating patients in a stepwise manner, describing clinical conditions, and integrating periodontal therapy in a comprehensive plan of care. Prerequisite: PERIO 517 and PERIO 525-PERIO 526. Offered: A.

PERIO 631 P-Periodontics (-1-) Students diagnose periodontal disease and plan and perform periodontal therapies, treating patients in a stepwise manner, describing clinical conditions, and integrating periodontal therapy in a comprehensive plan of care. Prerequisite: PERIO 517 and PERIO 525-PERIO 526. Offered: W.

PERIO 632 P-Periodontics (-1) Students diagnose periodontal disease and plan and perform periodontal therapies, treating patients in a stepwise manner, describing clinical conditions, and integrating periodontal therapy in a comprehensive plan of care. Prerequisite: PERIO 517 and PERIO 525-PERIO 526. Offered: Sp.

PERIO 639 Advanced Clinical Periodontics (1-) Maintenance and treatment of patients with more complex periodontal involvement. Development of skill in comprehensive treatment planning and execution by the individual student. Allowance made for surgical periodontics and experience in assisting in the treatment of advanced cases.

PERIO 640 P-Advanced Clinical Periodontics (-1-) Maintenance and treatment of patients with more complex periodontal involvement. Development of skill in comprehensive treatment planning and execution by the individual student. Allowance made for surgical periodontics and experience in assisting in the treatment of advanced cases. Offered: A.

PERIO 641 P-Advanced Clinical Periodontics (-1-) Maintenance and treatment of patients with more complex

periodontal involvement. Development of skill in comprehensive treatment planning and execution by the individual student. Allowance made for surgical periodontics and experience in assisting in the treatment of advanced cases. Offered: W.

PERIO 642 P-Advanced Clinical Periodontics (-1) Maintenance and treatment of patients with more complex periodontal involvement. Development of skill in comprehensive treatment planning and execution by the individual student. Allowance made for surgical periodontics and experience in assisting in the treatment of advanced cases. Offered: Sp.

PERIO 659 P-Periodontics Extended Learning (*, max. 4) Supplemental work in periodontics to correct an area of student deficiency. Credit/no-credit only.

PERIO 660 Clinical Periodontics ([2-6]-, max. 60) Clinical experience in diagnosis and treatment of periodontal disease.

PERIO 661 Advanced Root Preparation (1) *Daubert* Advanced skill development in the use of the periodontal probe, gracey curettes, files and instrument sharpening. Includes laboratory sessions on dentofoms leading up to treatment of initial therapy patients. Offered: S.

PERIO 662 Stomatology Clinic (1, max. 4) The diagnosis and treatment of oral and perioral lesions including history taking, biopsies, hematological laboratory tests and chemotherapy. Periodontal therapy in medically compromised patients in the hospital setting. Microscopic review of biopsy specimens. Offered: AWSpS.

PERIO 663 Pre-Prosthodontics Clinical Periodontics (*) Clinical diagnosis and treatment of periodontal disease for nonperiodontics student. Prerequisite: permission of department chairperson. Credit/no-credit only.

PERIO 665 Clinical Practice Teaching (*, max. 9) Supervised experience in teaching clinical periodontics to undergraduate dental students.

PERIO 685 Hospital Periodontics (1) Preparation in periodontics to practice in hospital situations, including experience in operation of nitrous oxide analgesia, general anesthesia, intravenous premedication, treating of out- and inpatients.

Prosthodontics

PROS 520 P-Complete Dentures (4) Deals with the basic principles of complete denture fabrication as well as the didactic portion of diagnosis and treatment of a completely edentulous patient. Offered: A.

PROS 523 P-Removable Partial Denture Design (2) Focuses on the basic principles of removable partial denture design. Covers technical aspects of design procedures in the pre-clinic laboratory using casts of real patients. Introduces some advanced designs using attachments and implants. Offered: A.

PROS 524 P-Immediate Dentures (3) Deals with the basic principles of immediate denture fabrication as well as the didactic portion of diagnosis and treatment of partial edentulous patient. Covers the principles in immediate complete denture design and fabrication. Offered: W.

PROS 525 P-Removable Partial Dentures (4) Deals with those procedures the dentist must perform to fabricate a physiologically acceptable removable partial denture. Student gains experience via laboratory exercises prior to beginning prosthodontic treatment of a partially edentulous patient. Offered: Sp.

PROS 560 Complete and Immediate Dentures (2) Lecture/seminar devoted to the diagnosis and treatment of the completely edentulous patient and the immediate denture patient, with emphasis on management of patients with difficulties in treatment. Offered: S.

PROS 563 Maxillofacial Prosthetics I (1) Introductory lecture/seminar series with emphasis on diagnosis and prosthodontic rehabilitative treatment of patients who

have experienced trauma or have congenital or acquired defects in the oral region. Offered: S.

PROS 564 Maxillofacial Prosthetics II (1) Introductory lecture series focusing on the prosthodontic rehabilitation of patients with loss and compromise of facial anatomy, i.e., ocular, orbital, nasal, auricular, combination intraoral/extraoral, and other related facial deformities. Offered: A.

PROS 571 Review of Literature Seminar (1, max. 12) Weekly seminar devoted to the review of prosthodontic and related literature. Offered: AWSp.

PROS 572 Special Topics Related to Prosthodontics (1) Lecture-seminar series focusing on relating principles of basic science to clinical application in prosthodontics. A wide and varied range of topics including surgery, psychology, speech, pharmacology, practice management, physiology, temporomandibular/myofascial joint dysfunction. Offered: S.

PROS 600 Independent Study or Research (*-) Prerequisite: permission of Graduate Program Adviser. Offered: AWSpS.

PROS 630 P-Clinical Prosthodontics ([1-2]-, max. 5) Clinical course involving the diagnosis and management of completely and partially edentulous patients. Removable partial dentures and immediate dentures are fabricated. Follow-up care provided for patients previously treated. Offered: AWSpS.

PROS 640 P-Clinical Prosthodontic Maintenance (1-, max. 3) Clinic involving additional patient treatment with complete, partial, or intermediate dentures, plus indirect relines, managing adjustment chair, peer review, recall clinic, and follow-up care for patients previously treated. Offered: AWSp.

PROS 650 P-Extramurals in Prosthodontics (*, max. 12) Elective clinical experiences or clinical practice teaching. Prerequisite: permission of instructor. Credit/no-credit only.

PROS 660 Clinical Prosthodontics (1-2, max. 6) Practical application of material covered in PROS560 and PROS 562. Offered: AWSpS.

PROS 665 Clinical Practice Teaching (1-, max. 4) Supervised experience in teaching clinical prosthodontics to the undergraduate dental student.

Restorative Dentistry

RES D 510 P-Dental Materials Science ([1/2]-, max. 3) Basic concepts of dental materials science including physical, mechanical, chemical, and biological properties of restorative dental materials. Clinical use of restorative dental materials also presented. Offered: WSp.

RES D 511 P-Applied Dental Materials (3) Lecture/laboratory emphasizing proper use of restorative dental materials through simulated clinical projects. Student self-evaluation also emphasized. Offered: Sp.

RES D 515 P-Dental Anatomy (3) Lecture and laboratory on the morphology and nomenclature of individual teeth of the adult human dentition. Introduction to function and the influence of tooth anatomy on clinical dental procedures. Offered: A.

RES D 516 P-Introduction to Occlusion (3) Introduces first-year dental students to the occlusion of permanent teeth. Students gain an depth of understanding of occlusal concepts, details of tooth anatomy, and expand motor skills and perceptual skills. Students also learn to candidly and accurately self-assess their work. Offered: W.

RES D 517 P-Functional Analysis of Occlusion (3) Clinical and laboratory experiences in examination and charting of patient's occlusion, record-taking for analysis of occlusion on a dental articulator, and preclinical diagnostic correction of problems of occlusion on articulated clinical casts. Provides basic background or technique information relative to laboratory and clinical experiences. Offered: Sp.

RES D 519 P-Operative Dentistry (1) Lecture series introducing operative dentistry. Nomenclature, assessment of disease risk, disease classification, instrumentation, pulp protection, and principles of cavity preparation. Offered: Sp.

RES D 520 P-Introduction to Operative Dentistry Technique (3) Covers the most current surgical techniques to restore one-surface carious lesions in permanent teeth. Cognitive and motor competency exams present clinical scenarios requiring application of didactic principles, perceptual skills, self-assessment, and application of the literature for successful completion. Offered: A.

RES D 521 P-Introduction to Operative Dentistry Technique (3) Introduces processes of restoring diseased or damaged tooth structure to proper health, form, function, and esthetics. Emphasis on basic principles of cavity preparation for multiple-surface direct filling restorations. Other considerations include restoration design, proper selection and use of restorative materials, and clinical considerations for restorative treatment planning. Requires demonstration of competence in didactic and practical aspects. Limited opportunity available for introduction to restorative care. Offered: W.

RES D 522 P-Introduction to Operative Dentistry Technique (3) Introduces processes of restoring diseased or damaged tooth structure to proper health, form, function, and esthetics. Emphasis on basic principles of cavity preparation for proper coverage cast gold, ceramic, and foundation buildup restorations. Other considerations include restoration design, proper selection and use of restorative materials, and clinical considerations for restorative treatment planning. Following demonstration of competence in didactic and practical aspects. Limited opportunity available for introduction to restorative care. Offered: Sp.

RES D 525 P-Fixed Prosthodontics (3) Serves as introduction to area of restorative dentistry dealing with indirect partial-coverage restorations and complete coverage restorations. Preclinical experience provided in tooth preparation, provisional restoration, and fabrication for various crown designs. Projects emphasize the various designs of single-tooth preparations and restoration. Offered: A.

RES D 526 P-Fixed Prosthodontics (3) Serves as introduction to area of fixed prosthodontics dealing with multiple-unit restorations. Preclinical experience provided with multiple tooth preparations and provisional restoration. Fabrication for various crown designs, singly and in conjunction with various pontic and connector types, to serve as fixed partial denture prostheses. Projects emphasize multiple-tooth preparation/restoration and implant-supported restorations. Offered: W.

RES D 527 P-Fixed Prosthodontics (3) Serves as introduction to area of fixed prosthodontics dealing with esthetic veneer indirect restorations. Preclinical experience provided in tooth preparation and restoration, fabrication for various esthetic veneer crown designs, singly and in conjunction with various pontic types to serve as fixed partial denture prostheses. Projects emphasize anterior single- and multiple-tooth preparation/restoration, provisional prostheses, and esthetic veneer restorations. Offered: Sp.

RES D 529 Implant Dentistry (3) Includes history of implantology; basic science of osseointegration; surgical, prosthetic, and restorative considerations for the partially and fully edentulous patient; occlusal considerations of implant treatment; surgical placement and restorative procedures; management of patients; surgical and prosthetic considerations; developing a treatment plan on assigned case; and restoring a single implant and mandibular implant overdenture.

RES D 530 P-Restorative Dentistry (2) Lecture series related to RES D 630 presenting restorative dentistry principles, including supportive material on clinical procedures. Emphasis on single-unit gold and esthetic veneer clinical procedures. Offered: A.

RES D 531 P-Restorative Dentistry (2) Lecture series related to RES D 630 presenting restorative dentistry principles, including supportive material on clinical procedures. Emphasis on multiple-unit gold and esthetic veneer clinical procedures. Offered: W.

RES D 533 Advanced Restorative Dentistry (2) Introduces new techniques and materials. Presents complex restorative/prosthodontics treatment options involving dental specialties. Broadens base of treatment planning and restorative implant procedures. Offered: Sp.

RES D 540 P-Restorative Dentistry (2) Lecture series related to RES D 630 presenting restorative dentistry principles, including supportive material on clinical procedures. Offered: A.

RES D 541 Contemporary Topics in Restorative Dentistry (2) Broadens base of restorative procedures. Introduction of new techniques and presentation of complex restorative treatment involving dental specialties. Credit/no-credit only. Offered: W.

RES D 542 P-New Developments in Dental Materials (1) Dental materials recently introduced to dental profession reviewed, compared to current materials, and clinically evaluated. Offered: Sp.

RES D 550 P-Directed Studies in Restorative Dentistry (*, max. 6) See DPHS 449 for course description. Credit/no-credit only. Offered: AWSpS.

RES D 570 Review of Literature Seminar (1, max. 6) Continuous weekly seminar devoted to a review of restorative and related literature, and discussion of teaching methods, philosophy of teaching, and treatment. Offered: AWSp.

RES D 580 Restorative Treatment Planning Seminar (1-, max. 8) Continuous weekly seminar to discuss controversial treatment problems and difficult diagnostic cases selected for graduate students. Offered: AWSp.

RES D 585 Advanced Dental Materials Science (2) Advanced concepts of dental materials science including physical, mechanical, chemical, and biological properties of restorative dental materials. Emphasis also on research design, testing methods, and proper selection of dental materials for clinical practice. Offered: W.

RES D 588 Masticatory Functional Analysis and Occlusal Adjustment (2) Lecture/seminar and clinical sessions in the study of the physiology of occlusion. Pertinent literature reviewed and discussed from the multidisciplinary viewpoint. The clinical sessions include training in masticatory functional analysis and treatment of occlusally related diseases. Offered: A.

RES D 589 Review of Literature in Occlusion (2) Seminar to review pertinent literature in occlusion. Offered: S.

RES D 590 Fundamentals of Fixed Prosthodontics (2-, max. 4) Lecture/laboratory/clinical sessions in the study of gnathological principles and procedures as they pertain to the treatment of comprehensive cases assigned to the students. Use and application of several articulators. Offered: A.

RES D 600 Independent Study or Research (*-) Prerequisite: permission of Graduate Program Adviser. Offered: AWSpS.

RES D 620 P-Comprehensive Treatment Planning in Restorative Dentistry (3) Orientation to restorative clinical operations, administrative procedures associated with patient management, and formulation of treatment plans. Emphasizes problem-based learning, treatment outcomes, the sequence of clinical treatment, and the diagnosis and management of dental disease. Offered: S.

RES D 630 P-Clinical Restorative Dentistry ([1-3]-, max. 9) Clinical training in fundamental restorative dentistry procedures, including diagnostic, treatment planning, and therapeutic aspects of restorative dentistry. Offered: AWSp.

RES D 635 Clinical Restorative Dentistry (3) Knowledge and experience in the diagnosis and restoration of dis-

312 SCHOOL OF DENTISTRY

eased, damaged, unesthetic, or missing teeth. Experience in management of complex, inter-disciplinary treatment plans. Skills in patient communication and management. Utilization of broader range of restorative materials and techniques. Offered: S.

RES D 640 P-Advanced Clinical Restorative Dentistry ([1-3]-, max. 12) Clinical training in restorative dentistry procedures, including diagnostic, treatment planning, and therapeutic aspects of restorative dentistry. Offered: AWSp.

RES D 650 Restorative Dentistry Clinical Elective (1-6, max. 12) Elective offering in clinical areas related to discipline. Credit/no-credit only. Offered: AWSpS.

RES D 659 P-Restorative Dentistry Extended Learning (*, max. 4) Supplemental work in restorative dentistry to correct an area of student deficiency. Credit/no-credit only. Offered: S.

RES D 660 Oral Rehabilitation ([1-6]-, max. 32) Clinical course to provide experience in diagnosis and treatment of patients requiring restorative procedures from single restorations to complex oral rehabilitative methods. Special emphasis is directed toward the integration of periodontics and occlusion as they relate to restorative dentistry. Offered: AWSpS.

RES D 665 Clinical Practice Teaching (1, max. 4) Supervised experience in teaching restorative dentistry to undergraduate dental students. Offered: AWSpS.

College of Education

Dean

Tom Stritikus

222 Miller

Associate Deans

Carol David

Elham Kazemi

Deborah E. McCutchen

Joy Williamson-Lott

The College of Education is primarily a graduate and professional school dedicated to equity and excellence in education through the preparation and on-going renewal of education professionals, the promotion of social justice, the advancement of knowledge through research, and the connection of research to inform policy and improve practice. In its graduate programs the College has four broad curricular areas: Curriculum and Instruction, Educational Leadership and Policy Studies, Educational Psychology, and Special Education. Graduate degrees conferred include the MEd, EdS, EdD, and PhD. Certification can be earned in teaching (elementary, secondary, and special education), school administration (principals, program administrators, and superintendents), and school psychology.

In addition, the College offers a BA with a major in early childhood and family studies, in both the traditional classroom format and through an online degree completion program. In collaboration with the College of Arts and Sciences, the College also offers an undergraduate minor in education, learning, and society.

The College of Education at the University of Washington believes that an effective public education system for a diverse citizenry is the cornerstone of a democratic society. To that end, the College dedicates its resources to helping make an excellent education an everyday reality for every student in every community across the state and country. As part of a major university located in a metropolitan area, the College is able to work in collaboration with a number of school districts in the area to provide teaching, research, and field experiences for its students.

Special Offices and Services

The College of Education maintains a number of specialized offices to assist in the fulfillment of its goals. Among these are the Office of Teacher Education, the Office of Student Services, the Office of Minority Recruitment and Retention, and a Writing Support Center. In addition, the College of Education maintains formal relationships with a number of school districts in the area to provide research and field experience opportunities for students in the various programs. Individuals interested in teacher certification, in graduate degree programs, or in the early childhood and family studies major, may visit the College's website, education.uw.edu, or e-mail edinfo@uw.edu, for additional information.

UNDERGRADUATE PROGRAM

Adviser

206 Miller Hall

(206) 221-3527

ecfsinfo@uw.edu

The College of Education offers the following programs of study:

- The Bachelor of Arts degree with a major in early childhood and family studies

- A minor in education, learning, and society (with the College of Arts & Sciences)

Bachelor of Arts

The Bachelor of Arts in early childhood and family studies is a challenging, inspiring academic path. ECFS majors study early childhood development, early learning, and family studies from a variety of perspectives across a range of disciplines. Students participate in fieldwork and/or research throughout their junior and senior years. Alumni pursue careers in social services/mental health, education, childcare, or research. They may also pursue graduate studies in education, speech and hearing sciences, physical therapy, occupational therapy, nursing, psychology, nutrition, and social work.

Suggested First- and Second-Year Coursework: A course in biological sciences (BIOL 100, BIOL 104, or similar); a course in biological bases of development (BIOL 118, B STR 301, PSYCH 202, or similar); a college-level mathematics or statistics course, EDUC 170, EDPSY 490, or EDPSY 491; ECFS 200 recommended, but not required

Department Admission Requirements

1. Satisfactory progress toward completion of general education requirements
2. Admission is competitive, based on the following criteria. Completion of requirements does not guarantee admission.
 - a. Two-to-three page personal statement reflecting an interest in the early childhood and family studies major and a commitment to learning about the field
 - b. Overall academic performance reflected in copies of unofficial transcripts.
 - c. Other evidence of interest in and commitment to the field (e.g., work experience, volunteer experience, or internships)
3. Grades in any completed recommended courses and courses applied to major requirements
4. Applications are due April 15 for autumn quarter start. Applications may be considered after that date on a case-by-case basis, depending on program capacity.

Students accepted into the major typically have a minimum cumulative 2.50 GPA and a minimum grade of 2.0 for any prior college coursework that can be applied toward the major.

Information Sessions: Prospective students are encouraged to attend an ECFS information session to learn more about the major and how to apply. For a schedule of information sessions, visit the early childhood and family studies website at education.uw.edu/programs/undergraduate.

For further information on requirements/procedures, see education.uw.edu/programs/undergraduate, or inquire at 210 Miller.

General Education Requirements

See College of Arts and Sciences requirements. A maximum 15 credits in ECFS-prefix courses from the University Areas of Knowledge list may be counted toward the UW Areas of Knowledge requirements. The following courses must be taken as part of general education requirements, either prior to or after admission to the program.

1. Biology Science and Development (7-10 credits): See website for complete list of acceptable courses.
2. Mathematics/Statistics (5 credits): Any college-level mathematics or statistics course, EDUC 170, EDPSY 490, or EDPSY 491.

Major Requirements

84 credits, to include the following:

1. Early Childhood and Family Studies Core Courses (28 credits): ECFS 301, ECFS 302, ECFS 400, ECFS 401, ECFS 402, EDPSY 402
2. General Development (18 credits): EDUC 305 or EDUC 310; EDPSY 304, EDSPE 404, and EDSPE 419
3. Service Learning and Research Experiences (18 credits): ECFS 303, ECFS 304, ECFS 305, ECFS 454, ECFS 455, ECFS 456
4. Electives (minimum 20 credits): Minimum one course each from theoretical foundations of early childhood development, methodology, and social policy and organization. See website for current list of electives.
5. Minimum 2.00 cumulative GPA in courses used to satisfy program requirements
6. Senior Project: Students identify interest areas, develop research skills, and prepare for future pursuits. Provides evidence that students have the ability to finish similar projects in work or graduate school. Students develop communication skills necessary for sharing knowledge and ideas with others. Presentation required.

Bachelor of Arts (Online Option)

Suggested First- and Second-Year Coursework: A course in biological sciences (BIOL 100, BIOL 104, or similar); a course in biological bases of development (BIOL 118, B STR 301, PSYCH 202, or similar); a college-level mathematics or statistics course, EDUC 170, EDPSY 490, or EDPSY 491; ECFS 200 recommended, but not required

Department Admission Requirements

1. Satisfactory progress toward completion of general education requirements
2. Admission is competitive, based on the following criteria. Completion of requirements does not guarantee admission.
 - a. Two-to-three page personal statement reflecting an interest in the early childhood and family studies major and a commitment to learning about the field
 - b. Overall academic performance reflected in copies of unofficial transcripts.
 - c. Other evidence of interest in and commitment to the field (e.g., work experience, volunteer experience, or internships)
 - d. Grades in any completed recommended courses and courses applied to major requirements
 - e. Completion of an academic associate degree with at least 70 transferable credits to apply to University's general education requirements.
 - f. A course in biological sciences (BIOL 100, BIOL 104, or similar); a course in biological bases of development (BIOL 118, B STR 301, PSYCH 202, or similar); a college-level mathematics or statistics course, EDUC 170, EDPSY 490, or EDPSY 491; ECFS 200 recommended, but not required

3. Applications are due May 15 for autumn quarter start. Applications may be considered after that date on a case-by-case basis, depending on program capacity.
4. This is a limited admission program. Students admitted to the ECFS online program are not allowed to transfer to another onsite or online major/degree program or complete a minor without reapplying to the UW through the normal admission review process.

Students accepted into the major typically have a minimum cumulative 2.50 GPA and a minimum grade of 2.0 for any prior college coursework that can be applied toward the major.

Information Sessions: Prospective students are encouraged to attend an ECFS information session to learn more

about the major and how to apply. For a schedule of information sessions, visit the Early Childhood and Family Studies website at education.uw.edu/programs/undergraduate.

For further information on requirements/procedures, see education.uw.edu/programs/undergraduate, or inquire at 210 Miller.

General Education Requirements

See College of Arts and Sciences requirements. A maximum of 15 credits in ECFS-prefix courses from the University Areas of Knowledge list may be counted toward the UW Areas of Knowledge requirements. The following courses must be taken as part of general education requirements, prior to admission to the program.

1. Biology Science and Development (7-10 credits): See website for complete list of acceptable courses.
2. Mathematics/Statistics (5 credits): Any college-level mathematics or statistics course, EDUC 170, EDPsy 490, or EDPsy 491.

Major Requirements

84 credits, to include the following:

1. Early Childhood and Family Studies Core Courses (28 credits): ECFS 301, ECFS 302, ECFS 400, ECFS 401, ECFS 402, EDPsy 402
2. General Development (18 credits): EDUC 305 or EDUC 310; EDPsy 304, EDSPE 404, and EDSPE 419
3. Service Learning and Research Experiences (18 credits): ECFS 303, ECFS 304, ECFS 305, ECFS 454, ECFS 455, ECFS 456
4. Electives (minimum 20 credits): Minimum one course each from theoretical foundations of early childhood development, methodology, and social policy and organization. See website for current list of electives.
5. Minimum 2.00 cumulative GPA in courses used to satisfy program requirements
6. Senior Project: Students identify interest areas, develop research skills, and prepare for future pursuits. Provides evidence that students have the ability to finish similar projects in work or graduate school. Students develop communication skills necessary for sharing knowledge and ideas with others. Presentation required.
7. Minimum 64 credits of coursework applied to the major taken from the UW Seattle campus.

Student Outcomes and Opportunities

- **Learning Objectives:** The early childhood and family studies major immerses students in the study of child and family development and education. Students learn about child development, early learning, and family studies from a variety of perspectives. They receive a strong grounding in reading and understanding the theory and evidence that provide the foundation for the field and drive current research and policy efforts.
- **Expected Outcomes:** Students apply their knowledge and skill as they work alongside community-based teachers, community leaders, and care providers. The degree provides excellent preparation for a wide variety of careers in early learning, childcare, parent and family support and education, child and community advocacy and organization, and social/mental health services. It also serves as a pathway for graduate studies in education, child and family studies, educational policy, special education, and other areas. This interdisciplinary major is offered at the sophomore, junior, and senior level.
- **Service Learning and Research:** Two sequences of field-based experiences provide students with real life-learning opportunities in community-based early childhood or family support/education settings. Students participate in both an introductory seminar experience as well as a sequenced field experience during their

first year in service learning. During the second phase, students participate in a three-quarter senior service learning, research, and senior project that provides advanced opportunities to integrate theory and practice in community-based early childhood or family support programs, and/or research settings. The seminar ties together research and practice, demonstrating how research informs evidence-based decision-making in programs and services. Students also receive guidance in career options and current events in the field, tying in major experiences with their own developmental and career goals. Learning objectives are outlined in class.

- **Honors Options Available:** With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- **Department Scholarships:** See departmental website for undergraduate scholarship information.
- **Student Organizations/Associations:** Associated Students of the College of Education (ASCE) and International Educators of the College of Education (IECE).

GRADUATE DEGREE PROGRAMS

Graduate Program Coordinator

206 Miller, Box 353600

(206) 543-7834

edinfo@uw.edu

The College of Education currently offers five advanced degrees: Master in Teaching (MIT), Master of Education (MEd), Educational Specialist (EdS), Doctor of Education (EdD), and Doctor of Philosophy (PhD). The MIT degree is awarded to elementary and secondary certification students at the completion of their program. The EdS degree is awarded to school psychology certification students at the completion of their program. Graduate students working toward other degrees may specialize their degree studies in curriculum and instruction, educational psychology, educational leadership and policy studies, or special education. Questions regarding graduate study in education should be directed via email to edinfo@uw.edu, or to the College's website

Master in Teaching

The Master in Teaching (MIT) degree program results in a Washington residency teaching certificate for elementary or secondary (specific subjects) school teaching. The program is an integrated sequence of full-time, daytime coursework and field experiences spanning four quarters. Field experiences are in partner schools in the Seattle/Puget Sound area chosen to provide experience working with children from racially and culturally diverse communities.

Admission Requirements

1. A bachelor's degree from an accredited institution with a minimum 3.00 GPA for the last 90 quarter (60 semester) credits
2. Goal statement
3. 40 or more hours in a classroom that most closely matches the subject and grade level the applicant wishes to teach
4. Two letters of recommendation from faculty or professional references
5. Passing scores from all three subtests of the WEST-B examination. Passing scores on the ACT and/or the SAT may be submitted in lieu of the WEST-B.
6. Official transcripts from all community colleges and universities attended.

7. Secondary applicants: complete required content courses in the endorsement subject they wish to teach.
8. Elementary applicants: complete prerequisite courses in child development and math for elementary teachers.
9. Secondary & Elementary applicants: complete one prerequisite course in education of an ethnic group.

Degree Requirements

60-101 credits, to include:

1. Elementary Education Focus

- a. Courses: EDC&I 324; EDC&I 494; EDC&I 586; EDLPS 496; EDSPE 526; EDTEP 501, EDTEP 502, EDTEP 503; EDTEP 505; EDTEP 511; EDTEP 521, EDTEP 522; EDTEP 523; EDTEP 531, EDTEP 532, EDTEP 533; EDTEP 541; EDTEP 542; EDTEP 543; EDTEP 551; EDTEP 552; EDTEP 601; UCONJ 510.

- b. Note: The current Washington state endorsement for elementary teachers is "elementary education." Graduates of this program may be hired to teach specific or multiple subjects in middle or junior high school through grade 8. Those interested in teaching in the middle schools are encouraged to discuss this option with advisers in the Office of Student Services.

2. **Elementary Special Education Focus:** EDC&I 324; EDC&I 494; EDC&I 586; EDLPS 496; EDSPE 404; EDSPE 414; EDSPE 496; EDSPE 496; EDSPE 500; EDSPE 513; EDSPE 514; EDSPE 526; EDSPE 545; EDSPE 601; EDTEP 501, EDTEP 502, EDTEP 503; EDTEP 505; EDTEP 511; EDTEP 521, EDTEP 522; EDTEP 523; EDTEP 531, EDTEP 532, EDTEP 533; EDTEP 541; EDTEP 542; EDTEP 543; EDTEP 551; EDTEP 552; EDTEP 601; UCONJ 510.

3. **Secondary Education Focus:** EDC&I 494; EDC&I 586; EDTEP 551; EDTEP 561; EDTEP 562, EDTEP 563; EDTEP 564; EDTEP 565; EDTEP 571; EDTEP 573; either EDTEP 580, EDTEP 582, EDTEP 584, EDTEP 586, or EDTEP 588; either EDTEP 581, EDTEP 583, EDTEP 585, EDTEP 587, EDTEP 589; EDTEP 591; EDTEP 592; EDTEP 593; EDTEP 595; EDTEP 601; elective outside education

Master of Education

The Master of Education (MEd) degree requires a minimum of 45 credits, including at least 15 credits in a specialized area of study in education; 9 credits related to, but outside the area of specialization, some coursework outside education; 9 thesis credits or, for the non-thesis option, 9 credits in a field study or other approved project; and a final examination.

Admission Requirements

1. A baccalaureate degree from an accredited institution
2. Minimum 3.00 GPA for the last 90 graded quarter credits (or 60 semester credits)
3. Transcripts from each college or university attended
4. Graduate Record Exam (GRE) scores
5. Personal goal statement
6. At least two letters of recommendation
7. Prerequisites stipulated by the area of specialization within the College

Degree Requirements, Curriculum and Instruction Programs

45 credits, to include:

1. Common Area Requirements

- a. **Foundations of education (9 credits):** Students gain an understanding of the complex issues that influence teaching and learning. Students work with advisers to select from courses such as: history of education, education as a moral endeavor, human learning, curriculum design, special topics in curriculum and instruction.

- b. *Thesis, non-thesis, or project option (9 credits)*: The non-thesis option may be satisfied by a 9-credit culminating project or 9 credits at the 500 level or above related to the student's teaching and research interests.
 - c. *Colloquium presentation*: At the end of the program, students present their work at the curriculum and instruction colloquium. Students prepare a visual representation of their work (usually a poster). During the colloquium, students talk to faculty and students about and answer questions about their thesis, project, or other work conducted during the program. In addition, students attend one other colloquium prior to presenting.
2. *Language, Literacy, and Culture Study Option*
- a. *Core studies (9 credits)*: Selected from the following: EDC&I 453, EDC&I 455, EDC&I 460, EDC&I 462
 - b. *Assessment and inquiry (3 credits)*: In consultation with adviser, select one course that focuses on issues of assessment and inquiry
 - c. *Concentrations (15 credits)*: Literacy specialists, in consultation with advisers, select a minimum of three courses in the literacy strand and a minimum of one course in each of the other strands. ESL specialists, in consultation with advisers, select a minimum of three courses in ESL and a minimum of one course in each of the other strands.
3. *Mathematics Education Study Option*
- a. At least 27 credits in mathematics and mathematics education. Courses, selected in consultation with the student's adviser, must be appropriate for future career goals. Of the 27 credits, 9 credits chosen from mathematics education courses (below).
 - b. *Mathematics education courses*: EDC&I 478, EDC&I 479; EDC&I 575, EDC&I 576, EDC&I 577
4. *Multicultural Education Study Option*
- a. *Ethnic diversity outside the College of Education (15 credits)*: Selected in ethnic diversity subject matter fields outside of the College of Education. Courses can be taken from those offered by various departments in the College of Arts and Sciences. All course choices are negotiated with advisers.
 - b. *Multicultural education (15 credits)*: EDC&I 424, EDC&I 569; remainder to be chosen from the following: EDC&I 464; EDC&I 469; EDC&I 474; EDPSY 536; EDLPS 566; EDC&I 573; EDC&I 574
5. *Science Education Study Option*: At least 21 credits, approved by the faculty supervisor, in fields such as, biology, chemistry, physics, earth science, oceanography, or other science-related courses
6. *Social Studies Education Study Option*: 12-15 credits of core social studies courses, negotiated with adviser. 15-21 credits of history/social science courses related to teaching interests, or additional educational courses
7. *Teaching and Curriculum Study Option*: 27 credits, including 9-18 credits of required study in teaching and curriculum, to be chosen in consultation with adviser
- requires preparation of a scholarly paper of publishable quality (9 credits minimum).
2. *Foundations of education courses (12 credits)*: either EDLPS 521, EDLPS 540, or EDPSY 580; either EDPSY 501 or EDPSY 510; EDPSY 490; EDPSY 591
3. *Measurement, Statistics, and Research Design Study Option (50 minimum total credits)*
- a. *Required courses*: One or more from each of the following content fields with options to consist of courses listed below or alternative courses (including courses outside education) approved by the faculty adviser
 - i. *Measurement and evaluation*: EDPSY 495, EDPSY 512, EDPSY 584, EDPSY 592, EDPSY 595, EDPSY 596, EDPSY 597
 - ii. *Human development*: EDPSY 502, EDPSY 531, EDPSY 532, EDPSY 582
 - iii. *Cognition and learning*: EDPSY 510, EDPSY 524, EDPSY 525, EDPSY 583, PSYCH 414
 - iv. *Language processes*: EDPSY 520, EDPSY 521
 - b. *Research (9 credits)*:
 - i. *Thesis option*: Report of a research investigation that requires the student to design and execute an empirical study.
 - ii. *Non-thesis option*: Preparation of a scholarly review of the research literature; should be of publishable quality.
4. *Learning Sciences and Human Development Option (45 minimum total credits)*
- a. *Required courses (17 credit hours)*: One or more from each of the following areas to consist of the courses listed below:
 - i. *Required Foundations (11 credit hours)*: EDPSY 501; EDPSY 581; EDPSY 502 or EDPSY 503; EDLPS 540, EDLPS 530, or EDLPS 521
 - ii. *Required Research Methods (6 credit hours)*: EDPSY 490; EDPSY 591; other recommended courses include EDPSY 491, EDPSY 495, EDLPS 588, and EDC&I 581.
 - b. *Strands or Specializations (17 credit hours)*: minimum one course in at least two different strands. Courses determined in conjunction with faculty adviser. Sample courses from each strand are available on College website.
 - i. *Learning Within and Across Disciplines - Literacy*
 - ii. *Learning Within and Across Disciplines - STEM*
 - iii. *Human Development, Families, and Communities*
 - iv. *Contexts, Culture, and Equity*
 - c. *Research (9 credits)*:
 - i. *Thesis option*: Report of a research investigation that requires student to design and execute an empirical study.
 - ii. *Non-thesis option*: Preparation of a scholarly paper of publishable quality.

Degree Requirements, Educational Psychology Programs

Minimum 45 credits, to include:

1. *General Requirements*
 - a. Minimum 45 quarter credits, exclusive of prerequisites and specific requirements listed for each study option
 - b. Written or oral examination upon completion of coursework
 - c. *Research*: two options available, thesis, or non-thesis. Thesis option requires design and accomplishment of an empirical study. Non-thesis option

Degree Requirements, Education Leadership and Policy Studies Programs

48 credits, as follows:

1. *Common Area and Distribution Requirements (18 credits minimum)*: Minimum 18 credits of coursework in EDLPS. Of these, 12 credits are distributed as follows:
 - a. Social and cultural foundations, 6 credits minimum
 - b. Organizations and policy, 6 credits
2. *Specialization Requirement (9 credits minimum)*: In conjunction with the adviser, students develop an area of specialization.
3. *Breadth Requirement (6 credits minimum)*:

- a. At least 3 credits in one or more other areas in the College of Education (EDC&I, EDPSY and/or EDSPE)
 - b. At least 3 credits outside the College of Education
4. *Research/Inquiry Requirement (6 credits minimum)*:
- a. At least 3 credits in basic statistics (EDPSY 490 or the equivalent)
 - b. At least 3 credits in research/inquiry methods (e.g., EDPSY 588, EDPSY 591, EDLPS 524, EDLPS 535, EDLPS 543, EDLPS 568, or the equivalent)
5. *Completion of Thesis or Non-Thesis Option (9 credits minimum)*
6. *Specific courses determined in consultation with adviser*

Degree Requirements, Special Education

48 credits, as follows:

1. *Foundations of Education (6 credits)*: Minimum 6 credits of courses in or out of the College of Education, or equivalent as determined in consultation with the adviser
2. *Special Education Major Field (21 credits)*: Specific sequence of courses determined by adviser, depending on student's background, educational goals, and type of disabled individual the student wishes to teach
3. *Assessment and Research Methodology (9 credits)*: Courses selected in consultation with adviser, to develop competency in assessment of learners with disabilities and familiarity with research tools
4. *Special Assignments in Special Education (12 credits minimum)*: Divided among at least two of the following options: EDSPE 500 (1-6, max. 6), EDSPE 600, EDSPE 601 (3-9, max. 9), EDSPE 700 (max. 9). Students entering an EdD or PhD program should select a thesis option.

Doctor of Education

Designed to prepare professionals whose primary interest is to deal directly with problems of educational practice. The program of study leading to the EdD, as a professional degree, focuses on the utilization of research and practitioners' knowledge, rather than on the production of research knowledge.

This professional degree requires a program of specialized study with credit in education and related fields, sufficient preparation in research methodology to interpret research findings for use in practice, an internship and leadership training, a general examination, a dissertation on a problem of educational practice, and a final examination.

Admission Requirements

1. Graduate Record Exam (GRE) scores
2. Master's degree or equivalent from an accredited institution
3. Minimum GPA of 3.00 for the most recent 90 (60 semester) credits
4. Transcripts (sealed) from each college or university attended.
5. Goal statement
6. Three letters of recommendation
7. Resume/curriculum vita
8. Writing sample(s)
9. Interviews
10. Specific programs may have additional admission requirements. Visit the website or contact the program for further information.

Degree Requirements

102 credits, as follows:

1. *Educational Specialization (24 credits)*:

- a. Courses in one specialty within the area of specialization designed to provide student with knowledge of the field: 9 credits
- b. Courses in the general area or in the student's special interests within the area of specialization other than those selected to fulfill the 9 credits above: 15 credits
2. *Related Field(s) (24 credits)*: Courses selected from within education (minimum of 12 credits) or outside of education which complement the student's educational specialization and include multidisciplinary learning experiences
3. *Research/Evaluation Preparation (9 credits)*: Courses selected to enhance a student's ability to conduct field-based research/evaluation studies
4. *Leadership Training (9 credits)*: EDLPS 520, EDLPS 550, EDLPS 560
5. *Supervised Internships and Field Experiences (9 credits)*: Internships and field experiences are designed to work in education and the related field(s), and to conduct field-based research and evaluation studies.
6. *Dissertation (27 credits)*

NOTE: The Doctor of Education degree offered through the leadership for learning program is considered a practice doctorate. A dissertation is not required for this program; 12 credit hours of capstone experience are required instead. A corresponding increase in other areas (educational specialization, research preparation, etc.) is required in order to meet the 102-credit-hour requirement for the Doctor of Education.

Doctor of Philosophy

A degree offering preparation for a research career on issues fundamental to education - issues that range from fairly narrow questions about human learning to macro-questions regarding the form of societies' educational institutions. The scope is broad. The degree may be organized around traditional study areas such as educational psychology, curriculum and instruction, special education, or educational leadership and policy. A student may develop a course of study that integrates various elements of more than one study area (e.g., multiethnic education and literacy). One study option is school psychology, which prepares students for the professional practice of psychology with school-age children, as well as for research.

Admission Requirements

1. Graduate Record Exam (GRE) scores
2. Master's degree or equivalent from an accredited institution
3. Minimum GPA of 3.00 for the most recent 90 (60 semester) credits
4. Transcripts (sealed) from each college or university attended.
5. Goal statement
6. Three letters of recommendation
7. Resume/curriculum vita
8. Writing sample(s)
9. Interviews

Degree Requirements

Minimum 90 credits, to include:

Six academic areas and the dissertation. The PhD is specialized and highly individualized. Although the department prescribes a limited number of required courses, it does require that students demonstrate in-depth knowledge of education and selected related fields. For most students, this means study in a broad area, a specialization within that area, two cognates, and a specialization outside the department.

Degree requirements include a program of specialized study with credits both in education and in other academic units, preparation in research methodology adequate to design and assess research in the field of specialization, sufficient study in cognate fields inside and outside education to ensure that the candidate can place the specialized research in a broader context, a general examination, a research dissertation, and a final examination.

Accreditation

Within the College of Education, a number of degree programs have formal accreditation. The school psychology EdS program is accredited by the American Psychological Association (APA) and approved by the National Association of School Psychologists (NASP). The school psychology MEd program is also accredited by NASP and the Washington State Board of Education for initial residency and continuing/professional teaching certificates and initial/residency certification. Graduates qualify for certification in all states party to the Interstate Certification Compact.

Financial Aid

The College of Education offers a limited number of awards with varying stipends for graduate students in education. Primary consideration is given to doctoral students with a background of successful teaching or administrative experience. Specific information on the various types of remunerative appointments for graduate students in education, amounts of stipends, and application procedures may be obtained via the College's website at education.uw.edu/admissions/funding-and-financial-aid.

PROFESSIONAL PROGRAMS

Professional Certification

The College of Education is authorized by the State Board of Education to offer professional certificate programs in education for administrators, educational staff associates, and teachers. Program-design specialists are available to help with pre-program counseling, long-range planning, applications, registration, referrals to other campus resources, general program advising, and continuing/professional certificate requirements.

Administrator Certificates

Administrator certificate preparation programs for superintendents, principals, and program administrators are offered through the College of Education. The following websites contain specific information about admissions, curriculum, faculty, and general advising:

For principals and program administrators, the Danforth Educational Leadership program, education.uw.edu/programs/leadership/danforth.

For superintendents, the Leadership for Learning program, education.uw.edu/141/.

Educational Staff Associate Certificates

Educational staff associate certificate preparation programs are offered for the school psychologist. Information concerning requirements and admission may be obtained from the Office of Student Services, 206 Miller Hall, edinfo@uw.edu.

The College of Education is authorized by the State Board of Education to prepare and recommend individuals for Residency Teaching Certificates. Title II of the Higher Education Act requires institutions of higher education and states that approve such programs to develop and publish an annual report on their teacher preparation programs. The College of Education publishes an annual Higher Education Opportunity Act report based on Title II data. That report may be viewed on the College's website: education.uw.edu/my-coe/oir/heoa.

The full Title II report may be requested via email from coeir@uw.edu.

Residency Teaching Certification Program

The College of Education offers residency teaching certification for individuals desiring careers as elementary or middle/secondary school teachers, or as special education teachers working with students with moderate and severe disabilities or emotional and behavioral disorders, and with infants, toddlers, and preschool children with disabilities. All programs are offered at the master's level. For additional information, e-mail edinfo@uw.edu, or visit the College's website at education.uw.edu/programs/teacher.

An undergraduate or postbaccalaureate program leading to certification in music education, grades K-12, is offered through the School of Music. For additional information contact the School of Music Advising Office, 116 Music, Box 353450, University of Washington, Seattle, WA 98195-3450.

Professional Teaching Certificates

For information on the Professional Certificate Assessment (ProTeach), visit the Office of the Superintendent of Public Instruction (OSPI): www.k12.wa.us/certification/Teacher/Residency3.aspx#Professional.

Endorsements on Teaching Certificates

Teachers holding an initial/residency or continuing/professional teaching certificate may add endorsements to their certificates which qualify them to teach additional subjects. Information on endorsement requirements is available on the web at education.uw.edu/programs/teacher/endorsements, or contact the Office of Student Services, 206 Miller Hall, or via e-mail at edinfo@uw.edu.

SPECIAL RESEARCH AND SERVICE FACILITIES

Within the College of Education, opportunities exist for students to gain research and service experience through one of the many research centers affiliated with the College. Below is a partial list of those centers; students should visit education.uw.edu/faculty-and-research/centers for a current and complete list.

The Center for Multicultural Education focuses on research projects and activities designed to improve practices related to equity issues, intergroup relations, and the achievement of students of color. Visit the center's website at education.uw.edu/cme/.

The Clinical Training Laboratory, operating under the aegis of Educational Psychology, offers observation rooms equipped with video recorders where counseling and psychology trainees and clients can be observed and taped through one-way mirrors.

The renowned *Experimental Education Unit* (EEU) offers an interdisciplinary approach to research, training, and service, providing integrated classes for 150-200 young children, toddlers, and infants with disabilities and their typically developing peers, and services for their families. Learn more about the EEU by visiting education.uw.edu/faculty-and-research/centers/haring.

The National Center for the Study of Teaching and Policy, a consortium of five universities headed by the University of Washington, conducts a wide range of studies aimed at local, state, and national policy strategies to promote teacher excellence. For more information, visit the center's website at depts.washington.edu/ctpmail, or e-mail ctp-mail@uw.edu.

The Learning Informal and Formal Environments (LIFE) Center is a collaborative effort among three primary partners — the University of Washington, Stanford University, and Stanford Research Institute — as well as other institu-

tions across the country. The overall purpose of the LIFE Center is to understand and advance human learning through a simultaneous focus on implicit, informal, and formal learning, thus cultivating generalizable interdisciplinary theories that guide the design of effective new technologies and learning environments. For more information visit education.uw.edu/research/center/life.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

Education

EDUC 170 Mathematics for Elementary School Teachers (5) NW Covers basic concepts of numbers and operations. Emphasizes problem solving, communication of mathematical ideas, and analysis of sources of difficulty in learning/teaching these concepts. Offered: WSp.

EDUC 210 Education and the Playfield (3) I&S Examines the intersection of education and sport from early childhood to college experiences. Explores educational themes related to physical development, sport's influence on individual and community development, access to physical activities, equity and inclusion within the sports environment, and the role of sports in social change.

EDUC 260 The Dream Project: Introduction to Mentoring Strategies (1, max. 8) I&S Taylor, Twitchell Introduces mentoring strategies and topics related to social mobility and educational access. Supports students' mentorship of high school students on college readiness and access to higher education. Corequisite: EDUC 369. Credit/no-credit only. Offered: AWSp.

EDUC 299 Education, Learning, and Society Colloquium (1) Provides a common learning experience where students learn from researchers and practicing educators about current pedagogical projects and theories. Fosters self-reflexive projects to build understanding of learning pathways. Credit/no-credit only. Offered: AWSp.

EDUC 300 Special Topics in Education, Learning, and Society (1-5, max. 20) Critical examination of current research and practice in education, learning, and society.

EDUC 301 Introductory Practice in Community Service Activity (1-10, max. 10) Observation and participation in a variety of activities in a K-12 classroom. Placement made according to participant interests and needs. Participation on a predetermined schedule plus scheduled orientation and debriefing sessions are required. Offered: AWSp.

EDUC 305 The Purpose of Public Schools in a Democracy (5) I&S Explores issues and questions pertaining to public schools in a democratic society through directed readings, dialogue, individual and group projects designed to engage students with a series of crucial issues in public schools. Offered: AWSp.

EDUC 310 Current Issues in Education (5, max. 20) I&S Covers a current issue and provides the opportunity to read and discuss educational issues with other students and faculty and to learn of opportunities in the College of Education programs. Offered: AWSp.

EDUC 360 The Dream Project: Mentoring and Education Policy (1, max. 8) I&S Discusses policy approaches to social mobility and educational access and supports development of communication and mentoring skills gained in EDUC 260. Supports students' mentorship of high school students on college readiness and access to higher education. Corequisite: EDUC 369. Credit/no-credit only. Offered: AWSp.

EDUC 361 The Dream Project: Special Topics (1, max. 8) I&S Taylor, Twitchell Provides discussion and exploration of a single topic related to social mobility and access to higher education. Designed for students who have already

completed EDUC or EDUC 360 who wish to examine a topic more closely. Corequisite: EDUC 369. Credit/no-credit only. Offered: AWSpS.

EDUC 369 The Dream Project: High School Visits - Field Experience (1, max. 8) Taylor, Twitchell Involves weekly travel to local high schools, mentoring low-income or first-generation juniors and seniors through the college readiness and admissions process. Corequisite: either EDUC 260, EDUC 360, or EDUC 361. Credit/no-credit only. Offered: AWSpS.

EDUC 401 Practicum in Community Service Activity (1-18, max. 20) VLPA/I&S Tutoring and teaching experiences in a school or community service organization. Placement made according to participant interests and needs. Participation on a predetermined schedule plus scheduled orientation and debriefing sessions are required. Offered: AWSp.

EDUC 402 Practicum in Classroom Teaching and Management: Primary (1-18, max. 20) Tutoring and teaching experiences in a primary school setting (grades K-3). Placements made according to participant's interest and needs. Participation on a predetermined schedule plus scheduled orientation and debriefing sessions.

EDUC 403 Practicum in Classroom Teaching and Management: Intermediate (1-18, max. 20) Tutoring and teaching experiences in an intermediate school setting (grades 4-8). Placements made according to participant's interest and needs. Participation on a predetermined schedule plus scheduled orientation and debriefing sessions.

EDUC 404 Practicum in Classroom Teaching and Management: Secondary (1-18, max. 20) Tutoring and teaching experiences in an intermediate school setting (grades 6-12). Placements made according to participant's interest and needs. Participation on a predetermined schedule plus scheduled orientation and debriefing sessions.

EDUC 502 Advanced Practicum in Classroom Teaching and Management (1-18, max. 20) In-depth classroom practicum experiences to certificated teachers working on additional endorsements. Arrangements must be made prior to enrolling with an adviser in the Teacher Education Office. Offered: AWSpS.

EDUC 700 Master's Thesis (*-) Prerequisite: permission of faculty adviser and Graduate Program Coordinator. Offered: AWSpS.

EDUC 750 Capstone Experience (2-10, max. 10) Provides advanced opportunities to integrate theory and practice through a capstone learning and research experience. Prerequisite: permission of faculty adviser and Graduate Program Coordinator. Credit/no-credit only. Offered: AWSpS.

EDUC 800 Doctoral Dissertation (*-) Prerequisite: permission of Supervisory Committee Chairperson and Graduate Program Coordinator. Offered: AWSpS.

EDUC 801 Practice Doctorate Project/Capstone (*-) Prerequisite: permission of Supervisory Committee Chairperson and Graduate Program Coordinator. Offered: AWSpS.

Curriculum and Instruction

EDC&I 324 Physical Education and Health in the Schools (2) Techniques and procedures for teaching physical education and health in elementary and secondary schools. For students in Teacher Education Program. Credit/no-credit only.

EDC&I 351 Teaching as a Profession (5) I&S, DIV Zeichner Helps students assess the profession of teaching. Explores what becoming a teacher means, assesses the organizational structure of teaching as a career and profession, examines social attitudes about education and the work of teachers, and thinks about teaching as social justice work.

EDC&I 352 Teaching to Change the World (5) I&S Barajas-Lopez Examines how value structures and political decisions affect systems of education. Considers particular inequalities based on race, class, and gender. Encourages

students to see the course as both an academic exercise, and a vantage point for considering their own past and possible future experiences in education.

EDC&I 353 Teaching in the Elementary School (3) Emphasizes selected teaching modes; lesson planning; classroom management procedures; grouping to accommodate pupils with special needs; utilization of learning resources; evaluation of teaching. Attention also given to school culture.

EDC&I 424 Multiethnic Curriculum and Instruction (3) I&S, DIV Primarily for preservice and in-service teachers who have little or no previous exposure to issues related to ethnicity and schooling. Designed to help teachers better understand the school's role in the ethnic education of students and acquire the insights, understandings, and skills needed to design and implement curricular and instructional strategies that reflect ethnic diversity.

EDC&I 438 Improvement of Teaching: Latin (5) VLPA Offered: jointly with LATIN 475.

EDC&I 453 Teaching the Bilingual-Bicultural Student (3) I&S, DIV Educational needs of bilingual students: research findings, special programs, materials, and methodologies that bilingual-bicultural education can provide to meet those needs. Cultural combinations of bilingual populations in American culture; historical, social, and linguistic factors affecting their K-12 education.

EDC&I 458 Content Area ESL Instruction (3) Exposes students and engages them in how to support their English Language Learners in their content areas through sheltered instruction, specifically through the framework, Sheltered Instruction Observation Protocol (SIOP). Focuses specifically on the academic language needs of these students.

EDC&I 459 Workshop in Instructional Improvement: Literacy (1-6, max. 18) Study of special topics in literacy with a focus on practical, classroom topics, and application.

EDC&I 460 Early Literacy Instruction (3) Theory, research, and practice in early literacy acquisition including emergent literacy, phonemic awareness, word identification, comprehension, invented spelling, and writing. Emphasis on classroom instruction strategies for first and second language learners. Offered: A.

EDC&I 461 Materials for Teaching Reading: Children's and Young Adults' Literature (3) Designed to provide acquaintance with materials used in the teaching of reading. Trade books and materials from content areas are examined.

EDC&I 462 Reading Comprehension Instruction in Elementary and Secondary School (3) I&S Research-based practices for explicit teaching of reading comprehension of both fiction and content-area texts including issues of reading strategies, text difficulty, teacher modeling, guided reading, discussion, assessment, and adaptations for struggling students. Offered: W.

EDC&I 464 Educating Native-American Youth (3) Assists students in understanding the North American Indian child from cultural, socioeconomic, and psychological points of view. Provides opportunities for the student to apply knowledge and skills gained in other courses to prepare programs and learning aids relevant to the educational situation of the Indian child.

EDC&I 465 Social Studies Education: Elementary School Programs and Practices (3) Stresses curriculum patterns, instructional procedures, resource materials, and the selection of content in social studies. For elementary and middle school teachers and students in Teacher Education Program.

EDC&I 468 Workshop in Instructional Improvement: Social Studies (1-6, max. 15) Individual or group study projects on the improvement of instruction in social studies.

EDC&I 469 Teaching African American Students and Culture (3) I&S Examination of sociocultural and pedagogical factors that influence African American students' learning

styles, opportunities, and outcomes; exploration of ways to reform teaching techniques to better accommodate cultural styles and experiences to improve the educational achievement of African American students. Offered: A.

EDC&I 471 Science Education: Secondary School Programs and Practices (3) Survey of the status and potential role of science in education; trends and their implications for the teaching of both biological and physical sciences in the junior and senior high schools; representative curricula and related teaching procedures; the psychology of concept formation and problem solving; and organization of science programs.

EDC&I 472 Environmental Education for Teachers (3) Status, selected problems, and role of environmental education in program of elementary, middle, and junior high schools. Opportunity to examine and receive instruction in use of existing environmental education instructional materials. Instruction is in the spirit of inquiry/discovery.

EDC&I 473 Workshop in Instructional Improvement: Science (1-6, max. 20) Individual or group study projects on the improvement of instruction in science.

EDC&I 474 Multi-Ethnic Studies: Methods, Content, and Materials (3) I&S, DIV Designed to help preservice and in-service teachers identify content and materials and devise methods for implementing ethnic studies programs and for incorporating ethnic content into regular K-12 social studies, language arts, and humanities curricula. Special attention is given to teaching about American Indians, Mexican Americans, African Americans, Asian Americans, Puerto Rican Americans, and white ethnic groups.

EDC&I 479 Workshop in Instructional Improvement: Mathematics (1-6, max. 20) Individual or group study projects for the improvement of instruction in mathematics.

EDC&I 482 Educational Technology in Schooling (3) Introduction to the application of technologies (computers, telecommunications, interactive video) in schools. Designed primarily for pre- and in-service teachers, but of interest to anyone involved in technology in education.

EDC&I 485 Workshop in Instructional Improvement: Educational Communication and Technology (2-6, max. 20) Individual or group study projects on the improvement of instruction through use of educational communication and technology.

EDC&I 488 Educational Technology and Learning in Alternative Settings (3) How educational technology can be used to encourage learning in nonschool environments, such as museums, radio and television broadcasts, parks and recreation centers, and distance education programs. Students investigate one of these areas and prepare a project.

EDC&I 494 Workshop in Improvement of Curriculum (1-6, max. 20) Stresses the application of procedures for curriculum development, maintenance, and evaluation. Opportunities furnished to develop and perfect strategies for program development with occasions given to utilize the strategies in master plan and materials preparation for simulated or real school situations. Specific focus of workshop is determined by instructor or by arrangement with district.

EDC&I 495 Workshop in Improvement of Teaching: Selected Topics, Issues, or Problems (1-6, max. 20) Individual or group projects to help teachers adapt instruction to selected topics, issues, or problems and to identify the approaches and instructional resources that provide the soundest learning experiences.

EDC&I 496 Workshop in Instructional Improvement (2-6, max. 20) Individual or group study projects on the improvement of instruction with attention to designing instructional plans.

EDC&I 499 Undergraduate Research (*) Students developing studies under this rubric should be advised that a

report or a paper setting forth the results of their investigations should be regarded as a basic part of the program.

EDC&I 500 Field Study (1-10, max. 20) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisite: approved plan of study and permission of the instructor must be filed in the Office of Curriculum and Instruction in the College of Education.

EDC&I 503 Foundations of Curriculum and Instruction (4) Explores three critical elements of curriculum and instruction: the role of schooling in shaping students' opportunities to learn; content selection and structuring; and instruction.

EDC&I 505 Seminar in Curriculum and Instruction (1-5, max. 20) Seminar on advanced topics in curriculum and instruction. Critical examination of current research and practice. Content varies.

EDC&I 506 Special Topics in Research Methods (1-6, max. 20) Features a special topic in research design and execution such as a particular method of data collection, data analysis, data interpretation, honing a conceptual framework, or reviewing a literature. Prerequisite: EDLPS 525; EDLPS 526; EDPsy 490.

EDC&I 511 Current Issues in Technology and Education (3) Examines current genres of learning technology, novel approaches for integrating technology into curriculum and instruction, and recent theoretical perspectives that inform future work in educational technology.

EDC&I 512 Survey of Educational Technology Research (2-, max. 4) Critically examines active research projects in educational technology. Critiques of research practice.

EDC&I 520 Current Models in Early Childhood Education (3)

EDC&I 521 Problems and Issues in Early Childhood Education (3)

EDC&I 522 Practicum in the Training of Early Childhood Instructional Personnel (3)

EDC&I 524 Seminar in Teacher Education (3, max. 6) Focus on recent research, issues, and proposals for future development in teacher education, certification, and continuing professional growth. Alternate year offering focuses on either preservice or in-service issues.

EDC&I 525 Teacher Learning and School Change (3-4) Synthetic study of how researchers understand what enables teachers and schools to transform themselves. Examines how the fields of teacher learning and school change can inform each other in order to enrich research and development in professional and school learning.

EDC&I 526 Inside Teacher Communities (3-4) Examines different perspectives on professional communities, the roles of communities in teachers' learning, the challenges these communities face, and the possible ramifications of professional communities for students. Participants explore practical tools for studying, engaging in, and building professional learning communities in schools.

EDC&I 527 Pedagogies of Professional Education (3) Investigates the theories of learning, models of teaching, and contextual features that impact the design and enactment of a variety of pedagogies used in various professional education programs. Considers what particular pedagogies demand on the part of the professional educator.

EDC&I 528 Foundations of Language, Literacy, and Culture (4) Explores the nature of literacy by examining language acquisition and its impact on literacy; historical theories and research on reading and writing processes; and how recognition and appreciation of cultural variation has changed literacy instruction and curricula over the past decades. Draws on seminal historical and current research. Offered: A.

EDC&I 530 Approaches to Literacy Instruction (4) Designed to aid experienced teachers who possess background in the teaching of literacy, and presents a variety of

approaches and actual analysis of approaches. Prerequisite: teaching experience and a basic course in the teaching of reading.

EDC&I 531 Seminar: Critical Review of Literacy Materials (4) Students formulate and apply criteria for assessing materials, with emphasis on linguistic, cultural, and psychological factors; instruction effectiveness, interest level; and educational objectives. Prerequisite: teaching experience and one basic course in the teaching of reading.

EDC&I 532 Seminar in Literacy Research (4, max. 12) Focuses on understanding scholarly research including various research methodologies (e.g. descriptive, correlational, experimental, quasi-experimental, qualitative) and the research questions they are designed to address. Prerequisite: permission of instructor.

EDC&I 533 Seminar: Conducting Research in Reading (3, max. 6) Students design and conduct original research studies in the field of reading. Emphasis on research rationale, choice of productive research types, and reporting of research results and implications. Prerequisite: EDC&I 532.

EDC&I 534 Reading Comprehension Instruction K-12 (4) Focuses on research-based comprehension strategy instruction and text-based discussion of different types in K-12 classrooms. Examines various comprehension models, strategies for instruction, and assessments of comprehension. Prerequisite: one 400- or 500-level education curriculum and instruction course in reading or language arts or one graduate course in literature for children or young adults.

EDC&I 535 Doctoral Seminar in Literacy Research (1-2, max. 18) H. HEBARD, R. HUDSON, D. MCCUTCHEN, S. VALENCIA Discusses a literary topic of interest. Instruction and discussion focus on close reading of research from a variety of theoretical and research traditions. Prerequisite: EDC&I 534. Offered: AWSp.

EDC&I 536 Inquiry and Methods in Writing Instruction (3) Covers methods of assessment and teaching written composition, spelling, and handwriting to children and youth with, and without, disabilities. Particular attention is given to how to establish a strong writing program in elementary classrooms and how to teach writing strategies. Offered: jointly with EDSPE 528; Sp.

EDC&I 538 Discourse in the Mathematics Classroom (4) Examines ways of looking at discourse in mathematics classrooms as it relates to teaching practice and student learning. Includes reading both seminal and cutting-edge works in the study of discourse in the mathematics classroom, looking at multiple school contexts and across grade levels.

EDC&I 539 Students' Mathematical Thinking, Curriculum, and Pedagogy (4) Examines ways of understanding the development of students' mathematical thinking. Intensive study of classroom videos, mathematical curricula, and fieldwork enable students to study the relationship among students' mathematical thinking, curriculum, and pedagogy.

EDC&I 540 Immigrant Schooling (3) Educational needs of bilingual students: research findings, special programs, materials, and methodologies that bilingual-bicultural education can provide to meet those needs. Cultural combinations of bilingual populations in American culture; historical, social, and linguistic factors affecting their K-12 education.

EDC&I 542 Approaches to Assessing Second Language Students in K-12 Schools (3) Examines the multiple ways of assessing linguistically diverse students in K-12 schools, including standardized and alternative assessments of these students. Prerequisite: a course in ESL methods.

EDC&I 544 Immigration and Education: Immigrant Student Perspectives (3) Examines the multitude of factors that shape the immigrant student experience in U.S. schools. Takes an interdisciplinary perspective drawing on

research from sociology, anthropology, and education, to understand teaching and learning from the perspective of immigrant students. Prerequisite: EDC&I 540 or equivalent.

EDC&I 545 Multilingual Socialization and Development (3) Explores the research base examining second language acquisition, in and out of school contexts. Focuses on the home language practices of linguistically diverse students with the purpose of understanding how these processes influence school learning.

EDC&I 547 Sociolinguistics (3) The study of language in its social context and the study of social life through language. Explores issues in the field of sociolinguistics and sharpens tools to explore educational issues related to linguistic and cultural diversity. Prerequisite: EDC&I 540 or equivalent.

EDC&I 548 Methods in Teaching English as a Second Language (4) Prepares teachers to teach English as a second language to students who are acquiring English in K-12 settings. Emphasizes the scaffolding of the development of the four language domains; listening, speaking, reading, and writing. Prerequisite: EDC&I 540 and EDC&I 545 or permission of instructor.

EDC&I 549 Practicum in Teaching English Learners in Context (3) Provides experiences in the field observing and working with an experienced ELL-endorsed teacher. Consists of observation; planning, teaching, and reflecting on at least two weeks worth of ELL-focused instruction lessons; and continued development of the methodological competencies needed to teach ELL students through seminar sessions at the practicum site.

EDC&I 550 Educational Technology Research (3) Analysis, critique, and practical experience with research studies of all types (experimental, ethnographic, evaluation) concerning questions of interest to educational technologists. Prerequisite: EDC&I 480, a research methods course, or permission of instructor.

EDC&I 551 Introduction to Instructional Design (3) An experimental course in analyzing, designing, developing, and formatively evaluating instructional products using the Instructional Systems Design (ISD) Mode. Also, discussion of how to successfully implement an instructional product/program within an organization using change management principles. Business and industry training focus.

EDC&I 556 Elementary School Curriculum (4) Study of elementary school curriculum, its design, rationale, and delivery. Current trends and issues affecting elementary school curriculum analyzed.

EDC&I 558 Secondary School Curriculum (4) Systematic analysis of current curriculum practices, with particular emphasis on the social and historical forces affecting secondary-school curriculum.

EDC&I 559 Principles and Procedures of Curriculum Development (3) Intensive study of basic principles and procedures utilized in development of curricula. Participants have opportunities to apply such procedures in class activities. Attention given to curriculum foundations.

EDC&I 560 Social Studies Education Programs and Practices (3) Stresses powerful instructional strategies, materials, and a selection of content in social studies education. For experienced teachers and non-social studies students in the Teacher Education Program.

EDC&I 561 Instruction for Under-Achieving Readers (2-10, max. 20) Covers instructional techniques addressing the comprehension, decoding, vocabulary, and fluency needs for under-achieving readers as well as strategies for assessing students' reading abilities and planning for instruction.

EDC&I 562 Seminar in Reading and Language Arts: Secondary Emphasis (3) Study of recent research in listening, oral language, reading, and written language, emphasizing

psychological and interrelated aspects. Prerequisite: permission of instructor.

EDC&I 563 Current Issues in Literacy Education (1-3, max. 20) Discussion of problems and issues of current interest and importance in language arts education.

EDC&I 565 Seminar in Social Studies Education: Elementary Emphasis (3) Intensive study of the social studies curriculum, with particular emphasis on current literature and research. Prerequisite: EDC&I 465 or equivalent.

EDC&I 566 Seminar in Social Studies Education: Secondary Emphasis (3) Intensive study of the social studies curriculum, with particular emphasis on current literature and research.

EDC&I 567 Current Issues in Social Studies Education (1-3, max. 20) Discussion of problems and issues of current interest and importance in social studies education.

EDC&I 569 Educating Ethnic Minority Youths (4) Intensive analysis and review of the research and curricular programs related to the social, psychological, and political factors that influence the school experiences of ethnic minority youths. Special attention given to instructional and curricular programs for African American, American Indian, Mexican American, Puerto Rican American, and Asian American students. Prerequisite: graduate standing or permission of instructor.

EDC&I 570 Seminar in Science Education: Elementary Emphasis (3) Investigation of curriculum and instruction in science at elementary-school levels, with particular emphasis on current literature and research. Prerequisite: EDC&I 470 or equivalent.

EDC&I 571 Ambitious Learning by Design in Science Classrooms (4) Explores the frontiers of research in science learning environments that are both rigorous and equitable. Allows individuals to wrestle with the current problems of teaching and learning, including how to design opportunities for all students to participate in the discourses and practice of science. Prerequisite: EDC&I 471 or equivalent.

EDC&I 572 Current Issues in Science Education (1-5, max. 6) Discussion of topics and problems of current interest and importance in science education.

EDC&I 573 School Reform and Multicultural Education (3) Similarities and differences among the visions, goals, and strategies of proposals for school reform and multicultural education are analyzed; implications for practice in curriculum and instruction are deduced from these analyses. Prerequisite: one course in multicultural education or permission of instructor.

EDC&I 574 Race, Gender, and Knowledge Construction: Curriculum Considerations (3) Using historical and contemporary perspectives, considers ways in which knowledge related to race and gender has been and is constructed and the implications of ways in which knowledge is constructed for curriculum reform and teaching. Prerequisite: one course in ethnic studies, multicultural education, or women studies or permission of instructor.

EDC&I 575 Seminar in Mathematics Education: Elementary Emphasis (3) Investigation of curriculum and instruction in mathematics at the elementary-school level; review of research and preparation of proposals.

EDC&I 576 Seminar in Mathematics Education: Secondary Emphasis (3) Investigation of curriculum and instruction in mathematics at the secondary-school level; review of research and preparation of proposals.

EDC&I 577 Current Issues in Mathematics Education (1, max. 20) Discussion of problems and issues of current interest and importance in mathematics education.

EDC&I 580 Technology in Context (3) Focuses on development of appropriate methods and concepts for research on technology in schools, workplaces, and other naturalistic settings. Fieldwork exercises and reading exemplary studies from multiple disciplinary perspectives. Prerequisite: EDC&I 510, EDC&I 511.

EDC&I 581 Cognitive Systems Design (3) Covers the design of applied technology-based learning systems, informed by current views of learning, technology, and cognition. Emphasizes synthesizing students' knowledge of technology, learning and research in collaborative settings. Prerequisite: EDC&I 510, EDC&I 511, EDC&I 512, EDC&I 580, or permission of instructor.

EDC&I 582 Design Experimentation and Implementation in Context (3) Introduces theoretical, methodological, and practical issues involved with studying the designed use of learning technologies in real world settings. Focuses on engaging in empirical study of the designed system through partnerships involving education researchers, educators, and technologists. Prerequisite: EDC&I 510, EDC&I 511, EDC&I 512, EDC&I 580, EDC&I 581, or permission of instructor.

EDC&I 585 Technology and the Culture of Education (3) Social impact of technology on education in the United States and elsewhere: social, political, and cultural factors affecting educational communication and technology; roles and relationships among instructors and learners; appropriate technology in developing countries; technology's long-term influence on thought and values.

EDC&I 587 Design and Application of Interactive and Immersive Instructional Systems (3) Theoretical and empirical questions involved in design of interactive instructional systems using such technologies as virtual reality and CAI. Specific problems inherent in design of complex learning environments: immersion, control, structure, sequence of experiences, navigation, learner guidance. Educational uses of systems. Prerequisite: either EDC&I 583 or permission of instructor.

EDC&I 590 Seminar in Elementary Education (3) Exploration of the philosophy, history, purposes, curriculum, methods, and school organization of elementary education. Prerequisite: elementary-school teaching experience, EDC&I 556.

EDC&I 591 Seminar in Curriculum Research (3) Analysis of past and current empirical, historical, ethnographic research, and philosophical analysis of the curriculum field. Studies considered include research in curriculum development, the curriculum plan, contextual characteristics, and factors related to curriculum participants. Group and individual analyses focus on theory generation and practical applications of research. Prerequisite: EDC&I 559 or permission of instructor.

EDC&I 592 Seminar in Secondary Education (3) Research and study of secondary education. Primary focus on factors involving change in secondary-school curriculum and organization. Prerequisite: EDC&I 558.

EDC&I 593 Seminar in Curriculum: Theory and Practice (3) Investigation of curriculum theory and practice. Consideration is given to theoretical writings that address the relationships between various curricular variables. Theoretical positions are related to curricular practices and innovations. Prerequisite: EDC&I 559.

EDC&I 594 Seminar in Curriculum: Issues, Systems, Models (3) Emphasis on the current approaches to curriculum and curriculum innovation. Attention is given to major educational issues as they affect curricular activity. Prerequisite: EDC&I 559.

EDC&I 595 Seminar in Analysis of Teaching (3) Investigation of the ways in which classroom teaching has been analyzed from a variety of disciplinary perspectives. Focus on methods, findings, and implications of research on teaching. Prerequisite: teaching experience.

EDC&I 596 Seminar in Strategies of Instruction (3) Various instructional models applicable to all levels of schooling. Theoretical and philosophical bases for these instructional models are considered.

EDC&I 597 Curriculum Evaluation Seminar (3, max. 6) Focuses on the evaluators' roles, evaluation theory and models, and selected curricular evaluations. Examples are

drawn from the several disciplines commonly offered in the elementary and secondary schools. Students are expected to identify an evaluation problem and to develop an evaluation design that can be implemented as a practical solution to the problem. Prerequisite: EDC&I 559 and permission of instructor.

EDC&I 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Prerequisite: permission of instructor.

EDC&I 600 Independent Study or Research (*-) Prerequisite: permission of instructor.

EDC&I 601 Internship ([1-10]-, max. 20) Prerequisite: permission based on approval of proposal submitted during quarter preceding the internship. Credit/no-credit only.

Early Childhood and Family Studies

ECFS 200 Introduction to Early Childhood and Family Studies (3) I&S

Explores current practices, programs, and research in the field of early childhood and family studies. Topics include: child development, early childhood education, parenting and family support, mental health, poverty, and other risk factors. Offered: AW.

ECFS 301 Early Childhood Curriculum (5) I&S Focuses on developmental foundations and theoretical and researched-based models of early childhood curriculum. Studies approaches to designing, organizing, and implementing early learning programs. Studies curricular content for supporting children's learning and development in physical development; social and emotional development; approaches to learning; cognition; and language and early literacy. Offered: W.

ECFS 302 Survey of Infant and Children at Risk (5) I&S *Sandall* Provides a survey of risk factors that can affect early childhood development, including prenatal and neonatal factors, and social/societal influences. Emphasizes understanding how risk factors can impact social-emotional, physical, and cognitive growth. Includes research-based principles and approaches to child guidance. Offered: Sp.

ECFS 303 Service Learning and Research I (1-6, max. 6) Provides students with opportunities in community-based early childhood or family support settings. Includes a field experience and a once-a-week seminar. The seminar ties together research and practice demonstrating how research informs evidence-based decision-making in programs and services for young children and families. Offered: AWSp.

ECFS 304 Service Learning and Research II (1-6, max. 6) Provides students with opportunities in community-based early childhood or family support settings. Includes a field experience and a once-a-week seminar. The seminar ties together research and practice demonstrating how research informs evidence-based decision-making in programs and services for young children and families. Recommended: ECFS 303. Credit/no-credit only. Offered: WSp.

ECFS 305 Service Learning and Research III (1-6, max. 6) Provides students with opportunities in community-based early childhood or family support settings. Includes a field experience and a once-a-week seminar. The seminar ties together research and practice demonstrating how research informs evidence-based decision-making in programs and services for young children and families. Credit/no-credit only.

ECFS 311 Teaching from the Inside Out: Being a Resilient Educator (3) I&S Equips students with skills and strategies to optimize their effectiveness as early childhood educators. Students learn how to be as healthy as possible; possess the confidence to manage stressful situations; connect effectively with others; and focus on the positive aspects of life.

ECFS 312 Positive Behavioral Support in Early Childhood (3-5) Addresses the significance of social and emotional development in the early years. Discusses the adoption of models and evidence-based practice strategies that focus on promoting social-emotional development, providing support for children's appropriate behavior and preventing challenging behavior. Examines how adult resiliency and wellness relates to improved early care and teaching. Offered: AWSp.

ECFS 321 ENGAGING INTERACTIONS AND ENVIRONMENTS (3) I&S *Joseph* Increases participants' knowledge about the importance of high quality early childhood education, and the specific types of environments and interactions that support the development of children's social-emotional, cognitive, and early academic skills. Offered: AWSp.

ECFS 399 Current Issues and Trends in Early Childhood and Family Studies (3-5, max. 10) I&S Explores current theory, research, policy, and practice in early childhood and family studies. Offered: AWSp.

ECFS 400 Child Observation and Assessment (5) I&S Focuses on observation and methods used to study and understand young children in the context of families and society. Develops skills to understand children's behavior in learning environments. Examines approaches to and purposes for assessment and documentation of children's development and learning. Explores approaches to assessing early learning environments. Offered: A.

ECFS 401 Understanding Early Childhood and Family Studies Research (5) I&S, QSR Focuses on the kinds of knowledge, ways of knowing, and modes of inquiry relevant to early childhood and family studies. Through identifying and reviewing substantive research in their areas of interest, students locate ideas for inquiry within the research literature in early childhood and family studies. Offered: A.

ECFS 402 Social Policy and Young Children and Families (5) I&S Seeks to deepen understanding of contemporary social issues and problems that impact families and young children. Discusses legislation and other policies form a local, national, and global perspective. Explores the complex web of social, private, and governmental organization that impact families and young children. Offered: W.

ECFS 410 Laying the Foundation for Reading: Supporting Language and Literacy Development in Preschool (5) VLPA Increases knowledge about language and literacy developments between ages 3 to 5 and the ways in which these developments are critical precursors to the emergence of and success with formal reading skills, and to build participants' use of evidence-based language and literacy practices within the preschool classroom.

ECFS 411 Fostering the Development of Young Children's Mathematics and Science Knowledge and Skills (5) I&S/NW Increases knowledge about cognitive developments between ages 3 to 5 and ways in which these developments are critical precursors to emergence and success with later content and skills in mathematics and science. Learn to design and implement effective instructional practices and interactions with children that support their learning and development.

ECFS 412 Learning with Digital Media in Early Childhood (3) Addresses how young children learn basic literacy and mathematics skills, and develop an interest in science from engaging with digital media. Examines how teachers of young children need to be prepared in instructional practices that can enhance learning from media in a developmentally appropriate way.

ECFS 454 Advanced Service Learning and Research I (3) Sandall First of a three-quarter sequence leading to the completion and presentation of the senior project during spring quarter. Provides advanced opportunities to integrate theory and practice in community-based early childhood or family support programs and research settings.

Includes a weekly seminar to reflect on and expand on applied experiences. Offered: A.

ECFS 455 Advanced Service Learning and Research II (3) Sandall Second of a three-quarter sequence leading to the completion and presentation of the senior project during spring quarter. Provides advanced opportunities to integrate theory and practice in community-based early childhood or family support programs and research settings. Includes a weekly seminar to reflect on and expand on applied experiences. Offered: W.

ECFS 456 Senior Project (3) Third of a three-quarter sequence leading to the completion and presentation of the senior project during the final quarter in the major. Provides advanced opportunities to integrate theory and practice in community-based learning and research experience continues during the quarter. Offered: WSp.

ECFS 480 Individualizing Teaching and Learning (5) I&S *Joseph* Introduction to effective practices that support the development of young children. Focuses on evidence-based, individualized instructional methods and strategies used in teaching and facilitation the development of young children in response to both their strengths and needs. Offered: AWSp.

ECFS 495 Advanced Seminar in Early Childhood and Family Studies (3, max. 9) Addresses current topics and critical issues in the field of early childhood and family studies in an advanced seminar format. Offered: AWSp.

ECFS 499 Undergraduate Research (*) Students conducting this research produce a report or a paper setting forth the results of their investigation which should be regarded as a basic part of the independent study plan. Credit/no-credit only. Offered: AWSp.

Educational Leadership and Policy Studies

EDLPS 444 Constitution and American Public Education (3-6, max. 6) I&S Examines the relationships between the Constitution of the United States and the American system of public education, excluding higher education, in areas of constitutional freedom and legal controls, racial desegregation, and equal educational opportunity, including equal financing of the public schools. Credit/no-credit only. Offered: jointly with LAW 444.

EDLPS 458 Education in the Forming of American Society (5) I&S *Beadie* Covers the development of American education in cultural context; history of schools and non-school learning from colonial period to the twentieth-century; apprenticeship and learning societies; community and market-based schooling; liberal learning and the rise of the university; and schools as agencies of economic and political integration and mediators of culture and social status. Offered: jointly with HSTAA 458.

EDLPS 459 History of American Education Since 1865 (3) I&S Development of American education in cultural context: progressive education, recent criticism, continuing issues and trends. Offered: jointly with HSTAA 459.

EDLPS 479 Crucial Issues in Education (3) Selected educational issues, policies, and contexts. Evolution of the American education enterprise, legal issues, professionalism, finance, and other vital educational concerns.

EDLPS 496 Workshop: Education Programs and Problems (1-6, max. 10) Study of such topics as planning, development, supervision, organization, operation, or evaluation of current or emerging programs or problems in education.

EDLPS 499 Undergraduate Research (*) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program.

EDLPS 501 Introduction: Leadership Beyond the Classroom (3-6, max. 6) First course in principal certification program; explores Washington state laws, legal principles, context of public schools, multicultural issues, changing

population. Essential skills of leadership: communication, human relations, strategies for shared decision making, and dealing with conflict. (Open only to students admitted to the Danforth Principal/Program Administrator Preparation Program.)

EDLPS 502 Leadership Core ([3-6]-, max. 6) Topics include moral dimensions of leadership; modes of inquiry; organizational theory and change; instructional leadership and supervision; school-centered inquiry and decision-making; policy, planning, and program evaluation; issues on diversity and multicultural education; American and Washington State school law; school finance and resource allocation; school-community relations. Instruction occurs in units and seminar throughout the academic year. Prerequisite: admission to Danforth Principal/Program Administrator Preparation Program.

EDLPS 503 Leadership Core (-[3-6]-, max. 6) Topics include moral dimensions of leadership; modes of inquiry; organizational theory and change; instructional leadership and supervision; school-centered inquiry and decision-making; policy, planning, and program evaluation; issues on diversity and multicultural education; American and Washington State school law; school finance and resource allocation; school-community relations. Instruction occurs in units and seminar throughout the academic year. Prerequisite: admission to Danforth Principal/Program Administrator Preparation Program.

EDLPS 504 Leadership Core (-[3-6], max. 6) Topics include moral dimensions of leadership; modes of inquiry; organizational theory and change; instructional leadership and supervision; school-centered inquiry and decision-making; policy, planning, and program evaluation; issues on diversity and multicultural education; American and Washington State school law; school finance and resource allocation; school-community relations. Instruction occurs in units and seminar throughout the academic year. Prerequisite: admission to Danforth Principal/Program Administrator Preparation Program.

EDLPS 505 Transition to Leadership (3-6, max. 6) Completion seminar for Danforth Program Master's students. Focuses on leadership models and transition to a leadership role, including opening a school or program and dealing with student/school crises. Prerequisite: admission to Danforth Principal/Program Administrator Program.

EDLPS 510 School Finance (3) M. PLECKI Financial practices and problems in districts and schools considered, including state and federal support plans, school plant planning, school business management, resource allocation, and budgeting and educational accountability.

EDLPS 511 School-Community Relations (3) Examines the dynamics of the interface between the public schools and the community. Special attention is given to the findings of research in relation to school-community power, types, and organizational influences.

EDLPS 513 Seminar in Instructional Development and Supervision (3) Theory of the process of supervising instructionally effective school personnel, including an analysis of the techniques of supervision, theory of leadership and group process, interpersonal relations, and evaluation of teacher effectiveness.

EDLPS 516 Special Education and the Law (3) Brown Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis upon procedural and substantive rights of children with disabling conditions. Offered: jointly with EDSPE 504.

EDLPS 519 Special Topics in Educational Leadership ([0-10]-, max. 20) Readings, lectures, and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues of particular concern to K-12 administrators and other educators in leadership roles in districts and schools. Topics vary.

EDLPS 520 Education as a Moral Endeavor (3) J. WILLIAMSON-LOTT An exploration of fundamental questions that have faced educational leaders in the past and most likely will continue to face them in the future. Foundational studies in history, philosophy, and sociology provide the basis for discussion and writing about these fundamental questions.

EDLPS 521 Philosophy of Education (3) D. KERDEMAN Philosophy of education considered as a study of the conceptual basis for educational policy and practice. Emphasis on relationships between enduring educational problems and fundamental philosophic issues; concepts that feature centrally in educational discourse; and conceptual analysis as a means for clarifying decisions regarding educational policy and practice.

EDLPS 522 Contemporary Philosophies of Education (3) D. KERDEMAN Intensive study of the writings of selected contemporary philosophers of education. Offered: WS.

EDLPS 524 Seminar in Philosophy of Education (3, max. 6) D. KERDEMAN Philosophical examination of ways in which education might be studied. Uses and limits of conventional scientific approaches in education inquiry. Consideration of alternatives. Offered: WS.

EDLPS 525 Educational Inquiry (3) D. KERDEMAN General survey of epistemological issues underlying the several schools of thought or families of inquiry. Overview of various methods used in conduct of educational inquiry, examples of ways those methods are typically used, and exploration of strengths and weaknesses of those methods. Discussion throughout is in terms of assumptions regarding the nature of knowledge and purposes of inquiry. Must be taken in sequence. Prerequisite: doctoral status in education. Credit/no-credit only. Offered: A.

EDLPS 526 Educational Inquiry (3) D. KERDEMAN General survey of epistemological issues underlying the several schools of thought or families of inquiry. Overview of various methods used in conduct of educational inquiry, examples of ways those methods are typically used, and exploration of strengths and weaknesses of those methods. Discussion throughout is in terms of assumptions regarding the nature of knowledge and purposes of inquiry. Must be taken in sequence. Prerequisite: doctoral status in education. Credit/no-credit only. Offered: W.

EDLPS 528 Current Issues in Graduate Education (3) M. NERAD Examines recurrent forces impacting U.S. graduate education including but not limited to research funding, intra-institutional pressure, student unions, and accountability. Analyzes the current literature from different perspectives: historical, psychological, sociological, economic, and educational to illuminate the complexities of graduate education.

EDLPS 530 History of Education (3) N. BEADIE Historical survey of education. Emphasis on relationship between idea and practice. Topics include education and colonialism, formation of state school systems, progressive education, equal educational opportunity, changes in textbooks and curricula, education and social structure, and education in the history of cultures.

EDLPS 531 History of American Higher Education (3) Examination of the historical development of the American higher education enterprise, including pre-colonial origins. Includes attention to the colonial colleges, the rise of new institutions in the nineteenth century, and the further development of American colleges and universities in the twentieth century. Leaders in these developments are identified.

EDLPS 535 Historical Inquiry in Education Research (3, max. 6) N. BEADIE Methods and critique of historical research in education. Examination of landmark works in education history and historiography. Hands-on experience framing historical questions, finding historical sources, using historical evidence, substantiating historical claims, and addressing issues in the history of education.

EDLPS 536 Historical Problems in the Transfer of Culture (4) N. BEADIE Provides an analysis and interpretation of the history of education in its broadest sense: the transfer of culture across generations. Pays special attention to issues of cultural conflict, cultural change, and curricula as representations of culture. Examines problems of evidence and interpretation in exemplary historical works.

EDLPS 537 Perennial Debates in the History of Education (3) J. WILLIAMSON-LOTT Analysis of the historical underpinnings of debates about educational issues.

EDLPS 538 Education for Liberation (3) J. WILLIAMSON-LOTT Analyses of the different educational histories of American ethnic, social, gender, and religious groups and how they relate their own definitions of "education for liberation."

EDLPS 539 History of Urban Education (4) Beadie Examines the complex ways that race, class, real estate interests, the quest for social mobility, and a range of government policies have interacted to structure the social and spatial distribution of educational opportunity in cities historically. Includes a comparative historical analysis of urban case studies, including Seattle.

EDLPS 540 Sociology of Education (3) Examination of education and educational institutions by using the major conceptual tools of sociology. Emphasis on sociological thought and findings that have particular bearing on the understandings and judgments of educators.

EDLPS 542 Seminar in Educational Sociology (3) Application of sociological principles to school problems; individual problems and investigations. For teachers, administrators, and those using educational sociology as a field for advanced degrees.

EDLPS 544 Comparative Education: Introduction to Concepts and Methods (3) Introduction to research methods used in comparative education studies. Considers ways to study familiar and unfamiliar contexts, identifies the common pitfalls of international comparisons. Reviews ethnomethodological tools of interview construction, cross-cultural observation strategies, documentary analysis. Education policy and practice is primary focus; useful for comparing other public policy issues internationally.

EDLPS 545 Knowledge and Data in Relation to Action ([0/3]-, max. 3) Introduces Leadership for Learning (L4L) students to systematic inquiry - to fundamental ideas about knowing and knowledge, data and evidence, and to the applications of these ideas in settings that invite leadership action to address educational issues. Prerequisite: admission to the Leadership Learning program.

EDLPS 546 Leadership Inquiry I: The Design of Research on Local Problems of Practice ([0/3]-, max. 3) Examines evaluation design, action research, critical inquiry, and mixed method research. Equips L4L students to recognize and create viable, rigorous designs for action-oriented research into local problems of practice. Prerequisite: admission to the Leadership Learning program.

EDLPS 547 Leadership Inquiry II: Developing Useful Quantitative and Qualitative Evidence ([0/3]-, max. 3) Helps students, in the context of action-oriented research, develop data collection tools, produce high-quality quantitative and qualitative data, and construct evidence for claims the investigator wishes to make. Prerequisite: admission to the Leadership Learning program.

EDLPS 548 Leadership Inquiry III: Refining the Design and Analysis of Research that Informs Practice ([0/3]-, max. 3) Teaches how to critically evaluate and improve research designs so that they are internally consistent, fully developed, and well-anchored to both substantive and methodological literatures. Builds largely around the students' own emerging dissertation designs. Prerequisite: admission to the Leadership Learning program.

EDLPS 549 Special Topics in Educational Studies (1-6, max. 20) Readings, lectures, and discussions pertaining to significant and enduring ideas in the philosophy, history

and sociology of education. Specific topics are critically examined in light of contemporary problems in education. Topics vary.

EDLPS 550 The Dynamics of Educational Organizations (3) Exploration of the literature in organizational theory and leadership, the assumptions that underlie the development of various approaches to organizational theory and how these approaches are applied, and an acquaintance with different conceptual frames that can be used to determine how to improve and change organizations. Credit/no-credit only.

EDLPS 551 Organizational Theory and Educational Change (4) Introduces students to the interdisciplinary research literature on organizations and its applicability to the research and practice of educational organizations. Engages students in understanding and critiquing organizational research and using it to develop conceptual frameworks to guide educational research and practice.

EDLPS 552 Organizational Change in Education (3) Change and innovation in educational organizations. Theoretical approaches include sociopsychological, rational planning, political perspectives, and those associated with notion of organized anarchies. Specific topics related to change and innovation (e.g., roles of beliefs, symbols and norms, diffusion of innovations, and research issues).

EDLPS 554 Foundations I: Leading for Learning in Complex Educational Systems ([0/3]-, max. 3) Explores (1) the conceptions of educational leadership as it manifests itself and is exercised in large-scale education systems (districts, regional entities, states); and (2) the possible connections between leadership and learning. Prerequisite: admission to the Leadership Learning program. Credit/no-credit only.

EDLPS 555 Foundations II: Moral and Historical Contexts for the Leadership of Complex Educational Systems ([2-4]-, max. 4) Locates system-level educational leadership in a context of values, moral principles, and historical events and trends. Connects leadership to principles of social justice and enduring dilemmas in public education within a democratic society. Prerequisite: admission to the Leadership Learning program. Credit/no-credit only.

EDLPS 556 Foundations III: The Dynamics of Organizations, Policy, and Systems Change ([2-6]-, max. 6) Considers the nature and dynamics of organizations within large educational systems. Draws on theories concerning organizations, politics, administration, systems, and innovation. Explores how organizations are designed and function, how policy works, and how systems change, adapt, and learn. Prerequisite: admission to the Leadership Learning program.

EDLPS 557 Foundations IV: Fiscal and Legal Contexts for Leadership of Complex Educational Systems ([2-5]-, max. 5) Considers two major challenges facing leaders of complex educational systems: (1) securing and allocating resources (especially funds, but also time and expertise); and (2) conforming to the framework of legal principles and precedents that govern public education. Prerequisite: admission to the Leadership Learning program.

EDLPS 558 Introduction to Qualitative Research Methods in Education (3) A. ELFERS Provides a basic overview of qualitative research methods. Covers the purpose, design, and conduct of qualitative research.

EDLPS 560 Perspectives on Policy and Policy Making in Education (3) Introduces a variety of theoretical perspectives that can be used to analyze policy content, processes and outcomes. Includes a consideration of the power and limits of policy and a discussion of the many ways people in different positions in organizations can influence policy. Credit/no-credit only.

EDLPS 561 Education Policies and Leadership in Political Context (3) Systematic consideration of the structure and function of educational policies and problems of research in political context.

EDLPS 562 American School Law (3) Examination of persistent legal issues, including an analysis of how these issues are manifest in public policy debates.

EDLPS 563 Education, The Workforce, and Public Policy (3, max. 6) W. ZUMETA Examination of policy issues involving education, training, the economy, and the development of the nation's human resources. Relationship between education, training, and work, underutilized workers, race and gender discrimination issues, and the role of education and training in economic development. Offered: jointly with PB AF 571.

EDLPS 564 Seminar in Economics of Education (3) M. PLECKI Current problems in school finance, including costs, ability to support schools, and financial implications of educational principles. The economics of public education. Problems of federal, state, and local school support. Financing capital outlay, research, and public relations.

EDLPS 565 Power and Politics in Organizational Leadership and Decision Making (3) Focuses on conceptual frameworks that can be used to analyze power-influence processes in complex organizations and research methods that are well-suited to the study of these processes. Opportunities to design studies of power relations and political processes are provided.

EDLPS 566 Education Policy Serving Disenfranchised Groups (3) Examines programs and policies aimed at ameliorating conditions that face disenfranchised groups in contemporary K-12 schooling. Seminar members critically analyze the assumptions, design, and likely impact of these programs and policies on institutions and individuals. Designed for advanced doctoral students. Others admitted with permission of instructor.

EDLPS 567 Education Policy and the Improvement of Teaching and Learning (3) Examines connections between policies and classroom practice, in P-12 and higher education settings. Of particular concern is the capacity of policy to improve the quality of curriculum and instruction. Students design and critique policies, drawing on research and feedback from policymakers.

EDLPS 568 Policy Evaluation in Education (3) Examination of methods for evaluating educational policies across the educational continuum. Students design and conduct a policy evaluation which draws on the policy evaluation literature. Examination of the uses of policy evaluation information in shaping organization-decision making is also included.

EDLPS 569 Issues in P-12 School Reform (3-5, max. 20) Copland, Knapp Offers rigorous ways to explore the meaning and action implications of contemporary reform movements in the P-12 public school system. Examines a different topic each quarter concerning reform at school, district, state, or federal levels through readings, discussion, projects, and analytical writing assignments. Offered: AWSp.

EDLPS 571 Instructional Renewal and the Achievement Gap ([0/3]-, max. 3) Examines the meaning of the performance gap between relatively advantaged and disadvantaged students in contemporary American schools and school districts, and the possibilities for reducing and closing it, especially within classroom instruction. Prerequisite: admission to the Leadership Learning program.

EDLPS 572 Teaching, Learning, and Instructional Renewal in the Context of Learner Differences ([2-5]-, max. 5) Examines the nature of learning and learner differences, and how educators can work productively with these differences, in relation to particular subjects (literacy, mathematics), diversity (language, culture, disability), assessment, and instructional technology. Prerequisite: admission to the Leadership Learning program. Credit/no-credit only.

EDLPS 573 Professional Learning and Instructional Renewal (2-4, max. 4) Investigates professional learning and how to support it, based on cognitive research, sociocultural theory, and scholarship on teacher education (pre-

service and inservice). Offers system-level leaders ways to address the quality of teaching and learning in classrooms. Prerequisite: admission to the Leadership Learning program.

EDLPS 574 Mixed Methods in Educational Research (3) M. PLECKI Introduces the principles of mixed methods research design, whereby qualitative and quantitative components inform each other in sampling, data collection, and data analysis. Explores design issues and solutions primarily in the context of education policy research. Offered: W.

EDLPS 575 Education Policy Implementation (4) M. HONIG Analyzes influences on implementation outcomes. Focuses on how skilled use of theoretical frameworks can help reveal relationships between policy and practice and evidence-based decisions that may improve implementation. Credit/no-credit only. Offered: Sp.

EDLPS 579 Special Topics in Organizational and Policy Analysis ([0-6]-, max. 20) Readings, lectures, and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues related to the analysis of educational organizations, policies, and policy making. Topics vary.

EDLPS 580 The American College and University (4) Introduction to contemporary United States higher education, with special emphasis on emerging trends, roles of the several kinds of institutions, the composition and character of student bodies and faculty, and the state coordination of colleges and universities.

EDLPS 581 Principles and Practices of Adult and Continuing Education (3) History and development of adult and continuing education in the United States: component parts of the field; issues, theory, and research; program planning for adults; professionalization of the field.

EDLPS 582 Seminar in the History and the Organization of Higher Education (3) Advanced seminar in the history and organization of higher education.

EDLPS 583 Higher Education and the Law (3) Legal implications of university operations and an explanation of the legal and constitutional rights of students, faculty, and staff within the university. Special attention given to faculty employment and termination decisions; student protections, including due process; and university liabilities.

EDLPS 584 Academic Governance and Collective Bargaining in Higher Education (3) Explores the concept and operation of collective bargaining in higher education: its origin; the reasons for its growing popularity as a governance mechanism; the legal framework within which it operates; the rights, powers, and duties subsumed under its operation; and its relationship to the traditional form of faculty governance mechanisms.

EDLPS 585 Resource Allocation in Higher Education (3) After attention to the basic tools of economic analysis, focus is on application of those tools to specific topics in higher education (e.g., access, budgeting, finance and policies, and funding alternatives).

EDLPS 586 Navigating the P-20 Pipeline (3) J. MYERS TWITCHELL Introduction to programs, policies, and challenges related to supporting students as they transition from K-12 schools to institutions of higher education. Exploration of localized/region-based efforts to decrease the post-secondary opportunity gap, including funding models, collaborations and networks, and data and measurement strategies to increase rates of post-secondary attainment. Offered: A.

EDLPS 587 Seminar in Teaching and Learning in Higher Education (3, max. 9) Theory and practice of instruction and learning in higher education.

EDLPS 588 Seminar in Administration of Community Colleges (3) For students preparing for administrative positions in community colleges. Principles and practices in organization and administration of community colleges.

EDLPS 589 The Community College (3) Intensive study of the community college—its history and present and future status. Curriculum, instruction, financial, and governance issues are also discussed.

EDLPS 590 Student Populations and Experiences in Higher Education (3) Examines foundational literature dealing with students in higher education. Primary focus is on how students change during college, how they make choices and decisions, what roles institutional climate and structure play in the students' experiences, and what impact college has on students.

EDLPS 591 Higher Education and Public Policy (3) Covers public policy processes affecting higher education. Issues examined vary, but typically include fiscal context of higher education policy, access, equity, distance learning, and accountability policies.

EDLPS 592 Higher Education Equity, Reform, and Policy (3) Develops the critical and analytical lens that students apply to public policy issues as they directly relate to higher education in the United States.

EDLPS 593 Assessment and Evaluation in Higher Education (3) Covers the key components of evaluation design and implementation, particularly what researchers and practitioners define as good assessment and evaluation approaches. Develops competencies in planning assessment and evaluation strategies using these approaches.

EDLPS 594 GLOBALIZATION & INTERNATIONALIZATION OF HIGHER EDU (3) Explores topics of globalization and international higher education to examine the impacts of a changing world on higher education issues.

EDLPS 596 Secondary Data Analysis (3-5) J. LOTT Introduces the conceptual and practical issues involved in conducting educational research using existing sources of data, commonly known as secondary data analysis. Covers several fundamental concepts in order to become an informed and competent researcher who uses secondary data. Prerequisite: basic understanding of educational statistics.

EDLPS 597 Advanced Secondary Data Analysis (3) J. LOTT Applied methods. Introduces the conceptual and practical issues involved in conducting educational research using existing sources of data, commonly known as secondary data analysis. Covers several fundamental concepts in order to become an informed and competent researcher who uses secondary data. Prerequisite: EDLPS 596.

EDLPS 598 Special Topics in Higher Education (1-6, max. 20) Readings, lectures, and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues related to education in community colleges, four-year colleges, and universities. Topics vary.

EDLPS 599 Independent Studies in Education (1-10, max. 20) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed, and which with permission of the instructor, must be filed with the Office of Leadership and Policy Studies in the College of Education. Prerequisite: permission of instructor.

EDLPS 600 Independent Study or Research (*-) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed, and which with permission of the instructor, must be filed with the Office of Leadership and Policy Studies in the College of Education. Prerequisite: permission of instructor. Credit/no-credit only.

EDLPS 601 Internship ([1-4]-, max. 20) Name of faculty member responsible for supervising the student should be indicated on program of studies. Prerequisite: permission of Supervisory Committee Chairperson or Graduate Program Adviser. Credit/no-credit only.

Educational Psychology

EDPSY 304 Learning and Teaching in our Changing World: Insights from Experience and Research (5) I&S Human learning in the educational setting. Cognition, development, learning, motivation, affective processes, and socialization. Emphasis on skills in influencing classroom learning and discipline. Offered: A.

EDPSY 402 Child Development and Learning (5) I&S Uses readings, discussions, naturalistic observations, and "virtual" children to understand the different ways children develop - physically, cognitively, social-emotionally, in language and literacy, and in approaches to learning - during early childhood, the interplay between each of these domains and the environmental context, and the theories about the developmental mechanisms underlying these changes.

EDPSY 405 Adolescents and Media: Challenges in the 21st Century Classroom (3) I&S Encourages students to consider classrooms of the future while reflecting on their own classroom experiences. Examines adolescents' informal use of media today, some of the ways media can affect young people, and the implications of these effects in a classroom setting.

EDPSY 420 Bullies, Victims, and Bystanders: Social Power in School and Workplace (4) I&S, DIV Examines theories and research on bullying, revenge, and bystander behavior in classrooms and workplaces. Identifies the social-cognitive, emotional, and ethical correlates of bullying, and social processes that empower or deter it. Presents and evaluates practical interventions at the organization, peer group, and individual level. Prerequisite: either EDPSY 402, PSYCH 206, PSYCH 245, PSYCH 306, or PSYCH 345. Offered: W.

EDPSY 425 BULLIES, VICTIMS, AND BYSTANDERS: SOCIAL POWER IN (4) I&S

EDPSY 431 Strategies for Classroom Research and Evaluation (5) Techniques and strategies for the design and implementation of studies of classroom instruction. Directed toward classroom teachers as consumers of instructional research and as evaluators in their own classrooms. Credit/no-credit only.

EDPSY 447 Principles of Guidance (3) Study of guidance programs in elementary and secondary schools. Attention is given to the roles of specialists with emphasis on the role of the classroom teacher in school guidance programs. Designed for teachers, administrators, and prospective teachers.

EDPSY 449 Laboratory in Educational Psychology (2-6, max. 6) Special studies for counselors, teachers, administrators, and others concerned with student personnel and psychological services in schools and colleges. Focuses on special topics that have either local or contemporary significance.

EDPSY 471 Educational Neuropsychology (5) NW Berninger Covers brain systems underlying normal development and academic learning: sensory and motor, language, cognitive, social emotional, and executive-functions for self-regulation alone and interaction with the physical and social worlds in and out of school. Recommended: prior course on learning.

EDPSY 472 Teaching Reading, Writing, and Math with Brain in Mind (5) I&S Berninger Students learn evidence-based guiding principles for designing and implementing instruction with brain in mind (developing mental worlds through other -regulated and self-regulated interactions with external physical and social environments that are multi-culturally sensitive and support learning that creates reading, writing, and math brains). Prerequisite: EDPSY 471. Offered: Sp.

EDPSY 490 Basic Educational Statistics (3) NW, QSR Measures of central tendency and variability, point and interval

estimation, linear correlation, hypothesis testing. Offered: AWSpS.

EDPSY 491 Intermediate Educational Statistics (3) QSR Abbott, Sanders Covers intermediate-level concepts in analysis of variance and regression methods. Emphasizes understanding appropriate use of methods, conducting analyses using software, and correctly interpreting statistical results. Includes SPSS/PASW software instruction. Prerequisite: EDPSY 490. Offered: W.

EDPSY 495 Introduction to Educational Measurement (3) QSR Practical understanding of test reliability, validity, and derived scores as they apply to external educational assessments; concepts of criterion and norm-referenced testing; review of group administered norm-referenced and criterion-referenced tests and/or testing programs; test interpretation; issues and ethics in large scale assessment. Prerequisite: EDPSY 490. Offered: Sp.

EDPSY 499 Undergraduate Research (*) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Offered: AWSpS.

EDPSY 500 Field Study I (1, max. 3) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisite: approved plan of study and permission of the instructor must be filed in the Office of Educational Psychology in the College of Education. Offered: AWSpS.

EDPSY 501 Human Learning and Educational Practice (3) Systematic examination of current research about human learning in educational settings, including the study of behavioral, information processing, social construction, and the developmental perspectives on learning. Offered: AWSpS.

EDPSY 502 Developmental Foundations of Early Learning (3) Perceptual-motor, language, and overall cognitive development in children from birth through primary-school age. Emphasis on Piagetian and Vygotskian approaches to development with a special focus on the connections between learning and development. Field-based course projects may be required. Prerequisite: EDPSY 501 or permission. Offered: Sp.

EDPSY 503 Theories of Intelligence (3) Bang Reading and discussion of theoretical and research papers from the extensive literature on Piagetian, psychometric, and information processing conceptions of intelligence. A historical approach to the topic is followed by analysis of current writings on intelligence and its measurement. Prerequisite: EDPSY 501 and graduate status in education or psychology. Credit/no-credit only.

EDPSY 505 Field Study II (1, max. 3) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisite: second year standing in the School Psychology program. Credit/no-credit only. Offered: AWSpS.

EDPSY 506 Instructional Theory (3) Sources, current state, and utility of prescriptive instructional theories with emphasis upon theories having a potential for guiding the design of instruction. Prerequisite: EDPSY 501 or equivalent.

EDPSY 507 Reading, Writing, and Arithmetic: Educational Assessment and Consultation (5) Cook Students administer and interpret tests of reading, writing, arithmetic, and related developmental skills; integrate test, observational, interview, and portfolio information in staffings and written reports; and consult with teachers regarding educational interventions. Prerequisite: graduate standing in the school psychology specialization and permission of instructor. Offered: A.

EDPSY 508 Advanced Practicum in Supervision (2-6, max. 20) Bohlander, Grady Practicum in supervising field study students in counseling, group counseling & diagnostic interventions. Prerequisite: admission in the School Psychology program. Offered: AWSpS.

EDPSY 509 Educational Issues in Human Development (5) Human development theories and models. Educational implications of theory, methodology, and application. Current research complements the historical antecedents of current practice. Age range covered varies as function of current issues in professional literature. Prerequisite: 15 credits in educational psychology or psychology.

EDPSY 510 Cognition in the Context of the School Curriculum (3) *Bell, McCutchen* Contemporary issues and trends in human learning, with a focus on reasoning within subject-matter areas such as mathematics, history, and science. Prerequisite: EDPSY 501 or equivalent.

EDPSY 511 Seminar in Applied Educational Psychology (1, max. 6) Designed for graduate students in educational psychology. Applications of theoretical constructs to particular problems encountered in school counseling, practice.

EDPSY 512 Classroom Assessment Strategies (3) Development and evaluation of traditional, observational, essay, performance-based, portfolio assessments and grading models as they are used in classroom assessment; some review of current research on classroom-based assessment; classroom assessment ethics. Prerequisite: EDPSY 490 or equivalent.

EDPSY 513 Instrument Development (3) Instrument development techniques including construct development, test and item specifications, item writing, planning for reliability and validity studies; ethics in test administration and interpretation. Intended for doctoral or master's students to develop instruments for their own research. Prerequisite: EDPSY 490 or equivalent.

EDPSY 518 Assessment and Diagnosis of Reading Disabilities (3) *Valencia* Techniques for individual assessment of students with reading difficulties (K-12) including formal assessment using standard assessment tools and informal diagnostic teaching. Appropriate for classroom teachers, reading specialists, and school psychologists. Includes conducting and analyzing case studies. Prerequisite: EDC&I 460, EDC&I 462, other reading courses, or permission of instructor.

EDPSY 519 Vulnerable Children and Families in Comparative Perspective: Psychosocial Development Processes (3) *Jegatheesan* Research and theory examining the effects of disability, poverty, trauma, and immigration and its impact on child development across cultures, effective interventions in educational and non-educational settings, and the consequences of critical issues in the context of psychosocial and development processes in different cultural and international contexts. Offered: Sp.

EDPSY 520 Psychology of Reading (3) *McCutchen* Reviews current empirical research on cognitive processes in reading, including word and sub-word processes, syntax and comprehension, reading and perception, word recognition, concept development, and meaning in reading, psychology of reading interests, and skills. Prerequisite: EDPSY 501 or equivalent. Credit/no-credit only. Offered: WS.

EDPSY 521 Psychology of Writing (3) *McCutchen* Examines writing as a cognitive process and reviews current empirical research on writing, emphasizing primarily studies from a psychological perspective. Explores both developmental differences and individual differences in writing skills, together with instructional implications. Prerequisite: EDPSY 501 or equivalent. Credit/no-credit only. Offered: WS.

EDPSY 522 Teaching Reading, Writing, and Math with Brain in Mind (5) *Berninger* Students learn evidence-based guiding principles for designing and implementing instruction with brain in mind (developing mental worlds through other-regulated and self-regulated interactions with external physical and social environments that are multi-culturally sensitive and support learning that creates reading, writing, and math brains). Prerequisite: EDPSY 471, EDPSY 577, or permission of instructor. Offered: Sp.

EDPSY 523 Foundations of Ethnographic Research (3) *Jegatheesan* Exploration of the main components of

ethnographic endeavor. Students conduct ethnographic research including field entry, observing, listening, data analysis, and writing; typical issues and quandaries encountered in carrying fieldwork in a variety of settings, ethical issues, comprehension, intrusion, and access, experience and empathy, and power dynamics, and predicament.

EDPSY 524 Problem Solving and Critical Thinking in Education (3) Study of the classic and contemporary research literature concerned with human problem solving and critical thinking with emphasis upon applications to educational practice and further research. Prerequisite: EDPSY 501 or equivalent.

EDPSY 525 Creativity and Education (3) Study of the classic and contemporary research literature about creativity with emphasis upon applications to educational practice, evaluation of strategies to promote creativity in the schools, and further research. Prerequisite: EDPSY 501 or equivalent.

EDPSY 526 Seminar on Metacognition (3) *Nolan* Students read and discuss theoretical and research papers from the extensive literature on metacognition. Focuses on defining the concept of metacognition, establishing its range of applicability to educational matters, and becoming familiar with excellent examples of metacognitive research. Prerequisite: graduate status in education or psychology and permission of instructor.

EDPSY 527 Transfer of Teaching (3) *Bell, Shouse* Students read and discuss a representative sample of theoretical and research papers from extensive literature on teaching to promote transfer of what students learn to non-teaching environments. Historical approach to the topic is followed by analysis of current writings on transfer. Prerequisite: EDPSY 501 and graduate status in education or psychology. Credit/no-credit only.

EDPSY 528 Achievement Motivation in Education (3) *Nolan* Critical review of current research and major theories of achievement motivation in schools and other educational settings. Emphasis on the relationship of theories to the contexts and practice of education. Prerequisite: EDPSY 501 or permission of instructor. Offered: WS.

EDPSY 530 Vygotsky's Socio-Cultural Approach to Mind (5) *Herrenkohl* Critical reading and discussion of the work of L.S. Vygotsky as well as contemporary psychologists and educators who have investigated cognition in social context. Discusses the implications of these approaches for the design of learning environments. Prerequisite: EDPSY 501. Credit/no-credit only. Offered: W.

EDPSY 531 Socialization of School-Age Children (3) Study of personal social development and behavior from pre-school ages through adolescence. Developmental theory and research are reviewed on the socialization influences of parents and peers and on such topics as aggression, emotional regulation, and social cognition. Prerequisite: EDPSY 501 or equivalent.

EDPSY 532 Adolescence and Youth (3) Developmental processes and patterns examined with major theoretical and current research themes from behavioral sciences as applied to middle school and senior high students. Educational issues, social problems associated with adolescence in Western culture. Prerequisite: EDPSY 501 or equivalent.

EDPSY 533 Current Research in Adolescence (3) Contemporary trends and patterns of adolescent research are examined with emphasis upon theoretical foundations, contrasting methodologies, and implications for further research. Exemplary studies and integrative reviews of research on adolescence are featured. Prerequisite: EDPSY 532 and EDPSY 591 or equivalents.

EDPSY 534 School Problems of Adolescence (3) Study of the classic, contemporary, and emerging school problems of school age youth with emphasis upon problem solving strategies for educators and associated youth service personnel. Includes problems of academic achievement,

interpersonal relations, and social deviancy in the schools. Prerequisite: EDPSY 532 or equivalent.

EDPSY 535 Education and the Highly Capable Learner (3) *N. HERTZOG* Examination of major issues and problems in study and nurturance of highly capable children and youth in the educational setting. Emphasis placed on contributions of theory and research to educational problem solving for multiple aspects of advanced human capacity. Prerequisite: EDPSY 501 or equivalent.

EDPSY 536 Immigrant and Indigenous Children: Social Context of Learning (3) *Jegatheesan* Focuses on the broad context of family, school, and society of immigrant and indigenous young children in the United States. Introduces the complex interplay of socio-cultural and psychological factors that impact these children's learning. Offered: WS.

EDPSY 537 Teaching and Learning Science with Indigenous Students (3) *M. BANG* Provides an overview of the opportunities and challenges in teaching science to Indigenous learners. Students develop relevant pedagogical frameworks to approach problems of practice and develop high-leverage instructional practices for Indigenous students. Focused on Indigenous students however is relevant to other under-achieving populations. Offered: Sp.

EDPSY 540 School Psychological Assessment (5) *Jones* Study of assessment of human intelligence with supervised training in the administration, scoring, and interpretation of individual intelligence tests. Prerequisite: admission to School Psychology program. Offered: A.

EDPSY 544 Counseling (4) *J. MAZZA* Competency-based skills training for beginning counseling and school psychology students. Covers attending, listening, focusing, and intervening behaviors for use with adults and children. Introduction to theories of helping. Prerequisite: admission to School Psychology program. Offered: W.

EDPSY 545 Prepracticum (3) Competency-based skills training for beginning counseling and school psychology students. Attending, listening, focusing, and intervening behaviors for use with adults and children. Introduction to theories of helping. Prerequisite: graduate standing in school psychology or permission of instructor. Offered: A.

EDPSY 546 Counseling Practicum (3-5, max. 20) *J. MAZZA* Supervised practice in counseling. Prerequisite: admission to School Psychology program; EDPSY 544. Offered: Sp.

EDPSY 548 Educational Implications of Personality Theory (5) *J. MAZZA* Study of personality development and personality theories with continuous attention to the meaning of these in educational practice, testing, and counseling. Prerequisite: admission to the School Psychology program. Offered: A.

EDPSY 549 Seminar in Consultation Methods (3) *Cook* Theory and practice of process consultation in educational settings. Field practice in teams with clients. Prerequisite: admission to the School Psychology program. Offered: W.

EDPSY 550 Family Counseling (3) *Jones* Introduction to family counseling theory and practice, emphasizing family dynamics and communication analysis. Prerequisite: graduate standing in school psychology or permission of instructor. Offered: W.

EDPSY 551 Group and Behavioral Intervention (3) *Cook* Introduction to competency-based skills for beginning school psychology students. Includes basic processes of group management skills with children including group process in social skills training, problem-solving techniques, behavioral principles, and parent training. Prerequisite: admission to School Psychology program. Offered: Sp.

EDPSY 552 Multicultural Issues in School Counseling and School Psychology (3) Examination of multicultural issues as they relate to the delivery of services provided by school counselors and school psychologists. Theoretical and applied aspects emphasized and case study format utilized. Prerequisite: admission to School Psychology program. Offered: Sp.

EDPSY 553 School Psychology Services with Special Populations (3) *Murphy* Examines current issues in working with youth in special populations, as well as intervention strategies to help these students within the mainstream school environment. Prerequisite: admission to School Psychology program. Credit/no-credit only. Offered: W.

EDPSY 554 Response to Intervention for Behavioral Assessment, Consultation, and Intervention (3) *Cook* Teaches the RTI framework and provides instruction on how to conduct assessment, consultation, and evaluation intervention program effectiveness using both a direct service delivery model as well as an indirect model (consultation). Prerequisite: admission to School Psychology program. Offered: A.

EDPSY 556 Applied Social Psychology: Implications for Education (3) *Cunningham, Mazza* Provides students with the knowledge and understanding of how social psychology is applied within school settings and how it can be used to help develop effective strategies for psychological services. Prerequisite: admission to School Psychology program. Credit/no-credit only. Offered: W.

EDPSY 557 Tier III Interventions for School Psychologists (3) *Cook, Mazza* Provides school psychology students with a multi-tier framework in working with challenging students in schools. Provides explicit instruction on functional behavioral assessment, including content and training in how to work with youth who are at-risk or have engaged in self-harming and/or suicidal behavior. Prerequisite: admission to School Psychology program. Offered: Sp.

EDPSY 560 Advanced Practicum in Personality Assessment (3) *Jones* Designed for doctoral-level school psychologists to learn advanced personality assessment for diagnosis of emotional and behavior disorders. Prerequisite: admission to School Psychology program; EDPSY 540; EDPSY 564. Open to doctoral students only.

EDPSY 562 Group Counseling in Schools (3) Provides students with the opportunity to co-facilitate groups in elementary, middle, and secondary schools, supplemented by weekly didactic presentations of counseling and guidance models. Prerequisite: EDPSY 561 or permission of instructor. Offered: W.

EDPSY 564 Practicum in School Psychology (1-6, max. 20) *Jones, Lau* Practicum in assessment and consultation, emphasizing diagnosis of behavior and learning disabilities, and focusing on techniques acquired in EDPSY 507 and EDPSY 540. Prerequisite: admission to School Psychology program; EDPSY 507; EDPSY 540. Offered: W.

EDPSY 565 Advanced Practicum in Assessment and Cognitive Therapy with High Risk Students with E/BD (2, max. 20) Designed for doctoral level school psychologists to learn advanced assessment and cognitive therapy techniques in working with students with E/BD under the supervision of a licensed psychologist. Prerequisite: EDPSY 544, EDPSY 546 or equivalent and advanced graduate standing in the school psychology program.

EDPSY 566 Case Study Seminar (1-6, max. 20) *Grady* Integrating theoretical concepts with practice/service issues. Cases selected for discussion represent a wide range of problems found in schools. Activities include group supervision and peer review. Prerequisite: graduate standing in school psychology. Offered: AWSp.

EDPSY 568 Seminar in Professional Issues and Ethics (3) *Provenzano* Professional ethics codes and cases, history of counseling or school psychology, legal problems, credentialing issues, conditions of practice, continuing education, publishing, and presenting research papers. Prerequisite: graduate standing in College of Education or permission of instructor. Credit/no-credit only. Offered: W.

EDPSY 570 Introduction to School Psychology (2, max. 20) *J. MAZZA* Current issues in professional psychology practice and research. Prerequisite: admission to School Psychology program. Offered: A.

EDPSY 571 Educating Individuals with Biologically Based Disabilities (5) *Berninger* Reviews the history of neural science and its interdisciplinary roots, brain imaging methods and web resources, basic terminology and concepts for microscopic and larger neurological structures, functions, organizing principles and chemical bases, with focus on application to diagnosing and teaching students with developmental, learning, psychiatric, neurological, and medical disorders. Prerequisite: graduate standing in school psychology or instructor permission. Offered: Sp.

EDPSY 572 Social-Emotional Assessment (3) *Cunningham* Techniques in social-emotional assessment of school-aged children. Diagnostic systems presented in conjunction with assessment techniques. Emphasis on an integrative method for understanding social emotional assessment batteries and reliability and validity of their test score interpretation. Prerequisite: admission to School Psychology program. Offered: A.

EDPSY 573 Psychological Assessment of Preschool Children (5) *Olson* Students learn to give and interpret tests of intellectual development to assess language, play, and social/emotional functioning, and to write psychological assessment reports for infants, toddlers, and preschoolers. Prerequisite: graduate standing in school psychology and permission of instructor. Offered: Sp.

EDPSY 575 Structural Equation Modeling (3) *Abbott* Theory and data analysis using linear structural equation models. Application to data in educational research. Prerequisite: EDPSY 594 or equivalent. Offered: WS.

EDPSY 576 Hierarchical Linear Models (3) *Abbott* Theory and data analysis for research models where random factors are nested, such as multi-level data, growth curve analysis, and meta-analysis. Prerequisite: EDPSY 593 or equivalent. Offered: WS.

EDPSY 577 Neuropsychology of Learning and Behavior Problems (5) Brings together our understanding of neuropsychology and specific behavioral and learning problems to provide a foundation for practitioners to consider neuropsychological contributors to problems observed in clinical and educational settings. Credit/no-credit only. Offered: Sp.

EDPSY 578 Educational Applications of Neuropsychology: Assessment and Intervention (5) *Berninger* Students observe and administer neuropsychological tests and plan and carry out educational interventions for children with neuropsychological disorders. Content focuses on various neuropsychological disorders for which school psychologists can provide assessment and consultation. Prerequisite: EDPSY 540 or equivalent course in individual testing, and EDPSY 577 or permission of the instructor.

EDPSY 580 Seminar: The Emergence of Educational Psychology (3) Examination of documents by selected contributors to the field of educational psychology. Special focus on period from mid-nineteenth century to the later twentieth century.

EDPSY 581 Seminar in Educational Psychology (1-5, max. 20) Advanced seminar on selected topics in educational psychology. A critical appraisal of current research. Offered: AWSpS.

EDPSY 582 Seminar in Development and Socialization (3, max. 15) *Herrenkohl, Jegatheesan, Nolen, Kazemi* Advanced seminar on selected topics concerned with human development and socialization processes. Emphasis placed upon empirical research and its theoretical underpinnings in such areas as cognitive development, moral development and education, self-concept development, and related concerns. Prerequisite: graduate standing in College of Education or instructor permission.

EDPSY 583 Seminar in Learning and Thinking (3, max. 15) Seminar in the psychology of learning language and language learning. Each seminar is offered with pre-designated emphasis in one of the following topics: linguistics, phonology, pragmatics, psycholinguistics, semantics. Pre-

requisite: graduate standing in College of Education or instructor permission.

EDPSY 584 Seminar in Quantitative Methods (3, max. 15) *Li, Taylor* Seminar on such topics as measurement techniques, research design, psychometrics, and statistics. Prerequisite: EDPSY 490 and instructor permission.

EDPSY 585 History, Systems, and Contemporary Issues in School Psychology (3) *Jones, Mazza* Covers the history, systems, and research relating to the contemporary issues relevant to research and practice of school psychology. Meets APA and Washington state requirements for course in history and systems of psychology. Prerequisite: admission to School Psychology program. Credit/no-credit only. Offered: Sp.

EDPSY 586 Qualitative Methods of Educational Research I (3-5) Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, sociology, applied linguistics, cognitive psychology, policy analysis, and evaluation) with intensive experience in collection, analysis, and reporting of data. Prerequisite: second-year doctoral standing and one course in statistics, and permission of instructor. Offered: A.

EDPSY 587 Qualitative Methods of Educational Research III (3-5)

EDPSY 588 Survey Research Methodology and Theory (3) Survey research, research, theory, and methodology. Probability theory, sampling, human subjects considerations, instrumentation, and analysis techniques. Review and critique by students of theoretical issues in survey research and development of a survey instrument. Prerequisite: EDPSY 490 or equivalent. Offered: W.

EDPSY 589 Scholarly Writing in Education and Psychology (3) Introduction to the demands and expectations for technical writing in education and psychology, including aspects of the culture of scholarship. Designed for competent writers. Does not address basic grammar and composition. Prerequisite: doctoral standing, and permission of instructor. Credit/no-credit only.

EDPSY 590 Computer Utilization in Educational Research (3) Computer utilization in solution of research problems, data reduction to forms amenable to computer solution, appropriate framing of problems for solutions by computer. Using an interactive system, editors, and program packages. Prerequisite: EDPSY 490.

EDPSY 591 Methods of Educational Research (3) Introduction to educational research. Primary focus on hypothesis development, experimental design, use of controls, data analysis, and interpretation. Prerequisite: EDPSY 490. Offered: WSp.

EDPSY 592 Advanced Educational Measurements (3) *Li* Theory of measurement; an examination of assumptions involved in test theory, errors of measurement, factors affecting reliability and validity, and item analysis and standards for educational and psychological tests. Prerequisite: EDPSY 490. Offered: Sp.

EDPSY 593 Experimental Design and Analysis (5) Experimental design with emphasis on the analysis of variance. Prerequisite: EDPSY 490 or equivalent. Offered: W.

EDPSY 594 Advanced Correlational Techniques (5) *Abbott* Multivariate analysis, including regression and multiple correlation; matrix algebra; factor analysis. Prerequisite: EDPSY 490 or equivalent. Offered: Sp.

EDPSY 595 Item Response Theory Models of Testing (3) In depth exploration of IRT models and their roles in the development of large scale educational and psychological tests. Prerequisite: EDPSY 490 or equivalent, EDPSY 592, EDPSY 594.

EDPSY 596 Program Evaluation (3) *Mazza* Advanced course in evaluation research emphasizing nontraditional designs, especially those that impose severe ecological constraints on the evaluators. Prerequisite: EDPSY 593, EDPSY 594, EDC&I 597, or permission of instructor.

EDPSY 597 Technical Requirements of Large Scale Tests (3) Theoretical and practical understanding of the quantitative aspects of large-scale tests, including: scaling, norms development, and the development of derived and interpretive scores, evidence for validity and reliability. Prerequisite: EDPSY 490 or equivalent, EDPSY 592, EDPSY 595.

EDPSY 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Offered: AWSpS.

EDPSY 600 Independent Study or Research (*) Prerequisite: permission of instructor. Offered: AWSpS.

EDPSY 601 Internship (3-10, max. 30) Offered: AWSpS.

Special Education

EDSPE 404 Exceptional Children I&S (3) I&S Covers the knowledge of the field of special education including laws, practices, procedures, and controversies. Focuses on information about children with disabilities studied from the point of view of education. Offered: WSp.

EDSPE 414 Introduction to Early Childhood Special Education I&S (3) I&S Provides students with a comprehensive overview of major aspects of the field of early childhood special education. Theoretical foundations and program development and implementation are presented in an approach that integrates theory, research, and practice. Offered: WSp.

EDSPE 419 Family and Community Influences on the Young Child (5) I&S, DIV Develops an understanding of families of young children from different socio-cultural backgrounds, child socialization and development in family and community contexts (immigrant, refugee, indigenous, special-needs and vulnerable children), parenting across cultures, family processes, family systems theories, socio-cultural theories, and family-child collaborative partnerships using family and community strengths and resources. Offered: ASp.

EDSPE 422 DISABILITY, EDUCATION, AND THE ARTS (3) VLPA Cultural perspectives on disability and education, as interpreted through arts-based inquiry.

EDSPE 435 Introduction to Autism Spectrum Disorders (5) I&S, DIV Provides an overview of the characteristics, causes, treatments, and controversies about autism spectrum disorder (ASD). Addresses information about the history of the disorder, assessment strategies, and types of interventions. Offered: Sp.

EDSPE 460 Early Literary Instruction (3) Covers the theory and educational practices in early literacy including emergent literacy development, risk factors for poor literacy outcomes, methods to promote language needed for literacy, phonemic awareness, word identification. Emphasizes instructional strategies useful in childcare settings, preschools, early intervention, and programs for students with developmental disabilities.

EDSPE 499 Undergraduate Research (*) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Offered: AWSpS.

EDSPE 500 Practicum ([1-6]-, max. 20) Practicum in the field under the direction of a faculty member. Prerequisite: enrollment in a special education program, approved plan of study, and permission of the instructor. Offered: AWSpS.

EDSPE 502 Collaboration: Working with Parents and Professionals (3) Provides students with knowledge and skills for working collaboratively with other professionals, family members, and paraeducators. Focus is on the role of the special educator in forming and sustaining school, family, and community partnerships.

EDSPE 503 Classroom Management for Elementary School Educators ([1-3]-, max. 4) Examines how to set up effective classrooms to facilitate learning and the devel-

opment of social behaviors. Focuses on strategies for effectively managing whole group (classroom) and individual behavior of students in the context of public schools.

EDSPE 504 Special Education and the Law (3) Brown Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis upon procedural and substantive rights of children with disabling conditions. Offered: jointly with EDLPS 516.

EDSPE 505 Curriculum Development of Students with Moderate to Severe Disabilities (4) Addresses issues and practices in the development of appropriate curriculum, accessing the general education curriculum, and meaningful assessment for students with moderate to severe disabilities in educational settings. Topics include: assessing general education curriculum, inclusion, and development of Individualized Educational Plans (IEPs), assessment using environmental strategies, and identifying students' needs for assistive technology.

EDSPE 507 Instructional Methods for Students with Moderate to Severe Disabilities (4) Davis Details a systematic instructional process for the education of students with moderate to severe or profound disabilities. Includes instructional methods and materials designed to promote the development of skills that are required in school, home, and community settings, and to reduce challenging behaviors.

EDSPE 510 Behavioral Measurement and Management in the Classroom (3) Response measurement in the classroom; use of data analysis for instructional decisions and behavior management for children with disabilities.

EDSPE 511 Methods of Applied Behavior Analysis Research (3) Schwartz Characteristics of applied behavior analysis are presented: direct, daily measurement, and the systematic investigation of important variables. Representative studies from various applied situations are discussed in terms of dependent and independent variables, research design, reliability, validity, and data analysis. Prerequisite: EDSPE 510 or equivalent preparation.

EDSPE 513 Principles of Clinical Appraisal for Teachers of Exceptional Children (3) Diagnostic instruments used in the clinical appraisal of exceptional children. Theoretical and measurement considerations are used to buttress practical experiences in appraisal related to eligibility and intervention. Offered: A.

EDSPE 514 Fundamentals of Reading for Children with Disabilities (3) Hudson Emphasis on basic prereading and reading skills, such as phonics and structural analysis, specifically for the disabled child. Acquisition of comprehension skills by the disabled. Diagnosis of reading problems, published materials appropriate for children with disabilities, material modification. Offered: W.

EDSPE 515 Problems and Issues in Special Education (3, max. 9) Intensive examination of the issues pertinent to special education, such as legislation, interdisciplinary functions, and the role of special education in general education and placement practices.

EDSPE 517 Practicum in Research Design and Analysis in Special Education (1-4, max. 10) Critical analysis of current research in special education and related fields serves as background for designing applied research projects. Projects are examined, evaluated, and revised in seminar discussion. Prerequisite: EDPSY 490 and EDSPE 591 or equivalent and permission of instructor. Offered: AWSpS.

EDSPE 518 Seminar in Special Education Research (1-4, max. 20) Designed for doctoral students in special education during their first year of residency. Each candidate selects a dissertation problem and submits a proposal. Topics such as the procurement of subjects, the reporting and communication of research findings, and the evaluation of research are stressed. The seminar leads to the evolution of a viable dissertation proposal. Credit/no-credit only. Offered: AWSp.

EDSPE 520 Seminar in Applied Special Education (1-12, max. 20) Designed for graduate students in special education. Focus on contemporary topics relating to the application of the theoretical constructs to special education. Offered: AWSp.

EDSPE 521 Communication and Language in Young Exceptional Children (3) Review and critical examination of theories of language acquisition and their psychological implications for developing cognition. Emphases include a survey of language growth from the fields of linguistics, psychology, and sociology and combining these disciplines into the service of studying individual language development from the points of view of educational attainment and social relationships. Offered: Sp.

EDSPE 522 Seminar on the Education of Students with Severe Disabilities (3) Advanced graduate seminar arranged to study and discuss the essential components of providing a comprehensive approach to the identification and education of infants, children, adolescents, and young adults with severe disabilities.

EDSPE 523 Specific Numeracy Techniques for Elementary Students with Mild Disabilities (3) Lewis Provides the teacher with specific techniques for teaching numeracy to elementary students with mild disabilities in inclusive settings. Prerequisite: EDEP 522 or equivalent. Offered: Sp.

EDSPE 524 Functional Behavioral Assessment (3) Provides a solid foundation in the theory and practice of functional behavioral assessment (FBA). FBA is a required practice under special education law and considered a best practice for students with challenging behavior.

EDSPE 525 Educating Students with Autism or Severe Behavior Disorders (3) Consideration of the identification, etiology, education, and outcomes of individuals with Autism Spectrum Disorder. Offered: SpS.

EDSPE 526 Techniques for Instructing Social Behaviors for Elementary Students with Mild Disabilities (3) Provides prospective and practicing teachers with foundational theory and knowledge to select specific techniques to promote social competency in elementary children with mild disabilities. Discusses research related to use of these techniques and interventions. Develops schoolwide, classroom, and individual plans for teaching social skills. Offered: Sp.

EDSPE 527 Applied Behavior Analysis for Teachers (3) Presents principles of applied behavior analysis. Focuses on the use of principles in classroom, home, and community settings to influence learning. Emphasis on the use of data collection and progress monitoring the use of principles and outcomes for learning. Offered: A.

EDSPE 528 Inquiry and Methods in Writing Instruction (3) Covers methods of assessment and teaching written composition, spelling, and handwriting to children and youth with, and without, disabilities. Particular attention is given to how to establish a strong writing program in elementary classrooms and how to teach writing strategies. Offered: jointly with EDC&I 536; Sp.

EDSPE 529 Ethics in Applied Behavior Analysis (5) Examines ethical issues and responsibilities in regard to service provision to people with disabilities in education. Informed consent, protection of confidentiality, legal requirements to demonstrate changes in student learning, and selection of least intrusive, least restrictive behavior procedures presented and discussed within the context of readings and discussion of cases.

EDSPE 530 Advanced Readings in Applied Behavior Analysis (1, max. 20) Schwartz Provides opportunities to read and discuss core texts from applied behavior analysis (ABA). Covers the conceptual underpinnings of ABA and discusses examples of application of the principles. Offered: AWSp.

EDSPE 531 Planning Comprehensive Behavioral Interventions (3) Gives special educators the knowledge and skills they need to develop comprehensive behavior plans to ad-

dress challenging behavior in children with disabilities in their classrooms. Offered: W.

EDSPE 532 A Tiered Approach to Inclusive Education (3) Prepares educators to work in inclusive educational environments. Explores evidence based instructional strategies, discusses ways to use behavior analytic strategies to promote inclusion, and explores strategies to collaborate with general education teachers. Students also learn how to write high-quality Individualized Education Plans.

EDSPE 541 Education of Children with Behavior Disorders (3) Introductory course covering characteristics of and educational practices for children with emotional/behavioral disabilities. Reviews theory, definitional issues, models, assessment, and instructional methods for educating children with emotional and behavioral disorders. Students develop a working knowledge of educational approaches for teaching students with emotional/behavioral disabilities. Offered: A.

EDSPE 545 Instructional Modifications for the Education of Children with Mild Disabilities (3) In-depth analysis and application of several modifications of instructional techniques necessary for the education of students with mild disabilities.

EDSPE 546 Seminar in Educating Children with Behavior Disorders (3, max. 9) Advanced-level seminars focus on contemporary research topics relating to the effective education of children with serious behavior disorders. Students analyze and review research pertinent to the chosen topics and prepare a scholarly manuscript for dissemination.

EDSPE 548 Special Topics in the Education of the Learning Disabled (3, max. 12) In-depth analysis of empirical findings in the specialty of learning disabilities with focus on the synthesis of research findings and their application to the educational environment. A paper suitable for publication required. Prerequisite: course in learning theory, introductory course in learning disabilities, or equivalent preparation.

EDSPE 561 Educational Assessment of Young Children with Special Needs (3) Special standardized and educational measurement and evaluation procedures for use with young children with a variety of disabling conditions. Observation, ecological assessment, and programming strategies are discussed in combination with practical application of the skills within an educational framework.

EDSPE 562 Curricula for Preschool Children with Disabilities (3) Basic theoretical models and approaches to curricula for preschoolers with disabilities. Critical review of preschool curricula, standards, and benchmarks. Strategies for critiquing, evaluating, and adapting curricula. Offered: W.

EDSPE 563 Family-Professional Partnerships and Collaborative Teaming (4) *Meeker* Explores issues, theories, models, research, and recommended practices related to family-professional partnerships and collaborative teaming in education. Explores the dynamics of interactions with families and other team members including roles and responsibilities, decision-making, communication, and collaboration. Focuses on families and teaming in special education. Offered: AW.

EDSPE 564 Infants and Toddlers with Disabilities and Other Special needs (3) *Sandall* Examines early intervention policies, programs, and practices for infants and toddlers with disabilities and other special needs. Topics include theoretical, philosophical, and learning and research base for early intervention. Offered: A.

EDSPE 565 Seminar: Early Childhood Education for Children with Disabilities (3, max. 9) Advanced seminar on early childhood education for infants and young children with disabilities. Historical and current research from special education and related fields reviewed with regard to their application to the education of young children with disabilities.

EDSPE 566 Current Research in Early Childhood Special Education (2, max. 6) Explores theory, research, and practice in early intervention with infants, toddlers, and their families. Topics include typical and atypical development, assessment, curriculum, and intervention strategies.

EDSPE 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Offered: AWSpS.

EDSPE 600 Independent Study or Research (*-) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Offered: AWSpS.

EDSPE 601 Internship (1-10, max. 20) Prerequisite: graduate standing and permission based on prearrangement of internship placement and approval by adviser. Offered: AWSpS.

Teacher Education Program

EDTEP 501 Community-Based Field Experience (1-10, max. 15) Field experience and group discussions accompanying the first quarter of study in an Elementary Teacher Education Program. Field experience in community based organizations or school settings. Prerequisite: elementary TEP student. Credit/no-credit only.

EDTEP 502 Second Quarter Field Experience - Elementary (2-10, max. 15) Field experience accompanying the second quarter of study in an Elementary Teacher Education Program. Observe school-year opening full-time in late August through September; field experiences during the quarter in supervised school placements. Prerequisite: elementary TEP student. Credit/no-credit only.

EDTEP 503 Third Quarter Field Experience - Elementary (4) Field experience and use of reflective process in small group discussions accompanying third quarter of study in an Elementary Teacher Education Program. Field experiences during the quarter in supervised school placements. Prerequisite: elementary TEP student. Credit/no-credit only.

EDTEP 505 Capstone Project: Tools for Reflection - Elementary ([1-3]-, max. 3) Group discussions fostering integration of coursework, field experience, and teaching experiences through documentation and reflection on first year teaching experiences. Using certification standards for teachers, students illustrate their learning through multiple forms of evidence. Final capstone project is presented to an audience. Prerequisite: elementary TEP student. Credit/no-credit only.

EDTEP 511 School and Society (3) Exploration of issues regarding schooling and society, such as matters of value and value tension in American schools. Consideration of social values such as equality, opportunity, pluralism, and community; historical and contemporary evidence of values in schooling; and how values can conflict in policy and practice. Prerequisite: elementary TEP student.

EDTEP 521 Teaching and Learning in Numeracy I (4) Focus on mathematics from the perspective of the learner and on the meaning of understanding a mathematics concept. Examination of cultural aspects of the development of these concepts. Prerequisite: elementary TEP student.

EDTEP 522 Teaching and Learning in Numeracy II (3) Focus on pedagogy of mathematics. In conjunction with field experience, students extend understanding of mathematics and successfully integrate mathematics as a tool for learning science and art. Prerequisite: elementary TEP student.

EDTEP 523 Teaching and Learning in Science (3) Science teaching in a manner consistent with how young children learn science concepts and skills. Opportunities are provided for work on science activities similar to those used with elementary school children and to experience many of the problems and successes of preadolescents. Prerequisite: elementary TEP student.

EDTEP 531 Teaching and Learning in Literacy I (3) Investigation of the multiple natures of literacy development. Students study the impact of culture and family on literacy development by reading and discussing a variety of texts while also experiencing the development of their own learning through literature study, the writing process, and oral presentations. Prerequisite: elementary TEP student.

EDTEP 532 Teaching and Learning in Literacy II (4) Introduces participants to the content and process of literacy learning in elementary school. Study of abilities needed for effective literacy use, instructional strategies to help children acquire these abilities, and assessment strategies to evaluate student progress. Prerequisite: elementary TEP student.

EDTEP 533 Teaching and Learning in Literacy III (3) Introduces participants to the content and process of literacy learning in elementary school. Study of abilities needed for effective literacy use, instructional strategies to help children acquire these abilities, and assessment strategies to evaluate student progress. Prerequisite: elementary TEP student.

EDTEP 541 Dilemmas of Teaching and Learning in Elementary School ([2-4]-, max. 4) Covers human learning in the elementary school setting with emphasis on discipline-specific cognition and cognitive development. Prerequisite: elementary TEP student.

EDTEP 543 Teaching and Learning in Social Studies. (4) Strategies for teaching social studies and the arts through integrated thematic units of curriculum and instruction. Prerequisite: elementary TEP student.

EDTEP 544 Differentiated Instruction (1-4, max. 20) Introduction to the concepts and practice of differentiated instruction for children with diverse developmental, linguistic, and cultural characteristics. Prerequisite: elementary TEP student.

EDTEP 551 Multicultural Teaching (3) Concepts, theories, and strategies that constitute major dimensions of multicultural education. Focus on racial and ethnic groups, social class, and gender. Dimensions of multicultural education examined include content integration, knowledge construction process, prejudice reduction, equity pedagogy, and empowering school culture and social structure. Prerequisite: TEP student.

EDTEP 552 Assessment in Elementary Education ([1-2]-, max. 3) Emphasis on methods of assessment that reinforce understanding of the various disciplines. Includes performance assessments, assessments of student projects and papers, traditional exams, and observational exams. Prerequisite: elementary TEP student.

EDTEP 560 Teaching for Learning in Secondary School (3) Studies human learning in an educational setting, with an emphasis on learning of school subjects. Topics include nature of learning, knowledge and teaching, motivation, culture, and cognition. First in a two-course sequence. Prerequisite: secondary TEP student.

EDTEP 561 Teaching and Learning for Secondary Schools II (2) Study of human learning in an educational setting, with an emphasis on learning of school subjects. Topics include nature of learning, knowledge and teaching, motivation, culture, and cognition. Second of a two-course sequence. Prerequisite: secondary TEP student.

EDTEP 562 Adolescent Development and Education I (2-) Overview of trends and issues of adolescent development and behavior in relation to contemporary secondary schooling. Examines psychological perspectives on adolescent identity, interpersonal relationships, academic engagement, and social deviancy in schools. First in a two-course sequence. Prerequisite: secondary TEP student.

EDTEP 563 Adolescent Development and Education II (-2) Overview of trends and issues of adolescent development and behavior in relation to contemporary secondary schooling. Examines psychological perspectives on adolescent identity, interpersonal relationships, academic en-

gagement, and social deviancy in schools. Second in a two-course sequence. Prerequisite: secondary TEP student.

EDTEP 564 Working in Schools (1-2, max. 20) Explores the organizational, personal, and interpersonal aspects of working as a teacher in schools. Preparation for membership and leadership in a professional learning community and for continuing professional growth. Prerequisite: TEP student Credit/no-credit only.

EDTEP 566 Creating Classrooms for All Students (2-4, max. 4) Provides middle and high school teachers with an understanding of how to organize their classrooms so as to encourage and teach civility and be familiar with the needs of special education students.

EDTEP 571 Topics and Tensions in School and Society (4) Exploration of issues of value and value tension in American schools. Consideration of social values of equality, opportunity, pluralism, and community, historical and contemporary evidence of values in schooling, and how values can conflict in policy and practice. Prerequisite: secondary TEP student.

EDTEP 573 Assessment in Secondary Education (4) Strong emphasis on methods of assessment that reinforce understanding of the various disciplines, including performance assessments, assessments of student projects and papers, traditional exams, and observational exams. Prerequisite: secondary TEP student.

EDTEP 575 Working with English Language Learners and Literacy Across the Curriculum (4) Prepares pre-service secondary teachers to meet the needs of culturally and linguistically diverse students in the mainstream secondary classroom. Emphasis on second language acquisition, critical literacy issues, and integration of language and literacy into academic content areas for adolescent learners.

EDTEP 580 Teaching English and Language Arts in Secondary School I (5-) Teaching of English and language arts in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 581 Teaching English and Language Arts in Secondary School II (-3) Teaching of English and language arts in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 582 Teaching Mathematics in the Secondary School I (5-) Teaching of mathematics in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 583 Teaching Mathematics in the Secondary School II (-3) Teaching of mathematics in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 584 Teaching Social Studies in the Secondary School I (5-) Developing, teaching, and evaluating social studies courses on the middle, junior, and senior high school levels. Prerequisite: secondary TEP student.

EDTEP 585 Teaching Social Studies in the Secondary School II (-3) Developing, teaching, and evaluating social studies courses on the middle, junior, and senior high school levels. Prerequisite: secondary TEP student.

EDTEP 586 Teaching Science in the Secondary School I (5-) Teaching of science in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 587 Teaching Science in the Secondary School II (-3) Teaching of science in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 588 Teaching World Languages I (5-) Introduction to currently used foreign language teaching methods and approaches, including learning and teaching strategies and techniques for the four skills - reading, writing, speaking, listening - and culture. Current and future trends in pedagogy and technology. Prerequisite: secondary TEP student.

EDTEP 589 Teaching World Languages II (-3) Introduction to currently used foreign language teaching methods and approaches, including learning and teaching strategies and techniques for the four skills - reading, writing, speak-

ing, listening - and culture. Current and future trends in pedagogy and technology. Prerequisite: secondary TEP student.

EDTEP 591 First Quarter Field Experience - Secondary (2-5, max. 10) Field experience accompanying the first quarter of study in the Secondary Teacher Education Program. Observe and assist weekly during the quarter in supervised school placements. Prerequisite: secondary TEP student. Credit/no-credit only.

EDTEP 592 Second Quarter Field Experience - Secondary (2-5, max. 10) Field experience accompanying the second quarter of study in the Secondary Teacher Education Program. Supervised placements in summer school program. Prerequisite: secondary TEP student. Credit/no-credit only.

EDTEP 593 Third Quarter Field Experience - Secondary (2-5, max. 10) Field experience accompanying third quarter of study in Secondary Teacher Education Program. Four weeks full-time plus daily part-time in supervised school placements. Prerequisite: secondary TEP student. Credit/no-credit only.

EDTEP 595 Capstone Project: Tool for Reflection - Secondary ([1-3]-, max. 3) Group discussions fostering integration of coursework, field experience, and teaching experiences through documentation and reflection on student teaching experiences. Using certification standards for teachers, students illustrate their learning through multiple forms of evidence. Final capstone project is presented to an audience. Prerequisite: secondary TEP student. Credit/no-credit only.

EDTEP 600 Independent Study or Research (*-) Registration must be accompanied by a study prospectus endorsed by a Director of Teacher Education and the faculty adviser for the work proposed. Credit/no-credit only.

EDTEP 601 Fourth Quarter Field Experience (2-10, max. 15) Field experience during the fourth quarter of study in a Teacher Education Program. Full-time student teaching in supervised school placements. Prerequisite: TEP student. Credit/no-credit only.

College of Engineering

Dean

Michael B. Bragg
371 Loew

Associate Deans

Eve Riskin, Academic Affairs
Dawn Lehman, Infrastructure
Santosh Devasia, Research and Graduate Studies

Engineering is the science and art of applying scientific and mathematical principles, experience, judgment, and common sense to design devices and systems that benefit society. Engineers are fascinated by questions of how and why things work. They use their training in mathematics, physics, and chemistry to understand the physical world and develop creative solutions to society's complex needs. Engineers may be designers, planners, managers, analysts, researchers, consultants, sales specialists, and more. Engineering graduates have many career possibilities open to them.

The primary goal of College of Engineering educational programs is to prepare students for a professional career in engineering by providing the technical foundation required for success in industry, government, or academia. Other goals of the College are to instill within its students the highest ethical standards, the capability for lifelong learning, and a curiosity about the world. Excellence in undergraduate and graduate academic programs remains the College's highest priority.

For undergraduates, the College of Engineering offers a flexible curriculum that not only accommodates varied student needs, both in established departmental programs and interdisciplinary studies, but also culminates in a major and meaningful design experience. (See Interdisciplinary Engineering Studies Program for interdisciplinary undergraduate programs.)

For graduate students, the College of Engineering offers master's and doctoral programs in aeronautics and astronautics, bioengineering, chemical, civil and environmental, computer, electrical, human centered design and engineering, industrial and systems engineering, materials science, and mechanical engineering.

The College offers active educational and research programs, both departmental and interdisciplinary, at the graduate levels. (See Interengineering Graduate Program for interdisciplinary graduate programs.)

The College of Engineering has been a major unit of the University since 1899. The first engineering degrees were authorized in mining engineering and metallurgical engineering in 1898. Degrees were added for civil engineering (1901), electrical engineering (1902), mechanical engineering (1906), chemical engineering (1907), ceramic engineering (1919), aeronautical engineering (1929), bioengineering (1983), industrial engineering (1986), and computer engineering (1987). A degree program in technical communication was implemented in 1989. The new human centered design and engineering degree title replaced technical communication in 2009. In 2011, 2,229 upper-division undergraduate majors and 1,787 graduate students were enrolled in engineering programs taught by a faculty of 228 tenure track and 184 other engineering faculty members.

College Facilities

Teaching and research activities of the College are conducted in fourteen major campus buildings (and portions of others), which contain the College's offices, classrooms, and research and teaching laboratories. The Engineering Library, a branch of the University Libraries, provides outstanding collections of books, periodicals, technical re-

ports, and patents of interest to engineers. Computers and terminals are available in all departments and through the Student Access and Computing Group (SACG).

Student Organizations and Activities

All major professional engineering societies have student chapters on campus, and all engineering students are encouraged to join the chapter that represents their field of interest. The UW Chapter of Engineers Without Borders (EWB) students.washington.edu/ewbuw is a registered student-run organization of the University of Washington with members from many engineering as well as non-engineering backgrounds.

The College also has student chapters of the Society of Women Engineers, American Indian Science and Engineering Society, National Society of Black Engineers, the Society of Hispanic Professional Engineers, and the Phi Sigma Rho engineering sorority. Students are encouraged to join the University-wide Science and Engineering Business Association (SEBA).

The honor society open to engineering students is Tau Beta Pi.

Students serve with faculty members on engineering policy committees which make recommendations concerning instructor evaluation, curriculum revisions, advising, grading systems, and other matters of interest to students and faculty.

UNDERGRADUATE PROGRAM

Engineering Adviser
301 Loew, Box 352180
(206) 543-1770
engradv@uw.edu

The College of Engineering provides curricula that offer a variety of educational experiences to its students. The curricula also facilitate transfer from community colleges and from other four-year colleges and universities.

Student Academic Services

301 Loew

Students are encouraged to contact Student Academic Services for program, course, or career information and discussion. The Student Academic Services advising office assists any student interested in planning the initial portion of an engineering degree program, and distributes information about prerequisites for application to all departments in the College.

For more information, visit the Student Academic Services Website.

Financial Aid

The College offers financial assistance to undergraduates through industrial scholarships and loan funds. Scholarship information is available at the College of Engineering Student Academic Services office (301 Loew), and at the Office of Student Financial Aid (105 Schmitz). Most scholarships are given after a year or more in residence by the student.

Honors Program

The University Honors Program provides a special learning context for high-achieving students looking for a rigorous and enhanced educational experience. All departments in the College of Engineering participate in the UW Honors program.

There are two types of Honors degrees available within the College of Engineering: College Honors and Departmental Honors. Students in either program are part of the University Honors Program.

College Honors

To be eligible for College Honors, students must be accepted to the University Honors Program in their freshman year. Additionally, students must be accepted into the departmental honors program (See information below on Departmental Honors) for their major, which usually occurs during the junior year. Students who complete both the Honors Core Curriculum (See the University Honors Program for more information) and the departmental honors requirements graduate "With College Honors in Name of Major".

Departmental Honors

Students who do not participate in or complete the Honors Core Curriculum but are admitted into and complete departmental honors requirements receive a degree "With Honors in Name of Major".

Admission Requirements: All engineering departments require students to have at least a 3.30 cumulative UW GPA to be eligible for departmental honors. Also, most departments require students to complete a specified number of departmental courses with a minimum departmental GPA.

Departmental honors requirements vary by major and are established by the individual departments. Most departments in the College of Engineering require 9 to 10 credits of Honors courses in the major and an Honors senior project or thesis.

International Study

Given the increased likelihood that engineering students will have overseas work experiences or do business with international clients and competitors, the College encourages students to study foreign languages in addition to their engineering coursework and to take advantage of opportunities for study at foreign universities either at the undergraduate or graduate level. The College has exchange agreements with approximately thirty universities in seventeen countries. Foreign-language courses at the third-quarter level or above (e.g., GERMAN 103) may be applied toward the VLPA general education requirement. For more information about international study, visit the College of Engineering International Studies website at www.engr.washington.edu/curr_students/international.html. Engineering students can also participate in the Global Engineering Education Exchange program (through the Center for Workforce Development, located in 101 Wilson Annex) for opportunities to study abroad. Through the UW Chapter of Engineers Without Borders (EWB) students.washington.edu/ewbuw, students work with disadvantaged communities worldwide in order to improve their quality of life through the implementation of environmentally sustainable, equitable, and economical engineering projects.

Admission

Students follow a variety of pathways in gaining admission to programs in the College of Engineering. Details on the processes and information on prerequisite coursework are available on the individual department websites or from the Student Academic Services advising office in 301 Loew Hall. The information below provides an overview of the admission processes.

Direct Freshman Admission: All engineering departments enroll a small number of high-achieving students directly from high school, prior to completion of University-level prerequisites. Freshman applicants who have been accepted to the UW and who have specified a department with a direct admission program as their preferred major are automatically considered. Consult individual department listings for more information on Direct Freshman Admission. Direct Freshman Admission is for autumn quarter only. All students not admitted directly to an engineering department are admitted to the College of Engineering with pre-engineering status. Students without pre-engineering status who wish to pursue an engineering degree may have their coding changed to pre-engineering upon

request at the Student Academic Services advising office (301 Loew Hall). To retain pre-engineering status, students must maintain a cumulative GPA of 2.50 in prerequisite courses in mathematics, chemistry, physics, engineering fundamentals, English composition, and technical writing; maintain a minimum quarterly GPA of 2.00; and complete a minimum of 25 credits of the prerequisite and other specified courses per academic year. A detailed description of pre-engineering continuation requirements is available from the Student Academic Services advising office, 301 Loew Hall.

Early Admission: Most engineering programs offer an Early Admission option at the end of the freshman year. In general, Early Admission application requirements include one year of calculus, English composition, and 10 to 20 credits of required chemistry or physics. Early Admission is for autumn quarter only.

Upper-Division Admission: All engineering programs offer an Upper-Division Admission process. In general, Upper-Division Admission occurs at the end of the sophomore year; Chemical Engineering and Bioengineering, however, admit their upper-division students for spring quarter of the sophomore year. Typical application requirements include one year of calculus, differential equations or linear algebra, one or two quarters of general chemistry, two to three quarters of physics, English composition, and several engineering fundamentals courses. Student Academic Services or the individual department or program has a list of specific entrance requirements. All departments, with the exception of Bioengineering and Chemical Engineering, offer Upper-Division Admission for autumn quarter. Bioengineering and chemical engineering offer Upper-Division Admission for a spring quarter start. Several other departments also offer a spring quarter option.

To apply for admission to an engineering program, enrolled students must submit the online College of Engineering application. The application deadline for autumn admission is July 1. For programs that accept students for spring quarter, the application deadline is February 1.

Transfer Students

After completing the University transfer-student application, transfer students who have completed all upper-division application requirements for their desired program also need to submit the online College of Engineering application by the specified deadline. Transfer students who have not completed upper-division application requirements may apply for admission to the University as pre-engineering students.

Types of Programs

The College offers three basic programs leading to Bachelor of Science degrees.

Departmental Major

This program leads to a Bachelor of Science degree in a designated field of engineering (e.g., Bachelor of Science in Civil Engineering). It is designed for students who intend to practice as professional engineers in a standard branch of engineering or who plan to undertake graduate study in that field. The curricula for these degrees are accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: (410) 347-7700. Accreditation requirements stipulate certain course-distribution requirements for the undergraduate degree. A description of how each of the accredited baccalaureate programs meets the ABET requirements is available from the department office and from the College office. Accredited four-year curricula leading to baccalaureate degrees are offered in aeronautics and astronautics, bioengineering, chemical, civil and environmental, computer, electrical, industrial and systems, mechanical, materials science and engineering, and bioresource science and engineering (formerly paper science and engineering). (The bioresource science and en-

gineering major is offered in the School of Environmental and Forest Sciences and is a joint program with the School of Environmental and Forest Sciences and the College of Engineering.)

The following programs in the College of Engineering are accredited by the Engineering Accreditation Commission of ABET:

- Aeronautical and Astronautical Engineering
- Bioengineering
- Chemical Engineering
- Civil and Environmental Engineering
- Computer Engineering
- Electrical Engineering
- Industrial and Systems Engineering
- Materials Science and Engineering
- Mechanical Engineering

A curriculum leading to a baccalaureate degree is also offered by Human Centered Design and Engineering.

Application to a department or program at the upper-division level is made at the time lower-division requirements are satisfied. Currently enrollment limits imposed by faculty size and available laboratory/classroom space are such that entry into a specific department or program is usually competitive. In general, a student applicant must demonstrate scholastic aptitude, as evidenced by the attainment of grades averaging a minimum 2.50 or above (depending upon the program) in mathematics, the natural sciences, English composition, and other courses. A 2.50 GPA is a minimum only. In reality, the GPA of those offered admission is higher. The student is urged to plan ahead by learning the intended department or program requirements and particularly noting which requirements must be fulfilled by the time application is made.

Non-departmental Professional Program

This program leads to a Bachelor of Science in Engineering degree and is designed for students who have well defined, special educational objectives that departmental programs do not satisfy. Graduates can practice as professional engineers in newly developing fields, or they may embark on graduate study in these or allied fields (see Interdisciplinary Engineering Studies Program).

Nonprofessional Program

Leading to a Bachelor of Science degree, this program is intended for students who wish to have significant exposure to science and engineering courses, but do not plan to engage in professional engineering practice (see Interdisciplinary Engineering Studies Program).

Graduation Requirements

To graduate, students must meet or exceed the requirements of the University and their particular program or department. All program or departmental requirements are given in the specific section that describes that program or department.

All departments of the College have continuation policies that specify a minimum rate of progress as well as minimum academic-performance levels. These policies may be more restrictive than those generally applied by the University and may change with time. Information on current policy is available at the departmental offices.

Selecting courses that fulfill graduation requirements is the responsibility of each student. Students are urged to check carefully the course and credit requirements of the program in which they are enrolled.

GRADUATE PROGRAMS

Master of Science in Engineering and Master of Science

The College offers graduate programs leading to the Master of Science in Engineering and Master of Science degrees, without designation of a specific major. For graduate degrees within specific majors, see the individual departmental listings.

The civil, mechanical, and chemical departments, and inter-engineering offer approved programs that lead to the Master of Science in Engineering degree. The civil, and to the M.S. degree in civil engineering department, inter-engineering, and the materials science and engineering department offer approved programs that lead to the Master of Science degree.

The Interengineering Master of Science in Engineering (MSE) and Master of Science (MS) program is intended for students whose desired course of study does not fall within one of the traditional engineering graduate programs. An interengineering program combines coursework from at least one graduate engineering department as well as other graduate department(s) on campus (engineering or other) to allow students to create a program of study not available through the existing graduate degree programs. Applications and files of students entering the MS or MSE option are handled by the designated engineering department. Admission to the inter-engineering option requires a statement describing the applicant's objectives. This statement should state why the student wants to enter the MS/MSE program rather than one of the traditional engineering graduate programs. Applicants to the MS/MSE program must have well-defined educational objectives which cannot be satisfied by established engineering programs.

Admission Requirements

MSE/MS applicants are required to have a bachelor's degree in engineering, mathematics, or science with a minimum 3.00 GPA in courses taken in the junior and senior years. Students entering without an accredited engineering undergraduate degree and seeking an MSE degree must satisfy the minimum general requirements of the College of Engineering baccalaureate degree. Students are expected to complete the degree within two years. Situations requiring longer than this must be approved by the student's faculty adviser.

Development of the Plan of Study: When applying to the MSE/MS program, the applicant must submit a plan of study that sets out the intended 400- and 500-level coursework and proposed thesis topic. Before applying to the MSE program, the student must consult with a faculty member from each department in which the student intends to work, and identify at least one to serve as the student's faculty adviser. The other faculty members can serve on the student's supervisory committee if the student is admitted. Working with the faculty adviser(s), each student must develop a plan of study and research that meets the general degree requirements (below) and satisfies the student's own program objectives. The program of studies must include in-depth coursework from two or more departments and be approved by the faculty adviser(s). The proposed program is then set out on the student's application to the Interengineering MSE/MS program.

Development of the Statement of Objectives: Students must submit a one-page statement of study, degree, and career objectives for seeking the Interengineering MSE or MS degree. This statement should explain why the student wants to enter the MSE/MS program rather than one of the traditional engineering graduate programs. Also, students should include in this statement any additional information to be considered as part of the application. This may include work experience, outside interests, and unusual circumstances that may contribute to a better understanding

of the student's record. Applicants to the MSE/MS program must have well-defined educational objectives that cannot be satisfied by established engineering programs.

Degree Requirements

Students develop their own plan of study for the MS or MSE degree in consultation with faculty adviser(s) as a requirement for admission to the program. The plan of study must contain at least 39 credits of coursework, with no more than 9 credits of engineering courses at the 400 level and at least 21 credits of engineering courses at the 500 level. The plan of study must also include at least 9 credits of thesis study/preparation.

SPECIAL PROGRAMS AND RESOURCES

Engineering Co-op and Internship Program

014 Loew, Box 352180

engrcoop@uw.edu

The Engineering Co-op and internship program provides an opportunity for pre-engineering and engineering students to combine practical, full-time, on-the-job engineering experience with academic study before graduation. Students typically work full-time for three months or more and then return to full-time academic status upon completion of the co-op assignment. Some students work part-time while continuing coursework. In addition, students receive academic credit for the co-op experience. In several engineering departments, the credit earned can be applied toward degree requirements in the major. Advantages of participation include: assistance in deciding which field of engineering to follow, early experience in the industrial sector and industrial exposure that can help guide a student's remaining studies; additional income to help defray college expenses, relevance and motivation for study based on real engineering work, and work experience and employment contacts that may result in regular employment after graduation.

Information may be obtained from the Engineering Co-op and Internship Program office, College of Engineering, Box 352180 (014 Loew), or by visiting the Engineering Co-op and Internship Program website.

Engineering Undergraduate Research Program

014 Loew, Box 352180

Educational Outreach

Fulfilling a commitment to lifelong learning, the College of Engineering is partnered with UW Professional and Continuing Education (UWPCE) to offer master's degree programs, certificate programs, courses, workshops, and conferences to respond to the professional development needs of practicing engineers and related technical professionals worldwide. Thousands of practicing engineers update their technical knowledge or pursue advanced degrees each year through UWPCE. The College of Engineering works with UW Educational Outreach's Education at a Distance for Growth and Excellence (EDGE) to provide multimedia and class capture services either in an EDGE classroom or at a remote location. Go to UWPCE website for more information. Go to EDGE website for more information.

Office of Research and Graduate Studies

376 Loew, Box 352180

The Office of Research and Graduate Studies promotes, stimulates, and coordinates faculty and graduate research in all fields of engineering. Its primary role is to encour-

age and develop interdisciplinary research programs and national research initiatives. The Office of Research and Graduate Studies also reviews grant and contract proposals, tracks awards, and provides information on funding opportunities. This office allocates limited matching funds to College units to increase the quality of research in the College of Engineering. The College currently has the following research programs or centers:

- **Bio-Sciences**
 - *Center for Sensorimotor Neural Engineering (CSNE)*: An NSF-funded Engineering Research Center launched in July 2011 to advance the integration of technologies with human neural systems. The center brings together leaders in robotics, neuroscience, computer science, and other disciplines.
 - *Genetically Engineered Materials Science and Engineering Center (GEMSEC)*: Adapts techniques in molecular biology and genomics for developing new materials and systems.
 - *Molecular Engineering & Sciences Institute (MoES)*: Catalyzes translational research in the clean tech and biotech areas. The Institute serves both as an intellectual accelerator to bring fresh approaches and ideas to societal grand challenges in sustainable energy and materials, and in medical therapeutics and diagnostics, and as a physical incubator where new interdisciplinary teams can come together in a shared space. Creates and coordinates new interdisciplinary education programs for undergraduate and graduate students in the College of Arts and Sciences and the College of Engineering. The Institute is located in the new Molecular Engineering and Sciences Building, a facility specially designed to promote collaborative molecular-scale research.
 - *National ESCA Surface Analysis Center for Biomedical Problems (NESAC/BIO)*: Develops and applies new surface analysis technologies for biomedical research.
- **Education and Learning**
 - *Center for Engineering Learning and Teaching (CELT)*: Combines two missions: to conduct internationally recognized research in engineering learning and to promote teaching effectiveness in UW engineering classrooms.
- **Electronics and Computing**
 - *Center for Collaborative Technologies (CCT)*: An effort funded by Microsoft Research to develop the ConferenceXP platform and apply the technologies to a wide range of educational and collaborative scenarios.
 - *Center for Design of Analog-Digital Integrated Circuits (CDADIC)*: One of the few research consortiums in the country that addresses problems associated with analog and mixed-signal research.
 - *Intel Research Seattle*: A collaboration among Intel and university researchers to explore new technologies (such as personal robotics and "Trustworthy Wireless") to support the ubiquitous computing environments of the future.
 - *Turing Center*: Investigates problems at the crossroads of natural language processing, data mining, web search, and the Semantic Web.
- **Energy**
 - *Bioenergy Program*: Researches how to balance the technological, environmental, and social dimensions of a sustainable energy economy. (The full program name is Bioresource-Based Energy for Sustainable Societies.)
 - *Northwest National Marine Renewable Energy Center (NNMREC)*: A DOE-funded partnership between OSU and UW. UW is responsible for tidal energy

issues. The role of the center is to close key gaps in understanding of marine energy and to inform the public, regulators, research institutions, and device and site developers.

- *Plasma Science and Innovation Center (PSI)*: Develops predictive capability for emerging concept experiments, allowing new experiments in fusion science and in other areas of plasma science without actual construction.

Materials and Structures

- *Center for Intelligent Materials and Systems (CIMS)*: A collaboration of botanists and engineers to advance the bio-inspired design of intelligent materials and systems.
- *Center of Excellence for Advanced Materials in Transport Aircraft Structures (AMTAS)*: Seeks solutions to problems associated with existing, near- and long-term applications of composites and advanced materials for large transport commercial aircraft.
- *Institute of Advanced Materials and Technology (i-AMT)*: Facilitates interdisciplinary research in photonics, electronics, and magnetic materials; materials for energy generation and storage; biomaterials for the bio-nano interface; and multifunctional composites.
- **Transportation**
 - *Pacific Northwest Transportation Consortium (PacTrans)*: A multi-university, regional transportation center led by the University of Washington and funded by the US Department of Transportation. PacTrans focuses on safe and sustainable transportation in environments ranging from busy urban centers to remote mountainous terrain.
 - *Washington State Transportation Center (TRAC)*: A collaboration among Washington State University, the University of Washington, and the Washington State Department of Transportation to coordinate both state and commercial transportation research efforts and to develop research opportunities nationally and locally.
- **Other Centers Involving Engineering Faculty**
 - *Center for Materials and Devices for Information Technology Research (CMDITR)*: Established by the National Science Foundation in 1987 to fund interdisciplinary research and education activities and encourage technology transfer.
 - *Center for Process Analytical Chemistry (CPAC)*: A consortium established at the UW in 1984 to develop and foster collaboration on new measurement approaches, including the miniaturization of traditional instrumentation and the development of new sensors and non-traditional instruments.
 - *Microfabrication Laboratory (MFF)*: Provides a wide range of fabrication and characterization capabilities in a user facility that is open to academic as well as industrial researchers and engineers, including advanced electron beam lithography, thin film processing, and wet and dry etching in a 15,000 square foot cleanroom.

For more information, see the Office of Research and Graduate Studies web page, www.engr.washington.edu/facresearch/researchcenters.html.

Interdisciplinary Engineering Studies Programs

The College of Engineering directly administers non-departmental undergraduate and graduate degree programs.

The Interdisciplinary Engineering Studies (IES) Program is intended for students whose desired course of study does not fall within one of the traditional engineering departments. An interdisciplinary program combines coursework

from at least one engineering department as well as other department(s) on campus (engineering or other) to allow students to create a program of study not available through the existing undergraduate degree programs. Although coursework may involve departments outside the College of Engineering, the major thrust must be in engineering.

Undergraduate Programs

Bachelor of Science in Engineering and Bachelor of Science

The IES Program offers a nonprofessional degree program leading to the Bachelor of Science (BS) and a professional degree program for the Bachelor of Science in Engineering (BSE).

Due to the uniqueness of each interdisciplinary student's program of studies, the BS and BSE degrees are not accredited by the Engineering Accreditation Commission of ABET. The experience requirement to obtain a professional engineering license is two years longer for a BSE graduate, except in surveying, than for a graduate of an accredited program. A BS graduate is not eligible for a professional engineering license.

Interdisciplinary students develop personal programs of study approved by a faculty adviser with similar interests. Contact Student Academic Services, email: engradv@uw.edu or phone: (206) 543-1770, for information on established procedures and applications for entry into the BSE and BS programs. Entrance requirements and the continuation policy for participation in these programs are consistent with those of other departments in the College.

Bachelor of Science in Engineering

Admission to this program (usually after completion of 90 credits) is competitive with a minimum GPA of 2.80 in technical courses required for entry. A minimum of 75 credits must be completed after entering the program before a BSE degree is awarded. Detailed information regarding the BSE degree can be obtained from an adviser in Student Academic Services (301 Loew).

Bachelor of Science

The nonprofessional Bachelor of Science degree provides greater flexibility than does the Bachelor of Science in Engineering degree. It can be an excellent base for subsequent professional studies in law, medicine, or business. It may also be the primary educational objective in such fields as technical writing, engineering sales, or environmental studies. Detailed requirements are available from the adviser in Student Academic Services (301 Loew).

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

ENGR 100 Introduction to Engineering Design (5) I&S Introduction to design and communication principles through engineering project approach, stressing teamwork, design process, specialties and tools of engineering, creative and analytical thinking, professionalism and ethics, social, economic and political context, open-ended problems. Grading based on quality of engineering projects and presentation of design through written, oral, and graphical communication. Offered: AWSp.

ENGR 101 Engineering Exploration (1-2, max. 3) Presentations and discussions on topics of current interest in engineering. Explores various areas of engineering research, engineering disciplines, and the relevance to today's students. Topics vary by quarter.

ENGR 102 Studying Engineering (1-3, max. 6) Intensive seminar focusing on topics relating to the successful study of engineering. Topics include an introduction to the university culture, learning skills development, engagement with critical resources, and an introduction to engineering

disciplines and professions. Topics vary by quarter. Credit/no-credit only.

ENGR 197 Engineering Problem Solving (1, max. 12) Lectures and problem sessions in mathematics, chemistry, and physics with engineering applications. Enrollment restricted to Minority Science, Engineering Program (MSEP), and Women in Science and Engineering (WiSE) students. Credit/no-credit only. Offered: AWSp.

ENGR 199 Special Projects (1-3, max. 3) Students propose problems to solve to an engineering faculty member. The problems may be selected from the student's own experiences and interests, from the interest of the faculty member, or from other sources such as faculty or graduate students doing research projects, or from personnel in the physical medicine area, occupational therapy, hospital, industry, or government. Corroboration by an engineering faculty member is required. Project suggestions are available. Offered: AWSpS.

ENGR 202 Special Topics (1-5, max. 10) Topics of current interest to engineering students. Offered: AWSp.

ENGR 320 Engineering Cooperative Education (1-10, max. 12) Engineering practicum; includes integration of classroom theory with on-the-job training. Open only to students who have been admitted to the Engineering Cooperative Education Program. Credit/no-credit only. Offered: AWSpS.

ENGR 321 Engineering Cooperative Education ([1-2]-, max. 16) Engineering practicum; integration of classroom theory with on-the-job training. Periods of full-time work alternate with periods of full-time study. Open only to students who have been admitted to the Engineering Cooperative Education Program. Requires subsequent completion of ENGR 322 to obtain credit. Credit/no-credit only. Offered: AWSpS.

ENGR 322 Engineering Cooperative Education Postwork Seminar (-0) Reporting and evaluation of co-op work experience, and discussion of current topics in engineering. To be taken during the first quarter in school following each work session. Offered: AWSpS.

ENGR 360 Introductory Acoustics (3) NW Introduction to propagation of acoustical waves; emphasis on propagation of sound waves in air, but material is applicable to propagation of sound waves in liquids, including underwater acoustics, and to propagation of stress waves in solids. Includes a historical development of acoustics, terminology, and units employed. Prerequisite: either MATH 136 or MATH 307; PHYS 123. Offered: Sp.

ENGR 380 Design for Sustainability in the Developing World (2, max. 8) I&S Bolton Introduction to issues in international sustainable development from an engineering perspective. Combines lectures on current approaches and potential pitfalls with work on group projects related to sustainable development efforts of Engineers Without Borders. Develops research and design skills using real life projects. Intended for students from all backgrounds. Credit/no-credit only. Offered: AW.

ENGR 401 Leadership Development to Promote Equity in Engineering Relationships (3) DIV Engages engineering students' energy, creativity, social conscience, and on-the-ground perspectives in advancing diversity and inclusion in engineering. Students explore topics such as diversity in science and engineering, impact of unconscious bias, the role of allies, community engagement, and leadership in supporting all current and potential engineers. Credit/no-credit only. Offered: A.

ENGR 498 Special Topics in Engineering (1-5, max. 6) Offered: AWSpS.

ENGR 499 Special Projects in Engineering (1-3, max. 6) Offered: AWSpS.

ENGR 598 Seminar Series in Engineering (1, max. 12) Graduate seminar series on topics of interest to all engineering students.

ENGR 601 Internship ([1-2]-, max. 24) Engineering practicum; includes integration of classroom theory with on-the-job training for graduate students. Open only to students who have been admitted to the Engineering Cooperative Education Program. Offered: AWSpS.

Aeronautics and Astronautics

211 Guggenheim Hall

Aeronautics and astronautics deals with the design, analysis, and performance of air and space vehicles and a broad spectrum of related engineering science, such as aerodynamics, structural mechanics, automatic controls, flight mechanics, space dynamics, propulsion, plasma dynamics, and related topics.

UNDERGRADUATE PROGRAM

Adviser

211C Guggenheim Hall, Box 352400
(206) 616-1115

ugadvising@aa.washington.edu

The department offers the following program of study:

- The Bachelor of Science in Aeronautical and Astronautical Engineering degree
- Bachelor of Science in Aeronautical and Astronautical Engineering

Suggested First- and Second-Year College Courses: During the first year, students should take the required calculus, chemistry, English composition, and computer programming. If possible, begin taking the physics sequence. It is recommended that some VLPA and I&S courses be taken to balance the course load.

Department Admission Requirements

Applicants are considered in three groups -- Direct Freshman Admission, Early Admission, and Upper-Division Admission. Admission is competitive. All applicants have the right to petition and appeal the department's admission decision. Applications are accepted for autumn quarter only; application deadline is July 1.

Direct Freshman Admission

The department enrolls a select number of students directly from high school, prior to completion of University-level prerequisites. Students accepted to the UW who indicate aeronautics and astronautics as their preferred major on the freshman application are automatically considered. Competitive applicants have taken or are taking calculus and at least two years of laboratory science (physics and chemistry preferred) in high school.

Admission is for autumn quarter only.

Early Admission (Limited number of students admitted through this process)

Applicants must be currently enrolled at the UW and must have a minimum 15 credits of the prerequisites listed below, taken in residence at the UW.

1. *Course Requirements:* MATH 124, MATH 125, MATH 126; 10 credits of physical science courses plus accompanying laboratory at the level of PHYS 121, PHYS 122, PHYS 123, or CHEM 142 or above; and 5 credits of English composition. All courses must be completed prior to the July 1 application deadline. Admission is for autumn quarter only.
2. *Grade Requirements:* At least 15 credits completed, with a minimum grade of 2.0 in each prerequisite course required for admission, and a minimum 2.50 GPA in all courses required for admission.

3. Completion of minimum requirements does not guarantee early admission. Admission is highly competitive. Typically early admission students have cumulative GPAs significantly above 3.0.

Upper-Division Admission

1. *Course Requirements:* MATH 124, MATH 125, MATH 126, MATH 307, MATH 308, MATH 324, PHYS 121, PHYS 122, PHYS 123, CHEM 142, A A 210, A A 260, AMATH 301, CEE 220, M E 230, and 5 credits of English composition. (AMATH 301 and/or MATH 324 may be taken as late as the autumn quarter of admission but would create an extremely heavy course load if both are taken the same quarter.)
2. *Grade Requirements:* At least 75 credits completed, with a minimum grade of 2.0 in each prerequisite course required for admission and a minimum 2.50 GPA in all courses required for admission.
3. Completion of minimum requirements does not guarantee admission.

Graduation Requirements

180 credits, as follows:

1. *General Education Requirements (78 credits)*
 - a. *Areas of Knowledge (49 credits):*
 - i. *Visual, Literary, and Performing Arts (VLPA) and Individuals & Societies (I&S):* 24 credits, to include a minimum 10 credits in VLPA and a minimum 10 credits of I&S, plus 4 additional credits in either area.
 - ii. *Natural World:* 25 credits to include CHEM 142, PHYS 121, PHYS 122, PHYS 123, and an additional 5 credits of Natural World courses (consult department for list of approved courses.)
 - b. *Mathematics (24 credits):* MATH 124, MATH 125, MATH 126, MATH 307, MATH 308, and MATH 324.
 - c. *Written and Oral Communication:* One 5-credit English composition course from the University list. Additional writing credits are built into the major core courses.
2. *Major Requirements (89 credits)*
 - a. *Engineering Fundamentals (16 credits):* A A 210, A A 260, CEE 220, and M E 230.
 - b. *Departmental Core (73 credits):* A A 301, A A 302, A A 310, A A 311, A A 312, A A 320, A A 321, A A 322, A A 331, A A 332, A A 360; either A A 410 and A A 411 or A A 420 and A A 421; A A 447, A A 496, AMATH 301; 15 credits of senior technical electives. With approval, 3 credits of the latter may be chosen from another area of engineering.
 - c. Minimum 1.7 grade in each 300- and 400-level A A course applied to major requirements
 - d. Minimum 2.00 cumulative GPA for courses applied to major requirements
 - e. *Free Electives:* 13 credits

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, please contact the departmental adviser or see departmental webpage for more details.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* The goals and objectives of the undergraduate program are to provide a challenging and comprehensive education, to develop necessary functional skills and an understanding of the societal context in which engineering is practiced, to provide a solid foundation in the engineering sciences related to aerospace engineering, to provide a

em systems perspective, to develop engineering creativity through design experience, and to prepare graduates to succeed in engineering careers and lifelong learning.

Graduates of aeronautics and astronautics are skilled in engineering fundamentals, engineering design, laboratory skills, synthesis of various engineering disciplines, and working in a team environment. Graduates are highly regarded by employers in aeronautics, astronautics, energy systems, and related fields. They develop interpersonal skills and a desire for life-long learning that helps them succeed in their chosen careers. Graduates have been successful and valued at local, national, and international industries, as well as at government organizations and institutions of higher learning.

- *Instructional and Research Facilities:* Visit the department web page to view current research activities. Undergraduates are encouraged to participate in research activities.
- *Honors Options Available:* With College Honors (completion of Honors core curriculum and Departmental Honors requirements). With Honors (completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning:* Internships are arranged individually. See adviser for details.
- *Department Scholarships:* Scholarships are limited and are usually reserved for students who have junior and senior standing in the department. Deadline for scholarship applications is April 1.
- *Student Organizations/Associations:* American Institute of Aeronautics and Astronautics (AIAA) student chapter. Sigma Gamma Tau

GRADUATE PROGRAM

Graduate Program Coordinator

211B Guggenheim Hall Box 352400

(206) 616-1113

gradadvising@aa.washington.edu

The Department of Aeronautics and Astronautics offers programs that provide a foundation in the aerospace engineering sciences and expertise in various specialized application areas. Three graduate degree options are offered: Master of Science in Aeronautics and Astronautics, Master of Aerospace Engineering, and Doctor of Philosophy.

Master of Science in Aeronautics and Astronautics (MSAA)

Admission Requirements

1. *Grade Point Average:* The Graduate School requires that applicants hold a minimum 3.00 GPA for the last 90 quarter hours or 60 semester hours of graded undergraduate coursework. Applicants admitted by the department normally have a minimum 3.30 GPA. Applicants with less than a 3.30 GPA may still be considered if they have other strong credentials, such as graduation from an outstanding undergraduate program and excellent GRE scores.
2. *Quality and Difficulty of Courses Taken and Universities and Colleges Attended:* Each transcript is individually reviewed. The department recognizes that some academic institutions are more competitive and high grades are more difficult to obtain.
3. *GRE General Test:* Applicants take the general portion of the Graduate Record Examination. Although no minimum GRE score is required, the typical successful applicant has scores in excess of 450 Verbal, 700 Quantitative, 650 Analytical, or 4.0 Analytical Writing. If the applicant wishes to be considered for a graduate assistantship or fellowship, scores should be received before February 15.

4. *Two Letters of Recommendation:* Confidential letters may be submitted electronically by recommenders indicated on the online application, or placed in sealed envelopes and included with application materials, or sent directly to the department by the recommenders. Writers should be able to rank the applicant's performance as a student and/or researcher. A referrer should send the recommendation in letter format; no special form is used.

5. *Statement of Objectives:* Provides the department information not found in transcripts and other official documents. For example, statements can include personal histories, professional and academic goals, and specific research interests if applicable.
6. *English Requirements for Foreign Students:* Minimum TOEFL scores of 580 on the paper-based exam or 237 on the computerized exam for foreign students whose native language is not English.
7. *Prior Degrees:* Prospective students should hold an undergraduate degree in aerospace or mechanical engineering. Applicants with em grades (3.50 and above) in related disciplines (physics, other engineering disciplines) are considered.

Degree Requirements

39-45 credits, as follows:

1. All MSA degree candidates must have a program of study plan approved by the department's graduate committee.
2. Before completing 12 credits of graduate coursework, candidates file a program of study plan prepared with the assistance of the adviser or the Graduate Program Adviser and submitted to the graduate committee for approval.
3. The minimum MSA program consists of either ten courses plus 9 thesis credits, or 13 courses. No more than three of the courses may be at the 400 level (none in a student's depth area). All courses counted toward the degree must be graded. In addition, each student must enroll in the graduate seminar (A A 520) during every quarter of full-time studies.
4. The student's program of study is tailored to the needs and interests of the student. However, each program must include depth in a field of specialization, breadth to include at least one course in each of two different subject areas outside the field of specialization, and analytical strength to include three mathematical courses. Senior sequences in engineering, science, or other appropriate professional fields may make up part of the individualized graduate program. However, only three undergraduate courses may be counted toward the minimum requirements (and none in the student's depth area).
5. The thesis, if that degree option is chosen, is approved by the student's adviser and second reviewer and submitted to the Graduate School. After submitting one copy of the thesis to the department on CD, two signed, unbound copies and receipt for binding fee are submitted to the Graduate School by the last day of the quarter.

Normally one-and-a-half to two years of full-time study are needed to complete the requirements for an MSA degree. The Graduate School imposes a time limit of six years for any master's degree.

Master of Aerospace Engineering (MAE)

The MAE program is intended for recent graduates or engineers who wish to expand their knowledge in multidisciplinary areas while also learning other aspects of aerospace engineering, such as business, management, manufacturing, or technical communication.

Admission Requirements

1. *Grade Point Average:* The Graduate School requires that applicants hold a minimum 3.00 GPA for the last 90 quarter hours or 60 semester hours of graded undergraduate coursework. Applicants admitted by the department normally have a minimum 3.30 GPA. Applicants with less than a 3.30 GPA may still be considered for admission if they have other strong credentials, such as graduation from an outstanding undergraduate program and excellent GRE scores.
2. *Quality and Difficulty of Courses Taken and Universities and Colleges Attended:* Each transcript is individually reviewed. The department recognizes that some academic institutions are more competitive and high grades are more difficult to obtain.
3. *GRE General Test:* Applicants take the general portion of the Graduate Record Examination. Although the department does not specify minimum GRE scores, the typical successful applicant has scores in excess of 450 Verbal, 700 Quantitative, 650 Analytical, or 4.0 Analytical Writing. If the applicant wishes to be considered for a graduate assistantship or fellowship, the scores should be received before February 15.
4. *Two Letters of Recommendation:* Confidential letters may be submitted electronically by recommenders indicated on the on-line application, or placed in sealed envelopes and included with application materials, or sent directly to the department by the recommenders. Writers should be able to rank an applicant's performance as a student and/or researcher. A referrer should send the recommendation in letter format; no special forms are used.
5. *Statement of Objectives:* Provides the department information about the applicant not found in the transcripts and other official documents. For example, statements can include personal histories, professional and academic goals, and specific research interests if applicable.
6. *English Requirements for Foreign Students:* Minimum TOEFL scores of 580 on the paper-based exam or 237 on the computerized exam for foreign students whose native language is not English.
7. *Prior Degrees:* Prospective students should hold an undergraduate degree in aerospace or mechanical engineering. Applicants with em grades (3.50 and above) in related disciplines (physics, other engineering disciplines) are considered.

Degree Requirements

45-54 credits

Students create their own programs of study based on departmental distribution requirements and subject to departmental approval, to include courses in a specialty area, technical and non-technical electives, analytical courses, and a group or independent project. The MAE program includes twelve courses plus 8 credits for the project, or ten courses and one of three business certificate programs.

Doctor of Philosophy (PhD)

The doctoral program consists of lectures, seminars, discussions, and independent study, enabling the student to master and to make original contributions to a particular field.

Admission Requirements

1. *Grade Point Average:* The Graduate School requires that applicants hold a minimum 3.00 GPA for the last 90 quarter hours or 60 semester hours of graded undergraduate coursework. Applicants admitted by the department normally have a minimum 3.40 GPA. Applicants with less than a 3.40 GPA may still be considered for admission if they have other strong credentials, such

as graduation from an outstanding undergraduate program and excellent GRE scores.

2. *Quality and Difficulty of Courses Taken and Universities and Colleges Attended:* Each transcript is individually reviewed. The department recognizes that some academic institutions are more competitive and high grades are more difficult to obtain.
3. *GRE General Test:* Applicants must take the general portion of the Graduate Record Examination. Although the department does not specify minimum GRE scores, the typical successful applicant has scores in excess of 450 Verbal, 700 Quantitative, 650 Analytical, or 4.0 Analytical Writing. If the applicant wishes to be considered for a graduate assistantship or fellowship, the scores should be received before February 15th.
4. *Two Letters of Recommendation:* Confidential letters may be submitted electronically by recommenders indicated on the on-line application, or placed in sealed envelopes and included with application materials, or sent directly to the department by the recommenders. Writers should be able to rank the applicant's performance as a student and/or researcher. A referrer should send the recommendation in letter format; no special forms are used.
5. *Statement of Objectives:* Provides the department information about the applicant not found in the transcripts and other official documents. For example, statements can include personal histories, professional and academic goals, and specific research interests.
6. *English Requirements for Foreign Students:* Minimum TOEFL scores of 580 on the paper-based exam or 237 on the computerized exam for foreign students whose native language is not English.
7. *Prior Degrees:* Prospective students should hold undergraduate and graduate degrees in aerospace or mechanical engineering with a 3.40 minimum GPA. Applicants with strong grades in related disciplines (physics, other engineering disciplines) are considered.

Degree Requirements

Minimum 90 credits

In addition to the formal steps for obtaining the degree listed below, students must complete an approved program of study consisting of 18 credits of coursework beyond that required for the Master of Science in Aeronautics and Astronautics, for a total of 90 credits for the PhD

1. *The Departmental Qualifying Examination:* To take the department qualifying examination, students must have a 3.40 GPA in technical coursework at the graduate level. In addition, they must have a MSAA degree or its equivalent, must have a faculty member accept them into their research program and agree to serve as their thesis adviser, supervise their PhD research, and chair their qualifying examination committee.
2. *The General Examination:* Upon successful completion of the qualifying examination, a PhD Supervisory Committee chaired by the student's major adviser is appointed. The general examination is expected to be taken within one year after the qualifying exam, but no sooner than two years after the beginning of graduate study. At least three weeks prior to the exam, students provide the members of their committee a document outlining their proposed research.
3. *Completion of Coursework:* At least 18 credits of coursework in addition to that for the MSAA degree. A form listing the courses to be taken must be approved by the student's adviser and placed in the student's file.
4. *Preparation of the Dissertation:* The dissertation normally requires the equivalent of at least one year of full-time study, and must demonstrate original and independent research and achievement.

5. *The Final Examination:* When the dissertation is completed to the satisfaction of the chair of the Supervisory Committee, a reading committee of three is appointed from the student's committee. If the reading committee agrees that the dissertation is satisfactory, then the final examination is scheduled. That examination is generally devoted to a presentation and defense of the dissertation.

Research Activities

Current areas of research in the Department of Aeronautics and Astronautics include guidance and control systems, aerodynamics and fluid mechanics, propulsion and energy systems, advanced composite materials and structures, and plasma dynamics and fusion reactors. Research in controls includes autonomous systems involving spacecraft, aircraft, and underwater vehicles, flight systems integration, and development of unmanned aerial vehicles. Among fluid dynamics research topics are turbulent mixing, vortex dynamics and flow control, compressible flow, fluids in microgravity, and advanced fluid flow diagnostics development. Research programs in the areas of propulsion and energy include hypervelocity mass launchers, advanced technologies for generating space and terrestrial energy, combustion, and studies of planetary resources utilization. Structural mechanics research involves damage-tolerant composite structures, structural dynamics, fatigue, and fracture, and multidisciplinary design optimization. Experimental and computational research in plasma science has an emphasis on advanced, alternative concepts for achieving controlled fusion, as well as plasma propulsion for space applications.

Facilities

Facilities that support research activities in controls include unmanned aerial vehicle (UAV) and autonomous flight systems laboratories, and laboratories for underwater vehicle and distributed space systems research. Fluids, propulsion, and energy facilities include the Kirsten 8 x 12 foot low-speed wind tunnel, two water tunnels, a Mach 5, enthalpy blow-down wind tunnel, the Ram Accelerator hypervelocity launcher, a combustion laboratory, and a Mars environment simulation facility. Research in structures is conducted in a composite-material laboratory with material and structural test machines. Various plasma and fusion-research and engineering physics laboratories, including the Redmond Plasma Physics Laboratory (RPPL), exist to support research in plasmas. Lastly a variety of computer facilities is available, including a single 20-processor and two 8-processor servers, and a 16-computer heterogeneous cluster, as well as several stereographic visualization systems.

Financial Support

Most students are financially supported by the department as teaching or research assistants, or by their employers. For further information on this or other aspects of department programs, contact the Graduate Program Coordinator, 211B Guggenheim Hall, Box 352400, or visit the department's website.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at [www.uw.edu/students/crscat/](http://uw.edu/students/crscat/)

Aeronautics and Astronautics

AA 198 Special Topics in Aeronautics and Astronautics (1-5, max. 10) NW Knowlen Introduces the field of Aeronautics and Astronautics. Topics include aircraft flight, rocket propulsion, space travel, and contemporary space missions. May include hands-on activities. For non-majors.

AA 210 Engineering Statics (4) NW Applies vector analysis to equilibrium of rigid body systems and subsystems. Includes force and moment resultants, free body diagrams, internal forces, and friction. Analyzes basic structural and machine systems and components. Prerequisite: minimum grade of 2.0 in either MATH 126 or MATH 136; minimum grade of 2.0 in PHYS 121. Offered: AWS.

AA 260 Thermodynamics (4) NW Introduction to the basic principles of thermodynamics from a macroscopic point of view. Emphasis on the First and Second Laws and the State Principle, problem solving methodology. Prerequisite: minimum grade of 2.0 in either CHEM 140, CHEM 142, CHEM 144, or CHEM 145; minimum grade of 2.0 in either MATH 126, MATH 129, or MATH 136; minimum grade of 2.0 in PHYS 121. Offered: SpS.

AA 299 Undergraduate Research (1-5, max. 10) Research on special topics under the supervision of a faculty member. Application of fundamentals learned in the classroom to real problems in research. Credit/no-credit only. Offered: AWSpS.

A A 301 Compressible Aerodynamics (4) Covers aerodynamics as applied to the problems of performance of flight vehicles in the atmosphere; kinematics and dynamics of flow fields; thin airfoil theory; compressible fluids; one-dimensional compressible flow; and two-dimensional supersonic flow. Prerequisite: either A A 260 or M E 323. Offered: W.

A A 302 Incompressible Aerodynamics (4) Aerodynamics as applied to the problems of performance of flight vehicles in the atmosphere. Kinematics and dynamics of flow fields; incompressible flow about bodies. Thin airfoil theory; finite wing theory. Prerequisite: minimum grade of 1.7 in A A 301; PHYS 123; either AMATH 351, MATH 136, or MATH 307. Offered: Sp.

A A 310 Orbital and Space Flight Mechanics (4) Newton's law of gravitation. Two-body problem, central force motion, Kepler's laws. Trajectories and conic sections. Position and velocity as functions of time. Orbit determination and coordinate transformations. Rocket dynamics, orbital maneuvers, Hohmann transfer. Interplanetary trajectories, patched conics. Planetary escape and capture. Gravity assist maneuvers. Prerequisite: M E 230. Offered: A.

AA 311 Atmospheric Flight Mechanics (4) Applied aerodynamics, aircraft flight "envelope," minimum and maximum speeds, climb and glide performance. Range and endurance, take-off and landing performance, using both jet and propeller power plants. Longitudinal and dynamic stability and control, wing downwash, stabilizer and elevator effectiveness, power effects. Lateral and directional stability and control. Offered: A.

A A 312 Structural Vibrations (4) Vibration theory. Characteristics of single and multi degree-of-freedom linear systems with forced inputs. Approximate methods for determining principal frequencies and mode shapes. Application to simple aeroelastic problems. Prerequisite: M E 230. Offered: W.

A A 320 Aerospace Instrumentation (3) Hands-on laboratory experience for understanding the design and function of electronic circuits and instrumentation utilized in aerospace engineering. Topics include Ohm's law, Kirchhoff's laws, DC and AC circuits, passive and active components, op-amps and comparators, sensors, signal conditioning, electromechanical systems and actuators, digital systems, and data acquisition. Offered: A.

A A 321 Aerospace Laboratory I (3) The design and conduct of experimental inquiry in the field of aeronautics and astronautics. Laboratory experiments on supersonic flow, structures, vibrations, material properties, and other topics. Theory, calibration, and use of instruments, measurement techniques, analysis of data, report writing. Offered: W.

A A 322 Aerospace Laboratory II (3) Design and conduct of experimental inquiry in the field of aeronautics and

astronautics. Laboratory experiments on subsonic aerodynamics, supersonic flow, structures, propulsion, and other topics. Theory, calibration, and use of instruments, measurement techniques, analysis of data, report writing. Prerequisite: minimum grade of 1.7 in A A 321. Offered: Sp.

A A 331 Aerospace Structures I (4) Analysis and design of aerospace structures. Reviews concepts of stress, strain, and equations of elasticity. Plane stress and plane strain. Application to aerospace structural elements including general bending and torsion of rods and beams, and open and closed thin-walled structures and box beams. Prerequisite: CEE 220. Offered: W.

A A 332 Aerospace Structures II (4) Shear flow in multi-cell thin walled sections. Bending of rectangular and circular plates. Buckling analysis of beams and plates. Energy principles in elasticity. Introduction to the finite element method. Elements of fracture mechanics and fatigue. Prerequisite: minimum grade of 1.7 in A A 331. Offered: Sp.

A A 360 Propulsion (4) Study of the aero- and thermodynamics of jet and rocket engines. Air-breathing engines as propulsion systems. Turbojets, turbofans, turboprops, ramjets. Aerodynamics of gas-turbine engine components. Rocket vehicle performance. Introduction to space propulsion. Prerequisite: minimum grade of 1.7 in A A 301. Offered: Sp.

A A 400 Gas Dynamics (3) Introduction to kinetic theory and free molecule flow. Review of thermodynamics. One-dimensional gas dynamics: one-dimensional wave motion, combustion waves. Ideal and real gas application. Prerequisite: PHYS 123; either A A 260 or CHEM E 260. Offered: W.

AA 402 Fluid Mechanics (3) Introduction to fluid mechanics, dimensional analysis, effects of gravity on pressure, kinematics, conservation of mass and momentum, control-volume method, conservation of energy, vorticity and viscosity, viscous effects, Navier-Stokes solutions, and boundary layers. Prerequisite: MATH 324; A A 301. Offered: A.

A A 405 Introduction to Aerospace Plasmas (3) Development of introductory electromagnetic theory including Lorentz force and Maxwell's equations. Plasma description. Single particle motions and drifts in magnetic and electric fields. Derivation of plasma fluid model. Introduction to plasma waves. Applications to electric propulsion, magnetic confinement, and plasmas in space and Earth's outer atmosphere. Prerequisite: PHYS 123; MATH 324. Offered: A.

AA 410 Aircraft Design I (4-) Conceptual design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Offered: W.

AA 411 Aircraft Design II (-4) Preliminary design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Prerequisite: A A 410. Offered: Sp.

A A 419 Aerospace Heat Transfer (3) Fundamentals of conductive, convective, and radiative heat transfer with emphasis on applications to atmospheric and space flight. Prerequisite: PHYS 123; MATH 307. Offered: W.

A A 420 Spacecraft and Space Systems Design I (4-) Design of space systems and spacecraft for advanced near-Earth and interplanetary missions. Astrodynamics, space environment, space systems engineering. Mission design and analysis, space vehicle propulsion, flight mechanics, atmospheric entry, aerobraking, configuration, structural design, power systems. thermal management, systems integration. Oral presentations and report writing. Design topics vary. Offered: W.

AA 421 Spacecraft and Space System Design II (-4) A continuation of A A 420. Course content varies from year to

year and is dependent on the design topic chosen for A A 420. Prerequisite: A A 420. Offered: Sp.

A A 430 Finite Element Analysis in Aerospace (3) Introduction to the finite element method and application. One-, two-, and three-dimensional problems including trusses, beams, box beams, plane stress and plane strain analysis, and heat transfer. Use of finite element software. Prerequisite: CEE 220. Offered: A.

A A 432 Composite Materials for Aerospace Structures (3) Introduction to analysis and design of aerospace structures utilizing filamentary composite materials. Basic elastic properties and constitutive relations of composite laminates. Failure criteria, buckling analysis, durability, and damage tolerance of composite structures. Aerospace structure design philosophy and practices. Prerequisite: A A 332. Offered: W.

AA 440 Flight Mechanics I (3) Calculation of aerodynamic characteristics of aircraft and components including stability derivatives. Relation to wind tunnel and flight data. Vehicle equations of motion within the atmosphere, characteristics of propulsion systems and components including propellers. Prediction of performance, stability, and control characteristics for a specific aircraft. Offered: W.

A A 441 Flight Test Engineering (3) Determination in flight of performance, stability, and control characteristics of aircraft; and comparison with predicted and wind tunnel results. Prerequisite: A A 311; A A 440. Offered: Sp.

AA 447 Control in Aerospace Systems (4) Overview of feedback control. Dynamic models for control systems design including ODE, transfer function, and state-space. Linearization of nonlinear models. Analysis of stability, controllability, observability, time/frequency domain techniques. Frequency of response design techniques. Design of control systems via case studies. Prerequisite: minimum grade of 1.7 in A A 312; M E 230; MATH 308. Offered: A.

A A 448 Control Systems Sensors and Actuators (3) Overview of feedback control. Study of control systems components and formulation of their mathematical models. Discussion and analysis of amplifiers, DC servomotors, magnetic-actuators, accelerometers, potentiometers, shaft encoders and resolvers, proximity sensors, and force transducers. Experimental determination of component models and model parameters. Two three-hour laboratories per week. Prerequisite: A A 447.

A A 449 Special Topics in Controls (3-5) Topics of current interest in controls. Offered: Sp.

A A 461 Advanced Air Breathing Propulsion (3) Examines gas turbine engine design methodology. Covers aerodynamics or gas dynamics of air breathing engine components: inlets, compressors, turbines, and nozzles. Studies the on-design and off-design performance of gas turbine engines. Includes combustion, emissions, noise, and advanced air breathing propulsion systems. Prerequisite: A A 360. Offered: A.

A A 462 Rocket Propulsion (3) Covers the physical and performance characteristics of chemical rocket propulsion systems. Includes combustion chamber thermochemistry, propellant properties and handling, and rocket system component interactions. Offered: Sp.

A A 470 Systems Engineering (4) Concepts of system approach, system hierarchies, functional analysis, requirements, trade studies, and other concepts used to define and integrate complex engineering systems. Introduction to risk analysis and reliability, failure modes and effects analysis, writing specifications, and lean manufacturing. Offered: jointly with IND E 470.

AA 480 Systems Dynamics (3) Equations of motion and solutions for selected dynamic problems; natural frequencies and mode shapes; response of simple systems to applied loads. Prerequisite: A A 312. Offered: Sp.

A A 496 Undergraduate Seminar (1, max. 4) Lectures and discussions on topics of current interest in aviation and

space technology by guest speakers. Topics vary. Credit/no-credit only. Offered: W.

AA 498 Special Topics (1-5, max. 15) Topics of current interest in the Department of Aeronautics and Astronautics.

AA 499 Undergraduate Research (1-5, max. 10) Research on special topics under the supervision of a faculty member. Application of fundamentals learned in the classroom to real problems in research. A maximum of 6 credits may be applied toward senior technical electives. Offered: AWSpS.

AA 501 Physical Gasdynamics I (3) Equilibrium kinetic theory; chemical thermodynamics; thermodynamic properties derived from quantum statistical mechanics; reacting gas mixtures; applications to real gas flows and gas dynamics. Offered: W, odd years.

A A 503 Continuum Mechanics (3) Reviews concepts of motion, stress, energy for a general continuum; conservation of mass, momentum, and energy; and the second law; constitutive equations for linear/nonlinear elastic, viscous/inviscid fluids, and general materials; and examples/solutions for solid/fluid materials. Offered: jointly with M E 503; A.

A A 504 Compressible Fluid Mechanics (3) Reviews the fundamentals with application to external and internal flows; supersonic flow, 1D and Quasi-1D, steady and unsteady flow, oblique shocks and expansion waves, linearized flow, 2D flow, method of characteristics; and transonic and hypersonic flow. Offered: A.

A A 506 Vortex-Dominated Flows (3) Examines the vorticity equation, baroclinic torque, solenoidality, Biot-Savart's formula, diffusion of vorticity, Burger vortex, system of vortices, Kelvin-Helmholtz instability, effects of density, shear, and surface tension on instability, swirling flows, and other special topics. Offered: Sp, even years.

A A 507 Fluid Mechanics (3) Covers inviscid and viscous incompressible flows, exact solutions of laminar flows, creeping flows, boundary layers, free-shear flows, vorticity equation, and introduction to vortex dynamics. Offered: jointly with M E 507; W.

A A 508 Turbulence (3) The phenomena of turbulence; transition prediction; Reynolds stresses; turbulent boundary-layer equations. Approximate methods for turbulent boundary layers. Prerequisite: A A/M E 507 or permission of instructor. Offered: Sp, odd years.

AA 510 Mathematical Foundations of Systems Theory (4) Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Offered: jointly with CHEM E 510/E E 510/M E 510.

AA 513 Gas Laser Theory and Practice (3) Physics and fluid mechanics of gas lasers, with emphasis on performance of gas dynamic lasers, flowing chemical lasers, and gaseous electric lasers. Development of laser optics, interaction of radiation and matter, laser oscillation conditions, and methods of obtaining population inversions. Applications of high-power lasers emphasized. Offered: Sp, even years.

A A 516 Stability and Control of Flight Vehicles (3) Static and dynamic stability and control of flight vehicles in the atmosphere. Determination of stability derivatives. Effects of stability derivatives on flight characteristics. Flight dynamic model. Responses to control inputs and external disturbances. Handling qualities. Control system components, sensor characteristics. Stability augmentation systems. Offered: A.

AA 518 Automatic Control of Flight Vehicles (3) Specifications of flight vehicle performance. Synthesis of stability augmentation systems and autopilot control laws in the frequency-domain and using multivariable control methods. Reduced-order controller synthesis, digital design,

and implementation. Use of computer-aided control design packages. Prerequisite: A A 516 and A A 548. Offered: Sp, odd years.

AA 523 Special Topics in Fluid Physics (3) Offered: AWSp.

A A 524 Aeroacoustics (3) Reviews the fundamental concepts of acoustics which include sound measurements, reflection, resonance, transmission, radiation, scattering, diffraction, ray acoustics, wave guide, turbo-machinery noise, sound suppression, jet noise, and airframe noise and acoustic problems in rockets and other propulsion systems. Offered: A, odd years.

A A 525 Special Topics in Advanced Airbreathing Engines (3) Reviews the fundamental concepts of advanced airbreathing engines including advanced gas turbines, ram-jets, scramjets and variants, detonation engines, flow with chemical energy release, shock dynamics, Chapman-Jouguet, ZND model, and multi-cellular and spinning detonation. Offered: W, even years.

A A 527 Space Power Systems (3) Explores the theoretical background and technology of power systems for satellites, space science missions, and planetary and lunar outposts. Focuses on photovoltaic, solar-thermal, and nuclear systems, as well as chemical systems for storage. Addresses thermal management. Offered: A, even years.

A A 528 Spacecraft Dynamics and Control (3) Examines spacecraft dynamics and control. Includes basic orbital mechanics - the restricted three body problem, Hill's theory, perturbation theory, orbit determination, rigid body kinematics and dynamics, attitude control, and spacecraft formation flying. Prerequisite: MATH 307; MATH 308. Offered: W, odd years.

A A 529 Space Propulsion (3) Nucleonics, and heat transfer of nuclear-heated rockets. Electrothermal, electromagnetic, and electrostatic thrusters. Power/propulsion systems. Prerequisite: permission. Offered: Sp, odd years.

A A 530 Mechanics of Solids (3) General concepts and theory of solid mechanics. Large deformations. Behavior of elastic, viscoelastic, and plastic solids. Linear theory of elasticity and thermoelasticity. Wave propagation in solids. Offered: A.

AA 531 Integrity of Metallic Aircraft Structures (3) Examines the theory of failure for metallic structures; fatigue properties, fatigue load spectrum, fatigue crack propagation, fracture mechanics, damage tolerance, fretting and corrosion fatigue, design applications, and case studies. Prerequisite: A A 530 or equivalent or permission of instructor. Offered: W, odd years.

A A 532 Mechanics of Composite Materials (3) Analysis and design of composite materials for aerospace structures. Micromechanics. Anisotropic elasticity. Laminated plate theory. Thermo-viscoelastic behavior and fracture of composites. Prerequisite: coursework in mechanics of materials or permission of instructor. Offered: W, odd years.

A A 533 Materials and Processing Technology of Aerospace Composites (3) Covers the fundamentals of composite materials manufacturing and processing, emphasizing modern aviation industry practices. Focuses on autoclave and out-of-the-autoclave processing of carbon fiber composites, mechanical and physical property testing, generation of material allowables, and material qualification for composites. Emphasizes aircraft structures, but is applicable to all high performance, lightweight structures. Recommended: A A 532, which may be taken concurrently. Offered: W.

A A 534 Integrity of Composite Aircraft Structures (3) Concepts of certification by analysis supported by test evidence in aircraft structures, emphasizing regulatory agency requirements and industry approaches. Subjects include allowables approach, bolted and bonded joints, damage resistance and tolerance, specialized test methods, and inspection techniques. Prerequisite: either A A 432 or A A 532; recommended: A A 533. Offered: Sp.

A A 535 Advanced Composite Structural Analysis (3) Covers advanced stress analysis methods for composite structures made of beams, laminates, sandwich plates, and thin shells; stress and buckling analyses of solid and thin-walled composite beams; shear deformable theory for bending of thick laminated plates; and stress and fracture mechanics analysis of bonded joints. Prerequisite: A A 532. Offered: jointly with M E 500; Sp, odd years.

A A 538 Introduction to Structural Optimization (3) Includes the formulation of engineering design problems as optimization problems, gradient based numerical optimization methods, design oriented structural analysis, structural sensitivity analysis, approximation concepts, and introduction to multidisciplinary design optimization. Prerequisite: coursework in structural analysis; finite elements; and computer programming; or permission of instructor. Offered: A, odd years.

AA 540 Finite Element Analysis I (3) Formulation of the finite element method using variational and weighted residual methods. Element types and interpolation functions. Application to elasticity problems, thermal conduction, and other problems of engineering and physics. Offered: W.

A A 541 Finite Element Analysis II (3) Advanced concepts of the finite element method. Hybrid and boundary element methods. Nonlinear, eigenvalue, and time-dependent problems. Prerequisite: A A 540 or permission of instructor. Offered: Sp.

A A 543 Computational Fluid Dynamics (3) Examines numerical discretization of the inviscid compressible equations of fluid dynamics; finite-difference and finite-volume methods; time integration, iterative methods, and explicit and implicit algorithms; consistency, stability, error analysis, and properties of numerical schemes, grid generation; and applications to the numerical solution of model equations and the 2D Euler equations. Offered: W.

AA 544 Turbulence Modeling and Simulation (3) Examines numerical discretization of the incompressible Navier-Stokes equation; projection method, introduction to turbulence; Reynolds Averaged Navier-Stokes equations; algebraic, one-equation, and two-equation turbulence models; large-eddy simulation; direct numerical simulation; and applications to the numerical solution of laminar and turbulent flows in simple geometries. Offered: Sp.

AA 545 Computational Methods for Plasmas (3) Develops the governing equations for plasma models - particle, kinetics, and MHD. Applies the governing equation to plasma dynamics through the PIC method and integration of fluid evaluation equations. Examines numerical solution to equilibrium configurations, and linear stability by energy principle and variational method. Prerequisite: A A 405 or A A 557. Offered: Sp, odd years.

A A 546 Advanced Topics in Control System Theory (3) Topics of current interest for advanced graduate students with adequate preparation in linear and nonlinear system theory. Prerequisite: permission of instructor.

A A 547 Linear Systems Theory (4) Linearity, linearization, finite dimensionality, time-varying vs. time-invariant linear systems, interconnection of linear systems, functional/structural descriptions of linear systems, system zeros and invertibility, linear system stability, system norms, state transition, matrix exponentials, controllability and observability, realization theory. Recommended: either A A 447, E E 447, or M E 471. Offered: jointly with E E 547/M E 547.

A A 548 Linear Multivariable Control (3) Introduction to MIMO systems, successive single loop design comparison, Lyapunov stability theorem, full state feedback controller design, observer design, LQR problem statement, design, stability analysis, and tracking design. LQG design, separation principle, stability robustness. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with E E 548/M E 548.

A A 549 Estimation and System Identification (3) Fundamentals of state estimation for linear and nonlinear systems. Discrete and continuous systems. Probability and

stochastic systems theory. Models with noise. Kalman-Bucy filters, extended Kalman filters, recursive estimation. Numerical issues in filter design and implementation. Prerequisite: either A A 547, E E 547, or M E 547. Offered: jointly with E E 549/M E 549.

A A 550 Nonlinear Optimal Control (3) Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Recommended: A A 548/E E 548. Offered: jointly with E E 550/M E 550.

A A 553 Vibrations of Aerospace Systems (3) Continuous and discrete systems, natural frequencies, and modal analysis; forced vibrations and motion-dependent forces. Structural damping; control augmented structures. Measurements for structural dynamic testing. Prerequisite: A A 571 or equivalent. Offered: Sp, odd years.

A A 554 Aeroelasticity (3) Static and dynamic aeroelasticity, unsteady aerodynamics, aeroservoelastic modeling, and active control. Offered: Sp, even years.

A A 556 Space and Laboratory Plasma Physics (3) Discussion of waves, equilibrium and stability, diffusion and resistivity, basic plasma kinetic theory, and wave-particle interactions. Prerequisite: ESS 415, or equivalent, or permission of instructor. Offered: jointly with ESS 576; W, odd years.

A A 557 Physics of Fusion Plasmas (3) Review and comparison of single particle and fluid descriptions of plasmas. MDH equilibrium, flux surfaces, and basic toroidal description. Collisional processes including physical and velocity space diffusion. Introduction to island formation, stochasticity, and various plasma instabilities. Prerequisite: A A 405 or GPHYS 505. Offered: W, even years.

A A 558 Plasma Theory (3) Equilibrium, stability, and confinement. Classical transport, collisionless and resistive skin depths. Ideal MHD equations formally derived and properties of plasmas in the ideal limit are studied. Straight and toroidal equilibrium. Linear stability analysis with examples. Taylor minimum energy principle. Prerequisite: either A A 405, A A 556, A A 557, ESS 576, or GPHYS 537. Offered: Sp, even years.

AA 559 Plasma Science Seminar (1, max. 30) Current topics in plasma science and controlled fusion with presentations by invited speakers, on-campus speakers, and students. Students expected to give a seminar once or twice a year with instructor reviewing the method of presentation and material used for the presentation. Credit/no-credit only. Offered: AWSp.

A A 560 Plasma Diagnostics (3) Discusses plasma measurement methods including material probes and optical methods. Covers techniques for making measurement in a high electrical noise environment. Presents methods for measuring electron and ion temperatures, density, impurities, magnetic fields, fluctuations, and neutrals. Prerequisite: A A 405 or equivalent. Offered: A, even years.

A A 564 Kinetic Theory/Radiative Transfer (3) Boltzmann and Collisionless Boltzmann (Vlasov) equations. Instabilities in homogeneous and inhomogeneous plasma, quasi-linear diffusion, wave-particle interaction, collisional (Fokker-Planck) equation. Introduction to radiative non-equilibrium, scattering and absorption processes. Integral equation of radiative transfer. Prerequisite: A A 501 or permission of instructor. Offered: Sp, even years.

A A 565 Fusion Reactor Fundamentals (3) Introduction to basic engineering features of fusion power plants. Brief description of basic fusion physics and discussion of power plants for leading thermonuclear concepts. Engineering problems; blanket, shield neutronics; materials, thermal hydraulics; tritium, superconducting systems. Prerequisite: completion of or concurrent enrollment in A A 405 or permission of instructor. Offered: W, odd years.

A A 570 Manifolds and Geometry for Systems and Control (3) Introduction to fundamentals of calculus on manifolds and group theory with applications in robotics and control theory. Topics include: manifolds, tangent spaces and bundles, Lie groups and algebras, coordinate vs. coordinate-free representations. Applications from physics, robotics, and control theory. Offered: jointly with E E 570/M E 570; W, even years.

A A 571 Principles of Dynamics I (3) Systems of particles, rotating axes, rigid-body dynamics; calculus of variations. Lagrangian mechanics. Hamilton's principle. Kane's equations. Periodic and quasiperiodic motion. Stability of dynamical systems. Offered: A.

A A 578 Optimization in System Sciences (3) Covers convex sets, separation theorems, theorem of alternatives and their applications, convex analysis, convex functions, conjugation, subgradients, convex optimization, duality and applications, linear and semi-definite programming. Linear matrix inequalities, optimization algorithms, applications in system theory and control, bilinear, rank minimization, optimization software. Recommended: A A 547/M E 547/E E 547. Offered: jointly with E E 578/M E 578; W.

A A 580 Geometric Methods for Non-Linear Control Systems (3) Analysis and design of nonlinear control systems focusing on differential geometric methods. Topics include controllability, observability, feedback linearization, invariant distributions, and local coordinate transformations. Emphasis on systems evolving on Lie groups and linearly uncontrollable systems. Prerequisite: A A 570/E E 570/M E 570. Offered: jointly with E E 580/M E 580; Sp, even years.

AA 581 Digital Control (3) Chizeck Sampled-data systems, and z-transform. Frequency domain properties. Sampling D/A and A/D conversion. Controller design via discrete-time equivalents, direct methods, state feedback and observers. Quantization effects. LQR control and introduction to LQG optimal control. Prerequisite: E E 548/A A 548/ M E 548. Offered: jointly with E E 581/M E 581; W.

A A 582 Introduction to Discrete Event Systems (3) Berg Modeling DES with automata and Petri nets. Languages. State estimation and diagnostics. Control specifications. Feedback control. Dealing with uncontrollability and unobservability. Dealing with blocking. Timed automata and Petri nets. Prerequisite: A A 447/E E 447/ M E 471. Offered: jointly with E E 582/M E 582; Sp, even years.

A A 583 Nonlinear Control Systems (3) Analysis of nonlinear systems and nonlinear control system design. Phase plane analysis. Lyapunov stability analysis. Describing functions. Feedback linearization. Introduction to variable structure control. Prerequisite: A A 447/E E 447/M E 471. Offered: jointly with E E 583/M E 583.

A A 585 System Identification and Adaptive Control (3) Theory and methods of system identification and adaptive control. Identification of linear-in-parameter systems, using recursive LS and extended LS methods; model order selection. Indirect and direct adaptive control. Controller synthesis, transient and stability properties. Recommended: A A 547/E E 547/M E 547. Offered: jointly with E E 585/M E 585.

A A 589 Special Topics in Solid Mechanics (4) Offered: AWSp.

AA 591 Robotics and Control Systems Colloquium (1, max. 30) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Credit/no-credit only. Offered: jointly with CHEM E 591/E E 591/M E 591.

A A 593 Feedforward Control (3) Devasia Design feedforward controllers for precision output tracking; inversion-based control of non-minimum-phase systems; effect of plant uncertainty on feedforward control; design of feedforward controllers for applications such as vertical take off and landing aircraft, flexible structures and piezo-actua-

tors. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with E E 593/M E 593; Sp, even years.

A A 594 Robust Control (3) Basic foundations of linear analysis and control theory, model realization and reduction, balanced realization and truncation, stabilization problem, coprime factorizations, Youla parameterization, matrix inequalities, H-infinity and H2 control, KYP lemma, uncertain systems, robust H2, integral quadratic constraints, linear parameter varying synthesis, applications of robust control. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with E E 594/M E 594; Sp, odd years.

A A 595 Global Integrated Systems Engineering ([4/6]-, max. 10) Covers systems engineering, project management, finance, economics, and a seminar on global technical topics. Offered: jointly with IND E 595; AW.

AA 596 Global Integrated Systems Engineering Project (3) *Mastrangelo* Project-based systems design course. Prerequisite: A A/INDE 595. Offered: jointly with IND E 596; Sp.

A A 597 Networked Dynamics Systems (3) Provides an overview of graph-theoretic techniques that are instrumental for studying dynamic systems that coordinate their states over a signal-exchange network. Topics include network models, network properties, dynamics over networks, formation control, biological networks, observability, controllability, and performance measures over networks. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with E E 597/M E 597.

A A 598 Special Topics in Aeronautics and Astronautics (1-5, max. 30) Introduction of special topics in the field of aeronautics and astronautics. Topics introduced by regular and guest speakers and includes a variety of information that is of current interest in aeronautics and astronautics. Offered: AWSp.

A A 599 Special Projects (1-5, max. 30) Investigation on a special project by the student under the supervision of a faculty member. Offered: AWSpS.

A A 600 Independent Study or Research (*-) Offered: AWSpS.

AA 700 Master's Thesis (*-) Offered: AWSpS.

AA 800 Doctoral Dissertation (*-) Offered: AWSpS.

Aerospace Engineering

A E 501 Analytical Methods for Aerospace Engineering (4) Applications of analytical and mathematical methods for aerospace engineering, including: ordinary differential equations, partial differential equations, linear algebra, vector calculus, integral theorems, complex analysis, optimization, and probability. Prerequisite: permission of instructor. Offered: A.

A E 598 Aerospace Engineering Colloquium (1, max. 30) Covers the latest research in aerospace engineering. Includes current trends in professional aerospace engineering (e.g., manufacturing, systems, etc.) and professional development for aerospace engineers (e.g., project management, job searches, etc.). Lectures and discussions led by guest speakers. Credit/no-credit only. Offered: AWSp.

Chemical Engineering

105 Benson

The chemical engineering profession is a close-knit group with a common background in chemical processes, systems analysis, and systems economics. Chemical engineering training occurs through course and laboratory work addressing mathematical, scientific, and engineering fundamentals. With a strong background in mathematics, chemistry, and physics, chemical engineering students study transport phenomena (the description of momentum, heat, and mass transfer in chemical processes); chemical kinetics and reaction engineering; process con-

trol and design; and optimization of chemical processes. These subjects are common throughout the traditional chemical industry, applying as well to other industries such as electronics manufacture and biological and biochemical engineering. Chemical engineers find industrial employment in areas of electronics, petroleum, consulting, chemical, automotive, forest products, biotechnology, and energy. Chemical engineers also find careers in academia and government and military service.

UNDERGRADUATE PROGRAM

Adviser

105 Benson, Box 351750

(206) 543-2252

advising@cheme.washington.edu

The Department of Chemical Engineering offers the following programs of study:

- The Bachelor of Science in Chemical Engineering (BSChE) degree
- The Bachelor of Science in Chemical Engineering (BSChE) degree, with an option in nanoscience and molecular engineering

Bachelor of Science in Chemical Engineering

Suggested College Courses for First Five Quarters: MATH 124, MATH 125, MATH 126, MATH 307, MATH 308, CHEM 142, CHEM 152, CHEM 162, CHEM 237, CHEM 238, PHYS 121, PHYS 122, PHYS 123, ENGL 131 (or equivalent), AMATH 301 (or CSE 142)

Department Admission Requirements

Core courses within the department form a seven-quarter curriculum designed to start in spring quarter of the sophomore year. Applicants are considered in three groups: Direct Freshman Admission, Early Admission, and Upper-Division Admission. Admission is competitive. Completion of minimum requirements described below does not guarantee admission. Applicants not admitted under one admission group may subsequently apply to another admission group after completing more coursework. All applicants have the right to petition and appeal the department's admission decision.

Nanoscience and Molecular Engineering Option (NME): Admission to the NME option is competitive, and normally occurs upon completion of NME 220. Admission is based on grades, including NME 220 and any CHEM E courses already taken. A small number of students may be admitted into the NME option upon application to the department. Admission is based on the student's academic record and prior experience/work in the field of nanoscience and/or molecular engineering. Students applying for the NME option should so indicate on their chemical engineering application and discuss their interests and background in the essay.

Direct Freshman Admission

The department enrolls up to 30 percent of its incoming class directly from high school, prior to completion of University-level prerequisites. Students accepted to the UW who indicate chemical engineering as their preferred major on the freshman application are automatically considered. Competitive applicants have taken or are taking calculus and at least two years of laboratory science (physics, chemistry preferred) in high school. Admission is for autumn quarter only.

Early Admission

The department enrolls up to 30 percent of its class from students who have taken one year of college-level coursework at the UW. The application is available at www.engr.washington.edu/uapp. Admission is for autumn quarter only. Application deadline is July 1.

1. *Course Requirements:* MATH 124, MATH 125, MATH 126; CHEM 142, CHEM 152, CHEM 162; PHYS 121; and 5 credits of English composition, chosen from C LIT 240, ENGL 109-ENGL 110, ENGL 111, ENGL 121, ENGL 131, ENGL 197, ENGL 198, ENGL 199, or ENGL 281.
2. All courses must be completed prior to the July 1 application deadline.
3. *Credit Requirements:* Applicants must be completing their freshman year at the UW and must have completed a minimum 15 credits taken in residence at the UW.
4. *Grade Requirements:* Minimum 2.0 grade in each prerequisite course and minimum 2.50 GPA

Upper-Division Admission

The department enrolls the majority of its student through Upper-Division Admission. Upper-division applicants have completed at least four quarters of equivalent college-level coursework and are on track to begin the department curriculum in spring quarter of their sophomore year. Application for the department is available at www.engr.washington.edu/uapp. Students not at UW must also apply for admission to the UW for spring quarter, following the admission rules found at admit.washington.edu.

Admission is for spring quarter only. The department application deadline is February 1. The UW application deadline is December 15.

1. *Course Requirements:* Minimum 55 academic credits at time of application, including the following: MATH 124, MATH 125, MATH 126, MATH 307 (18 credits); CHEM 142, CHEM 152, CHEM 162 (15 credits); PHYS 121, PHYS 122 (10 credits); and one 5-credit English composition course, chosen from C LIT 240, ENGL 109-ENGL 110, ENGL 111, ENGL 121, ENGL 131, ENGL 197, ENGL 198, ENGL 199, or ENGL 281.

Applicants are considered for admission if they have completed all but two of the required courses and are currently enrolled in those courses at the time of application to the major (e.g., MATH 307 and PHYS 122). See department adviser with questions.

2. *General Expectations of Academic Progress:* To be fully prepared for major coursework and to be on track to complete the degree in a timely manner, students must have completed all admission requirements as well as the following courses by the start of the autumn quarter following admission: organic chemistry I and II (CHEM 237 and CHEM 238, CHEM 223 and CHEM 224, or CHEM 335 and CHEM 336), PHYS 123, AMATH 301 (or CSE 142), MATH 308, CHEM E 310. Students unable to meet the continuation requirement are automatically dropped from the program (appeals for readmission are considered in the case of special circumstances). Applicants should take general education or elective credits as space allows. See department academic adviser with questions related to academic progress.
3. *Credit and Grade Requirements:* 55 credits completed by application deadline, with a minimum overall 2.50 GPA and minimum 2.0 grade in all courses required for admission. Historically a substantially higher GPA in these categories is required for admission to the major. See department adviser with questions.

Factors included in the admission decision include the course record as indicated above and qualitative considerations such as difficulty of completed courses, frequency of incomplete or withdrawal grades, number of repeated courses, applicable work experience and maturity of attitude, record of honors, a demonstrated ability to take at least 12 credits per quarter, and special circumstances disclosed by the applicant.

Graduation Requirements

197 credits, as follows:

1. *General Education Requirements (97 credits)*

- a. *Written and Oral Communications (8 credits):* one 5-credit English composition course from the University list; HCDE 231. University required 4 additional writing credits are met by major core courses.
- b. *Visual, Literary, & Performing Arts (VLPA) and Individuals & Societies (I&S) (24 credits):* Minimum of 10 credits required in each area
- c. *Natural World (65 credits)*
 - ii. *Physics (15 credits):* PHYS 121, PHYS 122, PHYS 123
 - iii. *Mathematics (24 credits):* MATH 124, MATH 125, MATH 126, MATH 307, MATH 308, and MATH 309 (or MATH 390 or IND E 315)
 - iv. *Chemistry (26 credits):* CHEM 142, CHEM 152, CHEM 162, CHEM 237, CHEM 238, CHEM 455

2. Major Requirements (74 credits)

- a. *Engineering Fundamentals (4 credits):* AMATH 301 or CSE 142
- b. *Chemical Engineering Core Courses (51 credits):* CHEM E 310, CHEM E 325, CHEM E 326, CHEM E 330, CHEM E 340, CHEM E 435, CHEM E 436, CHEM E 437, CHEM E 457, CHEM E 465, CHEM E 480, CHEM E 485, CHEM E 486
- c. *Molecular and Nanoscience Engineering (3 credits):* CHEM E 455
- d. *Engineering Elective Courses (16 credits):* Only one, 1-credit seminar is allowed to count toward engineering electives. A maximum of 9 credits of undergraduate research (CHEM E 299, CHEM E 499, of which no more than 3 credits may be CHEM 299) may count toward engineering electives.

3. Unspecified Electives (6 credits)

4. Nanoscience and Molecular Engineering Option Major Requirements (77 credits)

- a. *Engineering Fundamentals (4 credits):* AMATH 301 or CSE 142
- b. *Chemical Engineering Core Courses (51 credits):* CHEM E 310, CHEM E 325, CHEM E 326, CHEM E 330, CHEM E 340, CHEM E 435, CHEM E 436, CHEM E 437, CHEM E 457, CHEM E 465, CHEM E 480, CHEM E 485, CHEM E 486
- c. *Nanoscience and Molecular Engineering Courses (22 credits):* CHEM E 299, CHEM E 455, CHEM E 499 (3-6 credits, maximum 3 credits from CHEM E 299), NME 220, NME 221, NME 321, NME 421; minimum two additional approved nanoscience and molecular engineering electives. See adviser for list of approved electives.
- d. *Unspecified Electives (2 credits)*

5. A minimum 2.00 GPA in core chemical engineering courses, based on the first time each course is taken, is required for graduation.

Many engineers design new equipment and processes or design modifications to them. The design experience is integrated throughout the curriculum, with open-ended problems (sometimes involving economic constraints) in several courses: design of heat exchangers (CHEM E 340) and distillation towers (CHEM E 435), design of piping and pumping systems (CHEM E 330), design of chemical reactors (CHEM E 465). The design experience culminates in two capstone design courses (CHEM E 485 and CHEM E 486 or CHEM E 497) which involve the design of an integrated chemical system. An optional 9-credit specialty area allows each student to develop special competence in a selected subject by taking a minimum of three courses in that area. Engineering and free electives may be used for this purpose. The areas are biotechnology; fuel cells and energy; polymers, composites, colloids, and interfaces; computers applied to chemical engineering; environmental engineering; and nuclear engineering.

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, contact the departmental adviser or refer to the department website.

Student Outcomes and Opportunities

- **Learning Objectives and Expected Outcomes:** Chemical engineering graduates possess knowledge (including safety and environmental aspects) of material and energy balances applied to chemical processes; thermodynamics of physical and chemical equilibria; heat, mass, and momentum transfer; chemical reaction engineering; continuous and stage-wise separation operations; process dynamics and control; and process design. They also gain ability to apply knowledge of mathematics, science, and engineering; ability to design and conduct experiments, as well as to analyze and interpret data; ability to design a system, component, or process to meet desired needs; ability to function on multidisciplinary teams; and ability to identify, formulate, and solve engineering problems. They also possess an understanding of professional and ethical responsibility; an ability to communicate effectively; the broad education necessary to understand the impact of engineering solutions in a global and societal context; a recognition of the need for, and an ability to engage in, life-long learning; a knowledge of contemporary issues; and an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- **Instructional and Research Facilities:** The chemical engineering building, Benson Hall, contains classrooms, offices, stockrooms, computer rooms, machine and electronics shops, and laboratories. The Unit Operations Lab holds a variety of experiments designed to give undergraduate students the experience of using real chemical process equipment and to deepen their understanding of chemical engineering fundamentals of fluid flow, heat transfer, separation processes, and reactor behavior. Departmental computer facilities include a network of PCs located in a keyed room for the exclusive use of chemical engineering students. Ten of these machines have hardware for computer data acquisition (to collect experimental data and support experiments on process automation). All have fast connections to the Internet and to larger UW computers.
- **Honors Options Available:** With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- **Research, Internships, and Service Learning:** Students are encouraged to participate in internships, which are generally facilitated through the Engineering Co-op Office.
- **Department Scholarships:** The department awards 20-25 full-tuition scholarships per year. See departmental website for application procedures.
- **Student Organizations/Associations:** The undergraduates in the department run a dynamic chapter of the American Institute of Chemical Engineers.

Of Special Note:

Entrance into most chemical engineering courses is ordinarily limited to majors in chemical engineering and bioresource science and engineering. Other students who wish to take departmental courses must meet the prerequisites and obtain instructor approval (except for CHEM E 485 and CHEM E 486, which are open to majors only).

GRADUATE PROGRAM

Graduate Program Coordinator

105 Benson, Box 351750

(206) 543-2250

grad.admissions@cheme.washington.edu

The department offers studies leading to the degrees of Doctor of Philosophy, Master of Science in Chemical Engineering, and Master of Science in Engineering. The doctoral degree is centered on the dissertation with a foundation in coursework; it is generally completed in four to five years beyond the baccalaureate degree. In the master's program primary emphasis is placed on coursework, and the degree generally requires 21 months of study. Thesis and non-thesis options are available.

The program of study includes basic subjects of importance to all chemical engineers, such as thermodynamics, transport phenomena, kinetics, and applied mathematics. In addition, students are invited to take more-specialized courses in chemical engineering or in other departments. Students usually take three courses during their first quarter. In subsequent quarters, less time is spent on coursework, and more on research and independent study.

The department has about seventy full-time graduate students, most of whom are working toward a doctorate. They study and collaborate with faculty members in an atmosphere that is informal, friendly, and intellectually vigorous. Faculty interests are broad, so students become familiar with a variety of areas while receiving individual guidance in a specialty.

Master of Science in Chemical Engineering

Admission Requirements

Most students applying for graduate admission have a Bachelor of Science degree in chemical engineering. If a student has an undergraduate degree in chemistry, physics, mathematics, or another branch of engineering, he or she may obtain a graduate degree in chemical engineering by meeting certain additional requirements. To be competitive, applicants must:

1. Be highly ranked (top 10 percent) in a respected chemical engineering program
2. Score at least 750 on the quantitative portion of the GRE
3. Score at least 600 (paper-based), 250 (computer-based), or 70 (Internet-based, not including speaking score) on the TOEFL, if an international applicant

Degree Requirements

Thesis Option

39 credits to include:

1. At least 18 credits in courses numbered 500-599, of which at most 3 may be seminar credits, such as CHEM E 523. Numerical grades must be received for at least 18 credits of coursework. These must be 500-599 or approved 400-level courses. They must include five courses from at least four of the following five categories. (The courses listed in each category are typical. Others may qualify subject to approval by the Graduate Program Coordinator.)
 - a. *Math/Computer/Statistics:* CHEM E 481, CHEM E 482, CHEM E 510, CHEM E 512, CHEM E 575, CHEM 526, STAT 421
 - b. *Thermodynamics:* CHEM E 455, CHEM E 525, CHEM E 526, CHEM 552
 - c. *Transport Phenomena:* CHEM E 530, CHEM E 531, M E 533, M E 534

d. *Reaction Phenomena:* CHEM E 461, CHEM E 560, CHEM E 564, CHEM E 565

e. *Materials and Biotech:* CHEM E 467, CHEM E 554, CHEM E 558, CHEM E 570, CHEM E 590

2. Approved 400-level courses presented for the 18 graded credits include 400-level CHEM E courses not required for the BS degree and 400-level non-CHEM E courses approved by the Graduate Program Coordinator.
3. A minimum 3.00 cumulative GPA in the graduate program
4. At least 30 credits taken at the UW
5. A thesis describing original research. At least 9 credits of thesis are required (CHEM E 700).
6. Final examination consisting of an oral presentation of the thesis.
7. Serve as TA for at least one quarter.

Non-Thesis Option

The non-thesis allows a student to receive graduate-level training with the primary focus on coursework. The degree requirements can be completed in four quarters (completion in three is possible).

39 credits, and other requirements, to include:

1. At least 18 credits in courses numbered 500-599, of which at most 3 may be seminar credits, such as CHEM E 523. Numerical grades must be received for at least 18 credits of coursework. These must be 500-599 or approved 400-level courses. They must include five courses from at least four of the following five categories. (The courses listed in each category are typical. Others may qualify subject to approval by the Graduate Program Coordinator.)
 - a. *Math/Computer/Statistics:* CHEM E 481, CHEM E 482, CHEM E 510, CHEM E 512, CHEM E 575, CHEM 526, STAT 421
 - b. *Thermodynamics:* CHEM E 455, CHEM E 525, CHEM E 526, CHEM 552
 - c. *Transport Phenomena:* CHEM E 530, CHEM E 531, M E 533, M E 534
 - d. *Reaction Phenomena:* CHEM E 461, CHEM E 560, CHEM E 564, CHEM E 565
 - e. *Materials and Biotech:* CHEM E 467, CHEM E 554, CHEM E 558, CHEM E 570, CHEM E 590
2. Approved 400-level courses presented for the 18 graded credits include 400-level CHEM E courses not required for the BS degree and 400-level non-CHEM E courses approved by the Graduate Program Coordinator.
3. A project consisting of at least 6 CHEM E 600 credits (with a numerical grade of 2.7 or above, or an S grade). A member of the chemical engineering graduate faculty must supervise and grade the work. A written report is required.
4. Thesis research (i.e., CHEM E 700 or CHEM E 800) cannot count toward the 39 credits.
5. Minimum 3.00 cumulative GPA in the graduate program
6. At least 30 credits taken at the UW
7. Final examination consisting of an oral presentation of the CHEM E 600 project

Master of Science in Engineering

Admission Requirements

A student is accepted for admission to the Graduate School as a chemical engineering major by joint action of the Graduate School and the department after consideration of a formal application. Most students applying for graduate admission have a Bachelor of Science degree in chemical engineering. If a student has an undergraduate degree

in chemistry, physics, mathematics, or another branch of engineering, he or she may obtain a graduate degree in chemical engineering by meeting certain additional requirements.

To be competitive, applicants must:

1. Be highly ranked (top 10 percent) in a respected chemical engineering program
2. Score at least 750 on the quantitative portion of the GRE
3. Score at least 600 (paper-based), 250 (computer-based), or 70 (internet-based, not including speaking score) on the TOEFL, if an international applicant

Degree Requirements

39 credits

The requirements are the same as for the MSChE thesis option, except that the research adviser considers the student's background and research objectives and tailors the course requirements accordingly (subject to Graduate Program Coordinator approval). Relative to the MSChE options, usually less emphasis is on chemical engineering, more on engineering science and related subjects.

Doctor of Philosophy

Admission Requirements

Most students applying for graduate admission have a Bachelor of Science degree in chemical engineering. If a student has an undergraduate degree in chemistry, physics, mathematics, or another branch of engineering, he or she may obtain a graduate degree in chemical engineering by meeting certain additional requirements.

To be competitive, applicants must:

1. Be highly ranked (top 10 percent) in a respected chemical engineering program
2. Score at least 750 on the quantitative portion of the GRE
3. Score at least 600 (paper-based), 250 (computer-based), or 70 (internet-based, not including speaking score) on the TOEFL, if an international applicant

Degree Requirements

90-108 credits, as follows:

1. **Minimum Graduate School Requirements:** Satisfy Graduate School minimum requirements, summarized below. NOTE: Graduate School policy imposes the requirements in force at the time of graduation (not at the time of program entry).
 - a. Complete at least 18 credits of courses numbered 500-600 at the University of Washington.
 - b. Complete at least 18 numerically graded credits of 400- and 500-level UW courses prior to the general examination. Any 400-level courses must have departmental approval.
 - c. Complete a minimum of 90 credits, at least 60 of which are UW credits.
 - d. Compile a minimum of 27 dissertation credits (CHEM E 800) over a period of at least three quarters. With the exception of summer, students may take a maximum of 10 dissertation credits per quarter.
 - e. Maintain a minimum cumulative GPA of 3.00.
 - f. Pass the general examination.
 - g. Pass the final examination (includes approval of the dissertation by student's Supervisory Committee).
 - h. Maintain full- or part-time graduate student registration at the UW for the quarter in which the above examinations are completed and the degree is conferred.

- i. Complete all work for the doctoral degree within ten years.
2. **Students with a Chemical Engineering Undergraduate Degree:** In addition to the requirements listed above, doctoral students must:
 - a. Complete the non-thesis MSChE degree prior to the general examination. (Students with an MS in chemical engineering from another university may petition the Graduate Program Coordinator for an exemption.)
 - b. Serve as a TA for at least three quarters. Students should plan on one quarter per year in years 2-4.
 - c. Complete at least six graded courses numbered 500-599 or approved 400-level courses to satisfy the following:
 - i. *Math/Computer/Statistics:* CHEM E 481, CHEM E 482, CHEM E 510, CHEM E 512, CHEM E 575, CHEM 526, STAT 421
 - ii. *Thermodynamics:* CHEM E 455, CHEM E 525, CHEM E 526, CHEM 552
 - iii. *Transport Phenomena:* CHEM E 530, CHEM E 531, M E 533, M E 534
 - iv. *Reaction Phenomena:* CHEM E 461, CHEM E 560, CHEM E 564, CHEM E 565
 - v. *Materials and Biotech:* CHEM E 467, CHEM E 554, CHEM E 558, CHEM E 570, CHEM E 590
 - e. One CHEM E course in a topic outside the student's main research area.
 3. **Non-Chemical Engineering Undergraduates:** Students whose undergraduate degree is in engineering or science (e.g., BS in chemistry or materials science) but not chemical engineering must pass or serve as a TA in the following courses in addition to the requirements listed in the previous section: CHEM E 330 (5), CHEM E 340, CHEM E 435, CHEM E 465, CHEM E 485
 4. Students lacking a strong background in thermodynamics are advised (but not required) to take CHEM E 326 prior to attempting CHEM E 525. It is possible to take some graduate courses while completing the required undergraduate courses.

Research Facilities

Benson Hall contains classrooms, offices, stockrooms, a machine shop, laboratories, and a variety of specialized research equipment. Each graduate student is provided desk space in a small laboratory or office as well as access to larger laboratories in the building. Students also may use the services of the Academic Computer Center, instrument-making shops, research centers (e.g., biomaterials, nanotechnology, chemical analysis), and the Chemistry and Engineering Libraries.

Financial Aid

The department has various sources of support for qualified graduate students. Those interested in applying for admission and support should visit the department's website: www.cheme.washington.edu, which provides details on application procedures. Offers of admission with financial support are usually made in January through March.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crsat/

Chemical Engineering

CHEM E 299 Undergraduate Research (1-3, max. 9) Research or special topics under the supervision of a faculty member. Offered: AWSpS.

CHEM E 301 Leadership Seminar (1) Schwartz Forum for industrial, academic, and government leaders to share their experiences and insights with students. Includes topics related to leadership in the chemical engineering profession including career planning, management skills, interpersonal skills, effective planning, entrepreneurship, ethics, and strategic decisions. Credit/no-credit only. Offered: A.

CHEM E 309 Creativity and Innovation (2) VLPA G. ALLAN Understanding creativity and creative thinking; its challenges and dynamics through knowledge, judgment, planning, and observation. Techniques of creative thinking. Design and development of creative games. Computer-aided creative thinking. Creation, protection, and exploitation of a useful idea, including bargaining and negotiations. Offered: jointly with BSE 309; Sp.

CHEM E 310 Material and Energy Balances (4) Chemical and physical process calculations: steady- and unsteady-state material and energy balances with specific examples in vapor-liquid contact operations and multiphase extraction, and introductory thermochemistry. Prerequisite: PHYS 122 and MATH 307. Offered: Sp.

CHEM E 325 Energy and Entropy (4) Introduction to the basic principles of thermodynamics from both microscopic and macroscopic points of view. Emphasis on equilibrium phenomena, and the trade-off of energy and disorder in determining structure and properties. Applications of thermodynamics in process design and analysis. Prerequisite: CHEM E 310. Offered: A.

CHEM E 326 Chemical Engineering Thermodynamics (4) Phase equilibria and chemical equilibria in multicomponent systems; theories of solution; chemical reaction analysis. Prerequisite: CHEM E 325. Offered: W.

CHEM E 330 Transport Processes I (5) Diffusive transport of momentum, heat, and mass; general aspects of fluid flow; the Navier-Stokes equations; one-dimensional flow with engineering applications. Prerequisite: CHEM E 310; either MATH 136 or MATH 307. Offered: A.

CHEM E 340 Transport Processes II (4) Heat transfer, basic principles, and applications. Conduction, convection, and radiation. Prerequisite: CHEM E 330. Offered: W.

CHEM E 341 Energy and Environment (3) NW Energy use. Fossil energy conversion. Oil, gas, coal resources. Air impacts. Nuclear energy principles, reactors, fuel cycle. Prerequisite: either MATH 112, MATH 124, or Q SCI 291; either CHEM 120, CHEM 142, CHEM 144, PHYS 114, or PHYS 121. Offered: jointly with ENVIR 341/M E 341; A.

CHEM E 355 Biological Frameworks for Engineers (3) Shen For engineers with no prior experience in the biological sciences. Hands-on, project-based course covers fundamental concepts and language of biology, from an engineering perspective. Topics include functions of life, information processing, proteins, DNA, genetic variability, control loops, energetics, tissues, organisms, ecosystems. Prerequisite: either CHEM 142 or CHEM 144; PHYS 123; either MATH 307 or AMATH 351; recommended: CHEM 220. Offered: W.

CHEM E 375 Chemical Engineering Computer Skills (2) Pfaendtner Use Excell, Matlab, and AspenPlus to solve typical chemical engineering problems. Solve realistic problems and explore alternatives that would be inaccessible for hand calculations. Includes equations of state, chemical equilibrium of simultaneous reactions, phase equilibria, plug flow reactors, heat transfer in 1-D, and time-dependent heat transfer. Offered: W.

CHEM E 435 Transport Processes III (4) Mass transfer, basic principles, and applications to equipment design.

Physical separation processes. Prerequisite: CHEM E 326; CHEM E 340. Offered: A.

CHEM E 436 Chemical Engineering Laboratory I (3) Lectures on statistics, experimental design, instrumentation, laboratory safety, and report writing; laboratory experiments on fluid mechanics and heat transfer. Emphasis on teaming, experimental planning, procedures, report writing, and oral presentations. Prerequisite: CHEM E 326; CHEM E 340 which may be taken concurrently; HCDE 231. Offered: ASp.

CHEM E 437 Chemical Engineering Laboratory II (3) Continuation of CHEM E 436. Laboratory investigation of chemical engineering principles applied to equipment design with emphasis on mass transfer operations and chemical reactors. Prerequisite: CHEM E 435; CHEM E 436; CHEM E 465. Offered: W.

CHEM E 442 Renewable Energy (4) NW P. MALTE Introduction to renewable energy. Principles and practices: solar, wind, water, and biomass energy conversion. Prerequisite: either M E 323, CHEM E 325, A A 260, or E E 351. Offered: jointly with M E 442; W.

CHEM E 445 Fuel Cell Engineering (3) Stuve Introduction to electrochemical fuel cells for use in transportation and stationary power applications. Topics covered include types of fuel cells, single cell operation, stack engineering, overall system design, and safety, with emphasis on proton exchange membrane and solid oxide fuel cells. Prerequisite: CHEM E 330.

CHEM E 455 Surface and Colloid Science Laboratory (3) Berg, Pozzo Laboratory techniques, equipment, and underlying fundamentals in surface and colloid science. Experiments in the measurement of surface tension, adsorption, wetting and spreading, colloid properties, emulsion preparation and stability, electrophoresis, and interfacial hydrodynamics. Recommended: CHEM E 326; CHEM E 330. Offered: ASp.

CHEM E 457 Principles of Molecular Engineering (3) Hillhouse Covers the basic aspects of statistical mechanics, focusing primarily on the canonical ensemble. Develops and applies a set of tools to regular liquid solutions, phase formation, spinodal decomposition, adsorption, polymer thermodynamics, chemical kinetics, and physical kinetics. Prerequisite: CHEM E 310; CHEM E 325; CHEM 455. Offered: Sp.

CHEM E 458 Surface Analysis (3) B. RATNER Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials, science wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger): ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with BIOEN 492; Sp.

CHEM E 461 Electrochemical Engineering (3) Schwartz Explores role of thermodynamics, charge transfer kinetics, and mass transfer on behavior of electrochemical systems. Includes cell thermodynamics, faradaic and non-faradaic rate processes, ionic transport, nucleation and growth theories. Applications to chemical sensors, batteries, corrosion, thin film deposition. In-class demonstrations to illustrate concepts.

CHEM E 465 Reactor Design (4) Application of chemical kinetics and transport phenomena to the design of chemical reactors; characterization of batch and continuous-flow reactors in homogeneous and heterogeneous systems. Prerequisite: CHEM E 326; CHEM E 340. Offered: A.

CHEM E 467 Biochemical Engineering (3) F. BANEYX Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Prerequisite: CHEM

E 340; either CHEM 223, CHEM 237, or CHEM 335; recommended: CHEM E 465. Offered: jointly with BIOEN 467; W.

CHEM E 468 Air-Pollution Control Equipment Design (3) Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Offered: jointly with CEE 494/M E 468.

CHEM E 480 Process Dynamics and Control (4) Dynamics of process units and systems; instrumentation and control system design and analysis. Includes weekly laboratory. Prerequisite: CHEM E 435; CHEM E 465. Offered: W.

CHEM E 481 Process Optimization (3) Holt Concepts and techniques of optimizing chemical engineering processes and systems, including classical and direct methods of search, linear and nonlinear programming, dynamic programming, statistical experimental design, and evolutionary operation. Offered: A.

CHEM E 482 Advanced Topics in Process Control (3) Holt, Ricker Current topics in process control design and analysis. Possible topics include robustness analysis and design, time delay compensation, modern frequency response techniques, discrete control, adaptive control, model-based control, and nonlinear control. Prerequisite: CHEM E 480.

CHEM E 484 Electronic and Optoelectronic Polymers (3) Jenekhe Covers the chemistry, physics, materials science, and engineering applications of semiconducting and metallic conjugated polymers. Examines the structural origins of the diverse electronic and optoelectronic properties of conjugated polymers. Exemplifies applications by light-emitting diodes, lasers, solar cells, thin film transistors, electrochromic devices, biosensors, and batteries. Prerequisite: either CHEM 237, CHEM 455, CHEM E 340, or MSE 310. Offered: A.

CHEM E 485 Process Design I (4) Applied economics in chemical engineering design and operations; measures of profitability; capital and operating cost estimates; introduction to design and design strategies. Prerequisite: CHEM E 480 which may be taken concurrently. Offered: W.

CHEM E 486 Process Design II (5) Comprehensive design of a specific process or product, including economic feasibility studies, utilization of market survey and plant location studies, process equipment design and optimization, and overall plant integration and layout. Prerequisite: CHEM E 485. Offered: Sp.

CHEM E 490 Engineering Materials for Biomedical Applications (3) Combined application of principles of physical chemistry and biochemistry, materials engineering, to biomedical problems and products. Applications include implants and medical devices, drug delivery systems, cell culture processes, diagnostics, and bioseparations. Offered: jointly with BIOEN 490; A.

CHEM E 491 Controlled-Release Systems (3) S. PUN Mechanisms for controlled release of active agents and the development of useful drug delivery systems for this purpose. Release mechanisms considered include diffusive, convective, and erosive driving forces. Delivery routes include topical, oral, and in vivo. Some special case studies covered in detail. Offered: jointly with BIOEN 491; W.

CHEM E 493 Advanced Surface Analysis (3) D. CASTNER Covers the latest advanced in surface analysis instrumentation and methodology, including advanced methods of biorecognition AFM, surface Plasmon resonance, x-ray photoelectron spectroscopy, sum frequency generation spectroscopy, time-of-flight secondary ion mass spectrometry, and multivariate analysis. Prerequisite: either CHEM E 458 or BIOEN 492. Offered: jointly with BIOEN 493; W.

CHEM E 497 Special Projects in Chemical Engineering Design ([1-6]-, max. 12) Chemical engineering design instruction and experience in special projects, such as industrially

motivated, timely, or interdisciplinary projects. Project subject and content varies. Majors only. Prerequisite: CHEM E 340.

CHEM E 498 Special Topics in Chemical Engineering (1-4, max. 12) Topics of current interest in the field. Subject matter changes from quarter to quarter.

CHEM E 499 Undergraduate Research ([1-6]-, max. 12) Independent research projects in chemical engineering. Offered: AWSpS.

CHEM E 510 Mathematical Foundations of Systems Theory (4) Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Offered: jointly with A A 510/E E 510/M E 510.

CHEM E 511 Biomaterials Seminar (1, max. 18) D. CASTNER, L. GAMBLE Presentation of student research results. Prerequisite: permission of instructor. Credit/no-credit only. Offered: jointly with BIOEN 511.

CHEM E 512 Methods of Engineering Analysis (3) Applications of mathematics to problems in chemical engineering; vector calculus; properties and methods of solution of first and second order partial differential equations; similarity transforms, separation of variables, Laplace and Fourier transforms. Prerequisite: MATH 308, MATH 307 or AMATH 351, MATH 324, or permission of instructor. Offered: jointly with AMATH 512; A.

CHEM E 515 Experimental Methods in Chemical Engineering Research (3) Baneyx, Berg, Jiang Lecture and laboratory studies in current research methods of chemical engineering. Includes surface science, biochemical engineering, colloidal chemistry, light scattering, and nanoscience techniques. Offered: A.

CHEM E 523 Seminar in Chemical Engineering (0-1, max. 30) Topics of current interest in chemical engineering. Credit/no-credit only. Offered: AWSp.

CHEM E 525 Chemical Engineering Thermodynamics (4) Review of principles of thermodynamics. Applications to problems in multiphase and multicomponent systems; theories of solutions. Prerequisite: undergraduate thermodynamics. Offered: A.

CHEM E 530 Momentum, Heat, and Mass Transfer I (4) Derivation of the differential equations for mass, energy, and momentum transport. Principles of fluid mechanics; creeping flow, turbulence, boundary-layer theory. Offered: A.

CHEM E 531 Momentum, Heat, and Mass Transfer II (3) Continuation of CHEM E 530. Flows of fluid-particle systems; convective heat transfer, natural convection. Prerequisite: CHEM E 530.

CHEM E 554 Nanoscale Science I: Contact Mechanics and Rheology on the Nanoscale (3) Overney Introductory nanoscale science with emphasis on contact mechanics, principle and concept of forces, scanning force microscopy, tribology (friction, wear, lubrication), rheology, ultrathin organic films, physical properties of polymers, and computer simulation. Offered: W.

CHEM E 556 Colloidal Systems (3) Berg, Pozzo Examines the unique properties and application of colloidal materials, i.e., dispersions of micro- or nano-sized particles in various media are described. Explores their inherent instability, and their kinetic, phoretic, electric, optical, and rheological properties. Offered: W.

CHEM E 558 Surface Analysis (3) B. RATNER Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, pho-

ton spectroscopic, and thermodynamic methods. Offered: jointly with BIOEN 592.

CHEM E 560 Reactions at Solid Surfaces (3) *Stuve* Fundamental studies of adsorption and reactions on metallic and non-metallic surfaces with emphasis on heterogeneous catalysis and electrochemistry, including fuel cells. Topics include gas phase and liquid phase surface reactions, analyzed both experimentally and computationally. Prerequisite: undergraduate level course in kinetics or catalysis.

CHEM E 565 Kinetics and Catalysis (3) *Stuve* Homogeneous and heterogeneous systems with emphasis on chemical engineering principles applied to industrial reactor design. Prerequisite: CHEM E 525.

CHEM E 580 Topics in Chemical Engineering Design (3, max. 9) Lectures and seminars on current design methods in chemical engineering, including technical and economic feasibility of processes, design and optimization of process equipment, and environmental and social constraints. Prerequisite: undergraduate chemical engineering design, admission to chemical engineering master's program, or permission of instructor.

CHEM E 584 Electronic and Optoelectronic Polymers (3) *Jenekhe* Covers the chemistry, physics, materials science, and engineering applications of semiconducting and metallic conjugated polymers. Examines the structural origins of the diverse electronic and optoelectronic properties of conjugated polymers. Exemplifies applications by light-emitting diodes, lasers, solar cells, thin film transistors, electrochromic devices, biosensors, and batteries. Prerequisite: either CHEM 237, CHEM 455, CHEM E 340, or MSE 310. Offered: A.

CHEM E 588 Research in Applied Microbiology (1, max. 30) *Lidstrom* Weekly research seminar and discussion of scientific literature pertaining to applied microbiology. Prerequisite: permission of instructor. Credit/no-credit only. Offered: jointly with MICROM 588; AWSpS.

CHEM E 590 Advanced Topics in Biomaterials (3) Major, controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraocular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bone fixation, new materials, artificial heart, medical device regulation. Prerequisite: BIOEN 490 or CHEM E 490. Offered: jointly with BIOEN 590.

CHEM E 591 Robotics and Control Systems Colloquium (1, max. 30) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Credit/no-credit only. Offered: jointly with A A 591/E E 591/M E 591.

CHEM E 593 Advanced Surface Analysis (3) *D. CASTNER* Covers the latest advanced in surface analysis instrumentation and methodology, including advanced methods of biorecognition AFM, surface Plasmon resonance, x-ray photoelectron spectroscopy, sum frequency generation spectroscopy, time-of-flight secondary ion mass spectrometry, and multivariate analysis. Prerequisite: either CHEM E 558 or BIOEN 592. Offered: jointly with BIOEN 593; W.

CHEM E 599 Current Topics in Chemical Engineering (1-5, max. 12) Readings or lectures and discussions of topics of current interest in the field of chemical engineering. Subject matter changes from year to year. Prerequisite: permission of instructor.

CHEM E 600 Independent Study or Research (*-) Offered: AWSpS.

CHEM E 700 Master's Thesis (*-) Offered: AWSpS.

CHEM E 800 Doctoral Dissertation (*-) Offered: AWSpS.

Nanoscience and Molecular Engineering

NME 220 Introduction to Molecular and Nanoscale Principles (4) *NW* Introduction to theories and concepts of molecular and nanoscale systems to raise awareness of technological and societal transformations anticipated through progress in nanotechnology. Prerequisite: either CHEM 142, CHEM 144, or CHEM 145; either MATH 126 or MATH 136; PHYS 121.

NME 221 Nanoscience and Molecular Engineering Seminar I (1) *Overney* Introduces nanoscience and molecular engineering, and offers the opportunity of a first intellectual and interdisciplinary forum with interactions with members of research groups in the field. First in a series of three. Prerequisite: NME 220, which may be taken concurrently. Credit/no-credit only.

NME 321 Nanoscience and Molecular Engineering Seminar II (1) *Overney* Demonstrates how to tackle research challenges, put results into the framework of the open literature, and present and interpret data. Discusses contemporary societal and ethical aspects in nanoscience and molecular engineering. Second in a series of three. Recommended: NME 221. Credit/no-credit only.

NME 421 Nanoscience and Molecular Engineering Seminar III (1) *Overney* Provides students with the opportunity to present their research results obtained during undergraduate research studies. Assessing the work of their peers and receiving feedback on their work, students further refine their ability in conducting and presenting research. Third in a series of three. Prerequisite: NME 321. Credit/no-credit only.

NME 498 Special Topics in Nanoscience and Molecular Engineering (1-4, max. 12) *Overney* Topics of current interest in the field.

Civil and Environmental Engineering

201 More

Civil and environmental engineering is a profession which interfaces closely with society in the planning, design, construction, and management of facilities serving the needs of people. These activities focus on: transportation infrastructure and construction; heavy construction; hydrology and hydrodynamics; structures, mechanics, and geotechnical engineering; wastewater treatment, and water-quality management; solid- and hazardous-waste disposal; and air quality management.

A civil engineer may specialize in one or several of these activities and may further specialize in a particular function, such as design or management. The work frequently provides close associations with the legal profession, urban and regional planners, economists, public officials, biologists, chemists, financial consultants, architects, and system analysts. Education and practice require a consideration not only of the technological-science aspects of a particular problem but also of its relationship to social, economic, political, and environmental constraints. Civil and environmental engineers create and maintain infrastructure in a heavily human-influenced ecosystem.

To accommodate these wide interests, the department is organized into six academic areas: construction engineering; transportation engineering; geotechnical engineering; structural engineering and mechanics; environmental engineering; and hydrology and hydrodynamics.

UNDERGRADUATE PROGRAM

Adviser

201 More, Box 352700

(206) 543-5092

ceadvice@uw.edu

The Department of Civil and Environmental Engineering offers the following program of study:

- The Bachelor of Science in Civil Engineering degree

The BSCE degree is appropriate for students interested in civil and environmental engineering. The BS program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

Bachelor of Science in Civil Engineering

Suggested First- and Second-Year Courses: MATH 124, MATH 125, MATH 126, MATH 308; CHEM 142; PHYS 121, PHYS 122; AMATH 301 (preferred) or CSE 142; A A 210; CEE 220; M E 230; English composition.

Department Admission Requirements

Applicants are considered in three groups - Direct Freshman Admission, Early Admission, and Upper-Division Admission. Admission is competitive. Completion of minimum requirements does not guarantee admission. All applicants have the right to petition and appeal the department's admission decision. Applications are accepted for autumn quarter only. Applications for Early and Upper-Division Admission are accepted through the College of Engineering online application form. For more information, see information for prospective students on the department website.

Direct Freshman Admission

The department enrolls up to 20% of its incoming class directly from high school, prior to completion of University-level prerequisites. Students accepted to the UW who indicate Civil and Environmental Engineering as their preferred major on the freshman application are automatically considered. Competitive applicants have taken or are taking calculus and at least two years of laboratory science (physics, chemistry preferred) in high school. Admission is for autumn quarter only.

Early Admission

1. Admission is for autumn quarter only. Departmental application deadline is July 1.
2. *Course Requirements:* MATH 124, MATH 125, MATH 126; 10 credits of physical science courses plus accompanying laboratory at the level of PHYS 121, PHYS 122, PHYS 123, or CHEM 142, CHEM 152; and 5 credits of English composition. All courses must be completed prior to the July 1 application deadline.
3. Applicants must be currently enrolled at the UW and must have a minimum 15 credits taken in residence at the UW.
4. *Grade Requirements:* Minimum 2.0 grade in each course required for admission and minimum 2.50 cumulative GPA for all courses required for admission
5. Completion of minimum requirements does not guarantee admission.

Upper-Division Admission

1. Admission is for autumn quarter only. Departmental application deadline is July 1.
2. *Course requirements:* MATH 124, MATH 125, MATH 126, MATH 308; CHEM 142; PHYS 121, PHYS 122; AMATH 301 (preferred) or CSE 142; AA 210; CEE 220; M E 230; and 5 credits of English composition.
3. *Grade requirements:* Minimum grade of 2.0 in each course and a minimum cumulative GPA of 2.50:
4. Completion of minimum requirements does not guarantee admission.

Graduation Requirements

Minimum 180 credits as follows:

1. *General Education Requirements (85-87 credits)*
 - a. *Written and Oral Communication (8 credits):* English composition; HCDE 231
 - b. *Visual, Literary, & Performing Arts (VLPA) and Individuals & Societies (I&S) (24 credits):* Minimum 10 credits in VLPA and minimum 10 credits in I&S plus 4 additional credits in either area.
 - c. *Economics (4-5 credits):* ECON 200 or IND E 250. ECON 200 may also be applied toward the I&S requirement. IND E 250 may also be applied toward the requirement for an additional Engineering Fundamentals course.
 - d. *Natural World (49-50 credits)*
 - ii. *Mathematics (21 credits):* MATH 124, MATH 125, MATH 126, MATH 307 (or AMATH 351), MATH 308 (or AMATH 352)
 - iii. *Statistics (3-4 credits):* IND 315 (preferred) or STAT 390
 - iv. *Science (25 credits):* CHEM 142, CHEM 152; PHYS 121, PHYS 122, PHYS 123
2. *Major Requirements (94-97 credits)*
 - a. *Engineering Fundamentals (20 credits):* AMATH 301 or CSE 142, A A 210, CEE 220, and ME 230. Students who complete STAT 390 must complete an additional engineering fundamentals course from A A 260, IND E 250, IND E 280, M E 123, E E 215, or MSE 170. Students who complete IND E 315 must complete either an additional Engineering Fundamentals course from the above list, or an additional 300-level math course other than statistics.
 - b. *Civil Engineering Core (40 credits):* CEE 307, CEE 317, CEE 327, CEE 337, CEE 347, CEE 357, CEE 367, and CEE 377.
 - c. *Professional Practice and Capstone Design (7 credits):* CEE 440 and one course from CEE 441, CEE 442, CEE 444, or CEE 445. Minimum 2.0 grade required for both courses in this two-course sequence.
 - d. *Civil Engineering Technical Electives (15 credits):* CEE 400-level coursework selected from an approved list (see adviser or department website for list), with at least one core course from three separate areas of concentration within the department. Minimum 2.0 grade required for each of the three courses used to fulfill the core-courses requirement.
 - e. *Upper-Division Engineering and Science (12 credits):* Choice of additional CEE 400-level courses or courses from an approved list from outside the department. Maximum 6 credits of CEE 498 and 3 credits of CEE 499 allowed toward upper-division engineering and science.
 - f. *Grade Requirements:* Minimum 2.00 GPA in all engineering courses with no grade below 1.0 in these courses.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Upon completion of the undergraduate program, students can demonstrate proficiency in applying fundamental mathematical, statistical, scientific, and engineering principles in formulating and solving civil and environmental engineering problems; demonstrate sufficient mastery of core civil and environmental engineering topics suitable for entry into the profession and for graduate study; gain significant experience in designing systems and components in civil and environmental applications in both individual and team contexts; possess up-to-date skills for analysis, data collection, modeling, project management, professional development, communication, and presentation; and develop an understanding of professional and social issues suitable for participation and leadership in their communities.

standing of professional and social issues suitable for participation and leadership in their communities.

- *Instructional and Research Facilities:* The department has a large and modern computer laboratory as well as substantial research laboratory facilities. The environmental science and hazardous waste research laboratory facilities include more than 7,000 square feet of lab space, well equipped with sophisticated research instruments, including state-of-the-art analytical capability for trace organic compounds. The lake-stream laboratory is equipped with limnological equipment, as well as an auto-analyzer, bench-top incubators, and research microscopes. The structural research laboratory contains an earthquake simulator, a modern MTS testing system, and a 2.4 million pound capacity Baldwin universal hydraulic testing machine. The geotechnical engineering laboratory contains soil testing equipment, including triaxial testing devices, a computer-controlled GDS pressure control system, a Bishop-Wesley cell, a recently developed cuboidal shear device, a CKC cyclic triaxial device, and a SBEL (Stokoe) resonant column.
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors). With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning:* Students typically work at internships in private companies and government agencies in the summer after their junior year, with some part-time internships continuing during the academic year. Many companies advertise internship and job openings through the department and meet with students for on-campus recruiting sessions.
- *Department Scholarships:* The department offers numerous annual scholarships. The application deadline for departmental scholarships is April 1. For more information, see department website. Scholarships are also available through the College of Engineering, the UW Scholarship Office, and external sources, including professional associations and industry.
- *Student Organizations/Associations:* American Society of Civil Engineers. Chi Epsilon, national honor society for civil engineering undergraduate and graduate students. See adviser for details.

GRADUATE PROGRAM

Graduate Program Coordinator

201 More, Box 352700

(206) 543-2574

ceginfo@uw.edu

The Department of Civil and Environmental Engineering offers programs of study leading to the degrees of Master of Science in Civil Engineering (MSCE), Master of Sustainable Transportation (MST), Master of Supply Chain Transportation and Logistics (MSCTL), and Doctor of Philosophy.

Graduate work is offered in most fields of civil and environmental engineering, including transportation and construction engineering; geotechnical engineering; structural engineering and mechanics; environmental engineering; and hydrology and hydrodynamics.

Graduate Online Programs:

Construction Engineering Master's Program: The Department of Civil and Environmental Engineering, in collaboration with the Department of Construction Management in the College of Built Environments, offers an online Master of Science in Civil Engineering degree in Construction Engineering. Designed for working professionals, this program can be completed entirely online and at the student's own pace. Areas covered include heavy construction project management, infrastructure construction, and qualitative

construction management. For more information on this program, see the Construction Engineering website.

Master in Sustainable Transportation Program: The Department of Civil and Environmental Engineering, in partnership with UW Professional and Continuing Education, offers an online Master of Sustainable Transportation degree (MST). The program provides transportation engineers and planners with the latest knowledge, skills, and tools needed to become leaders in developing and maintaining sustainable transportation practices. Students develop an awareness of green transportation strategies and gain a solid background with practical applications. In a part-time online format, the MST program covers three areas of concentration: Planning and Livable Communities; Environmental Issues and Impacts; and Policy Development, Health and Economics. For more information on this program, see the Master of Sustainable Transportation website.

Supply Chain Transportation and Logistics Master's Program: The Department of Civil and Environmental Engineering, in partnership with UW Professional and Continuing Education, offers an online Master of Supply Chain Transportation and Logistics degree. The program provides students with the knowledge needed to successfully design, implement and manage supply chain transportation and logistics strategies. Students study cross-functional areas of the supply chain, including operations, transportation and inventory management, and gain skills to design resilient supply-chain strategies. For more information on this program, see the Master of Supply Chain Transportation and Logistics website.

Master of Science in Civil Engineering

Admission Requirements

Priority for admission is based on an applicant's apparent ability to progress satisfactorily in a graduate degree program. The applicant's scholastic record is of major importance; usually, at least a "B" or 3.00 GPA in the junior and senior years is required. Consideration is also given to Graduate Record Examination scores and other information.

Degree Requirements

42 credits, as follows:

Two options are available -- thesis and non-thesis.

Thesis option:

1. 30 credits of coursework with at least 18 credits at the 500 level
2. 3 credits (maximum) of CEE 500
3. 9 credits of master's thesis, CEE 700

Non-thesis option:

1. 39 credits of coursework with at least 18 credits at the 500 level
2. 3 credits (maximum) of CEE 500

Doctor of Philosophy

Admission Requirements

Priority for admission is based on an applicant's apparent ability to progress satisfactorily in a research-based graduate degree program. The applicant's scholastic record is of major importance; usually, at least a "B" or 3.00 GPA in the junior and senior years is required. Consideration is also given to Graduate Record Examination scores and other information.

Degree Requirements

90 credits, as follows:

1. 60 coursework credits
2. 27+ dissertation credits

3. 3 seminar credits (for those without a master's degree from CEE at UW)

With the approval of the department, an appropriate master's degree from an accredited institution may be applied towards 30 of the 60 coursework credits.

Because this is a research-based degree, course requirements are individualized depending on student's background and PhD topic area.

Financial Aid

Research and teaching assistantships are available on a competitive basis. The number of positions depends upon the current level of funding. Additionally there are a limited number of fellowships, scholarships, and traineeships.

Research Facilities

More Hall has structural, concrete, bituminous materials, soil mechanics, computer, water-quality, solid-wastes, and air-quality laboratories as well as an air-monitoring station and equipment for fieldwork in the construction, water, air, and solid-waste programs. Facilities for experimental studies in hydrology and hydrodynamics are located in the Harris Hydraulics Laboratory.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

CEE 100 Twenty-First Century Civil and Environmental Engineering (1) Introduction to the modern discipline of civil and environmental engineering including major sub-disciplines, professional careers, projects, and departmental faculty. Explores the different disciplines and their relevance to today's students. Credit/no-credit only. Offered: W.

CEE 220 Introduction to Mechanics of Materials (4) NW Berman, Reed Introduction to the concepts of stress, deformation, and strain in solid materials. Development of basic relationships among loads, stresses, and deflections of structural and machine elements such as rods, shafts, and beams. Load-carrying capacity of these elements under tension, compression, torsion, bending, and shear forces. Prerequisite: minimum grade of 2.0 in AA 210. Offered: WSpS.

CEE 250 Environmental Processes and flows (3) NW Brett Introduces the concepts of environmental materials and energy balance within the context of Pacific Northwest case studies, in particular nutrient loading, eutrophication, hypoxia/fish kills, water treatment, and global climate change and its regional impacts on water resources and hydrologic cycles. Prerequisite: either MATH 120, or MATH 124. Offered: Sp.

CEE 291 Introduction to AutoCAD for Civil Engineers (2) NW Introduces engineering drafting and graphical communication. Application of drafting standards and structure, creating and modifying basic drawings in 2D and 3D drafting in AutoCAD. Introduction to reading plan sets and creating portions of plan sets applied to civil and environmental engineering fields. Offered: AWSpS.

CEE 297 Foreign Study (3-5, max. 15) For participants in approved foreign-study programs. May not be used to satisfy upper-division major requirements.

CEE 298 Special Topics in Civil and Environmental Engineering (1-5, max. 10) Explores special topics in civil and environmental engineering.

CEE 299 Independent Project (1-5, max. 10) Research on special topics under supervision of a faculty member. May not be used to satisfy upper-division major requirements. Offered: AWSpS.

CEE 307 Construction Engineering (5) Introduces construction engineering including construction methods, engineering economics, contracts, project delivery methods, plan and specifications, scheduling, estimating, productivity,

environmental regulations, safety and green construction. Uses scheduling and estimating software tools and emphasizes communication engineering information. Offered: AW.

CEE 317 GeoSurveying (5) Covers measurement and digital mapping techniques; integration of surveying methods and techniques, monitoring of structures; spatial data collection and integration with surveying data; adjustment of measurements, concepts of error; surveying control; coordinate systems, transformation; highway vertical curves; and Earthwork, leveling and datum consideration, photogrammetry, GPS, GIS, remote sensing, cadastral and construction surveys, digital mapping and drafting. Prerequisite: either MATH 126, MATH 134, MATH 135, or MATH 136; recommended: a course in statistics. Offered: A.

CEE 327 Transportation Engineering (5) Studies vehicular transportation fundamentals including vehicle dynamics, geometric design, pavement design, traffic flow concepts, level of service analysis, intelligent transportation systems, travel demand prediction methods, freight logistics, and management of transportation systems. Includes a review of relevant vehicle operating characteristics. Prerequisite: PHYS 121; either MATH 126, MATH 134, MATH 135, or MATH 136. Offered: WSp.

CEE 337 Construction Materials (5) General treatment of physical and mechanical properties and engineering behavior of metallic and nonmetallic materials. Steel, aluminum, aggregates, portland cement concrete, bituminous materials, asphalt concrete, wood. Laboratory testing, instrumentation, and investigation into macro-behavior. Sustainability issues including recycling, energy requirements, and greenhouse gas production associated with the materials. Prerequisite: CEE 220. Offered: ASP.

CEE 347 Introduction to Fluid Mechanics (5) Horner-Devine, Lundquist, Thomson Introduces the mechanics of incompressible fluids and their applications. Hydrostatic pressure forces. Kinematics, potential flows, and the Bernoulli equation. Conservation of mass, momentum, and energy. Laminar and turbulent flows. Flow in pipes, pipe networks, and open channel flows. Prerequisite: CEE 220; M E 230; PHYS 122. Offered: AW.

CEE 357 Environmental Engineering (5) Describes water and air resources, parameters that characterize their quality, and how their use alters their properties. Elements of hydrology. Mass and energy balances as applied to environmental systems. Global environmental change. Basics of aquatic chemistry and microbiology applied to municipal water and wastewater treatment operation. Groundwater contamination and treatment. Prerequisite: CHEM 142; either MATH 126, MATH 134, MATH 135, or MATH 136. Offered: WSp.

CEE 367 Geotechnical Engineering (5) Arduino, Kramer, Wartman Fundamental engineering properties of soil and rock; depositional processes and physical characteristics, hydro-conductive properties and advective flow; volume change characteristics including short- and long-term deformation; shear strength properties; and applications of basic concepts to practical problems such as foundation design and slope stability. Prerequisite: CEE 347. Offered: WSp.

CEE 377 Introduction to Structural Design (5) Berman, Eberhard, Reed, Roeder Introduces the concepts, approaches, procedures, and codes for the structural design. Characterization of structural loads. Structural systems and system behavior. Analysis of statically determinate structures and introduction to analysis of statically indeterminate structures including approximate methods. Introduction to the behavior and design of fundamental structural member. Prerequisite CEE 220. Offered: AW.

CEE 404 Infrastructure Construction (4) S. MUENCH Basic concepts of large transportation infrastructure construction projects including planning, scheduling, life-cycle cost analysis (LCCA), construction cost, logistics, productivity and, where applicable, traffic impacts. Uses current and prototype industry software. Term project is designed around a large-scale I-5 pavement reconstruction project involving construction, traffic, and the interaction between the two.

Involves presentations on a number of local transportation infrastructure projects. Prerequisite: CEE 307. Offered: W.

CEE 409 Engineering Rome: Study Abroad ([1-4]-, max. 5) Muench Covers Roman civil engineering over 3,000 years from Ancient Rome to the present day. Introduces civil engineering topics reinforced by practical engineering calculations, local experts, and site visits. Provides international and historical perspective on engineering and the contributions of engineers to infrastructure and society.

CEE 410 Traffic Engineering Fundamentals (3) General review of the fundamentals of traffic engineering, including their relationship to transportation operations management and planning, with emphasis on calculations and procedures in the Highway Capacity Manual; field surveys and data analysis. Prerequisite: CEE 327. Offered: W.

CEE 412 Transportation Data Management (3) Wang Introduction to modern concepts, theories, and tools for transportation data management and analysis. Applications of software tools for transportation data storage, information retrieval, knowledge discovery, data exchange, online information sharing, statistical analysis, system optimization, and decision support. Prerequisite: CEE 327. Offered: W.

CEE 416 Urban Transportation Planning and Design (3) Brief review of major issues in urban transportation planning. Planning process discussed and transportation models introduced. Uses a systems framework, including goals and objectives, evaluation, implementation, and monitoring. A design term project, individual or small groups, utilizes material presented on a contemporary problem. Prerequisite: CEE 327. Offered: A.

CEE 418 Computer-Aided Planning of Urban Systems (3) Survey of online planning applications; use of various on-line systems to solve urban systems design problems; investigations of hardware/software tradeoffs; human factors in man-computer systems design theory as it relates to problem-solving activity. Offered: jointly with URBPD 429.

CEE 421 Pavement Design (3) J. MAHONEY Current and developing procedures for the structural thickness design of pavements. Bituminous and concrete pavements for highways and special heavy loading. Elastic layered systems, slab theory. Maintenance and overlay design. Prerequisite: CEE 337. Offered: W.

CEE 424 GIS for Civil Engineers (3) GIS in civil engineering applications. Geographic and spatial data types and acquiring considerations. Data models and structures. Projections and transformations. Attribute-based operation, spatial operations. Surfaces and near neighbors. Training on Arc GIS software. Recommended: CEE 317. Offered: AS.

CEE 425 Reinforced Concrete Construction (3) D. JANSSEN Processes in constructing reinforced concrete structures. Identification and development of solutions to potential constructability problems. Lectures augmented with industry speakers and a field trip to a building under construction. Requires senior or graduate standing in Civil Engineering or Construction Management and familiarity with reinforced concrete design/construction. Prerequisite: either CEE 291 or AutoCAD experience; a minimum grade of 2.5 in either CEE 428 or CEE 452. Offered: Sp.

CEE 428 Lightweight Cementitious Composites ([0-2]-, max. 2) Janssen Introduces the process of designing within constraints and introductory experimental design. Covers the importance of proper laboratory documentation. Examines the characteristics of cementitious binders and elementary composite behavior. Considers constructability. Interprets pre- and post-cracking elastic behavior. Includes organization and production of technical report the documents work performed. Offered: A.

CEE 431 Seismology and Earthquake Engineering (3) NW Presents an overview of earthquake processes and details of the characteristics of destructive ground motion; illustrates the effects of such motion on engineering structures; reviews current practice in estimating earthquake hazards for important structures such as nuclear power plants. Prerequisite: either ESS 310, MATH 126, MATH 134, or both MATH 307 and MATH 308. Offered: jointly with ESS 465.

CEE 436 Foundation Design (3) Design considerations for foundations and retaining structures. Subsurface investigations and determination of soil properties for design. Design of shallow and deep foundations and retaining structures. Foundations and soil considerations for waterfront structures. Prerequisite: CEE 367. Offered: AWSp.

CEE 437 Engineering Geology I (3) General overview of engineering geology and its importance to civil engineers. Topics include geologic processes, hazards, subsurface investigations, classification of geologic materials, data synthesis, and natural construction materials.

CEE 440 Professional Practice Studio (2) Fundamentals of integrated civil engineering design, professional services marketing, project management, team dynamics, total quality management, value engineering, professional liability, and applied ethics in engineering practice. Emphasis on written and oral communications and on ethical, social, and economic factors. Offered: W.

CEE 441 Transportation and Construction Capstone Design Project (4) Comprehensive design project focusing on planning, design, and construction of a transportation project such as highways, transit, and airports. Prerequisite: CEE 327; CEE 440; either CEE 404, CEE 410, CEE 412, CEE 416, CEE 421, CEE 424, or CEE 425. Offered: Sp.

CEE 442 Structural Geotechnical Capstone Design Project (5) Comprehensive team design project focusing on structural and geotechnical engineering. Requires design drawings, written reports, and oral presentations interfacing with related fields such as aesthetics and architecture, mechanical systems, traffic, environmental planning. Prerequisite: CEE 440; two courses from CEE 436, CEE 451, CEE 452, CEE 453, CEE 454, CEE 456, or CEE 457. Offered: Sp.

CEE 444 Water Resources and Hydraulic Engineering Capstone Design Project (5) Opportunity to effect design solutions for projects or major project components in such representative areas as reservoirs and associated systems for flood control, water supply, irrigation, and hydroelectric power, surface water control systems, fisheries related projects, small harbors, and coastal engineering problems. Prerequisite: either CEE 345 or CEE 347; CEE 440; either CEE 475, CEE 476, CEE 482, CEE 483, or CEE 484. Offered: Sp.

CEE 445 Environmental Engineering Capstone Design Project (5) Individual and group design studies addressing environmental engineering problems such as stormwater management, water and wastewater treatment facilities, and residual processing. Prepare proposals, engineering reports, and alternative evaluations; process equipment design, present reports on selected design problems. Prerequisite: either CEE 345 or CEE 347; CEE 440; either CEE 473, CEE 475 CEE 476, CEE 481, CEE 482, CEE 483, or CEE 484. Offered: Sp.

CEE 451 Design of Metal Structures (3) J. BERMAN, C. ROEDER Introduction to the design and behavior of metal structures using LRFD concepts. Application of design methods and codes to columns, beams, frames, connections, and tension members. Prerequisite: CEE 377; recommended: CEE 456; CEE 458. Offered: A.

CEE 452 Design of Reinforced Concrete Structures (3) D. LEHMAN, D. REED, J. STANTON Fundamentals of design of buildings in reinforced concrete in accordance with current codes and practices. Prerequisite: CEE 377; recommended: CEE 457. Offered: AS.

CEE 453 Prestressed Concrete Design (3) Eberhard, Stanton Analysis, design, and construction of prestressed concrete structures. Prerequisite: CEE 452. Offered: W.

CEE 454 Design of Timber Structures (3) Berman, Reed Includes the design and construction of timber structures, using elements made of sawn wood, glued-laminated wood, and manufactured wood products. Prerequisite: CEE 377. Offered: W.

CEE 455 Structural Unit Masonry (3) Tawresy Structural behavior and design of reinforced brick, tile, and unit concrete masonry structures. Prerequisite: CEE 377. Offered: jointly with ARCH 426.

CEE 456 Structural Analysis (5) Berman, Eberhard, Lowes Fundamental analysis and modeling of civil structural systems. Equilibrium, kinematics, and constitutive relations; formal solution procedures emphasizing element-based stiffness methods; computer-based and manual techniques; verification and interpretation of results; case studies involving real structures; introduction to finite element analysis of 2D continua. Prerequisite: CEE 377. Offered: Sp.

CEE 457 Advanced Structures I (3) L. LOWES Introduction to the finite element method for modeling civil structures. Formulation of line and continuum elements using virtual work and the principal of minimum potential energy. MATLAB programming of the finite element method. Use of commercial software to model real structures. Prerequisite: CEE 456. Offered: W.

CEE 458 Advanced Structures II (3) Miller, Stanton Introduction to stability, including a consideration of elastic and inelastic buckling with applications to beam-columns and plates. Introduction to plastic analysis. Prerequisite: CEE 456.

CEE 459 Advanced Structural Mechanics (3) Formulation and solution of the basic equations of elasticity. Applications in 2-D stress analysis, torsion, thermal stresses, and beams on elastic foundation. Plate theory optional. Prerequisite: CEE 377.

CEE 462 Applied Limnology and Pollutant Effects on Freshwater (3) NW Principles of aquatic ecology that relate to causes and effects of water quality problems in lakes and streams. Population growth kinetics, nutrient cycling, eutrophication; acidification, oxygen/temperature requirements, and effects of various wastes on aquatic animals. Offered: W.

CEE 463 Limnology Laboratory (2) NW Examination of biota of fresh waters, survey of limnological methods, analysis of data, and writing of scientific papers. Prerequisite: BIOL 473/FISH 473/CEE 462, which may be taken concurrently. Offered: jointly with BIOL 474/FISH 474; A.

CEE 472 Introduction to Hydraulics in Water Resources (3) Hydraulics related to environmental issues. Global hydrology; stratified flows; two-phase (bubble) flows; pollutant transport and mixing in reservoirs, lakes, coastal waters, and oceans; diffuser design and related case studies. Prerequisite: CEE 347.

CEE 473 Coastal Engineering I (3) Thomson Linear theory of water waves, wave transformations near shore, sediment motion, and elementary tidal theory; shoreline protection methods; and applications illustrated by selected case histories. Prerequisite: CEE 347.

CEE 474 Hydraulics of Sediment Transport (3) A. HORNER-DEVINE Introduction to sediment transport in steady flows with emphasis on physical principles governing the motion of sediment particles. Topics include sediment characteristics, initiation of particle motion, particle suspension, bedforms, streambed roughness analysis, sediment discharge formulae, and modeling of scour and deposition in rivers and channels. Prerequisite: CEE 347. Offered: Sp.

CEE 475 Analysis Techniques for Groundwater Flow (3) R. NEUMANN Presents the fundamentals of subsurface flow and transport, emphasizing the role of groundwater in hydrologic cycle, the relation of groundwater flow to geologic structure, and the management of contaminated groundwater. Concepts are applied to well-known hydrogeologic sites. Prerequisite: CEE 347. Offered: W.

CEE 476 Physical Hydrology (3) Istanbuloglu Global water picture, data sources and data homogeneity, precipitation and streamflow hydrography analysis; calculation of surface runoff, evapotranspiration, and groundwater recharge. Hydrologic data frequency analysis and probability theory. Hydrologic design: flood mitigation, drainage. Introduction to deterministic and stochastic models. Prerequisite: CEE 347. Offered: A.

CEE 477 Open-Channel Flow (3) Jessup. Water flow in natural and engineered channels, rivers, and streams. Analysis and design of channels (lined, vegetated), flow controls (weirs, spillways), and structures affecting fish passage

(culverts). Prediction of water surface profiles. Introduction to river mechanics. Design-oriented problems. Prerequisite: CEE 347. Offered: W.

CEE 480 Air-Quality Modeling (3) NW Evaluation of air-quality models relating air pollution emissions to environmental concentrations. Emphasis on models used for air pollution permits. Emphasizes current problems. Offered: jointly with ATM S 480; W.

CEE 481 Hydraulic Design for Environmental Engineering (3) E. ISTANBULLUOGLU Introduction to the theory and the practice of planning and design of urban water supply distribution, pump stations, sewage and storm-water collection systems, and green stormwater infrastructure. Engineering methods and computer programs are applied for designing basic system elements. Prerequisite: CEE 347; CEE 357. Offered: W.

CEE 482 Wastewater Treatment and Reuse (3) Introduces wastewater treatment and systems, emphasizing fundamental biological, chemical, and physical processes related to protection of public health environmental quality and water reuse. Process analysis of the configuration and sizing of major types of treatment processes for various sizes of plants and effluent requirements. Prerequisite: CEE 357. Offered: A.

CEE 483 Drinking Water Treatment (3) Studies scientific, engineering, and regulatory principles underlying drinking water treatment; development of conceptual models for how and why treatment processes work and mathematical models describing their performance under various design and operating scenarios; field trips to water treatment systems. Prerequisite: CEE 357. Offered: A.

CEE 484 Decentralized and On-Site Wastewater Management and Reuse (3) Design and performance of on-site and decentralized wastewater treatment. Determination of appropriate alternatives based on endpoints of water reuse, economics, policy, management, water quality, and ecological considerations. Meeting sanitation and water reuse for situations including, individual homes, rural areas, developing countries, and high density urban dwellings. Prerequisite: CEE 357.

CEE 487 Solid-Waste Disposal (3) Describes sources and handling of municipal and industrial solid waste, with examination of collection, processing, recycling and resource recovery, and disposal alternatives. Public policy issues, local agencies and solid waste facilities, the legal and regulatory framework are all addressed in context of solid waste engineering.

CEE 488 Hazardous Wastes Engineering (3) Classification of hazardous wastes; resource conservation, Recovery Act regulations; characteristics and behavior of toxic organics; superfund; groundwater contamination, solutions. Hazardous waste site remedial action; case histories; sampling; landfill design. Stabilization and processing technologies, including incineration, carbon adsorption, emerging techniques. Prerequisite: CEE 357. Offered: Sp.

CEE 489 Water and Air Quality Sampling (2) Samples collected from lakes, streams, precipitation, and air. Resulting (and supplemental) data interpreted for cause-effect and statistical inference. Design for water and air quality monitoring programs. Prerequisite: CEE 462.

CEE 490 Air-Pollution Control (4) Fundamental concepts of air pollution Control including emission sources, atmospheric dispersion, ambient concentrations, and emission standards, with emphasis on processes and equipment for controlling emissions. Offered: jointly with ENV H 461; ASp.

CEE 491 Deterministic Systems (3) Development of quantitative methods for mathematical problem solving with emphasis on computer applications. Linear programming, mathematics of the simplex algorithm, sensitivity analysis, dynamic programming, systems simulation, and goal programming. Class project required. Recommended: a course in statistics. Offered: A.

CEE 492 Stochastic Systems (3) Introduction to probability distributions and statistics useful in systems analysis, conditional distributions, queuing theory and applications,

Monte Carlo simulation, chance-constrained mathematical programming, and stochastic dynamic programming. Emphasis on application of the techniques to civil engineering systems problems, including transportation, water resources, and structures. Prerequisite: CEE 491.

CEE 493 Air-Pollution Source Testing and Equipment Evaluation (3) Engineering evaluation of air pollutant sources and air control equipment. Fundamentals of source testing and stack sampling, including laboratory exercises.

CEE 494 Air-Pollution Control Equipment Design (3) Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Offered: jointly with CHEM E 468/M E 468.

CEE 495 Sustainability and Design for Environment (3) Cooper Analysis and design of technology systems within the context of the environment, economy, and society. Applies the concepts of resource conservation, pollution prevention, life cycle assessment, and extended product responsibility. Examines the practice, opportunities, and role of engineering, management, and public policy. Offered: jointly with ENVIR 415/M E 415.

CEE 496 Fate and Transport of Chemicals in the Environment (3) Neumann Presents a general introduction to the fundamental physical, chemical, and biological processes governing the movement and fate of chemicals in surface water and groundwater. Provides basic literacy in environment transport and fate processes, creating a solid foundation for accessing and synthesizing material on these topics. Offered: A.

CEE 497 Engineering Jordan: Water in an Arid Land Study Abroad (5) Gough Examines impacts of a hot dry climate on water engineering systems by studying the engineered water cycle in Jordan including: water cycles and sources in Jordan; drinking water treatment and desalination; wastewater treatment and reuse; decentralized and on-site treatment; and ancient water engineering.

CEE 498 Special Topics (1-5, max. 12) Special topics in civil engineering offered as course with lecture or laboratory.

CEE 499 Independent Study/Research (1-5, max. 12) Individual undergraduate research project. Recommended: 400-level CEE course.

CEE 500 Civil and Environmental Engineering Seminars (1, max. 3) Prerequisite: graduate standing in Civil and Environmental Engineering. Credit/no-credit only.

CEE 501 Structural Mechanics (6) Mackenzie, Miller Equations of a continuum for small displacements, applications to linear elasticity. Kirchhoff plate theory, problems in advanced strength of materials. Virtual work, minimum potential energy, force and displacement methods of structural analysis. Direct stiffness method. Approximate solutions, geometric stiffness matrix. Linearized buckling. Offered: A.

CEE 502 Structural Dynamics (3) Eberhard, Stanton Lagrange's equations. Free vibrations of linear, single, and multiple degree of freedom systems. Damping. Mode superposition. Forced vibrations by time history and by response spectrum methods. Free and forced vibrations of continuous systems. Wave propagation in rods and beams. Prerequisite: CEE 501. Offered: W.

CEE 503 Materials Modeling (3) Behavior of materials used in civil engineering structures. Yield and failure surfaces. Physical and phenomenological models of plastic and viscoelastic behavior. Fracture mechanics. Fatigue models and predictions. Damping and friction. Behavior of anisotropic and composite materials. Offered: S.

CEE 504 Finite Element Methods in Structural Mechanics (3) Mackenzie, Lowes, Miller Extension of the matrix methods of structural analysis to the solution of elasticity, plate, and shell problems by use of finite element approximations. Discussion of convergence and bounding and extension to

investigation of stability and finite deformations. Prerequisite: CEE 501 or permission of instructor. Offered: W.

CEE 505 Engineering Computing (3) Lowes, Mackenzie, Miller Applied computing in civil and environmental engineering contexts, including physical systems modeling, graphics and visualization, and data management. Program development using contemporary tools and strategies. Computer architecture fundamentals, theoretical and practical issues affecting memory use and performance. Offered: A.

CEE 506 Nonlinear Analysis of Structural Systems (3) Lowes, Miller, Mackenzie Formulation, solution, and interpretation of nonlinear numerical models of structural systems. Material and geometric nonlinearities for truss, beam, and frame systems. Resultant-based material laws. Large deformations. Solutions procedures, arc-length methods. Introduction to parameter identification. Prerequisite: CEE 501. Offered: Sp.

CEE 509 Engineering Rome: Study Abroad ([1/4]-, max. 5) Muench Covers Roman civil engineering over 3,000 years from Ancient Rome to the present day. Introduces civil engineering topics reinforced by practical engineering calculations, local experts, and site visits. Provides international and historical perspective on engineering and the contributions of engineers to infrastructure and society.

CEE 511 Advanced Reinforced Concrete (3) Eberhard, Stanton Behavior and design of reinforced concrete members and structures. Members subject to torsion and torsion combined with flexure and shear; members with small shear span/depth ratios, slabs. Prerequisite: CEE 452 or equivalent. Offered: A.

CEE 512 Advanced Structural Systems (3) Eberhard, Stanton Examines structural design of floor systems for buildings, including one-way and two-way slabs, strip method, yield line theory, prestressed concrete slabs. Lateral load resisting systems for buildings. Prerequisite: CEE 453; CEE 502. Offered: Sp.

CEE 513 Advanced Steel I (3) Berman, Roeder Factors influencing strength and serviceability of steel structures; LRFD limit state design procedures. Use of theories of plasticity and stability in development of design methods and specifications, bolted and welded connections, temperature effects, and affect of different fabrication methods on behavior of structure. Prerequisite: CEE 501. Offered: W.

CEE 515 Earthquake Engineering I (3) Roeder Earthquake mechanism and ground shaking, response spectra, linear elastic methods for prediction of behavior, displacement prediction methods for inelastically behaving structures, modeling and solution schemes, earthquake design philosophy, capacity design. Reinforced concrete, steel, and base-isolated structures. Prerequisite: CEE 501, CEE 502. Offered: Sp.

CEE 516 Earthquake Engineering II (3) Roeder Performance-based design, development of fragility curves, characteristics and effects of ground-shaking records, design methods, passive and active control, dynamic inelastic time history analysis, design of parts, system detailing, soil-structure interaction, repair and retrofit of structures. Prerequisite: CEE 515. Offered: A.

CEE 517 Wind Engineering Design (3) Reed Wind effects on structures, including atmospheric boundary layer flow; bluff body aerodynamics; structural dynamics and aeroelasticity; development and use of the ASCE Standards; estimation of along-wind, across-wind, and torsional response of tall buildings; design strategies for avoiding wind-induced discomfort. Fundamentals of wind tunnel testing. Offered: A.

CEE 518 Reliability and Design (3) Reed Introduction to theory of structural reliability and its application to design procedures in civil engineering, including probability theory; assessment of uncertainties; code specification and the related concept of risk and the influence of socioeconomic factors; loads, load combinations, and probabilities of damage. Offered: AS.

CEE 521 Seepage and Consolidation (3) Confined and unconfined seepage through porous media, flow net solutions, consolidation, settlement, numerical solution of seepage,

and consolidation problems. Prerequisite: CEE 367 or equivalent.

CEE 522 Shear Strength and Slope Stability (3) Shear strength of cohesive and granular soils and slope stability analysis of natural and man-made slopes. Prerequisite: CEE 367 or equivalent.

CEE 523 Advanced Foundation Engineering (3) Design of shallow and deep foundations for bearing capacity and settlement. Construction considerations. Prerequisite: CEE 522 and CEE 527.

CEE 524 Lateral Earth Pressures and Retaining Structures (3) Lateral earth pressure theory. Design of temporary and permanent retaining structures including in situ reinforcement. Prerequisite: CEE 523; CEE 527.

CEE 525 Soil Dynamics (3) Dynamics of discrete systems; dynamics of continuous systems, wave propagation; dynamic soil properties; linear, nonlinear, and equivalent linear ground response analysis; vibrations of footings; construction vibrations; vibration isolation.

CEE 526 Geotechnical Earthquake Engineering (3) Plate tectonics and elastic rebound theory of earthquakes and faults; characterization of ground motions; seismicity; seismic risk analysis; effect of local soil conditions on ground response; development of design ground motions; liquefaction; dynamic lateral earth pressures; seismic slope stability. Prerequisite: CEE 525 or permission of instructor.

CEE 527 Advanced Geotechnical Laboratory (4) Soil and site investigation, classification and engineering properties of soils and rock as determined by standard and advanced test procedures and equipment. Evaluation of test data. Report writing. Prerequisite: CEE 367 or equivalent. Offered: A.

CEE 528 Geosynthetic Engineering (3) Identification and testing of geosynthetics. Design of geosynthetic filters, roadway stabilization, earth reinforcement, and waste containment systems. Prerequisite: CEE 522 and CEE 523.

CEE 529 Foundation Soil Improvement (3) Analysis and design of physical and chemical treatment techniques commonly applied to problem foundation soils for civil engineering structure. Prerequisite: CEE 523.

CEE 530 Engineering Geology II (3) Application of engineering geology fundamentals to: location, design, and maintenance of engineered structures; policy decisions related to potential geological hazards. Case histories, governmental policy discussions, interpretation of geological maps for engineering purposes. Prerequisite: CEE 437 or permission of instructor.

CEE 531 Rock Engineering (3) Engineering classification, physical and mechanical properties of rocks, failure modes and initial stresses in rocks, laboratory and field testing of rocks, rock slope engineering, underground openings, foundations on rocks. Prerequisite: CEE 437 or permission of instructor.

CEE 540 Microbiological Process Fundamentals (3) Stahl Fundamental concepts for microbial processes including organic chemical structure, nomenclature and environmental properties, principles of microbial metabolism, study of specific types of bacteria important to environmental engineering and their metabolism, development of microbial kinetic equations, including substrate utilization, energetics, and stoichiometry. Prerequisite: permission of instructor. Offered: A.

CEE 541 Biological Treatment Systems (3) Basic reactions, design principles, current design models, and operational considerations for biological treatment systems used in environmental engineering. Applications include activated sludge design and optimization, fixed film reactors, nitrification, nitrogen removal, phosphorus removal, anaerobic treatment, biomethane production, resource recovery, and toxic organics removal. Prerequisite: either both CEE 540 and CEE 482 or equivalent. Offered: W.

CEE 543 Aquatic Chemistry (4) Principles of chemical equilibrium applicable to natural water systems and water and waste treatment processes. Chemical thermodynamics. Characteristics of acid/base, gas/liquid, solid/liquid, and

oxidation/reduction equilibria. Computer models for chemical speciation. Offered: A.

CEE 544 Physical-Chemical Treatment Processes (4) Principles and design of major physical-chemical unit processes used in water, wastewater, and hazardous waste treatment. Topics include chemical kinetics, reactor design and analysis, ion exchange, adsorption, and gas transfer. Development of mathematical models and evaluation of current design practice. Offered: W.

CEE 545 Environmental Organic Chemistry (3) Covers characterization and modeling of properties and processes governing the distribution, fate, and transformation of organic pollutants in environmental systems. Explores linear free energy relationships and their application to examining the water/soil/air partitioning, bioaccumulation, substitution and redox reaction kinetics, and abiotic transformations of organic pollutants. Prerequisite: CEE 543 or permission of instructor. Offered: W.

CEE 546 Topics in Ecological Effects of Wastewater (3) Application of ecological concepts for analysis and interpretation of bioenvironmental problems and data (eutrophication, acid rain, and toxicity). Students participate in presentation and discussion of current research. Prerequisite: CEE 462 or BIOL 473 or permission of instructor.

CEE 547 Lake and Watershed Management (3) Application of current techniques for lake and watershed analysis and modeling using fundamentals of limnology. Approaches to restoring eutrophic lakes, land use impacts on water quality. Practical exercises using data from real lake systems. Prerequisite: CEE 462/FISH 434, BIOL 473, or permission of instructor. Offered: Sp.

CEE 549 Advanced Topics in Environmental Engineering, Chemistry, and Biology (3) Special topics of current importance in environmental engineering. Application of fundamental chemical and biological principles to the study of such phenomena as the behavior of aqueous colloids, corrosion processes, and bacterial metabolism in chemically complex solutions. Prerequisite: CEE 540, CEE 541. Offered: Sp.

CEE 550 Environmental Chemical Modeling (3) Physical/chemical principles controlling the fate and distribution of environmental pollutants, and use of models to apply those principles. Includes modeling of physical transport in conjunction with chemical equilibrium and reaction kinetics. Applications focus on groundwater systems. Prerequisite: CEE 541. Offered: Sp.

CEE 551 Fate and Transport of Chemicals in the Environment (3) *Neumann* Presents a general introduction to the fundamental physical, chemical, and biological processes governing the movement and fate of chemicals in surface water and groundwater. Provides basic literacy in environment transport and fate processes, creating a solid foundation for accessing and synthesizing material on these topics. Offered: A.

CEE 552 Environmental Regulations (3) *I&S* Principal emphasis on regulations pertaining to construction site stormwater runoff, including regulatory background and requirements, how to analyze potential site problems and prepare plans to solve them, and specifying practices to avoid or reduce water pollutant releases. Briefer coverage of regulations concerning air pollutants, wetlands, hazardous wastes, and endangered species.

CEE 553 Seminar - Topics in Atmospheric Chemistry (1-3, max. 6) Seminar for atmospheric scientists, chemists, engineers in problems associated with the chemical composition of the atmosphere. Covers wide variety of topics, ranging from the natural system to urban pollution and global atmospheric change. Prerequisite: ATM S 301 or permission of instructor. Offered: jointly with ATM S 525.

CEE 554 Acoustics of Environmental Noise (4) Offered: jointly with M E 528.

CEE 555 Topics in Environmental Health (3) Introduction to human biology, including physiology, epidemiology, and toxicology. Study of contemporary environmental health problems and practices as they relate to radiological health,

solid-waste disposal, occupational health, biometeorology, and bioengineering.

CEE 557 Air Resources Management (3) Technical, administrative, and legal aspects of air conservation. Topics include urban and regional scale air quality measurement and modeling systems, receptor modeling based on chemical fingerprinting of sources and current case studies involving engineering analysis, air-quality modeling, and regulatory aspects at local, state, and federal governmental levels. Offered: A.

CEE 560 Risk Assessment for Environmental Health Hazards (3/4) Examines context, methodologies, data, uncertainties, and institutional arrangements for risk assessment. Qualitative and quantitative approaches to identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Offered: jointly with ENV H 577/PB AF 589; A.

CEE 561 Transportation Planning and Design (4) *Avery* Provides an overview of transportation planning and how sustainability fits into this field. Topics include institutional frameworks, legal/legislative issues, land use, capacity analysis, supply management and Intelligent Transportation Systems (ITS). Covers tasks/tools of transportation planning at the site, city, region, and state levels. Offered: A.

CEE 562 Livable Communities and Design (4) *Bassok* Explores the positives and negatives affecting livability. Covers sprawl and compact cities, energy issues and environmental quality, transit-oriented and traditional neighborhood development, and mixed-use and mixed income developments. Includes context-sensitive solutions to transportation projects. Offered: A.

CEE 563 Transportation Choices and Technology (4) *Rutherford* Explores the range of sustainable transportation choices for both people and goods. Studies passenger modes of transportation including bicycles, single-occupancy vehicles, care and van pools, shared autos, bus, rail, ferries, trolleys, and foot travel in the context of sustainability. Offered: A.

CEE 564 Sustainable Transportation from a Systems Perspective (5) *McCormack* Covers tools to evaluate and develop sustainable transportation systems. Emphasizes design approaches that support sustainable transportation, methods to evaluate the full life cycle impacts of transportation systems, and tools to assess transportation networks as resilient systems. Offered: W.

CEE 565 Climate Change and Energy (5) *Larson, Mahoney* Covers the nature of global climate systems, global warming, ozone depletion, and human influences. Introduces tools to evaluate current and alternative energy production and conversion options for transportation. Explores the nexus between transportation and energy in the context of climate change adaptation and mitigation. Offered: W.

CEE 566 Environmental Analysis and Assessment (5) *Watkins* Reviews statistical methods necessary to analyze environmental issues. Uses environmental data to demonstrate how significant impacts are measured and reported. Discusses transportation data sources, sustainable transportation indicators, and related statistical analysis. Includes travel demand forecasting and a review of engineering economy. Offered: W.

CEE 567 Health and Sustainable Transportation (5) *Rowangould* Examines how transportation policy is driven by human health impacts. Highlights water and air impacts on health along with the health benefit of human powered transportation. Presents legal and regulatory issues. Case studies provide examples of application of these principles to real world transportation issues. Offered: Sp.

CEE 568 Transportation Economics (5) *Niemeier* Economics applied to transportation planning, operations, maintenance, and management problems; microeconomic and macroeconomic theories; benefit-cost analysis; and the effect of uncertainty. Presents the effect of tolls, parking pricing, transit subsidies, and other pricing and incentive policies. Offered: Sp.

CEE 569 Policy Development, Finance, and Sustainable Transportation (5) *Rutherford* Covers the development and

implementation of transportation policies to support sustainable transportation systems. Reviews regulations and finance opportunities at the local, state, and federal level highlighting those that promote sustainable transportation. Offered: Sp.

CEE 570 Hydrodynamics (4) *A. HORNER-DEVINE* Applications of the equations of motion to ideal and real fluid flow, with topics in Environmental Fluid Mechanics. Kinematics, Navier-Stokes equations, viscous flows, Coriolis, density driven flows, free surface flows, and introduction to turbulence. Applications include: tidal flushing, lakes, estuaries, gravity currents and river plumes. Prerequisite: CEE 357 or equivalent. Offered: Sp.

CEE 571 Hydrodynamics in Water Quality (3) Theoretical, field study, and laboratory model approaches to diffusion in transport problems of concern to water resources engineers. Prerequisite: CEE 342 or permission of instructor.

CEE 572 Water Wave Mechanics (3) Theory of water waves. Classical water wave problem and approximate solution techniques. Evolution equations for and their solutions wave systems. Viscous damping effects and mass transport. Nonlinear shallow-water waves and the Korteweg-deVries equation. Waves on beaches. Prerequisite: CEE 342 or permission of instructor; recommended: graduate-level course in fluid mechanics.

CEE 573 Snow Hydrology (3) *Lundquist* Introduces snow hydrology research, emphasizing current research methods and results in both measurements and modeling. Explores the impact of snow on hydrology and water resources. Offered: W.

CEE 574 Advanced Hydrology (3) *E. ISTANBULLUOGLU* Detailed treatment of statistical methods used in hydrology: trend analysis, hypothesis testing, flood frequency, and elements of stochastic hydrology and data generation. Detailed examination of hydrologic models with emphasis on evapotranspiration and water budget, use of a watershed model (e.g., Stanford Watershed Model) in catchment. Offered: Sp.

CEE 576 Water Resources Planning (3) Engineering, social, and economic factors involved in water resource development and management; water policies, programs, and administration; use relationships and conflicts; considerations for regional water resource systems.

CEE 577 Water-Quality Management (3) Application of biological, ecological, and chemical processes to modeling of water quality and use of such models in appropriate management of water resource systems. Includes units on the modeling of temperature, BOD, nutrient, phytoplankton, zooplankton, and other processes in lakes, streams, and estuaries. Recommended: CEE 476; CEE 485; CEE 462/FISH 434; CEE 491. Offered: Sp.

CEE 578 Water Resource System Management and Operations (3) Readings in recent literature related to the modeling and management of water resources. Topics include drought management, expansion of existing water supplies, hydropower production, streamflow forecasting, water demand forecasting, regional water planning, climate change, and other topical issues. Offered: Sp.

CEE 579 Advanced Traffic Detection Systems (3) *Wang* Introduction to advanced tracking and detection technologies in transportation engineering, including Global Positioning Systems (GPS), inductance loop detection systems, remote traffic microwave radar, computer-vision based technologies, and other emerging detection technologies with cutting-edge research in these areas.

CEE 580 Urban Transportation Planning (4) *Rutherford* Introduction to transportation planning, including trends and issues, land use and transportation interaction, surveys, public involvement, demand management, technology, forecasting, impacts, and policy strategies. Offered: A.

CEE 581 Travel Demand Forecasting (4) Application of mathematical models to forecast urban travel behavior. Introduces emerging methods, land use models, travel demand models, including trip generation, trip distribution, mode choice, and network assignment. Discusses validation and ethics. Offered: A.

CEE 582 Intelligent Transportation Systems (3) Application of modern computer and communication technologies to transportation systems. Benefits to public agencies, commercial companies, and travelers. Coordination between private and public sectors. Intelligent Transportation System's (ITS) social, organizational, and operational changes. Offered: A.

CEE 584 Analytical Methods in Transportation I (3) *Boyle* Application of analytical and statistical methods to issues in transportation and driving. Analysis of probability distributions that describe variables. Development of statistical models for predicting transportation phenomena. Elementary sampling theory hypothesis testing, regression analysis, time series analysis, applied to transportation data. Offered: jointly with IND E 546; W.

CEE 585 Analytical Methods in Transportation II (3) Applications of advanced econometric methods to transportation issues. Topics include, but not limited to, systems of equations, duration models, limited dependent variable approaches, and count models. Hands-on modeling, with numerous data sets, available for application. Collaborative projects. Prerequisite: CEE 584 or permission of instructor.

CEE 586 Pedestrian Travel, Land Use, and Urban Form (3) Seminar concentrating on walking as a mode of transportation in cities and city-regions, including social, cognitive, and perceptual dimensions of pedestrian movement and behavior theory. Offered: jointly with URBPD 576.

CEE 587 Global Trade, Transportation, and Logistics Management (4) Provides an overview of trade, transportation, and logistics activities. Develops an understanding of the physical and information flows in supply chains, and the economic drivers of supply chain choices. Includes methods to analyze and improve logistics and transportation systems, including applications of policy, technology, and infrastructure. Offered: Sp.

CEE 588 Energy Infrastructure and the Environment (3) *Larson, Mahoney* Focuses on energy infrastructure, including site selection, permitting, design, construction, and maintenance. Includes electrical production facilities as well as transmission, focusing on permitting and construction of renewable energy facilities. Covers renewable energy infrastructure, emphasizing wind, solar, and geothermal. Offered: A.

CEE 589 Transit Systems Planning (3) Planning, operational methods for urban public transportation. Review of technological, operating characteristics of vehicles and systems; financing, management, institutional aspects. Paratransit. Short-range planning, operational strategies, revenue-fare structures. Service monitoring. Mode choice, transit demand relating to service. Computer-aided methods for planning, design of transit systems. Offered: Sp.

CEE 590 Traffic Systems Operations (3) *Goodchild, McCormack* Operational planning, management of arterial and freeway traffic systems. Review of transportation system management strategies to achieve more efficient use of existing infrastructure, including improved and innovative traffic control systems and demand management policies, measures of effectiveness, impact assessment, traveler response. Introduction to use of relevant computer models and packages. Offered: A.

CEE 591 Freight Transportation (3) Overview of the technical and institutional aspects of transporting freight. Topics include the different modes of moving freight, the technology of transferring freight between modes at ports and terminals, issues that impact freight movement such as congestion and government regulation, and the future of freight mobility. Also covers regional freight demand modeling techniques. Offered: A.

CEE 592 Statistical Fundamentals for Construction and Materials Applications (3) *S. MUENCH* Overview of statistical measures used in various construction and materials decision-making processes. Subjects include data distributions, hypothesis tests (making decisions with statistics), regression analysis, sampling, quality control and assurance, and experimental design. Uses construction data to illustrate these measures. Offered: Sp.

CEE 593 Construction Labor Law (3) *Goldblatt* In-depth study of construction labor topics, including labor-management organization, legislation, and regulation, collective bargaining, and job site administration. Examines importance of labor relations in construction firms, whether in a union setting or an open shop environment.

CEE 594 Computer-Aided Construction (3) Application of information technology to construction management and cost estimating. Topics include, but not limited to, computerized construction, fundamentals of computer hardware, construction management software tools, web publishing, GPS application, and construction data management. Offered: S.

CEE 595 Construction Materials (3) *Mahoney* Examines the use of aggregates, bituminous mixtures, Portland cement concrete, roller compacted concrete, soil and site stabilization, utility cuts, and flowable backfill in construction projects. Emphasis on behavior of materials in various construction applications. Offered: W.

CEE 596 Pavement Construction (3) *Muench* Examines pavement construction, including pavement contracts and specifications, quality control and assurance programs, and plant and laydown operations. Reviews both national and international pavement construction practices. Offered: Sp.

CEE 598 Engineering Jordan: Water in an Arid Land Study Abroad (5) *Gough* Examines impacts of a hot dry climate on water engineering systems by studying the engineered water cycle in Jordan including: water cycles and sources in Jordan; drinking water treatment and desalination; wastewater treatment and reuse; decentralized and on-site treatment; and ancient water engineering.

CEE 599 Special Topics in Civil and Environmental Engineering (1-5, max. 20) Special topics in civil and environmental engineering offered occasionally by permanent or visiting faculty members.

CEE 600 Independent Study or Research ([2-5]-) Topics covered depend on faculty and student interest. Prerequisite: permission of instructor.

CEE 601 Internship (2) Internship in an established program between industry, government, and the University. Prerequisite: permission of Graduate Program Coordinator and committee chair.

CEE 700 Master's Thesis (*-) Prerequisite: permission of adviser.

CEE 800 Doctoral Dissertation (*-) Prerequisite: permission of adviser.

Computer Science and Engineering

AC101 Paul G. Allen Center for Computer Science and Engineering

Computer science is the study of information and algorithms within the context of real and abstract computing devices. Computer scientists are interested in such topics as the representation and storage of information; algorithms to access, display, edit, and transform information; programming languages to express algorithms; and hardware and software processors to execute algorithms. These concerns lead to practical developments in computer systems software, such as operating systems and compilers; in application areas, such as artificial intelligence, computer graphics, and computational biology; and also to theoretical investigations of computers, algorithms, and data.

Computer engineering is a closely related field concerned with the design and practical application of computer hardware and software systems to the solution of technological, economic, and societal problems. The computer engineer analyzes a problem and selects from a variety of tools

and technologies those most appropriate for its solution. A computer engineer can expect to be involved in hardware design, software creation, and systems integration.

UNDERGRADUATE PROGRAM

Adviser

101 Paul G. Allen Center for Computer Science and

Engineering, Box 352350

(206) 543-1695

ugrad-advisor@cs.washington.edu

The Department of Computer Science and Engineering offers the following programs of study:

- The Bachelor of Science in Computer Engineering degree
- The Bachelor of Science degree with a major in computer science (see Computer Science in the Arts and Sciences section of this catalog)

The core requirements of the two undergraduate majors are similar. The computer engineering major may be more appropriate for students who are interested in creating and building systems that include both hardware and software components and that must be engineered to meet a variety of cost and performance constraints. The program includes a general foundation in engineering fundamentals to enable interdisciplinary work with other departments in the College of Engineering and the University as a whole.

The computer science major may be more appropriate for students who want to earn a double major with another College of Arts and Sciences program (for example, mathematics or economics), who want the additional flexibility of the computer science requirements (the computer engineering major has more required courses and fewer electives), or who may be more interested in the theory, design, and implementation of software systems and applications (for example, the techniques of modern compilers or the algorithms behind computer graphics and animation).

Bachelor of Science in Computer Engineering

Suggested First- and Second-Year College Courses: MATH 124, MATH 125, MATH 126; PHYS 121, PHYS 122; CSE 142, CSE 143; English composition.

Department Admission Requirements

Applicants are considered in two groups: Direct Admission and Regular Admission. Admission is competitive. Completion of minimum requirements does not guarantee admission.

1. Direct Admission: Computer Science and Engineering enrolls up to 30 percent of its incoming class directly out of high school, prior to completion of university-level prerequisites. Freshman applicants to the University listing Computer Science or Computer Engineering as their intended major are automatically considered. Competitive applicants have taken calculus and at least one year of laboratory science (preferably physics) upon entering the University. Admission is for autumn quarter only.
2. Regular Admission
 - a. Minimum 2.0 grade in each of the following courses: MATH 124, MATH 125, MATH 126 (or MATH 134, MATH 135, MATH 136); PHYS 121; CSE 142, CSE 143; and at least five credits of English composition.
 - b. Admission is for autumn or spring quarter. Application deadlines are July 1 for autumn quarter and February 1 for spring quarter.
 - c. Individual application prerequisites may be waived or substituted with departmental permission for matriculated students who have excelled in CSE in

introductory courses. Information is available from the department adviser.

Graduation Requirements

180 credits as follows:

1. General Education Requirements (83 credits)
 - a. Written and Oral Communication (12 credits): 5-credit course in English composition from the University-approved list; HCDE 231; 4 credits of UW approved writing (W) or additional UW approved composition (C) courses.
 - b. Visual, Literary, & Performing Arts (VLPA) and Individuals & Societies (I&S) (30 credits): A minimum of 10 credits in each required area
 - c. Natural World (41 credits):
 - i. Mathematics (15-18 credits): MATH 124, MATH 125, MATH 126 (or MATH 134, MATH 135, MATH 136); MATH 308 or MATH 318 (waived if MATH 136 taken)
 - ii. Science (20 credits): PHYS 121, PHYS 122, and 10 additional credits from the list of approved natural science courses in the CS&E handbook
 - iii. Mathematics or Science (3-6 credits): 3 to 6 additional credits of math/science (to bring total to 41) chosen from approved natural science courses in the CS&E handbook, STAT 390, STAT 391, STAT 394, MATH 307, MATH 309, MATH 334, MATH 335, AMATH 351, or AMATH 353 (STAT 391 recommended.)
2. Major Requirements (72 credits)
 - a. Required Courses (33 credits): CSE 142, CSE 143, CSE 311, CSE 312, CSE 332, CSE 351, CSE 352; E E 215 or E E 205.
 - b. CSE Electives (39 credits):
 - i. One course chosen from: CSE 403, CSE 466, or CSE 484
 - ii. Three additional courses chosen from the CSE 401, CSE 403, CSE 444, CSE 451, CSE 452, CSE 461, CSE 466, CSE 467, CSE 471, CSE 484
 - iii. c. Two additional courses chosen from the CSE core course list in the online CSE handbook
 - iv. d. A design capstone course from the approved list in the CSE handbook.
 - c. 7 credits of College of Engineering courses from the CSE elective list
 - d. Additional (1-5 credits) CSE electives to bring total CSE electives to 39 credits
 - e. Minimum 2.0 grade for any course applied to the major, Natural World, or Written and Oral Communications requirements. Transfer students must earn a minimum of 24 graded credits toward the major at the UW
3. Free Electives (21-25 credits)

Student Outcomes and Opportunities

Learning Objectives and Expected Outcomes:

Engineering Quality: Graduates engage in the productive practice of computer engineering to identify and solve significant problems across a broad range of application areas.

Leadership: Graduates engage in successful careers in industry, academia, and public service, providing technical leadership for their business, profession, and community.

Economic Impact: Graduates enhance the economic well-being of Washington State through a combination of technical expertise, leadership, and entrepreneurship.

Lifelong Learning: Graduates adapt to new technologies, tools, and methodologies to remain at the leading edge of

computer engineering practice with the ability to respond to the challenges of a changing environment.

The computer engineering undergraduate degree is housed in the College of Engineering and is thereby accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: (410) 347-7700. The department has adopted the following student outcomes. Upon graduation from the computer engineering program, students have:

- a. An ability to apply knowledge of mathematics, science, and engineering
- b. An ability to design and conduct experiments, as well as to analyze and interpret data
- c. An ability to design a computing system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- d. An ability to function on multi-disciplinary teams
- e. An ability to identify, formulate, and solve computer engineering problems
- f. An understanding of professional and ethical responsibility
- g. An ability to communicate effectively
- h. The broad education necessary to understand the impact of computer engineering solutions in a global, economic, environmental, and societal context
- i. A recognition of the need for, and an ability to engage in life-long learning
- j. Knowledge of contemporary issues
- k. An ability to use the techniques, skills, and modern computer engineering tools necessary for engineering practice.

Instructional and Research Facilities: The department is housed in the state-of-the-art Paul G. Allen Center for Computer Science and Engineering. The Allen Center includes more than 20,000 square feet of laboratories, nearly 1,000 computer systems, and more than 50 terabytes of storage. Gigabit connectivity is provided to every desktop by more than 60 miles of data cabling, and wireless access is available throughout the building.

CSE general-purpose laboratories support the diverse set of hardware and software platforms required for a cutting-edge education in the field. CSE special-purpose laboratories provide tailored support for activities such as mobile robotics, computer graphics, digital design, motion capture, embedded systems, laser scanning, educational technology, networking, and artificial intelligence.

The Allen Center is one of the finest computer science and computer engineering facilities in the nation. All of its capabilities are available to all CSE students.

Honors Options Available: With College Honors (Completion of Honors Core and Departmental Honors requirements). With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.

Research, Internships, and Service Learning: Internships and co-op opportunities are available for computer science undergraduates. See www.engr.washington.edu/coop and careers.washington.edu for information.

Departmental Scholarships: CSE has a limited number of scholarships available to current CSE majors. Scholarship information is listed at www.cs.washington.edu/education/ugradscholars/scholarships.html.

Student Organizations/Associations: A student chapter of the Association for Computing Machinery (ACM) operates within CSE. The ACM helps to coordinate new student orientations, research nights, technical talks, and various tutorials.

GRADUATE PROGRAM

Graduate Program Coordinator

AC101 Paul G. Allen Center for Computer Science and Engineering, Box 352350
(206) 543-1695

grad-admissions@cs.washington.edu

The Department of Computer Science and Engineering offers programs of study leading to the degrees of Master of Science and Doctor of Philosophy. Students can pursue full-time graduate study leading to a PhD with an integrated MS. Students can also pursue part-time graduate study in the evening, leading to an MS. Programs are designed to provide considerable breadth of knowledge, as well as depth in an area of specialization.

The department has 40 faculty and is authorized to grow over the next few years. In addition, there are nearly 40 adjunct, affiliate, and emeritus faculty members. The faculty is currently conducting research in the following areas: embedded systems and reconfigurable computing; computer architecture; networking; operating systems and distributed systems; programming systems; information retrieval, database systems, and intelligent Internet systems; software engineering; computer graphics, vision, and animation; human interface to computing; artificial intelligence; theory of computation; and computing and biology.

Master of Science

Degree Requirements

40 credits, as follows:

Non-Thesis Option:

1. Of the 40 credits required, 20 credits must be in courses numbered 500 or above, 30 credits must be in CSE courses, and 10 credits may be in one or more supporting fields.
2. Satisfactorily pass an MS qualifying evaluation. The faculty as a whole assesses whether the student has satisfactorily completed a breadth requirement and an independent project requirement as described below.
3. A breadth requirement, satisfied through coursework. The required course list may change from time to time to reflect changes in the curriculum and faculty research interests. Students may choose to meet the requirements in place when they were admitted. Students must take one course in each of the four groups below and one additional course from two of the groups (18 credits) for graded credit (a waiver is possible for graduate courses taken elsewhere):
 - a. Either CSE 521, CSE 525, or CSE 531
 - b. Either CSE 548, CSE 551, CSE 561, or CSE 567
 - c. Either CSE 501, CSE 503, CSE 505, or CSE 544
 - d. Either CSE 510, CSE 546, CSE 557, CSE 573, or CSE 576
 - e. Two additional courses from two of the groups above
4. An independent project completed under the supervision of a primary and a secondary faculty adviser. A written summary and an oral presentation are required.

Thesis Option:

1. 9 credits CSE 700, master's thesis - preparing a written thesis acceptable to a CSE Supervisory Committee and satisfactorily passing an oral examination on the thesis work
2. Of the 31 remaining credits,
 - a. 24 credits must be CSE courses
 - b. 7 credits may be in one or more supporting fields such as: engineering, mathematics, natural sciences, business administration, linguistics, philosophy, psychology, or medicine.

Professional Master's Program

Degree Requirements

To satisfy the requirements of the Professional Master's Program (PMP), students must successfully complete eight 4-credit PMP courses (determined in consultation with an adviser) and other courses providing 8 additional credits. The additional credits may be earned through participation in the department's colloquium series, which features leading-edge researchers and developers in computer science from around the world. This series airs throughout the Puget Sound region on UWTB and is available live and archived on the Internet. Students who take one course per quarter, plus 1 credit of colloquium, complete the program in two-and-a-half years.

Doctor of Philosophy

Admission Requirements

Most entering students are expected to have a solid background in computer science, including programming, machine organization, data structures, discrete mathematics, automata theory, and programming systems (i.e., the equivalent of CSE 326, CSE 321, CSE 322, and CSE 378, and either CSE 401 or CSE 451). Some exceptions to these requirements are made for otherwise-promising students. Graduate Record Examination scores are required. Scores should be earned within the preceding five years. The Computer Science and Engineering Graduate Program home page for prospective students gives full details of application procedures.

Complete applications must be received by December 15 for both U.S. and international students for autumn quarter admission.

Degree Requirements

90 credits, to include:

1. Satisfactorily pass a PhD qualifying evaluation. The faculty as a whole assesses whether the student has satisfactorily completed a breadth requirement and an independent project requirement as described below.
 - a. A breadth requirement satisfied through coursework. The required course list may change from time to time to reflect changes in the curriculum and faculty research interests. Students may choose to meet the requirements in place when they were admitted.
 - b. One course from each of the four groups below and one additional course from two of the groups (18 credits) for graded credit (a waiver is possible for graduate courses taken elsewhere):
 - i. Either CSE 521, CSE 525, or CSE 531
 - ii. Either CSE 548, CSE 551, CSE 561, or CSE 567
 - iii. Either CSE 501, CSE 503, CSE 505, or CSE 544
 - iv. Either CSE 510, CSE 544, CSE 546, CSE 557, CSE 573, or CSE 576
 - v. Two additional courses from two of the groups above
 - vi. Four additional courses taken for credit from CSE or related areas with approval.
 - c. An independent project completed under the supervision of two faculty advisers. A written summary and an oral presentation are required.
2. Satisfactorily pass the general examination. In this examination, the applicant must demonstrate depth of knowledge in a principal area acceptable to the Ph.D. Supervisory Committee.
3. Complete at least 90 credits of coursework, at least 40 of which are in courses numbered 500 or above. 45 credits should be in courses chosen from the computer science course list. At least two CSE courses numbered 500 or above (or approved courses in related disciplines)

plines) must be taken for graded credit in addition to those courses taken to satisfy the breadth component of the qualifying evaluation. Coursework taken toward the M.S. degree is applicable toward the Ph.D. degree.

4. Completion of two quarters of teaching assistantship within the department.
5. Preparation of a dissertation that must be acceptable to the Supervisory Committee. Students must register for at least 27 credits of CSE 800 (Dissertation).
6. Satisfactorily pass an oral examination on the dissertation work.

Assistantships

Research and teaching assistantships are available and are allocated on the basis of scholastic excellence and potential. All students accepted to the program are awarded three years of funding. Students who are applying for assistantships to start in autumn quarter should have all applications to the Graduate School and the department completed by December 15.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crsat/

Computer Science and Engineering

CSE 120 Computer Science Principles (5) NW, QSR Introduces fundamental concepts of computer science and computational thinking. Includes logical reasoning, problem solving, data representation, abstraction, the creation of digital artifacts such as web pages and programs, managing complexity, operation of computers and networks, effective web searching, ethical, legal and social aspects of information technology. May not be taken for credit if credit earned in CSE 100/INFO 100.

CSE 131 Science and Art of Digital Photography (4) VLPA Hemingway Covers the fundamentals of digital photography, including computational imaging; the elements of photographic composition and design; and the future of internet-enabled photography.

CSE 142 Computer Programming I (4) NW, QSR Basic programming-in-the-small abilities and concepts including procedural programming (methods, parameters, return, values), basic control structures (sequence, if/else, for loop, while loop), file processing, arrays, and an introduction to defining objects. Intended for students without prior programming experience. Offered: AWSpS.

CSE 143 Computer Programming II (5) NW, QSR Continuation of CSE 142. Concepts of data abstraction and encapsulation including stacks, queues, linked lists, binary trees, recursion, instruction to complexity and use of predefined collection classes. Prerequisite: CSE 142. Offered: AWSpS.

CSE 154 Web Programming (5) QSR Covers languages, tools, and techniques for developing interactive and dynamic web pages. Topics include page styling, design, and layout; client and server side scripting; web security; and interacting with data sources such as databases. Prerequisite: minimum grade of 2.0 in either CSE 140, CSE 142, or CSE 143.

CSE 160 Data Programming (4) NW, QSR Introduction to computer programming. Assignments solve real data manipulation tasks from science, engineering, business, and the humanities. Concepts of computational thinking, problem-solving, data analysis, Python programming, control and data abstraction, file processing, and data visualization. Intended for students without prior programming experience. No credit if CSE 143 has been taken.

CSE 190 Current Topics in Computer Science and Engineering (1-5, max. 15)

CSE 311 Foundations of Computing I (4) QSR Examines fundamentals of logic, set theory, induction, and algebraic structures with applications to computing; finite state machines; and limits of computability. Prerequisite: CSE 143; either MATH 126 or MATH 136.

CSE 312 Foundations of Computing II (4) QSR Examines fundamentals of enumeration and discrete probability; applications of randomness to computing; polynomial-time versus NP; and NP-completeness. Prerequisite: CSE 311; CSE 332, which may be taken concurrently.

CSE 331 Software Design and Implementation (4) Explores concepts and techniques for design and construction of reliable and maintainable software systems in modern high-level languages; program structure and design; program-correctness approaches, including testing; and event-driven programming (e.g., graphical user interface). Includes substantial project and software-team experience. Prerequisite: CSE 143.

CSE 332 Data Abstractions (4) Covers abstract data types and structures including dictionaries, balanced trees, hash tables, priority queues, and graphs; sorting; asymptotic analysis; fundamental graph algorithms including graph search, shortest path, and minimum spanning trees; concurrency and synchronization; and parallelism. Not available for credit for students who have completed CSE 373. Prerequisite: CSE 311.

CSE 333 Systems Programming (4) Includes substantial programming experience in languages that expose machine characteristics and low-level data representation (e.g., C and C++); explicit memory management; interacting with operating-system services; and cache-aware programming. Prerequisite: CSE 351.

CSE 341 Programming Languages (4) Basic concepts of programming languages, including abstraction mechanisms, types, and scoping. Detailed study of several different programming paradigms, such as functional, object-oriented, and logic programming. No credit if CSE 413 has been taken. Prerequisite: CSE 143.

CSE 344 Introduction to Data Management (4) Introduces database management systems and writing applications that use such systems; data models (e.g., relational, semi-structured), query languages (e.g., SQL, XQuery), language bindings, conceptual modeling, transactions, security, database tuning, data warehousing, parallelism, and web-data management. Prerequisite: CSE 311.

CSE 351 The Hardware/Software Interface (4) Examines key computational abstraction levels below modern high-level languages; number representation, assembly language, introduction to C, memory management, the operating-system process model, high-level machine architecture including the memory hierarchy, and how high-level languages are implemented. Prerequisite: CSE 143.

CSE 352 Hardware Design and Implementation (4) Covers digital circuit design, processor design, and systems integration and embedded-systems issues. Includes substantial hardware laboratory. Prerequisite: CSE 311; CSE 351.

CSE 369 Introduction to Digital Design (2) Introduces the implementation of digital logic and its specification and simulation. Covers Boolean algebra; combinational circuits including arithmetic circuits and regular structures; sequential circuits including finitestate-machines; and use of field-programmable gate arrays (FPGAs). Emphasizes simulation, high-level specification, and automatic synthesis techniques. Prerequisite: CSE 311.

CSE 373 Data Structures and Algorithms (3) Fundamental algorithms and data structures for implementation. Techniques for solving problems by programming. Linked lists, stacks, queues, directed graphs. Trees: representations, traversals. Searching (hashing, binary search trees, multiway trees). Garbage collection, memory management. Internal and external sorting. Intended for non-majors. Not

open for credit to students who have completed CSE 332. Prerequisite: CSE 143.

CSE 374 Intermediate Programming Concepts and Tools (3) Covers key software development concepts and tools not in introductory courses. Concepts of lower-level programming (C/C++) and explicit memory management; techniques and tools for individual and group software development; design, implementation, and testing strategies. Intended for non-majors. Cannot be taken for credit if credit received for CSE 333. Prerequisite: CSE 143.

CSE 390 Special Topics in Computer Science and Engineering (1-5, max. 10) Covers topics of current interest in computer science and engineering.

CSE 399 CSE Foreign Study (*) Upper-division computer science or computer engineering course, taken through an approved study abroad program, for which there is no direct University of Washington equivalent. Credit/no-credit only.

CSE 401 Introduction to Compiler Construction (4) Fundamentals of compilers and interpreters; symbol tables; lexical analysis, syntax analysis, semantic analysis, code generation, and optimizations for general purpose programming languages. No credit to students who have taken CSE 413. Prerequisite: CSE 332; CSE 351.

CSE 403 Software Engineering (4) Fundamentals of software engineering using a group project as the basic vehicle. Topics covered include the software crisis, managing complexity, requirements specification, architectural and detailed design, testing and analysis, software process, and tools and environments. Prerequisite: CSE 331; CSE 332.

CSE 410 Computer Systems (3) Structure and components of hardware and software systems. Machine organization, including central processor and input-output architectures; assembly language programming; operating systems, including process, storage, and file management. Intended for non-majors. No credit to students who have completed CSE 351 or CSE 451. Prerequisite: CSE 373.

CSE 413 Programming Languages and Their Implementation (3) Basic concepts and implementation strategies for modern functional and object-oriented programming languages such as Scheme and Java. Intended for non-majors. No credit to students who have completed CSE 341 or CSE 401. Prerequisite: CSE 373.

CSE 414 Introduction to Database Systems (4) Introduces database management systems and writing applications that use such systems; data models, query languages, transactions, database tuning, data warehousing, and parallelism. Intended for non-majors. Not open for credit to students who have completed CSE 344. Prerequisite: minimum grade of 2.5 in CSE 143.

CSE 415 Introduction to Artificial Intelligence (3) NW Principles and programming techniques of artificial intelligence: LISP, symbol manipulation, knowledge representation, logical and probabilistic reasoning, learning, language understanding, vision, expert systems, and social issues. Intended for non-majors. Not open for credit to students who have completed CSE 473. Prerequisite: CSE 373.

CSE 417 Algorithms and Computational Complexity (3) Design and analysis of algorithms and data structures. Efficient algorithms for manipulating graphs and strings. Fast Fourier Transform. Models of computation, including Turing machines. Time and space complexity. NP-complete problems and undecidable problems. Intended for non-majors. Prerequisite: CSE 373.

CSE 421 Introduction to Algorithms (3) Techniques for design of efficient algorithms. Methods for showing lower bounds on computational complexity. Particular algorithms for sorting, searching, set manipulation, arithmetic, graph problems, pattern matching. Prerequisite: CSE 312; CSE 332.

CSE 427 Computational Biology (3) Algorithmic and analytic techniques underlying analysis of large-scale biological data sets such as DNA, RNA, and protein sequences or structures, expression and proteomic profiling. Hands-on experience with databases, analysis tools, and genome markers. Applications such as sequence alignment, BLAST, phylogenetics, and Markov models. Prerequisite: CSE 312; CSE 332.

CSE 428 Computational Biology Capstone (5) Designs and implements a software tool or software analysis for an important problem in computational molecular biology. Prerequisite: CSE 312; CSE 331; CSE 332.

CSE 431 Introduction to Theory of Computation (3) Models of computation, computable and noncomputable functions, space and time complexity, tractable and intractable functions. Prerequisite: CSE 312.

CSE 440 Introduction to HCI: User Interface Design, Prototyping, and Evaluation (5) Human-Computer Interaction (HCI) theory and techniques. Methods for designing, prototyping, and evaluating user interfaces to computing applications. Human capabilities, interface technology, interface design methods, and interface evaluation tools and techniques. Prerequisite: CSE 332.

CSE 441 Advanced HCI: Advanced User Interface Design, Prototyping, and Evaluation (5) Human-Computer Interaction (HCI) theory and techniques. Advanced methods for designing, prototyping, and evaluating user interfaces to computing applications. Novel interface technology, advanced interface design methods, and prototyping tools. Prerequisite: CSE 440.

CSE 444 Database Systems Internals (4) The relational data model and the SQL query language. Conceptual modeling: entity/relationships, normal forms. XML, XPath, and XQuery. Transactions: recovery and concurrency control. Implementation of a database system. A medium sized project using a relational database backend. Prerequisite: CSE 332; CSE 344.

CSE 446 Machine Learning (4) Methods for designing systems that learn from data and improve with experience. Supervised learning and predictive modeling: decision trees, rule induction, nearest neighbors, Bayesian methods, neural networks, support vector machines, and model ensembles. Unsupervised learning and clustering. Prerequisite: CSE 332; either STAT 390, STAT 391, or CSE 312.

CSE 450 Animation Production Seminar (1) Open to all students who have an interest in digital animation. Reviews and analyzes films, animated feature films, and television commercials. Emphasizes the technical and aesthetic basics of animation production in industry studio environments.

CSE 451 Introduction to Operating Systems (4) Principles of operating systems. Process management, memory management, auxiliary storage management, resource allocation. No credit to students who have completed CSE 410 or E E 474. Prerequisite: CSE 351; CSE 332; CSE 333.

CSE 452 Introduction to Distributed Systems (4) Covers abstractions and implementation techniques in the construction of distributed systems, including cloud computing, distributed storage systems, and distributed caches. Prerequisite: CSE 451.

CSE 454 Advanced Internet and Web Services (5) Design of Internet search engines, including spider architecture, inverted indices, frequency rankings, latent semantic indexing, hyperlink analysis, and refinement interfaces. Construction of scalable and secure web services. Datamining webserver logs to provide personalized and user-targeted services. Large project. Prerequisite: CSE 332; CSE 351; either CSE 331 or CSE 352.

CSE 455 Computer Vision (4) Introduction to image analysis and interpreting the 3D world from image data. Topics may include segmentation, motion estimation, image mosaics, 3D-shape reconstruction, object recognition, and image retrieval. Prerequisite: CSE 333; CSE 332.

CSE 456 Story Design for Computer Animation (4) Animation principles and production for story development and design. Design, development, and production of several storyreels, which are a tool for the pre-production of animated features and shorts. Student use authoring tools to present finished work.

CSE 457 Computer Graphics (4) Introduction to computer image synthesis, modeling, and animation. Topics may include visual perception, displays and framebuffers, image processing, affine and projective transformations, hierarchical modeling, hidden surface elimination, shading, ray-tracing, anti-aliasing, texture mapping, curves, surfaces, particle systems, dynamics, character animation, and animation principles. Prerequisite: CSE 333; CSE 332.

CSE 458 Computer Animation (5) Introduction to basic principles of computer generated animation. Focus on the modeling and lighting of animated characters. Students from art, CSE, and music team up on projects to be built on commercially-available modeling and lighting packages. Prerequisite: CSE 457.

CSE 459 Pre-Production for Collaborative Animation (5) Pre-production of collaboratively designed animated shorts. In-depth analysis of classical and computer generated works. Character design and pre-planning, model sheets, character rigging, storyreel and animatics, character motion, design for multiple characters, and principles of animation as applied to character motion and effects. Prerequisite: CSE 458.

CSE 460 Animation Capstone (5) Apply the knowledge gained in previous animation courses to produce a short animated film. Topics include scene planning, digital cinematography, creature and hard surface modeling, animatics and basics of character animation, and rendering techniques. Prerequisite: CSE 458, CSE 459.

CSE 461 Introduction to Computer-Communication Networks (4) Computer network architectures, protocol layers, network programming. Transmission media, encoding systems, switching, multiple access arbitration. Network routing, congestion control, flow control. Transport protocols, real-time, multicast, network security. Prerequisite: either CSE 326 or CSE 332; either CSE 303 or CSE 333.

CSE 464 Advanced Topics in Digital Animation (1-5, max. 10) Students design individual animated works for professional quality demo reels. 2- and 3-D animatics, special effects design, advanced character animation techniques, 3-D paint techniques and integration, short design, sequence planning, non-photorealistic rendering options, interactive animation for pre-planning, and advanced production techniques and strategies.

CSE 466 Software for Embedded Systems (4) Software issues in the design of embedded systems. Microcontroller architectures and peripherals, embedded operating systems and device drivers, compilers and debuggers, timer and interrupt systems, interfacing of devices, communications and networking. Emphasis on practical application of development platforms. Prerequisite: CSE 352; CSE 333.

CSE 467 Advanced Digital Design (4) Advanced techniques in the design of digital systems. Hardware description languages, combinational and sequential logic synthesis and optimization methods, partitioning, mapping to regular structures. Emphasis on reconfigurable logic as an implementation medium. Memory system design. Digital communication including serial/parallel and synchronous/asynchronous methods. Prerequisite: CSE 352; CSE 332.

CSE 469 Computer Architecture I (5) Introduction to computer architecture. Assembly and machine language, microprocessor organization including control and datapath. Computer arithmetic. Memory systems and caching. Performance modeling of microprocessors. Prerequisite: either E E 271 or CSE 369; CSE 143 Offered: jointly with E E 469; AWSp.

CSE 470 Computer Architecture II (4) Advanced computer architecture. Performance evaluation and energy

efficiency. Instruction set architectures. Instruction-level parallelism. Modern microprocessor micro-architecture. Thread-level parallelism. Cache coherency and memory consistency in shared-memory multiprocessors. Memory hierarchy. GPU architecture. Warehouse-scale computing. Trends in computer design. Prerequisite: CSE 351; either CSE 469 or E E 469. Offered: jointly with E E 470.

CSE 471 Computer Design and Organization (4) CPU instruction addressing models, CPU structure and functions, computer arithmetic and logic unit, register transfer level design, hardware and microprogram control, memory hierarchy design and organization, I/O and system components interconnection. Laboratory project involves design and simulation of an instruction set processor. Prerequisite: CSE 352.

CSE 472 Introduction to Computational Linguistics (5) VLPA/NW E. BENDER Introduction to computational approaches to modeling language, for linguistic research and practical applications, including analyses at different levels of linguistic structure and symbolic as well as statistical approaches. Prerequisite: either LING 200 or LING 400; either LING 461 or CSE 311. Offered: jointly with LING 472.

CSE 473 Introduction to Artificial Intelligence (3) Principal ideas and developments in artificial intelligence: Problem solving and search, game playing, knowledge representation and reasoning, uncertainty, machine learning, natural language processing. Not open for credit to students who have completed CSE 415. Prerequisite: CSE 332.

CSE 474 Introduction to Embedded Systems (4) Introduces the specification, design, development, and test of real time embedded system software. Use of a modern embedded microcomputer or microcontroller as a target environment for a series of laboratory projects and a comprehensive final project. Prerequisite: CSE 143. Offered: jointly with E E 474; AWSpS.

CSE 475 Embedded Systems Capstone (5) Capstone design experience. Prototype a substantial project mixing hardware, software, and communications. Focuses on embedded processors, programmable logic devices, and emerging platforms for the development of digital systems. Provides a comprehensive experience in specification, design, and management of contemporary embedded systems. Prerequisite: either E E 271 or CSE 369; either CSE 466, E E 472, or CSE 474/E E 474. Offered: jointly with E E 475; AWSpS.

CSE 477 Digital System Design (5) Capstone design experience. Prototype a substantial project mixing hardware, software, and communication components. Focuses on use of embedded processors and programmable logic in digital system design, case studies, and emerging components and platforms. Provides a complete experience in embedded system design and management. Prerequisite: CSE 451; CSE 466; CSE 467.

CSE 481 Capstone Software Design (5, max. 15) Students work in teams to design and implement a software project involving multiple areas of the CSE curriculum. Emphasis is placed on the development process itself, rather than on the product. Prerequisite: CSE 332; CSE 351; either CSE 331 or CSE 352.

CSE 484 Computer Security (4) Foundations of modern computer security, including software security, operating system security, network security, applied cryptography, human factors, authentication, anonymity, and web security. Prerequisite: CSE 332; CSE 351.

CSE 486 Introduction to Synthetic Biology (3) Studies mathematical modeling of transcription, translation, regulation, and metabolism in cell; computer aided design methods for synthetic biology; implementation of information processing, Boolean logic and feedback control laws with genetic regulatory networks; modularity, impedance matching and isolation in biochemical circuits; and parameter estimation methods. Prerequisite: either MATH 136

or MATH 307, AMATH 351, or CSE 311 and MATH 308 or AMATH 352. Offered: jointly with BIOEN 423/E E 423; A.

CSE 487 Advanced Systems and Synthetic Biology (3) Covers advanced concepts in system and synthetic biology. Includes kinetics, modeling, stoichiometry, control theory, metabolic systems, signaling, and motifs. All topics are set against problems in synthetic biology. Prerequisite: either BIOEN 401, BIOEN 423, E E 423, or CSE 486. Offered: jointly with BIOEN 424/E E 424; W.

CSE 488 Laboratory Methods in Synthetic Biology (4) Designs and builds transgenic bacterial using promoters and genes taken from a variety of organisms. Uses construction techniques including recombination, gene synthesis, and gene extraction. Evaluates designs using sequencing, fluorescence assays, enzyme activity assays, and single cell studies using time-lapse microscopy. Prerequisite: either BIOEN 423, E E 423, or CSE 486; either CHEM 142, CHEM 144, or CHEM 145. Offered: jointly with BIOEN 425/E E 425; W.

CSE 490 Special Topics in Computer Science and Engineering (1-5, max. 15) Lectures, discussions, and possibly labs on topics of current interest in computer science and engineering not covered by other CSE undergraduate courses.

CSE 495 Project Practicum ([1-5]-, max. 5) Available in special situations for computer science majors to compete, under instructor guidance, a substantial computing project that deepens one's knowledge and experience in the field. Projects may involve a group of students.

CSE 497 Undergraduate Research Seminar (1) Students prepare and give a public talk on their faculty-sponsored research projects.

CSE 498 Senior Project ([1-9]-, max. 9) A report (and perhaps demonstration) describing a development, survey, or small research project in computer science or an application to another field. Objectives: (1) integrating material from several courses, (2) introducing the professional literature, (3) gaining experience in writing a technical document, and (4) showing evidence of independent work. Work normally extends over more than one quarter, for a maximum of 6 credits for CSE 498; 9 credits are required for CSE 498H.

CSE 499 Reading and Research (1-24, max. 24) Available in special situations for advanced computer science majors to do reading and research in field, subject to approval of undergraduate adviser and CSE faculty member. Free elective, but does not replace core course or computer science elective. Credit/no-credit only.

CSE 501 Programming Language Analysis and Implementation (4) Design and implementation of compilers and run-time systems for imperative, object-oriented, and functional languages. Intra- and interprocedural analyses and optimizations. Prerequisite: CSE 341.

CSE 503 Software Engineering (4) Specification, implementation, and testing of large, multiperson, software systems. Topics include abstraction, information hiding, software development environments, and formal specifications.

CSE 504 Advanced Topics in Software Engineering (4) Topics vary but may include software design and evolution, formal methods, requirements specifications, software and system safety, reverse engineering, real-time software, metrics and measurement, programming environments, and verification and validation.

CSE 505 Principles of Programming Languages (4) Design and formal semantics of modern programming languages, includes functional and object-oriented languages. Prerequisite: CSE 341.

CSE 506 Advanced Topics in Programming Languages (4) May include functional, object-oriented, parallel, and logic programming languages; semantics for languages of these kinds; type declaration, inference, and checking (including

polymorphic types); implementation issues, such as compilation, lazy evaluation, combinators, parallelism, various optimization techniques. Implementation project required. Prerequisite: CSE 501 which may be taken concurrently, and CSE 505.

CSE 507 Computer-Aided Reasoning for Software (4) Covers theory, implementation, and applications of automated reasoning techniques, such as satisfiability solving, theorem proving, model checking, and abstract interpretation. Topics include concepts from mathematical logic and applications of automated reasoning to the design, construction, and analysis of software.

CSE 510 Advanced Topics in Human-Computer Interaction (4) Content varies, including interface issues for networks, embedded systems, education applications, safety and critical systems, graphics and virtual reality, databases, and computer-supported cooperative work.

CSE 512 Data Visualization (4) Covers techniques and algorithms for creating effective visualizations based on principles from graphic design, visual art, perceptual psychology, and cognitive science. Topics include data and image models; visual encoding; graphical perception; color; animation; interaction techniques; graph layout; and automated design. Lectures, reading, and project.

CSE 515 Statistical Methods in Computer Science (4) Introduction to the probabilistic and statistical techniques used in modern computer systems. Graphical models, probabilistic inference, statistical learning, sequential models, decision theory. Prerequisite: either CSE 312, STAT 341, STAT 391 or equivalent.

CSE 517 Natural Language Processing (4) Overview of modern approaches for natural language processing. Topics include language models, text, classification, tagging, parsing, machine translation, semantic, and discourse analysis.

CSE 519 Current Research in Computer Science (1, max. 18) Weekly presentations on current research activities by members of the department. Only computer science graduate students may register, although others are encouraged to attend. Credit/no-credit only.

CSE 520 Computer Science Colloquium (1, max. 18) Weekly public presentations on topics of current interest by visiting computer scientists. Credit/no-credit only.

CSE 521 Design and Analysis of Algorithms I (4) Principles of design of efficient algorithms: recursion, divide and conquer, balancing, dynamic programming, greedy method, network flow, linear programming. Correctness and analysis of algorithms. NP-completeness. Prerequisite: either CSE 332 or equivalent.

CSE 522 Design and Analysis of Algorithms II (4) Analysis of algorithms more sophisticated than those treated in CSE 521. Content varies and may include such topics as algebraic algorithms, combinatorial algorithms, techniques for proving lower bounds on complexity, and algorithms for special computing devices such as networks or formulas. Prerequisite: CSE 521.

CSE 523 Computational Geometry (4) Algorithms for discrete computational geometry. Geometric computation, range searching, convex hulls, proximity, Voronoi diagrams, intersection. Application areas include VLSI design and computer graphics. Prerequisite: CSE 521.

CSE 524 Parallel Algorithms (4) Design and analysis of parallel algorithms: fundamental parallel algorithms for sorting, arithmetic, matrix and graph problems, and additional selected topics. Emphasis on general techniques and approaches used for developing fast and efficient parallel algorithms and on limitations to their efficacy. Prerequisite: CSE 521.

CSE 525 Randomized Algorithms and Probabilistic Analysis (4) Examines algorithmic techniques: random selection, random sampling, backwards analysis, algebraic methods, Monte Carlo methods, and randomized rounding; random

graphs; the probabilistic method; Markov chains and random walks; and analysis tools: random variables, moments and deviations, Chernoff bounds, martingales, and balls in bins. Prerequisite: either CSE 521 or equivalent.

CSE 527 Computational Biology (4) Introduces computational methods for understanding biological systems at the molecular level. Problem areas such as mapping and sequencing, sequence analysis, structure prediction, phylogenetic inference, regulatory analysis. Techniques such as dynamic programming, Markov models, expectation-maximization, local search.

CSE 528 Computational Neuroscience (3) Introduction to computational methods for understanding nervous systems and the principles governing their operation. Topics include representation of information by spiking neurons, information processing in neural circuits, and algorithms for adaptation and learning. Prerequisite: elementary calculus, linear algebra, and statistics, or permission of instructor. Offered: jointly with NEURO 528.

CSE 529 Neural Control of Movement: A Computational Perspective (3) Systematic overview of sensorimotor function on multiple levels of analysis, with emphasis on the phenomenology amenable to computational modeling. Topics include musculoskeletal mechanics, neural networks, optimal control and Bayesian inference, learning and adaptation, internal models, and neural coding and decoding. Prerequisite: vector calculus, linear algebra, MATLAB, or permission of instructor. Offered: jointly with AMATH 533.

CSE 531 Computational Complexity I (4) Deterministic and nondeterministic time and space complexity, complexity classes, and complete problems. Time and space hierarchies. Alternation and the polynomial-time hierarchy. Circuit complexity. Probabilistic computation. Exponential complexity lower bounds. Interactive proofs. Prerequisite: either CSE 311 or equivalent.

CSE 532 Computational Complexity II (4) Advanced computational complexity including several of the following: circuit complexity lower bounds, #p and counting classes, probabilistically-checkable proofs, de-randomization, logical characteristics of complexity, communication complexity, time-space tradeoffs, complexity of data structures.

CSE 533 Advanced Topics in Complexity Theory (4) An in-depth study of advanced topics in computational complexity.

CSE 544 Principles of Database Systems (4) Data models and query languages (SQL, datalog, OQL). Relational databases, enforcement of integrity constraints. Object-oriented databases and object-relational databases. Principles of data storage and indexing. Query-execution methods and query optimization algorithms. Static analysis of queries and rewriting of queries using views. Data integration. Data mining. Principles of transaction processing.

CSE 546 Machine Learning (4) Explores methods for designing systems that learn from data and improve with experience. Supervised learning and predictive modeling: decision trees, rule induction, nearest neighbors, Bayesian methods, neural networks, support vector machines, and model ensembles. Unsupervised learning and clustering. Prerequisite: either CSE 312, STAT 341, STAT 391 or equivalent.

CSE 547 Machine Learning for Big Data (4) *Fox, Guestrin* Covers machine learning and statistical techniques for analyzing datasets of massive size and dimensionality. Representations include regularized linear models, graphical models, matrix factorization, sparsity, clustering, and latent factor models. Algorithms include sketching, random projections, hashing, fast nearest-neighbors, large-scale online learning, and parallel learning (Map-Reduce, GraphLab). Prerequisite: either STAT 535 or CSE 546. Offered: jointly with STAT 548; W.

CSE 548 Computer Systems Architecture (4) Notations for computer systems. Processor design (single chip, look-

ahead, pipelined, data flow). Memory hierarchy organization and management (virtual memory and caches). Micro-programming. I/O processing. Multiprocessors (SIMD and MIMD). Prerequisite: CSE 451.

CSE 549 High-Performance Computer Architectures (4) Algorithm design, software techniques, computer organizations for high-performance computing systems. Selected topics from: VLSI complexity for parallel algorithms, compiling techniques for parallel and vector machines, large MIMD machines, interconnection networks, reconfigurable systems, memory hierarchies in multiprocessors, algorithmically specialized processors, data flow architectures. Prerequisite: CSE 548 or permission of instructor.

CSE 550 Computer Systems (4) Explores computer system design, implementation, and evaluation. Covers principles, techniques, and examples related to the construction of computer systems, including concepts that span network systems, operating systems, web servers, parallel computing, and databases. Prerequisite: CSE 451.

CSE 551 Operating Systems (4) Operating system design and construction techniques. Concurrent programming, operating system kernels, correctness, deadlock, protection, transaction processing, design methodologies, comparative structure of different kinds of operating systems, and other topics. Prerequisite: CSE 451.

CSE 552 Distributed and Parallel Systems (4) Principles, techniques, and examples related to the design, implementation, and analysis of distributed and parallel computer systems. Prerequisite: CSE 551.

CSE 553 Real-Time Systems (4) Design and construction of software for real-time computer systems. Software architectures. Requirements and specification methods. Scheduling algorithms and timing analysis. Real-time operating systems. Real-time programming languages. Selected case studies. Prerequisite: CSE 451.

CSE 557 Computer Graphics (4) Introduction to image synthesis and computer modeling, emphasizing the underlying theory required for undertaking computer graphics research. Topics include color theory, image processing, affine and projective geometry, hidden-surface determination, photorealistic image synthesis, advanced curve and surface design, dynamics, realistic character animation. Prerequisite: solid knowledge of linear algebra.

CSE 558 Special Topics in Computer Graphics (4) Advanced topics in computer graphics not treated in CSE 557. Topics vary from year to year but typically include advanced aspects of image synthesis, animation, and 3D photography. Prerequisite: CSE 557 or permission of instructor.

CSE 561 Computer Communication and Networks (4) Fundamentals of data transmission: coding, message formats, and protocols. Organization of computer networks. Examples of network implementations. Prerequisite: either CSE 451 or equivalent.

CSE 564 Computer Security and Privacy (4) Examines the fundamentals of computer security including: human factors; attack detection, measurements, and models; cryptography and communications security; system design and implementation; and side channels.

CSE 567 Principles of Digital Systems Design (4) Principles of logic design, combinational and sequential circuits, minimization techniques, structured design methods, CMOS technology, complementary and ratioed gates, delay estimation and performance analysis, arithmetic circuits, memories, clocking methodologies, synthesis and simulation tools, VLSI processor architecture. Prerequisite: basic knowledge of logic design.

CSE 568 Introduction to VLSI Systems (4) Introduction to CMOS technology and circuit design; combinational logic-design alternatives; register-design and system-clocking methodologies; datapath and subsystem design; VLSI system-design methodologies; CAD tools for synthesis, layout, simulation, and validation; design of a complex VLSI chip. Prerequisite: either CSE 567 or permission of instructor.

CSE 571 AI-based Mobile Robotics (4) Overview of mobile robot control and sensing. Behavior-based control, world modeling, localization, navigation, and planning Probabilistic sensor interpretation, Bayes filters, particle filters. Projects: Program real robots to perform navigation tasks. Prerequisite: either CSE 473 or permission of instructor.

CSE 573 Artificial Intelligence I (4) Intensive introduction to artificial intelligence: Problem solving and search, game playing, knowledge representation and reasoning, uncertainty, machine learning, natural language processing. Prerequisite: either CSE 421 or equivalent; exposure to logic, probability, and statistics.

CSE 574 Artificial Intelligence II (4) Advanced topics in artificial intelligence. Subjects include planning, natural language understanding, qualitative physics, machine learning, and formal models of time and action. Students are required to do projects. Prerequisite: CSE 573.

CSE 576 Computer Vision (3) Principles and methods for interpreting the three-dimensional world from images. Topics include feature detection, image segmentation, motion estimation, image mosaics, 3D-shape reconstruction, object recognition, and image retrieval. Prerequisite: solid knowledge of linear algebra; good programming skills. Offered: jointly with E E 576.

CSE 577 Special Topics in Computer Vision (3) Topics vary and may include vision for graphics, probabilistic vision and learning, medical imaging, content-based image and video retrieval, robot vision, or 3D object recognition. Prerequisite: CSE 576/E E 576. Offered: jointly with E E 577.

CSE 579 Intelligent Control through Learning and Optimization (3) Design or near-optimal controllers for complex dynamical systems, using analytical techniques, machine learning, and optimization. Topics from deterministic and stochastic optimal control, reinforcement learning and dynamic programming, numerical optimization in the context of control, and robotics. Prerequisite: vector calculus; linear algebra; MATLAB. Offered: jointly with AMATH 579.

CSE 586 Introduction to Synthetic Biology (3) Studies mathematical modeling of transcription, translation, regulation, and metabolism in cell; computer aided design methods for synthetic biology; implementation of information processing, Boolean logic and feedback control laws with genetic regulatory networks; modularity, impedance matching and isolation in biochemical circuits; and parameter estimation methods. Prerequisite: either MATH 136 or MATH 307, AMATH 351, or CSE 311 and MATH 308 or AMATH 352. Offered: jointly with BIOEN 523/E E 523.

CSE 587 Advanced Systems and Synthetic Biology (3) Covers advanced concepts in system and synthetic biology. Includes kinetics, modeling, stoichiometry, control theory, metabolic systems, signaling, and motifs. All topics are set against problems in synthetic biology. Prerequisite: either BIOEN 523, E E 523, or CSE 586. Offered: jointly with BIOEN 524/E E 524; W.

CSE 590 Research Seminar (*, max. 50) Several offerings each quarter, on topics of current interest.

CSE 591 Group Projects in Computer Science (1-3, max. 25) Focuses on specialized topics and research activities in computer science.

CSE 599 Special Topics in Computer Science (1-5, max. 30) Studies of emerging areas and specialized topics in computer science.

CSE 600 Independent Study or Research (*-) Credit/no-credit only.

CSE 700 Master's Thesis (*-) Credit/no-credit only.

CSE 800 Doctoral Dissertation (*-) Credit/no-credit only.

Accelerated Masters Program

CSE M 544 Database Systems (4) Relational data model and SQL query language. Conceptual modeling; normal forms; XML. Transactions: recovery and concurrency control. Implementation of a database system. Application

project using a relational database system. Study of database research papers. May not be taken for credit if student has taken CSE 444. Prerequisite: CSE 332; CSE 344.

CSE M 552 Introduction to Distributed Systems (4) Covers abstractions and implementation techniques in the construction of distributed systems, including cloud computing, distributed storage systems, and distributed caches. Prerequisite: CSE 451

CSE M 584 Computer Security (4) Explores foundations and new directions in computer security and privacy, including: risk analysis, system security, applied cryptography, human-computer interaction, design and implementation issues, anonymity, web security, and side channels. Studies security and privacy research papers. Prerequisite: CSE 351; either CSE 451 or CSE 461.

Professional Masters Program

CSE P 501 Compiler Construction (4) Principles and practice of building efficient implementations of modern programming languages. Lexical, syntactic, and semantic analysis of programs. Intermediate program representations. Intra- and interprocedural analysis and optimization. Run-time system techniques. Related programming environment facilities such as source-level debuggers and profilers.

CSE P 503 Principles of Software Engineering (4) Study of major developments in software engineering over the past three decades. Topics may include design (information hiding, layering, open implementations), requirements specification (informal and formal approaches), quality assurance (testing, verification and analysis, inspections), reverse and re-engineering (tools, models, approaches).

CSE P 504 Advanced Topics in Software Systems (4) Topics include software architecture, software tools, programming language analysis, type systems, formal reasoning, and other pertinent topics in software engineering and programming languages research.

CSE P 505 Programming Languages (4) A study of non-imperative programming paradigms such as functional, object-oriented, logic, and constraint programming. Programming language semantics and type theory.

CSE P 510 Human Computer Interaction (4) Topics in human-computer interaction, including tools and skills for user interface design, user interface software architecture, rapid prototyping and iterative design, safety and critical systems, evaluation techniques, and computer supported cooperative work.

CSE P 517 Natural Language Processing (4) Provides an overview of modern approaches for natural language processing. Topics include language models, text classification, tagging, parsing, machine translation, semantics, and discourse analysis.

CSE P 521 Applied Algorithms (4) Principles of design of efficient algorithms with emphasis on algorithms with real world applications. Examples drawn from computational geometry, biology, scientific computation, image processing, combinatorial optimization, cryptography, and operations research.

CSE P 524 Parallel Computation (4) Survey of parallel computing including the processing modes of pipelining, data parallelism, thread parallelism, and task parallelism; algorithmic implications of memory models; shared memory and message passing; hardware implementations; bandwidth and latency; synchronization, consistency, interprocessor communication; programming issues including implicit and explicit parallelism, locality, portability.

CSE P 531 Computability and Complexity Theory (4) Survey of the theory of computation including Turing Machines, Church's Thesis, computability, incompleteness, undecidability, complexity classes, problem reductions, Cook's theorem, NP-completeness, randomized computation, cryptography, parallel computation, and space complexity.

Some emphasis placed on historical and philosophical aspects of the theory of computation.

CSE P 544 Database Management System (4) Introduction to the principles of database management systems. Topics include database system architecture, data models, theory of database design, query optimization, concurrency control, crash recovery, and storage strategies.

CSE P 545 Transaction Processing (4) Technology supporting reliable large-scale distributed computing, including transaction programming models, TP monitors, transactional communications, persistent queuing, software fault tolerance, concurrency control and recovery algorithms, distributed transactions, two-phase commit, data replication.

CSE P 546 Data Mining (4) Methods for identifying valid, novel, useful, and understandable patterns in data. Induction of predictive models from data: classification, regression, probability estimation. Discovery of clusters and association rules.

CSE P 548 Computer Architecture (4) Architecture of the single-chip microprocessor: instruction set design and processor implementation (pipelining, multiple issue, speculative execution). Memory hierarchy: on-chip and off-chip caches, TLBs and their management, virtual memory from the hardware viewpoint. I/O devices and control: buses, disks, and RAID's.

CSE P 551 Computer Operating Systems (4) A study of developments in operating systems from the 1960s to the present. Topics include operating system structure, protection, virtual memory, communication mechanisms, concurrency, lightweight threads, object-oriented systems, distributed systems, and transaction support in operating systems.

CSE P 552 Distributed Systems (4) Principles, techniques, and examples related to the design, implementation, and analysis of distributed computer systems.

CSE P 557 Current Trends in Computer Graphics (4) Introduction to computer image synthesis, modeling, and animation emphasizing the state-of-the-art algorithm applications. Topics may include visual perception, image processing, geometric transformations, hierarchical modeling, hidden-surface elimination, shading, ray-tracing, anti-aliasing, texture mapping, curves, surfaces, particle systems, dynamics, realistic character animation, and traditional animation principles.

CSE P 561 Network Systems (4) Current choices and challenges in network systems. Fundamental concepts combined with emphasis on evaluation of design/operations alternatives. Topics include alternative link, network, and transport-layer technologies, topologies, routing, congestion control multimedia, IPv6, ATM v. IP, network management and policy issues.

CSE P 564 Computer Security and Privacy (4) Examines the fundamental of computer security including: human factors; attack detection, measurements, and models; cryptography and communications security; system design and implementation; and side channels.

CSE P 567 Design and Implementation of Digital Systems (4) Overview of current implementation technologies for digital systems including custom integrated circuits, field-programmable logic, and embedded processors. Systems components such as buses and communications structures, interfaces, memory architectures, embedded systems, and application-specific devices. Focus on the design of large systems using modern CAD tools.

CSE P 573 Applications of Artificial Intelligence (4) Introduction to the use of Artificial Intelligence tools and techniques in industrial and company settings. Topics include foundations (search, knowledge representation) and tools such as expert systems, natural language interfaces, and machine learning techniques.

CSE P 576 Computer Vision (4) Provides an overview of computer vision, emphasizing the middle ground between image processing and artificial intelligence. Image formation, pre-attentive image processing, boundary and region representations, and case studies of vision architectures.

CSE P 590 Special Topics in Computer Science (1-4, max. 20)

CSE P 595 Software Entrepreneurship (4) Provides an overview of the major elements of entrepreneurial activity in software, including market identification and analysis, evaluation and planning of the business, financing, typical operating and administrative problems, and alternatives for growth or sale.

CSE P 596 Business Basics Computer Science Professionals (4) Business principles relevant to the software industry in four areas: competitive strategy, finance, accounting, and human resources. Organized as a series of case studies and lectures. Progresses from an emphasis on tools to a more high-level look at competitive dynamics in high-tech industries.

CSE P 600 Independent Study or Research ([1-4]-)

Electrical Engineering

AE100R Paul Allen Center

Electrical engineering is concerned with the understanding and utilization of electricity and with providing society useful, efficient, and economic products and services. It encompasses everything from batteries and power supplies to crystal fabrication, autonomous robots, and devices that can recognize human speech. Electrical engineers design, produce, study, and operate all manner of devices and systems that use electric and electromagnetic energy. They also work on systems at the macro scale of electric power grids and at the micro scale of nanotechnology.

Contemporary society is in the midst of an information revolution, created in large part from the fruits of electrical engineering. Rapid improvements in communication technologies, computer visualization, and information access continue to have a significant impact on manufacturing, medicine, transportation, and environmental monitoring. Dramatic advances in personal communication services, digital imaging, and network hardware and software are changing the texture of everyday life for an increasing portion of the world's population.

UNDERGRADUATE PROGRAM

Adviser

AE 100R Paul Allen Center

(206) 543-2142

undergrad@ee.washington.edu

The Department of Electrical Engineering offers the following programs of study:

- The Bachelor of Science in Electrical Engineering degree
- The Bachelor of Science in Electrical Engineering degree with an option in nanoscience and molecular engineering

Bachelor of Science in Electrical Engineering

Suggested First- and Second-Year Courses: MATH 124, MATH 125, MATH 126; CHEM 142; English composition; PHYS 121 (and beyond if possible). Students should start in math courses right away and follow with physics, chemistry, computer programming, etc., as soon as possible. The department publishes a sample four-year plan of study

for fulfilling all degree requirements, including those to be taken during the first year, online at www.engr.washington.edu/files/curr_students/docs/EE_2014.pdf.

Department Admission Requirements

Because resources are limited, students must apply for admission to the electrical engineering program. Admission to the department is competitive and completion of the requirements does not guarantee admission. Appeal of the department's admission decision is possible only if there was an error in the data considered by the admissions committee. Additional information on the program and admission is available through the department's website.

Direct Freshman Admission

The Department of Electrical Engineering enrolls up to one-third of its incoming class directly out of high school, prior to completion of University-level prerequisites. Freshman applicants to the UW who list electrical engineering as their intended major are automatically considered. Competitive applicants have taken or are taking calculus and at least one year of laboratory science (preferably physics). Admission is for autumn quarter only.

General Admission

Application for general admission is through the online College of Engineering Departmental Application. Application deadlines are February 1 for spring quarter and July 1 for autumn quarter.

1. *Course Requirements:* MATH 124, MATH 125, MATH 126; PHYS 121, PHYS 122; CHEM 142; 5 credits of English composition.
2. *Grade Requirements:* Minimum overall 2.50 GPA and minimum 2.50 GPA in courses required for admission.

Nanoscience and Molecular Engineering Option (NME): Admission to the NME option is by self-selection and normally occurs in winter quarter of the junior year, upon completion of all electrical engineering prerequisites and formal admission to the BS electrical engineering major. Students who have completed NME 220 with a minimum 2.0 grade are eligible. To declare, students schedule an appointment with an EE undergraduate adviser. Students applying for the NME option should indicate that interest on their electrical engineering major application and discuss their interests/background in their application personal statement.

Graduation Requirements

General Education Requirements (81 credits)

1. *Written and Oral Communications:* 12 credits, to include one 5-credit English composition course from the University list; HCDE 231; HCDE 333 (or department-approved alternative).
2. *Visual, Literary, & Performing Arts (VLPA), and Individuals & Societies (I&S) (25 credits):* Minimum 10 credits required in each area.
3. *Natural World (44 credits):*
 - a. Mathematics (24 credits): MATH 124, MATH 125, MATH 126, MATH 307 (or AMATH 351), MATH 308 (or AMATH 352), and MATH 324.
 - b. Science (20 credits): CHEM 142; PHYS 121, PHYS 122, PHYS 123

Major Requirements (80-81 credits)

1. *Computer Programming (9 credits):* CSE 142, CSE 143
2. *Electrical Engineering Core (14 credits):* E E 215, E E 233, E E 235
3. *Electrical Engineering Major Concentration Area (24 credits minimum)*
4. *Electrical Engineering Electives (up to 20 credits):* See adviser for list of acceptable courses. Number of credits of the major concentration and electives should total 44.

5. *Professional Issues:* One course. See adviser for list of acceptable courses. Course may also be counted toward Electrical Engineering Core, Electrical Engineering Major Concentration Area, or Electrical Engineering Electives requirement.
6. *Engineering Electives (10 credits):* See adviser for list of acceptable courses.
7. *Statistics (3-4 credits):* STAT 390/MATH 390 or IND E 315
8. *Grade Requirements:* Minimum 2.00 GPA in all E E courses with no grade below 2.0 in any of these courses.

Nanoscience and Molecular Engineering Option Requirements (80-81 credits)

1. *Computer Programming (9 credits):* CSE 142, CSE 143
2. *Electrical Engineering Core (14 credits):* E E 215, E E 233, E E 235
3. *Nanoscience and Molecular Engineering Courses (6 credits):* NME 220, NME 221, NME 421
4. *Electrical Engineering Major Concentration Area (24 credits minimum)* See adviser for list of acceptable courses.
5. *Electrical Engineering Electives (up to 20 credits):* See adviser for list of acceptable courses. Number of credits of the major concentration and electives should total 44.
6. *Professional Issues:* One course. See adviser for list of acceptable courses. Course may also be counted toward Electrical Engineering Core, Electrical Engineering Major Concentration Area, or Electrical Engineering Electives requirement.
7. *Engineering Electives (10 credits):* See adviser for list of acceptable courses.
8. *Statistics (3-4 credits):* STAT 390/MATH 390 or IND E 315
9. *Grade Requirements:* Minimum 2.00 GPA in all E E courses with no grade below 2.0 in any of these courses.

Electives (18-19 credits)

1. *Approved Non-Electrical Engineering Electives (10 credits):* Selected from courses listed in the departmental handbook.
2. *Free Electives (8-9 credits)*

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Graduates with a degree in electrical engineering find employment in industries such as aerospace, communications, computer manufacturing, power distribution, consumer electronics, and biomedical engineering. Positions can be found focusing on the research, design, and testing of new products; in technical sales and marketing; business consulting; and even growing areas such as intellectual property. Students who pursue graduate studies are quite successful in highly competitive national and international programs.

The BSEE program is accredited by the Accrediting Board for Engineering and Technology (ABET) and the department has adopted the following student outcomes:

- a. ability to apply knowledge of mathematics, science, and engineering
- b. ability to apply knowledge of probability and statistics, including applications appropriate to the program name and objectives
- c. ability to apply knowledge of mathematics through differential and integral calculus, basic science, and engineering sciences necessary to analyze and design complex electrical and electronic devices, software, and systems containing hardware and software components

- d. ability to apply knowledge of advanced mathematics, typically involving differential equations, linear algebra, complex variables, and discrete mathematics
- e. ability to design and conduct experiments, as well as to analyze and interpret data
- f. ability to design a system, component, or process to meet desired needs
- g. ability to function on multi-disciplinary teams
- h. ability to identify, formulate, and solve engineering problems
- i. understanding of professional and ethical responsibility
- j. ability to communicate effectively
- k. the broad education necessary to understand the impact of engineering solutions in a global and societal context

- *Instructional and Research Facilities:* The department maintains a number of instructional and research laboratories to support courses and independent study activities. There are three general-purpose computing laboratories. Instructional laboratories include a large instrumentation laboratory supporting numerous electronics courses; individual laboratories for digital design courses; a power laboratory to support the power/energy systems classes; and laboratories that support capstone design classes. Students participating in undergraduate research and independent study generally have access to the research laboratories of their supervising faculty member.

- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.

- *Research, Internships, and Service Learning:* Many electrical engineering students participate every year in internship and co-op (cooperative education) programs. The Engineering Co-op Office is one source for companies recruiting for internship and co-op students. The Center for Career Services also lists a variety of internship opportunities.

- *Department Scholarships:* Many scholarships specifically for electrical engineering majors and based on merit and financial need are awarded each year. Students interested in applying for these and other College of Engineering scholarships may obtain information from the Department of Electrical Engineering Scholarship Award Committee Chair.

- *Student Organizations/Associations:* The Institute of Electrical and Electronics Engineers (IEEE), UW student chapter organizes social activities, workshops, field trips and other professional development opportunities. Eta Kappa Nu (HKN) is an invitation-only honor society for electrical engineering students. HKN organizes tutoring services, tutorial workshops, social activities, and community services projects.

GRADUATE PROGRAM

Graduate Program Coordinator

AE100R Paul Allen Center, Box 352500

(206) 543-2142

grad@ee.washington.edu

The Department of Electrical Engineering offers graduate programs leading to the degrees of Master of Science in Electrical Engineering (MSEE) and Doctor of Philosophy (PhD). Graduate courses and research programs are offered in biosystems, circuits and network theory, computational intelligence, computer networks and distributed systems, computer architecture, digital systems, software

engineering, operating systems, microprocessors, VLSI design, control systems, electromagnetics (including optics and radio science), electronic materials (including devices and micro-electronics), energy systems (including power electronics and electric drives), signal and image processing, telecommunications, and virtual reality. Numerous interdisciplinary research opportunities exist, including projects relating to bioengineering, computer engineering, and marine acoustics. The department does extensive research in coordination with the University of Washington's Applied Physics laboratory and Washington Technology Center.

The MSEE degree may be earned in three ways, each of which requires the accumulation of 45 credits. A student may perform research and write a thesis; a student may pursue a one-quarter project as part of his or her studies; or a student may simply accumulate a suitable distribution of 45 credits of coursework. Coursework for each of the options is developed with the advice of faculty advisers as well as through the department advising staff.

For the PhD degree, students must pass the departmental qualifying examination, pass an advanced General Examination, pursue an original research problem, and report the results of that research in a dissertation that must be a contribution to knowledge. At least one year of coursework beyond the MSEE degree is usually desirable.

Master of Science in Electrical Engineering

Admission Requirements

In addition to meeting Graduate School admission requirements, the Graduate Record Examination (GRE) general test is required. Official test scores must be submitted, along with a formal application, a statement of purpose, and a minimum of two reference letters.

Although most applicants have baccalaureate degrees in electrical engineering, applicants with degrees in other branches of engineering, the physical sciences, computer science, or mathematics often are able to pursue graduate study in electrical engineering following some additional preparation. Such applicants are strongly encouraged to contact the department for further information.

For more information on admission qualifications, visit the department's website at www.ee.washington.edu/admissions/graduate/index.html.

Degree Requirements

Master's students have the option of choosing between two different pathways for pursuing their degree:

1. **Thesis Option:** The thesis option is best for students who wish to pursue an in-depth research experience with intended preparation for pursuing a PhD
2. **Coursework Option:** A student whose main goal is to work in industry immediately upon graduation may find the coursework option more suitable to his or her needs.

These two options have several related requirements:

1. Complete a plan of study by second quarter of study
2. Complete a minimum of 45 credits
3. Register full time (10 credits) per quarter (less in summer)
4. Apply no more than 3 credits of E E 500. 1 credit required
5. Apply no more than 5 credits of E E 599 to the degree
6. Take 1 credit of E E 592, offered autumn quarter

Thesis Option

45 credits, as follows:

1. 9-12 credits of E E 700
2. At least 20 credits in E E courses numbered 500 and above

3. No more than 12 credits in E E 400-level courses

4. No more than 9 credits from non-E E courses

The thesis option is an opportunity to pursue an individual problem in depth and in close collaboration with a faculty member. Typical problems involve basic research or application of classroom principles to a professional problem beyond the routine practice of electrical engineering. Students who choose the thesis option must complete a written thesis and oral examination based upon the thesis material before their degree is granted.

Coursework Option

45 credits, as follows:

1. At least 25 credits in E E courses numbered 500 and above
2. No more than 12 credits in E E 400-level courses
3. No more than 9 credits from non-E E courses

The coursework option allows students to pursue the MSEE by taking a prearranged course load specific to each of the seven curriculum areas. A generic coursework option is also available. The curriculum group chair and the Graduate Program Coordinator must approve deviation from these prearranged plans.

Doctor of Philosophy

Admission Requirements

In addition to meeting Graduate School admission requirements, the Graduate Record Examination (GRE) general test is required. Official test scores must be submitted, along with a formal application, a statement of purpose, and a minimum of two reference letters.

Although most applicants have baccalaureate degrees in electrical engineering, applicants with degrees in other branches of engineering, the physical sciences, computer science, or mathematics often are able to pursue graduate study in electrical engineering following some additional preparation. Such applicants are strongly encouraged to contact the department for further information.

For more information on admission qualifications, visit the department's Website at www.ee.washington.edu/admissions/graduate/index.html.

Degree Requirements

Minimum 90 credits, to include:

The PhD is awarded based on general proficiency and distinctive attainments in electrical engineering, particularly on the demonstrated ability of independent investigation. As evidence of ability, the student must produce a doctoral dissertation embodying original research yielding a new contribution to knowledge and presented with a satisfactory degree of literary skill. The majority of PhD students hold master's degrees within the same field, although students with degrees in the physical sciences and other engineering fields are also admitted. To earn a PhD, students must:

1. Pass the department qualifying examination
2. Complete an individualized course of study approved by the student's PhD Supervisory Committee
3. Pass the University general examination
4. Prepare and defend a satisfactory dissertation based on original research
5. Complete at least 90 credits of coursework, independent study, and dissertation (60 of which must be completed at the UW), 18 of which must be graded credits
6. Maintain a cumulative minimum GPA of 3.00.
7. Complete 30 credits of dissertation credits (E E 800)

Research Groups

Facilities in the Department of Electrical Engineering include research laboratories for advanced digital systems, advanced power technology, applied electromagnetics, optics, remote sensing, applied signal and image processing, mechatronics and intelligent control, modern sensors, and semiconductor technology

Financial Aid

Research assistantships, teaching assistantships, scholarships, and graduate fellowships are available to qualified graduate students in all areas of electrical engineering. Most awards include a monthly stipend plus payment of tuition and fees.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

EE 135 The Digital World of Multimedia (4) NW Introduces signal processing concepts behind multimedia creation, storage, and communication. Includes digitizing, decomposing, and modifying sounds and images; coding information for compression, errors, and security; and basics of network communication. Team-oriented labwork involves creating digital sounds and images using MATLAB, and experiments with streaming media technology.

E E 205 Introduction to Signal Conditioning (4) QSR Introduces analog circuits interfacing sensors to digital systems. /includes connection, attenuation, amplification, sampling, filtering, termination, controls, Kirchhoff's Laws, sources, resistors, op amps, capacitors, inductors, PSice, and MATLAB. Intended for non-EE majors. Prerequisite: either MATH 126 or MATH 136; PHYS 122. Offered: W.

E E 215 Fundamentals of Electrical Engineering (4) NW Introduction to electrical engineering. Basic circuit and systems concepts. Mathematical models of components. Kirchhoff's laws. Resistors, sources, capacitors, inductors, and operational amplifiers. Solution of first and second order linear differential equations associated with basic circuit forms. Prerequisite: either MATH 126 and MATH 307, which may be taken concurrently or MATH 136; PHYS 122. Offered: AWSpS.

EE 233 Circuit Theory (5) Electric circuit theory. Analysis of circuits with sinusoidal signals. Phasors, system functions, and complex frequency. Frequency response. Computer analysis of electrical circuits. Power and energy. Two port network theory. Laboratory in basic electrical engineering topics. Prerequisite: 1.0 in E E 215. Offered: AWSpS.

E E 235 Continuous Time Linear Systems (5) Introduction to continuous time signal analysis. Basic signals including impulses, pulses, and unit steps. Periodic signals. Convolution of signals. Fourier series and transforms in discrete and continuous time. Computer laboratory. Prerequisite: either MATH 136, MATH 307, or AMATH 351, any of which may be taken concurrently; PHYS 122; CSE 142, which may be taken concurrently. Offered: AWSp.

EE 271 Digital Circuits and Systems (5) Overview of digital computer systems. Digital logic, Boolean algebra, combinational and sequential circuits and logic design, programmable logic devices, and the design and operation of digital computers, including ALU, memory, and I/O. Weekly laboratories. Prerequisite: CSE 142. Offered: AWSpS.

E E 299 Introductory Topics in Electrical Engineering (1-5, max. 10) NW New and experimental approaches to basic electrical engineering. May include design and construction projects.

E E 331 Devices and Circuits I (5) Physics, characteristics, applications, analysis, and design of circuits using semiconductor diodes and field-effect transistors with an em-

phasis on large-signal behavior and digital logic circuits. Classroom concepts are reinforced through laboratory experiments and design exercises. Prerequisite: 1.0 in E E 233. Offered: AWSpS.

EE332 Devices and Circuits II (5) Characteristics of bipolar transistors, large- and small- signal models for bipolar and field effect transistors, linear circuit applications, including low and high frequency analysis of differential amplifiers, current sources, gain stages and output stages, internal circuitry of op-amps, op-amp configurations, op-amp stability and compensation. Weekly laboratory. Prerequisite: 1.0 in E E 331. Offered: AWSpS.

EE341 Discrete Time Linear Systems (5) Discrete time signals and systems, impulse response, convolution, Z-transforms, discrete time Fourier analysis. Computer laboratory. Prerequisite: 1.0 in E E 235. Offered: WSpS.

E E 351 Energy Systems (5) Develops understanding of modern energy systems through theory and analysis of the system and its components. Discussions of generation, transmission, and utilization are complemented by environmental and energy resources topics as well as electro-mechanical conversion, power electronics, electric safety, renewable energy, and electricity blackouts. Prerequisite: 1.0 in E E 233. Offered: ASp.

E E 361 Applied Electromagnetics (5) Introductory electromagnetic field theory and Maxwell's equations in integral and differential forms; uniform plane waves in linear media; boundary conditions and reflection and transmission of waves; guided waves; transmission lines and Smith chart; electrostatics. Prerequisite: 1.0 in E E 233; MATH 324; PHYS 123. Offered: AW.

EE371 Design of Digital Circuits and Systems (5) Provides a theoretical background in, and practical experience with, tools, and techniques for modeling complex digital systems with the Verilog hardware description language, maintaining signal integrity, managing power consumption, and ensuring robust intra- and inter-system communication. Prerequisite: either E E 205 or E E 215; E E 271.

EE393 Advanced Technical Writing in Electrical Engineering (4) Develops formal technical writing skills for engineering students. Includes organization and structure of papers and reports, clear and concise technical language, choice of appropriate terminology, and an overview of common grammatical errors. Covers implementation of figures, equations, and literature citations, with specific recommendations for electrical engineers. Prerequisite: HCDE 231. Offered: AWSp.

E E 398 Introduction to Professional Issues (1) Covers topics of interest to students planning their educational and professional path, including salaries, the value of advanced degrees, societal expectations of engineering professionals, the corporate enterprise, ethical dilemmas, patents and trade secrets, outsourcing, and the global market. Offered: AWSp.

EE399 Special Topics in Electrical Engineering (1-5, max. 10) New and experimental approaches to current electrical engineering problems. May include design and construction projects.

E E 400 Advanced Topics in Electrical Engineering (1-5, max. 10) Contemporary topics at the advanced undergraduate elective level. Faculty presents advanced elective topics not included in the established curriculum.

E E 401 Engineering Design in Large Teams (4) Engineering design process, including project management, team formation, working with technical literature, concept development (e.g., brainstorming, morphological analysis, biomimetics, theory of inventive problem solving), intellectual property, high-tech ventures. Prerequisite: E E 215.

E E 402 Engineering Design in Large Teams: Robotics II (5) Engineering design process applied to robot design. Involves project management, mentoring, marketing, and multi-disciplinary collaboration. The team designs, prototypes, manufactures, assembles, tests, modifies, trouble-

shoots, and learns to operate a system that competes in an international design contest. Prerequisite: E E 215; E E 401.

E E 406 Engineering Design for K-12 Outreach (3) Design process targeted toward development of relevant activities for K-12 audiences in such areas of science and engineering. Instruction in basic design process, design specification combined with an overview of relevant cognitive/social development in K-12. Prerequisite: either E E 271, E E 331, E E 341, E E 351 or E E 361.

E E 415 Computer-Aided System Analysis and Design (3) Concepts, principles, and techniques concerned with the design, testing, and application of general-purpose problem-oriented computer programs for analyzing large-scale systems.

E E 416 Random Signals for Communications and Signal Processing (4) Probability and random processes in communications. Random variables, distributions, and expectation. Statistical filter design for detection and estimation. Prerequisite: E E 341; either STAT 390 or IND E 315. Offered: A.

EE417 Modern Wireless Communications (4) Introduction to wireless networks as an application of basic communication theorems. Examines modulation techniques for digital communications, signal space, optimum receiver design, error performance, error control coding for high reliability, multipath fading and its effects, RF link budget analysis, WiFi and Wimax systems. Prerequisite: E E 341; either IND E 315, MATH 390, or STAT 390. Offered: W.

EE418 Network Security and Cryptography (3) Fundamental principles of cryptography and its application to network and communication security. An introduction to the fundamental tools in cryptography and the protocols that enable its application to network and communication security. Prerequisite: MATH 308; either MATH 390, STAT 390, or IND E 315. Offered: A.

E E 420 Design in Communications (4) Design projects in communications. Frequent projects solved by student teams. Reports and presentations. Prerequisite: 1.0 in E E 417 which may be taken concurrently. Offered: Sp.

E E 423 Introduction to Synthetic Biology (3) Studies mathematical modeling of transcription, translation, regulation, and metabolism in cell; computer aided design methods for synthetic biology; implementation of information processing, Boolean logic and feedback control laws with genetic regulatory networks; modularity, impedance matching and isolation in biochemical circuits; and parameter estimation methods. Prerequisite: either MATH 136 or MATH 307, AMATH 351, or CSE 311 and MATH 308 or AMATH 352. Offered: jointly with BIOEN 423/CSE 486; A.

E E 424 Advanced Systems and Synthetic Biology (3) Covers advanced concepts in system and synthetic biology. Includes kinetics, modeling, stoichiometry, control theory, metabolic systems, signaling, and motifs. All topics are set against problems in synthetic biology. Prerequisite: either BIOEN 401, BIOEN 423, E E 423, or CSE 486. Offered: jointly with BIOEN 424/CSE 487; W.

E E 425 Laboratory Methods in Synthetic Biology (4) Designs and builds transgenic bacterial using promoters and genes taken from a variety of organisms. Uses construction techniques including recombination, gene synthesis, and gene extraction. Evaluates designs using sequencing, fluorescence assays, enzyme activity assays, and single cell studies using time-lapse microscopy. Prerequisite: either BIOEN 423, E E 423, or CSE 486; either CHEM 142, CHEM 144, or CHEM 145. Offered: jointly with BIOEN 425/CSE 488; W.

EE433 Analog Circuit Design (5) Design of analog circuits and systems applying modern integrated circuit technology: operational amplifiers, differential amplifiers, active filters, voltage references and regulators. Prerequisite: 1.0 in E E 332. Offered: A.

E E 436 Medical Instrumentation (4) Introductory course in the application of instrumentation to medicine. Topics include transducers, signal-conditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electrical safety, and the design of clinical electronics. Laboratory included. For upper-division and first-year graduate students preparing for careers in bioengineering - both research and industrial. Prerequisite: E E 332. Offered: Sp.

EE440 Introduction to Digital Imaging Systems (4) Image representation and standards, visual perception and color spaces, spatial domain image filtering and enhancement, image restoration, image transforms, image and video coding, image geometrical transformation and camera modeling. Prerequisite: E E 341. Offered: A.

E E 442 Digital Signals and Filtering (3) Methods and techniques for digital signal processing. Review of sampling theorems, A/D and D/A converters. Demodulation by quadrature sampling. Z-transform methods, system functions, linear shift-invariant systems, difference equations. Signal flow graphs for digital networks, canonical forms. Design of digital filters, practical considerations, IIR and FIR filters. Digital Fourier transforms and FFT techniques. Prerequisite: 1.0 in E E 341. Offered: W.

E E 443 Design and Application of Digital Signal Processing (5) Application of learned theories/algorithms and available computer technologies to modern image and speech processing problems. Two-dimensional signals and systems. Image transform, enhancement, restoration, coding. Characteristics of speech signals, linear predictive coding (LPC) of speech, pitch detection, and LPC speech synthesis, speech recognition, hardware designs for signal processing. Prerequisite: 1.0 in E E 442. Offered: Sp.

E E 447 Control System Analysis I (4) Linear Servomechanism theory and design principles. Pole-zero analysis, stability of feedback systems by root locus and real-frequency response methods. Design methods of Bode and Nichols. Introduction to advanced topics in automatic control theory, state variable methods. Prerequisite: E E 233; E E 235; MATH 308. Offered: A.

E E 448 Systems, Controls, and Robotics Capstone (4-) In-depth control engineering design experience in small design teams. Includes project planning and management, reporting, and technical communication. Student teams design, implement, test, and report on their project results. Includes lectures on selected topics, e.g., project management, intellectual property, and some control engineering topics. Prerequisite: E E 447. Offered: W.

E E 449 Systems, Controls, and Robotics Capstone (-4) In-depth control engineering design experience in small design teams. Includes project planning and management, reporting, and technical communication. Student teams design, implement, test, and report on their project results. Includes lectures on selected topics, e.g., project management, intellectual property, and some control engineering topics. Prerequisite: E E 448. Offered: Sp.

EE451 Wind Energy (4) Covers the operation and modeling of wind energy, wind statistics, wind generators and converters, wind energy systems, challenges to wind energy development, impacts of wind energy on the power grid, and existing and potential solutions to wind energy integration. Prerequisite: E E 351. Offered: Sp, odd years.

EE452 Power Electronics Design (5) Electronic conversion and control of electrical power. Includes semiconductor switching devices, power converter circuits, design of magnetics, and control of power converters. Also ac/ac, ac/dc, and dc/dc power converters; circuit simulation; extensive laboratory work; a four-week power converter design project. Prerequisite: 1.0 in E E 331; 1.0 in E E 351. Offered: A.

E E 453 Electric Drives (5) Elements of drive systems, speed-torque characteristics of electric motors and industrial loads, solid-state converter. Starting and braking methods of loaded motors. Speed control of electric motors. Solid-state drives. Transient analysis of loaded mo-

tors. Special forms of individual- and multimotor drives. Prerequisite: 1.0 in E E 452. Offered: W.

EE 454 Power System Analysis (4) Introduction to methods of analyzing power systems. Includes symmetrical components, calculation of line parameters, representation of transmission lines and power components, and power flow control. Prerequisite: 1.0 in E E 351. Offered: A.

E E 455 Power System Dynamics and Protection (4) Analysis of symmetrical and unsymmetrical power systems' networks, fault analysis, and stability studies. Prerequisite: 1.0 in E E 351. Offered: W.

E E 456 Computer-Aided Design in Power Systems (4) Design-oriented course in power system engineering. Students are assigned a project concerning system operation and planning, steady-state and dynamic behaviors of power systems, or distribution systems. Each involves formulation of design criteria, development of approach, application of existing software. Prerequisite: either 1.0 in E E 454 or 1.0 in E E 455. Offered: Sp.

E E 457 Electric Energy Distribution Systems (4) Introduction to electric utility distribution systems. Primary and secondary network analysis and design, distribution substation problems, distribution transformers, capacitor application, overcurrent and overvoltage protection. System planning and reliability. Prerequisite: 1.0 in E E 351. Offered: W.

E E 461 Introduction to Computer-Communication Networks (4) Computer network architectures and protocols. OSI Layers and performance analysis. Transmission media, switching, multiple access arbitration. Network routing, congestion control, flow control. Transport protocols, real-time, multicast, network security. Prerequisite: CSE 143; either MATH 390/STAT 390, STAT 391, or IND E 315. Offered: Sp.

E E 465 Fiber Optics, Devices, and Applications (4) Wave propagation in optical waveguiding structures, signal distortion, coupling of modes, modulation, sources and detectors, fabrication and measurement methods, communication and sensor systems. Prerequisite: E E 331; E E 361.

E E 467 Antennas: Analysis and Design (4) Fundamentals of antennas, analysis, synthesis, and computer-aided design, and applications in communications, remote sensing, and radars. Radiation pattern, directivity, impedance, wire antennas, arrays, numerical methods for analysis, horn antennas, microstrip antennas, and reflector antennas. Prerequisite: 1.0 in E E 361. Offered: Sp.

E E 469 Computer Architecture I (5) Introduction to computer architecture. Assembly and machine language, microprocessor organization including control and datapath. Computer arithmetic. Memory systems and caching. Performance modeling of microprocessors. Prerequisite: either E E 271 or CSE 369; CSE 143 Offered: jointly with CSE 469; AWSp.

E E 470 Computer Architecture II (4) Advanced computer architecture. Performance evaluation and energy efficiency. Instruction set architectures. Instruction-level parallelism. Modern microprocessor micro-architecture. Thread-level parallelism. Cache coherency and memory consistency in shared-memory multiprocessors. Memory hierarchy. GPU architecture. Warehouse-scale computing. Trends in computer design. Prerequisite: CSE 351; either CSE 469 or E E 469. Offered: jointly with CSE 470.

E E 471 Computer Design and Organization (5) Introduction to computer architecture, algorithms, hardware design for various computer subsystems, CPU control unit design, hardware and microprogrammed control, memory organization, cache design, virtual memory, I/O organization, and I/O hardware design. Prerequisite: either E E 271 or CSE 370; CSE 143. Offered: AWSp.

E E 472 Microcomputer Systems (5) Concepts of multi-level machines and computer systems organization. Utilizing microprocessors, digital computer studied at assembly; also, high-language levels with emphasis on concepts of

central processor architecture, memory organization, input/output, and interrupts. Assembly language programming concepts applied to solution of various laboratory problems including I/O programming. Prerequisite: CSE 143. Offered: AWSp.

E E 473 Linear Integrated Circuits (5) Design of linear integrated circuits applying modern MOS and BJT integrated circuit technologies: single-stage amplifiers; current-mirror DC bias and active load circuits; stability and frequency compensation of single-stage and two-stage operational amplifiers; output stages; current and voltage reference circuits. Prerequisite: 1.0 in E E 332. Offered: W.

E E 474 Introduction to Embedded Systems (4) Introduces the specification, design, development, and test of real time embedded system software. Use of a modern embedded microcomputer or microcontroller as a target environment for a series of laboratory projects and a comprehensive final project. Prerequisite: CSE 143. Offered: jointly with CSE 474; AWSp.

E E 475 Embedded Systems Capstone (5) Capstone design experience. Prototype a substantial project mixing hardware, software, and communications. Focuses on embedded processors, programmable logic devices, and emerging platforms for the development of digital systems. Provides a comprehensive experience in specification, design, and management of contemporary embedded systems. Prerequisite: either E E 271 or CSE 369; either CSE 466, E E 472, or CSE 474/E E 474. Offered: jointly with CSE 475; AWSp.

E E 476 Digital Integrated Circuit Design (5) Comprehensive view of digital integrated circuit design. Topics to be covered include the design of inverters, static logic circuits, switch logic, and synchronous logic. Students design, simulate, and layout a complete digital IC using modern computer-aided design tools. Prerequisite: either E E 205 or E E 215; E E 271. Offered: A.

E E 477 VLSI II (5) Provides a fairly deep understanding of how IC-based memory and datapath blocks are designed using static and dynamic CMOS technologies. Gives students extensive experience with industry-standard computer-aided design tools, including Cadence (Virtuoso, DRC, LVS) and Avant! (Hspice). Credit not allowed for both E E 477 and E E 525. Prerequisite: E E 331; E E 476. Offered: W.

EE 478 Design of Computer Subsystems (5) Design of digital computer subsystems and systems, using SSI, MSI, and LSI digital components. Combinational logic, sequential logic, memory hardware designs, I/O hardware and interface design, system design steps, high-speed digital circuit design, noise reduction techniques, and hardware description language. One four-hour laboratory each week and design project. Prerequisite: E E 271; E E 472. Offered: AWSp.

E E 480 Microwave Engineering I (4) Analysis and design of transmission lines and matching circuits. Lossy transmission lines. Mode structures in metallic and dielectric waveguides. Microwave resonators and magnetic devices. Smith chart and matching techniques. Prerequisite: 1.0 in E E 361. Offered: A.

E E 481 Microwave Electronic Design (4) Design of microwave circuits using S-parameter techniques. Measurement techniques, CAD of microwave systems. Includes design, fabrication, and evaluation of a microwave amplifier. Prerequisite: 1.0 in E E 332; 1.0 in E E 361. Offered: W.

EE 482 Semiconductor Devices (4) Fundamentals of semiconductor theory: carrier diffusion and drift; concept of direct and indirect energy materials, effective mass of mobile carriers; device physics: homo- and heterojunctions, operating principles of bipolar, junction, and MOS field-effect transistors. Prerequisite: E E 331; E E 361. Offered: A.

E E 484 Sensors and Sensor Systems (4) Introduction to optical and solid-state chemical and physical sensors. Topics include transduction mechanisms, design parameters,

fabrication methods and applications. Prerequisite: E E 331. Offered: Sp.

E E 485 Introduction to Photonics (4) Introduction to optical principles and phenomena. Topics include electromagnetic theory of light, interference, diffraction, polarization, photon optics, laser principles, Gaussian beam optics, semiconductor optics, semiconductor photonic devices. Prerequisite: E E 361 or PHYS 123. Offered: W.

E E 486 Fundamentals of Integrated Circuit Technology (3) Processing physics, chemistry, and technology, including evaporation, sputtering, epitaxial growth, diffusion, ion implantation, laser annealing, oxidation, chemical vapor deposition, photoresists. Design considerations for bipolar and MOS devices, materials and process characterization. Future trends. Prerequisite: either both E E 331 and E E 361 or MSE 351. Offered: jointly with MSE 486; AW.

E E 488 Photonics Design Capstone (4) Design of optical and optoelectronic devices using fundamental principles of photonics. Recent advances in contemporary research. Construction of microscopes or spectrometers. Involves a major design experience. Prerequisite: E E 485.

EE 490 Reading and Research (1-5, max. 25) Reading and research in the field under supervision of an E E faculty member. Credit/no-credit only.

E E 491 Undergraduate Seminar (1, max. 2) Weekly seminars on current topics in electrical engineering. Credit/no-credit only.

E E 499 Undergraduate Research and Special Projects (2-5, max. 10) Undergraduate research or design project carried out under the supervision of a faculty sponsor.

E E 500 Graduate Seminar (1, max. 9) Weekly seminars on current topics in electrical engineering. More than one section may be offered in a given quarter. Credit/no-credit only.

EE 501 Radar Remote Sensing (4) Introduces radar remote sensing. Covers the fundamentals of radar systems, monostatic and bistatic topologies, radar equation, range-time diagram; ambiguity function, pulse compression, elementary estimation and detection theory, spectrum estimation for underspread and overspread targets; interferometry, source imaging; and Time Difference of Arrival, Aperture Synthesis (SAR and ISAR).

EE 502 Introduction to Microelectro Mechanical Systems (4) Theoretical and practical aspects in design, analysis, and fabrication of MEMS devices. Fabrication processes, including bulk and surface micromachining. MEMS design and layout. MEMS CAD tools. Mechanical and electrical design. Applications such as micro sensors and actuators, or chemical and thermal transducers, recent advances. Offered: jointly with M E 504/MSE 504.

E E 503 Modeling of MEMS (4) Explores microelectro mechanical systems (MEMS) including lumped modeling, conjugate power variables, electrostatic and magnetic actuators, linear transducers, linear system dynamics, design optimization, and thermal analysis. Numerical modeling topics include electro (quasi) static, mechanical, electro mechanical, magneto (quasi) static, and fluidic phenomena; parametric analysis, visualization of multi-dimensional solutions; and verification of validity of results.

E E 505 Probability and Random Processes (4) Foundations for the engineering analysis of random processes: set theoretic fundamentals, basic axioms of probability models, conditional probabilities and independence, discrete and continuous random variables, multiple random variables, sequences of random variables, limit theorems, models of stochastic processes, noise, stationarity and ergodicity, Gaussian processes, power spectral densities. Prerequisite: graduate standing and understanding of probability at the level of E E 416.

E E 506 Fundamentals of Wireless Communication (4) Reviews fundamentals of wireless communications including signal and noise theory, modulation techniques, fading

channels, error analysis, synchronization, and coding. Prerequisite: E E 505.

E E 507 Communication Theory II (3) Review of stochastic processes. Communication system models. Channel noise and capacity. Optimum detection, modulation, and coding, convolutional coders and decoders. Typical channels, random and fading channels. Waveform communication, optimum filters. Prerequisite: E E 506.

E E 508 Stochastic Processes in Engineering (3) Non-measure theoretic introduction to stochastic processes. Topics include Poisson processes, renewal processes, Markov and semi-Markov processes, Brownian motion, and martingales, with applications to problems in queuing, supply chain management, signal processing, control, and communications. Prerequisite: E E 505. Offered: jointly with IND E 508.

E E 510 Mathematical Foundations of Systems Theory (4) Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Offered: jointly with A A 510/CHEM E 510/M E 510.

E E 511 Introduction to Statistical Learning (4) Covers classification and estimation of vector observations, including both parametric and nonparametric approaches. Includes classification with likelihood functions and general discriminant functions, density estimation, supervised and unsupervised learning, feature reduction, model selection, and performance estimation. Prerequisite: either E E 505 or CSE 515.

E E 512 Graphical Models in Pattern Recognition (4) Bayesian networks, Markov random fields, factor graphs, Markov properties, standard models as graphical models, graph theory (e.g., moralization and triangulation), probabilistic inference (including Pearl's belief propagation, Hugin, and Shafer-Shenoy), junction trees, dynamic Bayesian networks (including hidden Markov models), learning new models, models in practice. Prerequisite: E E 508; E E 511.

E E 514 Information Theory I (4) Includes entropy, mutual information, Shannon's source coding theorem, data compression to entropy limit, method of types, Huffman coding, Kraft inequality, arithmetic coding, Kolmogorov complexity, communication at channel capacity (channel coding), coding theory, introduction to modern statistical coding techniques, differential entropy, and Gaussian channels. Prerequisite: E E 505.

E E 515 Information Theory II (4) Includes advanced modern statistical coding techniques (statistical coding), advanced codes and graphs, source coding with errors (rate distortion), alternating minimization principles, channel coding with errors, network information theory, multiple description coding, and information theory in other areas including pattern recognition, bio-informatics, natural language processing, and computer science. Prerequisite: E E 514.

E E 516 Computer Speech Processing (4) Introduction to automatic speech processing. Overview of human speech production and perception. Fundamental theory in speech coding, synthesis and reproduction, as well as system design methodologies. Advanced topics include speaker and language identification and adaptation. Prerequisite: E E 505; E E 518.

E E 517 Statistical Language Processing (4) Introduction to major issues in natural language processing and human language technology, with emphasis on statistical approaches. Addresses topics in statistical parsing and tagging, dialogue systems, information extraction, and machine translation. Prerequisite: E E 505.

EE 518 Digital Signal Processing (4) Digital representation of analog signals. Frequency domain and Z-transforms of digital signals and systems design of digital systems; IIR

and FIR filter design techniques, fast Fourier transform algorithms. Sources of error in digital systems. Analysis of noise in digital systems. Prerequisite: knowledge of Fourier analysis techniques.

EE 519 Stochastic Analysis of Data From Physical Systems (4) Computer systems for acquisition and processing of stochastic signals. Calculation of typical descriptors of such random processes as correlation functions, spectral densities, probability densities. Interpretation of statistical measurements made on a variety of physical systems (e.g., electrical, mechanical, acoustic, nuclear). Lecture plus laboratory. Prerequisite: E E 505.

E E 520 Spectral Analysis of Time Series (4) Estimation of spectral densities for single and multiple time series. Non-parametric estimation of spectral density, cross-spectral density, and coherence for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourier transform. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes and for randomly sampled processes. Techniques of robust spectral analysis. Prerequisite: one of STAT 342, STAT 390, STAT 481, STAT 509/CS&SS 509/ECON 580, or IND E 315. Offered: jointly with STAT 520.

E E 521 Quantum Mechanics for Engineers (4) Covers the basic theory of quantum mechanics in the context of modern examples of technological importance involving 1D, 2D, and 3D nanomaterials. Develops a qualitative and quantitative understanding of the principles of quantization, band structure, density of states, and Fermi's golden rule (optical absorption, electron-impurity/phonon scattering). Prerequisite: MATH 307 or AMATH 351.

E E 523 Introduction to Synthetic Biology (3) Studies mathematical modeling of transcription, translation, regulation, and metabolism in cell; computer aided design methods for synthetic biology; implementation of information processing, Boolean logic and feedback control laws with genetic regulatory networks; modularity, impedance matching and isolation in biochemical circuits; and parameter estimation methods. Prerequisite: either MATH 136 or MATH 307, AMATH 351, or CSE 311 and MATH 308 or AMATH 352. Offered: jointly with BIOEN 523/CSE 586.

E E 524 Advanced Systems and Synthetic Biology (3) Covers advanced concepts in system and synthetic biology. Includes kinetics, modeling, stoichiometry, control theory, metabolic systems, signaling, and motifs. All topics are set against problems in synthetic biology. Prerequisite: either BIOEN 523, E E 523, or CSE 586. Offered: jointly with BIOEN 524/CSE 587; W.

EE 525 VLSI II (5) Analyzes how IC-based memory and datapath blocks are designed using static and dynamic CMOS technologies. Gives students extensive experience with industry-standard computer-aided design tools, including Cadence (Virtuoso, DRC, LVS) and Avant! (Hspice). Credit not allowed for both E E 477 and E E 525. Prerequisite: E E 476.

EE 526 VLSI III (4) Ultra-high speed digital logical families based on output prediction logic; high-speed division; input and output pad design; state-of-the-art latch and flip-flop design; clock distribution, including PLLs and DLLs; noise considerations in high-speed digital IC design. Prerequisite: E E 477 or E E 525.

EE 527 Microfabrication (4) Principles and techniques for the fabrication of microelectronics devices and integrated circuits. Includes clean room laboratory practices and chemical safety, photolithography, wet and dry etching, oxidation and diffusion, metallization and dielectric deposition, compressed gas systems, vacuum systems, thermal processing systems, plasma systems, and metrology. Extensive laboratory with limited enrollment.

E E 528 Physics and Modeling of VLSI Fabrication (4) Physics of VLSI fabrication, emphasizing processing modeling and simulation. CMOS process, sequences, point defects and diffusion, ion implantation and annealing, film growth kinetics, deposition and etching, advanced photolithography. Process interactions and process integration. Extensive use of process simulation software. Prerequisite: either E E 486/MSE 467, E E 520/M E 504/MSE 504, or E E 527. Offered: jointly with MSE 528.

EE 529 Semiconductor Optoelectronics (4) Covers optical processes in semiconductors; optical waveguide theory; junction theory; LEDs; lasers photodetectors; photovoltaics; and optical modulators and switches. Prerequisite: E E 485.

E E 530 Wavelets: Data Analysis, Algorithms, and Theory (3) Review of spectral analysis. Theory of continuous and discrete wavelets. Multiresolution analysis. Computation of discrete wavelet transform. Time-scale analysis. Wavelet packets. Statistical properties of wavelet signal extraction and smoothers. Estimation of wavelet variance. Prerequisite: some Fourier theory and linear algebra; MATH 390/STAT 390, ECON 481 or STAT 481, STAT 509/CS&SS 509/ECON 580, STAT 513, or IND E 315. Offered: jointly with STAT 530; Sp.

E E 531 Semiconductor Devices and Device Simulation (4) Physical principles in semiconductor devices. Generation, recombination, p-n junctions, MOS, metal-semiconductor and other interface structures. Carrier transport at low and high level injection levels. Device simulation used to demonstrate physical principles and basic device operation. Project using device simulation. Prerequisite: E E 482.

E E 533 Photodetectors and Photodetection (4) Includes both the device physics and signal processing aspects of photodetection. Photodiodes, photoconductors, photomultipliers, and solar cells. Noise, signal-to-noise ratios, and imaging considerations. Prerequisite: E E 482.

E E 534 Power Electronics (4) Detailed study of DC-to-AC inverters, pulse-width modulated and resonant DC-to-DC converter topologies; drive and protection circuits for efficient switching of semiconductor devices. Includes extensive computer-aided circuit simulation and power supply control.

E E 536 Design of Analog Integrated Circuits and Systems (4) Design of analog VLSI: specifications, design, simulation, layout. Covering CMOS and Bi CMOS technologies. Prerequisite: E E 433.

E E 537 Computation Methods for Circuit Analysis and Simulation (3) Introduction to numerical algorithms and computer-aided techniques for the simulation of electronic circuits. Theoretical and practical aspects of important analyses: large-signal nonlinear DC, small-signal AC, nonlinear transient, and large-signal steady-state. Simulation concepts applied to the modeling and characterization of various electronic devices.

E E 538 Topics in Electronic Circuit Design (1-5, max. 16) Topics of current interest in electronic circuit and system design. Course content varies from year to year, based on current professional interests of the faculty member in charge.

E E 539 Advanced Topics in Solid-State Electronics (1-5, max. 16) Lectures or discussions of topics of current interest in the field of solid-state electronics for advanced graduate students having adequate preparation in solid-state theory. Subject matter may vary according to the interests of students and faculty.

E E 540 VLSI Testing (4) VLSI testing and design-for-test techniques, covering digital systems, mixed analog-digital systems, integrated sensor systems, and radio-frequency systems. Projects include test algorithm design, testing of fabricated circuits, and parametric testing of state-of-the-art industry circuits. Prerequisite: either E E 477 or E E 525.

E E 541 Automatic Layout of Integrated Circuits (4) Examines the algorithms behind the following commonly used

physical design automation tools: floorplanning, partitioning, placement, routing, compaction, and verification. Prerequisite: either E E 271 or CSE 370; CSE 143.

E E 542 Advanced Embedded Systems Design (5) Studies advanced embedded system design principles and practices. Emphasizes formal design methodologies such as hardware-software co-design, investigates techniques for performance optimization, and examines distributed embedded systems. Prerequisite: E E 478.

E E 543 Models of Robot Manipulation (4) Mathematical models of arbitrary articulated robotic (or biological) arms and their application to realistic arms and tasks, including the homogeneous coordinate model of positioning tasks, the forward and inverse kinematic models, the Jacobian Matrix, and the recursive Newton-Euler dynamic model. Prerequisite: linear algebra.

E E 544 Advanced Robot Manipulation (4) Continuation of the analysis of robot manipulation, considering kinematic redundancy, control of robot manipulators in contact with the environment, teleoperation, and grasping with multi-fingered hands. Students perform a project and critique a research paper in the area of the project. Prerequisite: E E 543.

E E 545 Autonomous Multi-Robot Systems (4) Design-oriented course in autonomous multi-robot systems. Wireless peer communication protocols, multi-robot control methodologies and computational issues. Laboratory exercises include design, construction, and testing of multiple autonomous mobile robots, which compete as a team at the end of the term. Prerequisite: either E E 462 or E E 463.

E E 546 Advanced Topics in Control System Theory (1-5, max. 16) Topics of current interest in control system theory for advanced graduate students with adequate preparation in linear and nonlinear system theory. Prerequisite: permission of instructor. Offered when adequate enrollment develops prior to close of advance registration.

E E 547 Linear Systems Theory (4) Linearity, linearization, finite dimensionality, time-varying vs. time-invariant linear systems, interconnection of linear systems, functional/structural descriptions of linear systems, system zeros and invertibility, linear system stability, system norms, state transition, matrix exponentials, controllability and observability, realization theory. Offered: jointly with A A 547/M E 547.

E E 548 Linear Multivariable Control (3) Introduction to MIMO systems, successive single loop design comparison, Lyapunov stability theorem, full state feedback controller design, observer design, LQR problem statement, design, stability analysis, and tracking design. LQG design, separation principle, stability robustness. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with A A 548/M E 548.

E E 549 Estimation and System Identification (3) Fundamentals of state estimation for linear and nonlinear systems. Discrete and continuous systems. Probability and stochastic systems theory. Models with noise. Kalman-Bucy filters, extended Kalman filters, recursive estimation. Numerical issues in filter design and implementation. Prerequisite: either A A 547, E E 547, or M E 547. Offered: jointly with A A 549/M E 549.

E E 550 Nonlinear Optimal Control (3) Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Offered: jointly with A A 550/M E 550.

E E 551 Wind Energy (4) Covers the operation and modeling of wind energy, wind statistics, wind generators and converters, wind energy systems, challenges to wind energy development, impacts of wind energy on the power grid, and existing and potential solutions to wind energy integration. Prerequisite: E E 351.

E E 552 Power Systems Dynamics and Control (4) Advanced computer modeling and analysis of power systems. Application of modern systems and control theories. Prerequisite: E E 351 and E E 455.

E E 553 Power System Economics (4) Economic structure of power systems. Problem formulation, optimization methods and programming for economic analysis of power system operation and planning. Economic dispatch, load forecasting, unit commitment, interchange, planning and reliability analysis. Provides background to pursue advanced work in planning and operation.

E E 554 Large Electric Energy Systems Analysis (4) Deals with problems whose solution depends upon the inversion of sparse matrices that occur in the planning and operational studies of large interconnected energy systems. Application studies include system model development, state estimation, and load flow. Prerequisite: E E 456.

E E 555 Fundamentals of Intelligent Systems (4) Fundamentals and applications of intelligent systems and biologically inspired algorithms such as neural networks, evolutionary computations, swarm optimization and fuzzy systems. Solving complex engineering applications with a combination of these technologies as well as with more traditional approaches such as statistical system theories.

E E 556 Analyzing the Power Grid (4) Discusses the models of the various components of an electricity grid and how they are combined into a set of equations that can be used to analyze the grid under normal, steady state conditions, as well as to calculate fault currents and assess its transient stability.

E E 557 Dynamics of Controlled Systems (4) Explores control techniques for high precision motion control. Covers state variable feedback of linear and nonlinear, multivariable systems in depth. Uses physical system modeling, graphical analysis, and numerical analysis to describe system performance. Uses simulation mini-projects to emphasize the dynamics of controlled systems and their performance.

E E 558 Substation and Distribution Automation (4) Examines how smart grid technologies affect substation and distribution operations and how history, customer expectations, and state and federal policies have shaped the existing infrastructure. Studies the capabilities of various emerging technologies to assess how they are able to solve existing issues.

E E 559 Special Topics in Electrical Energy Systems (1-5, max. 16) Topics of current interest in electrical power and energy devices and systems. Content varies from year to year, based on current professional interests of faculty member in charge.

E E 560 Advanced Electric Machines and Drives (4) Fundamentals of electric machines and drives, including brush DC, brushless DC, PM synchronous, induction machines, inverter topologies, and control techniques. Evaluation of torque production and control in machines with electronic drives (motor controllers).

E E 562 Artificial Intelligence for Engineers (3) Covers main areas of artificial intelligence (AI) without need for extensive prerequisites. Programming languages for AI; problem solving; representations; control strategies; searching strategies; predicate calculus; rule-based deduction; goal-directed planning; knowledge-based systems. Prerequisite: CSE 373.

E E 565 Computer-Communication Networks I (4) Network architectures and protocols; layered model; reliable transmission protocols at the data control layer; Transmission Control Protocols (TCP); routing algorithms; performance modeling, and analysis of packet-switched networks. Multi-access. Projects involving routing and multi-access principles. Prerequisite: E E 505.

E E 566 Computer-Communication Networks II (3) Local area, metropolitan area, satellite, and packet radio networks; routing algorithms for wide area networks; optimal

design of packet-switched networks; congestion and flow control; fast packet switching; gigabit networks. Prerequisite: E E 565.

E E 567 Mobile Radio Networks (4) Wireless communication networks, including digital broadcasting, wireless LAN, wireless access networks and ultra wide band (UWB); OFDM modem design; dirty-paper coding; MAC and RLP; TCP/UDP over wireless; multi-radio networks; cross-layer protocol optimization; radio network planning. Prerequisite: E E 506; E E 565.

E E 568 Image Processing Computer Systems (4) All components of digital image-processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image processing operations. Selected advanced image processing topics. Individual student project. Prerequisite: permission of instructor.

E E 570 Manifolds and Geometry for Systems and Control (3) Introduction to fundamentals of calculus on manifolds and group theory with applications in robotics and control theory. Topics include: manifolds, tangent spaces and bundles, Lie groups and algebras, coordinate vs. coordinate-free representations. Applications from physics, robotics, and control theory. Offered: jointly with A A 570/M E 570; W, even years.

E E 571 High Frequency Circuits and Antennas: Computation of Fields and Waves (4) Planar microstrip structures are high frequency circuits and antennas used in communication, aerospace and computer industries. Examines the computation of fields and waves in such structures. How to calculate circuit parameters and radiation characteristics. Structures studied include microstrip lines, coupled lines, antennas, resonators, and discontinuities. Prerequisite: either E E 482 or E E 572.

E E 572 Electromagnetic Theory and Applications I (4) Electromagnetic waves in layered media; complex waves, leaky and slow waves, waves in periodic structures, optical fibers, ionosphere and other guiding structures; transients and dispersive media; waveguides and cavities; beam waves; eigenfunctions and eigenvalues.

E E 573 Electromagnetic Computations and Applications I (4) Fundamentals of computational electromagnetics, method of moments, integral equations, basis functions, iterative methods, periodic structures and Green's Functions finite difference time domain method, Yee's lattice, absorbing boundary conditions, variational principles, and finite element method. Applications in antennas, waveguides, and scattering problems. Prerequisite: E E 572.

E E 574 Electromagnetic Computations and Applications II (4) Current topics in computational electromagnetics, fast multipole multilevel method, sparse matrix canonical grid method, wavelet based methods, recursive method, spectral time domain method. Applications in large scale problems such as array antennas, radar cross section, rough surface scattering, and dense media scattering. Prerequisite: E E 573.

E E 575 Waves in Random Media (4) Propagation and scattering of electromagnetic, optical, and acoustic waves in turbulence and random media, scattering from rough surfaces and randomly distributed particles. Atmospheric turbulence, fog, rain, smog, clear-air turbulence detection, remote sensing, terrain scattering, scattering from blood cells and tissues, scattering by ocean waves. Applications to atmospheric sciences, bioengineering, geoscience, ocean engineering.

E E 576 Computer Vision (3) Principles and methods for interpreting the three-dimensional world from images. Topics include feature detection, image segmentation, motion estimation, image mosaics, 3D-shape reconstruction, object recognition, and image retrieval. Prerequisite: solid knowledge of linear algebra; good programming skills. Offered: jointly with CSE 576.

E E 577 Special Topics in Computer Vision (3) Topics vary and may include vision for graphics, probabilistic vision

and learning, medical imaging, content-based image and video retrieval, robot vision, or 3D object recognition. Prerequisite: CSE 576/E E 576. Offered: jointly with CSE 577.

E E 578 Optimization in System Sciences (3) Covers convex sets, separation theorems, theorem of alternatives and their applications, convex analysis, convex functions, conjugation, subgradients, convex optimization, duality and applications, linear and semi-definite programming. Linear matrix inequalities, optimization algorithms, applications in system theory and control, bilinear, rank minimization, optimization software. Offered: jointly with A A 578/M E 578; W.

E E 579 Advanced Topics in Electromagnetics, Optics, and Acoustics (1-5, max. 16) Topics of current interest in electromagnetics, optics, and acoustics. Content varies from year to year, based on current professional interests of faculty member in charge.

E E 580 Geometric Methods for Non-Linear Control Systems (3) Analysis and design of nonlinear control systems focusing on differential geometric methods. Topics include controllability, observability, feedback linearization, invariant distributions, and local coordinate transformations. Emphasis on systems evolving on Lie groups and linearly uncontrollable systems. Prerequisite: A A 570/E E 570/M E 570. Offered: jointly with A A 580/M E 580; Sp, even years.

E E 581 Digital Control (3) Chizeck Sampled-data systems, and z-transform. Frequency domain properties. Sampling D/A and A/D conversion. Controller design via discrete-time equivalents, direct methods, state feedback and observers. Quantization effects. LQR control and introduction to LQG optimal control. Prerequisite: E E 548/A A 548/ M E 548. Offered: jointly with A A 581/M E 581; W.

E E 582 Introduction to Discrete Event Systems (3) Berg Modeling DES with automata and Petri nets. Languages. State estimation and diagnostics. Control specifications. Feedback control. Dealing with uncontrollability and unobservability. Dealing with blocking. Timed automata and Petri nets. Prerequisite: A A 447/E E 447/ M E 471. Offered: jointly with A A 582/M E 582; Sp, even years.

E E 583 Nonlinear Control Systems (3) Analysis of nonlinear systems and nonlinear control system design. Phase plane analysis. Lyapunov stability analysis. Describing functions. Feedback linearization. Introduction to variable structure control. Prerequisite: A A 447/E E 447/M E 471. Offered: jointly with A A 583/M E 583.

E E 585 System Identification and Adaptive Control (3) Theory and methods of system identification and adaptive control. Identification of linear-in-parameter systems, using recursive LS and extended LS methods; model order selection. Indirect and direct adaptive control. Controller synthesis, transient and stability properties. Offered: jointly with A A 585/M E 585.

E E 586 Digital Video Coding Systems (4) Introduction to digital video coding algorithms and systems. Theoretical and practical aspects of important topics on digital video coding algorithms, motion estimation, video coding standards, systems issues, and visual communications.

E E 587 Multimedia Compression and Networking (4) Addresses four major components of multimedia: 1) data compression of multimedia (e.g., speech, audio, image, and video); 2) quality of service (QoS) issues for data transmission over IP; 3) multimedia streaming and conferencing applications; and 4) intellectual property management and protection (IPMP) of multimedia contents. Co-requisite: E E 518.

E E 589 Advanced Topics in Sensors and Sensor Systems (3) Topics of current interest in sensors and sensor systems.

E E 590 Advanced Topics in Digital Computers (2-5, max. 16) Lectures or discussions of topics of current interest in the field of digital systems. Subject matter may vary from year to year.

E E 591 Robotics and Control Systems Colloquium (1, max. 30) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Credit/no-credit only. Offered: jointly with A A 591/CHEM E 591/M E 591.

E E 592 Electrical Engineering Research Survey (1, max. 2) Weekly presentations on current research activities by members of the department. Credit/no-credit only.

E E 593 Feedforward Control (3) Devasia Design feedforward controllers for precision output tracking; inversion-based control of non-minimum-phase systems; effect of plant uncertainty on feedforward control; design of feedforward controllers for applications such as vertical take off and landing aircraft, flexible structures and piezo-actuators. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with A A 593/M E 593; Sp, even years.

E E 594 Robust Control (3) Basic foundations of linear analysis and control theory, model realization and reduction, balanced realization and truncation, stabilization problem, coprime factorizations, Youla parameterization, matrix inequalities, H-infinity and H2 control, KYP lemma, uncertain systems, robust H2, integral quadratic constraints, linear parameter varying synthesis, applications of robust control. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with A A 594/M E 594; Sp, odd years.

E E 595 Advanced Topics in Communication Theory (1-5, max. 16) Extension of E E 507, E E 508, E E 518, E E 519, E E 520. Material differs each year, covering such topics as: detection theory, decision theory, game theory, adaptive communication systems, nonlinear random processes.

E E 596 Advanced Topics in Signal and Image Processing (2-5, max. 16) Topics of current interest in signal and image processing. Content may vary from offering to offering.

E E 597 Networked Dynamics Systems (3) Provides an overview of graph-theoretic techniques that are instrumental for studying dynamic systems that coordinate their states over a signal-exchange network. Topics include network models, network properties, dynamics over networks, formation control, biological networks, observability, controllability, and performance measures over networks. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with A A 597/M E 597.

E E 599 Selected Topics in Electrical Engineering (1-5, max. 15) Prerequisite: permission of instructor.

E E 600 Independent Study or Research (*)

E E 700 Master's Thesis (*)

E E 800 Doctoral Dissertation (*)

Human Centered Design and Engineering

423 Sieg Hall

In the Department of Human Centered Design and Engineering (HCDE), students are designing the future by building innovative technologies and systems. Putting people first, HCDE students and faculty research, design, and engineer interactions between humans and technology. HCDE students and faculty focus on understanding human needs and interests as they design and build engineering solutions to the world's problems.

HCDE faculty are award-winning and interdisciplinary, with graduate degrees in fields such as computer science, information studies, industrial engineering, design, education, English, linguistics, public policy, and technology and society studies.

HCDE prepares students for leadership roles in user interface design, user experience research and design, human-computer interaction, information and communication systems, computer-supported cooperative work, and related specializations, all from a human-centered perspective. In classes, directed research groups, and capstone projects, students develop portfolio quality products. HCDE graduates obtain jobs, primarily in the high-tech industry (e.g., Microsoft, Intel, Amazon, Facebook, T-Mobile, Google, Boeing), researching and designing user interfaces, websites, and other form factors to improve the user experience.

HCDE emphasizes student-centered, hands-on learning. Beyond taking traditional classroom courses, students join research groups and work side-by-side with top-ranked professors and graduate students to enhance the knowledge base of this dynamic field. Our educational mission is supported by up-to-date facilities.

HCDE prepares students to assume positions of intellectual leadership in industry, government, non-profit organizations, and academia nationally and globally. Whatever their professional direction, HCDE students learn the research skills appropriate to their interests, the most effective design strategies, and the most current technologies and practices. They also learn enduring theory and principles so they can dynamically respond to the evolving field of human centered design and engineering.

UNDERGRADUATE PROGRAM

Adviser

(206) 543-2567

www.hcde.washington.edu

The Department of Human Centered Design and Engineering (HCDE) offers the following programs of study:

- Bachelor of Science in Human Centered Design and Engineering degree
- A minor in technical Japanese

Bachelor of Science in Human Centered Design and Engineering

Suggested First-Year College Courses: See regular admission requirements

Department Admission Requirements

Admission is competitive. Completion of minimum requirements does not guarantee admission. All applicants have the right to petition and appeal the department's admission decision.

Direct Freshman Admission

The department enrolls up to 30% of its incoming class directly from high school, before completion of University-level prerequisites. Students accepted to the UW are automatically considered for admission to HCDE if they indicate Human Centered Design and Engineering as their preferred major on the freshman application. Competitive applicants have taken or are taking calculus and at least two years of laboratory science (physics and chemistry are preferred) in high school. Admission is for autumn quarter only.

Regular Admission

1. Course Requirements:

- a. Minimum 5 credits of mathematics: MATH 120 or MATH 124
- b. Minimum 5 credits of statistics: STAT 220, STAT 221/ SOC 221/CS&SS 221, STAT 311, STAT 390, QMETH 201, Q SCI 190, or Q SCI 381
- c. Minimum 10 credits of science: BIOL 118, BIOL 180, BIO A 201, CHEM 142, CHEM 152, PHYS 114, PHYS 115, PHYS 121, PHYS 122, or PSYCH 202

- d. Minimum 5 credits of first-year composition
 - e. CSE 140 or CSE 142
 - f. All courses must be completed before July 1 or February 1 application deadlines
2. *Application Deadline:* July 1 for autumn quarter and February 1 for spring quarter
 3. *Grade Requirement:* Minimum 2.00 cumulative GPA

Graduation Requirements

180 credits as follows:

General Education Requirements (88 credits)

1. *Written and Oral Communication (8 credits):* 5 credits English composition from the University list; HCDE 231. University required additional 5 writing credits are built into the major core requirements
2. *Visual, Literary, & Performing Arts (VLPA), and Individuals & Societies (I&S) (30 credits):* Minimum 10 credits required in both areas
3. *Natural World (50 credits):*
 - a. *Mathematics* (minimum 15 credits; see list of qualifying courses on HCDE website)
 - b. *Science* (minimum 15 credits; see list of qualifying courses on HCDE website)

Major Requirements (83-87 credits)

1. *HCDE Core (46 credits):* HCDE 300, HCDE 301, HCDE 308, HCDE 310, HCDE 313, HCDE 318, HCDE 321, HCDE 322, HCDE 492, HCDE 493, HCDE 495 (3), HCDE 496 (2)
2. *Engineering Fundamentals (12 credits):* See department for approved list.
3. *HCDE Electives (25-29 credits)*
 - a. *Standard Option:* See department for approved list of HCDE electives
 - b. *HCI Option:* To satisfy the requirements for the HCI option, students must take at least one course in HCI foundations, and three additional courses from at least two of the four HCI course areas – user interface, software, and technology; design; usability and user research; and social and ethical dimensions. See department website for approved area courses. Students then take additional approved HCDE elective courses to reach the overall electives requirements (25-29 credits)

Free Electives (as needed)

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, contact the departmental adviser or refer to the department website.

Minor

Minor Requirements

Technical Japanese: Minimum 25 credits to include HCDE 461, HCDE 462, HCDE 463, plus 10 credits from the approved list of elective courses. For more information, contact the departmental adviser.

Student Outcomes and Opportunities

- *Expected Outcomes:* HCDE BS graduates contribute to society by applying design and engineering processes to solve problems through a deep understanding of people and their contexts. In particular, they are leaders in:
 - Investigating people and systems, using quantitative and qualitative methods, to identify opportunities for new systems and strengths and weaknesses of existing systems.

- Designing, building, and evaluating systems according to a variety of perspectives, with an emphasis on understanding the relationships between social and technical elements of systems.
- Bringing ideas to actualization through expertise in design strategy and processes, effective communication and collaboration skills, and ethical perspectives.
- Identifying and learning new skills, perspectives, and tools that help them and others accomplish their goals.

The Department of Human Centered Design and Engineering prepares students to assume positions in industry, government, and non-profit organizations and to apply to graduate programs.

- *Instructional and Research Facilities:* Department facilities include the HCDE Design Laboratory and Laboratory for Usability Testing and Evaluation (LUTE).
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors). With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
- *Research, Internships, and Service Learning:* HCDE undergraduates are required to complete at least one 3-credit internship. The supervised internship must be approved by the faculty internship adviser. As an internship substitution, students may elect to take part in a six-month co-op, sponsored by the Engineering Co-op program. Additionally, undergraduates work in research groups with HCDE faculty and graduate students.
- *Department Scholarships:* HCDE selects one recipient of a College of Engineering Scholarship annually. The criteria for this scholarship are the applicant's academic history and likelihood for success in the technical communication field.
- *Student Organizations/Associations:* Students in the HCDE degree program participate in student activities such as the HCDE Student Association, the Minority Science and Engineering Program (MSEP), and Women in Science and Engineering (WISE).
- *Of Special Note:* The HCDE department is an inclusive, interdisciplinary academic community. Students generally call their professors by their first name and have the opportunity to work individually on projects and research supervised by HCDE faculty. Undergraduate students are encouraged to work in research groups and to attend conferences and professional meetings.

GRADUATE PROGRAMS

Graduate Program Coordinator

1428 Sieg Hall, Box 352315

(206) 543-1798

hcde@uw.edu

Master of Science in Human Centered Design and Engineering

The Department of Human Centered Design and Engineering (HCDE) offers a Master of Science in Human Centered Design and Engineering (MS HCDE) – an engineering degree. An evening program is offered through UW Educational Outreach, serving full time and part time students. HCDE offers a Master of Science in Human Centered Design and Engineering (MSHCDE). (An evening program is offered through UW Educational Outreach.) A total of 48 credits is required for the MSHCDE degree, which includes 25 credits of required HCDE graduate courses and 23 credits of approved electives. MSHCDE students may elect to pursue a master's thesis or project report with the approval of their Supervisory Committee.

Upon completion of the HCDE MS degree, students assume leadership roles in human-centered design and engineering in academia, industry, government, and non-profits. HCDE MS graduates are able to:

- Evaluate and understand human needs as a basis for designing and engineering new technologies.
- Master conceptual frameworks that motivate interdisciplinary research and design in HCDE.
- Select and critically evaluate user research methods for a variety of stakeholders and product contexts.
- Create visual, interactive, experience, and systems designs and prototypes.
- Translate organizational requirements into interface and product solutions, while accounting for all stakeholder perspectives and working ethically and collaboratively.
- Communicate effectively in oral, written, and visual forms, while scaling communications to audience needs and sociotechnical contexts.

Admission Requirements

In making recommendations for admission, the faculty consider the following from an applicant's record:

1. Undergraduate GPA
2. Undergraduate degree program and work experience
3. Test of English as a Foreign Language (TOEFL) score (if applicable)
4. Letters of recommendation
5. Statement of goals and career objectives. A limited number of prerequisite undergraduate courses may be required.

Degree Requirements

48 credits, to include:

1. *Core Courses (22 credits):* HCDE 501, HCDE 503, HCDE 517, HCDE 518, HCDE 521 (1 credit required, max. 2), HCDE 592, HCDE 593
2. *Specialized content areas (minimum 12 credits):* minimum 4 credits in each of the three areas: research, design, and engineering. Research courses: HCDE 502, HCDE 516, HCDE 519; design courses: HCDE 508, HCDE 511, HCDE 520, HCDE 536; engineering courses: HCDE 530, HCDE 532, HCDE 537, HCDE 539. Students are encouraged to gain depth in any or all of the three areas by taking additional courses beyond the minimum.
3. *Additional coursework to complete at least 48 HCDE credits.* May include credits from electives, directed research groups, and optional internships. Students select electives based on specific academic, research, and professional goals.
4. Students may also pursue a formal transcribed option in User-Centered Design (UCD).

Certificate in User-Centered Design (UCD)

An evening, graduate-level, one-year, four-course program for students who wish to explore a wide range of UCD issues. Involves sophisticated methods for planning and developing intuitive, user-friendly product designs. Students study the latest user research and design theories and practices for placing user needs at the forefront of each stage of the design process.

Focuses on usability studies, user-centered design theory and practice, visual communication and information visualization, and web design.

12 of the 13 credits earned for the UCD certificate may later count toward the MS in Human Centered Design and Engineering if students apply for Graduate Non-Matriculated Status prior to taking coursework.

Certificate Requirements

1. HCDE 517 (autumn)
2. HCDE 518 (winter)
3. HCDE 521 (winter only)
4. One of the following electives: HCDE 508, HCDE 511, HCDE 536, HCDE 537 (optional prerequisite for HCDE 537 is HCDE 532)

Inter-Engineering Master's in Technical Japanese

The inter-engineering master's in technical Japanese is a two-year degree program that combines the study of engineering and technical Japanese. Students take classes in an engineering specialty and in advanced Japanese. After their first year, they spend summer quarter and optionally the following autumn quarter in Japan doing a required internship in a Japanese company or research lab. Students graduate with an inter-engineering MSE or MS degree.

Admission Requirements

Program no longer accepts applications: 2014 - 2015 is its last year.

Degree Requirements

Minimum 54 credits, to include:

1. **Engineering Fields:** Students must select an engineering field (usually the same as the undergraduate area of concentration) from among the following:
 - a. Aeronautics and Astronautics
 - b. Bioengineering
 - c. Chemical Engineering
 - d. Civil and Environmental Engineering
 - e. Computer Science and Engineering
 - f. Electrical Engineering
 - g. Mechanical Engineering
2. **Credit Requirements:**
 - a. **Distribution:** 24 credits in one engineering specialty, 27 credits of coursework in technical Japanese, and 3 credits of summer internship in Japan. Note: 3 credits of internship may be substituted for 3 credits of coursework.
 - b. **Technical Japanese coursework:**
 - i. Oral communication in technical and business settings: HCDE 471, HCDE 472, HCDE 473
 - ii. Reading techniques in technical Japanese: HCDE 461, HCDE 462, HCDE 463
 - iii. Advanced Japanese for technical and business professionals: HCDE 561, HCDE 562, HCDE 563

Doctor of Philosophy

The Department of Human Centered Design and Engineering (HCDE) offers a PhD in Human Centered Design and Engineering (PhD HCDE)—an engineering degree. The program provides unparalleled depth and experience for students interested in studying the conception, design, implementation, use, evaluation, and effects of technologies.

HCDE is an interdisciplinary engineering department at the University of Washington in Seattle, an internationally ranked, R1 research institution. HCDE's interdisciplinary faculty have graduate degrees from fields such as computer science, industrial engineering, information studies, design, education, English, linguistics, public policy, and technology and society studies. The faculty's research and teaching focus on six areas of study: influencing awareness, thinking, and behavior; design for emergent collaborations and organizations; low resource and underserved populations; material and embodied technologies, and ubiquitous computing; data visualization and big data; and learning in professional and technical environments.

The HCDE doctoral program prepares students for careers as scholars and researchers through relevant coursework, mentorship from faculty, and collaboration with peers. Early in the program, students may explore different topics and research areas through directed research groups and other independent projects.

Goals of the HCDE PhD program are as follows:

- To prepare graduates for a career as researchers, teachers, and intellectual leaders in the discipline of HCDE
- To enable graduates to develop theoretical frameworks, apply investigative methods, and translate theory and research findings into technical or strategic innovations in the field of HCDE
- To foster the development and dissemination of new knowledge in HCDE
- To foster the development of an international, multi-cultural perspective and a diverse, inclusive student body and workforce in HCDE

Admission Requirements

Completion of either an undergraduate degree or a master's degree in HCDE or a relevant field (up to 30 credits of master's work may be applied toward the 105-credit requirement). Applicants often come from a wide range of backgrounds.

Applicants must submit the following:

1. UW HCDE PhD admission forms
2. Official transcripts of all academic study
3. Evidence of a minimum 3.00 GPA
4. Three letters of recommendation
5. A curriculum vitae
6. A personal statement of objectives and research area of interest.

International students must also submit a TOEFL iBT test score of at least 106 (including a speaking sub-score of 26), obtained within the last two years.

Degree Requirements

105 credits, to include:

1. 34 core credits (HCDE 541, HCDE 542, HCDE 543, HCDE 544, HCDE 545, HCDE 546, HCDE 547, HCDE 548); 12 credits of directed research (HCDE 596); HCDE 521, HCDE 523; 30 credits of approved electives to include HCDE 518 and one additional graded, graduate-level course in each of four thematic areas; minimum 27 dissertation credits.
2. Preliminary examination
3. Select committee chair within two quarters of passing preliminary examination
4. Successfully complete all course distribution and credit-hour requirements
5. Successfully complete the requirements for directed research.
6. Pass a general examination to attain formal candidacy for the PhD program (candidate's certificate).
7. Successfully defend a dissertation proposal before a supervisory committee.
8. Successfully defend the dissertation itself before a reading committee (final examination).

Students are encouraged but not required to teach

Early in the program, students often explore different topics and research areas through directed research groups and other independent projects. No later than the end of the quarter following passing the preliminary exam (usually the end of the fourth quarter in the program), students choose a dissertation adviser and begin to focus on a research area for the dissertation. Students are often supported by a research assistantship by that adviser.

Students who enter the PhD program with a previous graduate degree relevant to HCDE can petition to have up to 30 credits transferred toward this program. Check with the doctoral adviser for details.

Research Facilities

The Department of Human Design and Engineering has well-equipped laboratories that effectively support its courses and research projects. Also, HCDE graduate students can utilize significant College of Engineering and University-level research facilities.

Financial Aid

A limited number of teaching and research assistantships and scholarships are available for the financial support of graduate students in HCDE. More information and application forms can be obtained by contacting the department.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

HCDE 100 Introduction to Human Centered Design and Engineering (5) Topics may include: virtual communities, human-computer interaction, web design, usability testing, visual design, and others. Explores course content through individual and group hands-on projects. Offered: A.

HCDE 231 Introduction to Technical Communication (3) Examines fundamentals of research and presenting technical information for various audiences and purposes. Individually and in teams, students learn to construct documents and presentations, following conventions of oral, written, and visual communication. Assignments are framed around ethical and sustainable engineering practices. Prerequisite: either C LIT 240, both ENGL 109 and ENGL 110, ENGL 111, ENGL 121, ENGL 131, ENGL 182, ENGL 197, ENGL 198, ENGL 199, or ENGL 281. Offered: AWSp.

HCDE 300 Foundations of Human Centered Design and Engineering (5) Examines principles and practices of human centered design and engineering. Includes overview of conceptual problems in human centered design and engineering, issues related to communicating scientific and technical information to a variety of audiences, and human centered design approaches. Includes attention to social contexts and environments (legal, ethical, cultural).

HCDE 301 Written Communication in Human Centered Design and Engineering (5) Reviews the writing process including analyzing audience and purpose, planning and designing communication, integrating graphics, mastering style and syntax in Standard American English, and using appropriate tone. Prerequisite: HCDE 231.

HCDE 303 Project Management and Computer Supported Collaboration and Work (5) Addresses how to understand and manage communication practices and projects in scientific and technical organizations. Topics include: system design, project design, supporting workflow, communication practices, information structures, and planning. Focuses on CMC and CSC principles and practices.

HCDE 308 Visual Communication in Human Centered Design and Engineering (5) VLPA Introduces principles of visual communication and design used in human centered design and engineering so that students gain a systematic understanding as they create visual communication components of print, interactive, and video media. Students develop this understanding through hands-on exercises, design critiques, discussions, lectures, and readings in a studio environment.

HCDE 310 Interactive Systems Design and Technology (5) Provides opportunities to identify and build interactive systems to solve problems in human centered design and

engineering. Students specify, design, build, and justify design solutions in terms of user experience and technical design choices. Prerequisite: either CSE 140 or CSE 142. Offered: A.

HCDE 313 Introduction to User Research (5) Introduces user research methods, such as interviews, surveys, usability tests, content analysis, and focus groups. Reviews selecting an appropriate research method, how to conduct research and analyze results, conveying research data in the form of design requirements, and ethics.

HCDE 318 Introduction to User-Centered Design (5) Explores the user-centered design paradigm from a broad perspective, with an emphasis on the importance of developing and applying design processes and strategies. Students learn to think like a user-centered designer and carry out activities that are key to user-centered design.

HCDE 321 Portfolio (2) Covers recent trends in design and communication portfolios, as well as foundational considerations for portfolio development. Prerequisite: minimum grade of 2.0 in HCDE 310; may not be repeated. Credit/no-credit only.

HCDE 322 Organizational Teamwork (2) Introduces students to teamwork and leadership competencies of particular significance to interdisciplinary, design-oriented, creative, and distributed work of human-centered design and engineering. Particular emphasis on competencies related to interpersonal interactions, group dynamics, and civic responsibility. Credit/no-credit only.

HCDE 333 Advanced Technical Writing and Oral Presentation (4) Emphasizes the principles of written and oral communication for the engineering workplace. Designs solutions to professional communication problems: technical reports, proposals, correspondence, resumes, and oral presentations. Focuses on needs assessment and designing solutions that call for effective selection and integration of verbal and visual components. For engineering majors. Prerequisite: HCDE 231. Offered: AWSpS.

HCDE 407 Software User Assistance (5) Concepts, skills, and industry practices for designing the full spectrum of information resources that users need to master complex interfaces. Includes interface text, embedded and standard help, manuals, wizards, tutorials, SDK documentations and troubleshooting (Knowledge Base) content, and the role of social media and user-generated content. Prerequisite: HCDE 310. Offered: Sp.

HCDE 408 Public Documents: Proposals, EISs, Assessments (3) Analyzing special documents of public character: proposals, EISs, questionnaires, technology assessments. Understanding socio-political milieu in which they are planned, organized, written; the specialized audiences (e.g., agencies with their missions, guidelines, constituencies; citizen groups; commercial interests) they serve. Documents, the decision-making process. Offered: Sp, odd years.

HCDE 411 Information Visualization (5) VLPA/I&S Introduces the design and presentation of digital information. Covers the use of graphics, animation, sound, and other modalities in presenting information to the user; understanding vision and perception; methods of presenting complex information to enhance comprehension and analysis; and the incorporation of visualization techniques into human-computer interfaces. Prerequisite: minimum grade of 2.0 in HCDE 310; HCDE 308; may not be repeated.

HCDE 417 Usability Research Techniques (5) Introduces usability research methods used in the product-development process; contextual inquiry, surveys and interviews, focus groups, user profiling, usability testing, cognitive walkthroughs, heuristics, and others. Prerequisite: minimum grade of 2.0 in HCDE 313; may not be repeated.

HCDE 418 User Experience Design (5) Provides a project-based introduction to the user interface design process and is oriented toward practical methods for approaching

a design problem. Focuses on developing conceptual designs based on user need. Prerequisite: HCDE 318.

HCDE 419 Concepts in Human-Computer Interaction (5) I&S Studies the social, cognitive, behavioral, and contextual aspects of information systems and informational dimensions of the human-computer interface, and other user-centered design concepts. Surveys research literature of human information behavior, as well as ethical standards. Prerequisite: HCDE 300.

HCDE 421 Current Practices in Technical Communication (3) Covers principles and practices of writing to communicate scientific and technical information to a variety of readers. Teaches how to write for the expert, general scientific and technical reader, manager, and general public.

HCDE 422 Style in Technical Communication (3) Covers principles and practices of writing publication-ready American English writing for global audiences. Teaches how to write for the expert, general scientific and technical reader, manager, and general public.

HCDE 423 Introduction to Technical Editing (3) Covers editorial practices and responsibilities in communication of scientific and technical information. Includes the editor's role as an editor of documents, a collaborator in document development, and a manager of publication projects and groups.

HCDE 424 The Computer in Technical Communication (4) Introduces popular tools used by TC professionals. Students examine the tools' functionality, the types of design activities supported, and techniques for designing effective solutions. Project-driven course project teaches students how to transform unformatted content, using these tools, into a polished set of documents in multiple formats.

HCDE 426 Software User Assistance (3) Covers how to write effective documentations for a variety of software users, from end-users to developers. Students produce a complete documentation set for a software product or service using the most appropriate delivery mechanisms for the content and the audience. Prerequisite: HCDE 310.

HCDE 427 Production Editing (4) Covers the editorial role in the preparation of text and visual materials, both print and online, for production. Teaches the editor's responsibilities and prerogatives as they relate to those of other professionals in the production phase of the publication's field.

HCDE 435 Introduction to Content Management (3) Principles and practices of building, managing, and using content management systems in the workplace. Examines both the intricacies of collaborative workflow technologies and the organizational contexts that surround them.

HCDE 437 Web Design and Web Publishing (5) VLPA/I&S Design principles and skills including navigation, functional design, visual design, and content development. Includes the ongoing process of Web publishing. Addresses societal issues pertaining to the web and Internet. Students build a website and plan for ongoing web publishing. Prerequisite: HCDE 318. Offered: W.

HCDE 438 Web Technologies (5) Markup languages and styles, JavaScript, Flash, Photoshop, and the fundamentals of digital sound and video. Includes an introduction to server-side technologies. Students expand their existing design skills to encompass the use of these web technologies. Prerequisite: HCDE 310. Offered: Sp.

HCDE 455 User Interface Design (4) Furness Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interface, and research methodologies are discussed. Offered: jointly with IND E 455; A.

HCDE 461 Japanese for Technical and Business Professions I (5) VLPA Kato Strengthens knowledge of grammar and vocabulary and applies this to basic technical busi-

ness communication situations. Covers cultural concepts underlying these situations. Reviews authentic materials on technology-related topics. Teaches skills to analyze sentence structure for accurate interpretation. Laboratory work required. Placement test before admission. Offered: A.

HCDE 462 Japanese for Technical and Business Professions II (5) VLPA Kato Covers the functional/situational conversation skills necessary in technical and business communication situations, plus the cultural concepts underlying these situations. Reviews skills (such as prediction) for more effective reading and improves skills for analyzing complex sentence structure. Additional grammar, vocabulary, and kanji are introduced. Laboratory work required. Prerequisite: HCDE 461. Offered: W.

HCDE 463 Japanese for Technical and Business Professions III (5) VLPA Kato Covers the functional/situational conversation skills necessary in technical and business communication situations, plus the cultural concepts underlying these situations. Further improves skills introduced in previous courses and reviews skills for understanding inter-sentence structure. Additional grammar, vocabulary, and kanji introduced. Laboratory work required. Prerequisite: HCDE 462. Offered: Sp.

HCDE 492 Capstone Planning (2) Helps students define capstone topics, form project teams, and develop initial concepts, deliverables, and schedules for the HCDE capstone project. Credit/no-credit only.

HCDE 493 Senior Capstone (5) Capstone design experience. Integrates knowledge and skills acquired during major program into one paper or project. Prerequisite: minimum grade of 2.0 in HCDE 417; may not be repeated.

HCDE 495 Professional Practice (3-10, max. 10) Supervised internship in a publications organization approved by the faculty adviser. A minimum of one internship is required of students majoring in human centered design and engineering. Credit/no-credit only. Offered: AWSpS.

HCDE 496 Directed Research in Human Centered Design and Engineering (1-5, max. 10) Students, working in teams under the supervision of individual faculty members, review relevant literature, pose research questions, design and conduct studies, and present the results in papers prepared either for submission to a professional journal or for presentation at a professional conference. Credit/no-credit only. Offered: AWSpS.

HCDE 497 Study Abroad: Human Centered Design and Engineering (3-5, max. 15) Upper-division human centered design and engineering courses, for which there are no direct University of Washington equivalents, taken through the Department of Human Centered Design and Engineering's study abroad program. Credit/no-credit only. Offered: S.

HCDE 498 Special Topics (1-5, max. 15) Special topics in human centered design and engineering to be offered occasionally by permanent or visiting faculty members.

HCDE 499 Special Projects (1-5, max. 10) Individual undergraduate projects in human centered design and engineering. Offered: AWSpS.

HCDE 501 Theoretical Foundations of Human Centered Design and Engineering (4) Examination of the theories that inform work in human centered design and engineering, focusing particularly on communication and interaction design theories. Topics include the complexities of communication as it is configured in different theoretical frameworks, the implications of these different configurations, and why these differences matter to people engaged in professional practice or research. Prerequisite: admission to an engineering master's program or permission of instructor. Offered: A.

HCDE 502 Empirical Traditions in Human Centered Design and Engineering (4) Introduction to empirical traditions that inform research and practice in field of human centered design and engineering. Topics include epistemologi-

cal assumptions underlying empirical research, empirical methods, and survey of results of empirical research on effects of text and visual media on comprehension, recall, and performance. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

HCDE 503 Navigating Design in Organizations (4) Examines how to manage the incubation and development of an idea, communicate it effectively to stakeholders, and deliver a quality product. Students learn to manage a design project from start to finish, collaborating across disciplines, working with partners and end-users, and communicating strategies for project management in organizations.

HCDE 505 Computer-Assisted Communication (4) Explores computer-assisted communication from three perspectives: (1) cultural roles of communication technologies; (2) relationships between communication and information including information technologies in the workplace, academe, and other settings; and (3) application to design including models for audience analysis, task analysis, and cognitive systems engineering. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

HCDE 508 Visual Communication (4) Reviews principles of visual communication and design used in HCDE so that students gain a systematic and critical understanding so they can create visual communication components of print and interactive media. Students develop this understanding through hands-on exercises, design critiques, discussions, lectures, and readings in a studio environment.

HCDE 509 Writing the Scientific Article (3) Examination of principles and practice of writing research manuscripts, articles, abstracts, and oral presentations. Detailed examination of scientific publication process includes issues of style, organization, and ethics. Students draft, critique, and revise their own manuscripts and learn to review the manuscripts of others. Offered: Sp.

HCDE 510 Information Design (4) Examination of the design principles and procedures underlying the creation of both print and electronic information presentations. Topics include: print vs. electronic media, designing for the page and screen, information topologies, and hypermedia. Seminar includes a design project. Prerequisite: HCDE 501 or permission of instructor. Offered: A.

HCDE 511 Information Visualization (4) Covers the design and presentation of digital information. Uses graphics, animation, sound, and other modalities in presenting information to users. Studies understanding vision and perception. Includes methods of presenting complex information to enhance comprehension and analysis; and incorporation of visualization techniques into human-computer interfaces.

HCDE 512 International User Experience and Communication (4) Covers theory, research, and approaches for creating digital media for international audiences. Topics include cultural schemata and contrastive rhetoric, content, and text types and corresponding translation and localization strategies, market relevance and adaptation, international user research and usability, international policies and geopolitics, and cross-cultural business management and team work. Offered: Sp.

HCDE 513 Globalization and Localization Management (4) Spyridakis Examines globalization and localization business processes. Topics include localization challenges for various business sectors and audiences as well as selecting localization software, services, and content; project types; and associated start-to-finish processes. Offered: S.

HCDE 514 Strategies for International Product Management (4) Spyridakis Examines best practices in establishing localization work in technology companies. Covers facets important to research, planning, and decision-making processes, including use of internal company data, and economic, marketing, and technology factors. Uses real-life scenarios to demonstrate how companies have instituted localization processes given user-centered practices.

es. Prerequisite: HCDE 512; HCDE 513; or permission of instructor.

HCDE 516 Experimental Research Methods (4) Introduction to experimental research methods in human centered design and engineering. Examines the relationship between theory and research, hypothesis testing, experimental designs, modes of observation, sampling, validity, and data analysis and interpretation. Prerequisite: introductory statistics course. Offered: Sp.

HCDE 517 Usability Studies (4) Discusses the human-computer interface (HCI) as the communicative aspect of a computer system. Analyzes usability issues in HCI design, explores design-phase methods of predictability, and introduces evaluative methods of usability testing. Prerequisite: substantial experience with computers and graduate standing, or permission of instructor. Offered: A.

HCDE 518 User-Centered Design (4) Explores the user-centered design paradigm from a broad perspective, emphasizing how user research and prototype assessment can be integrated into different phases of the design process. Students learn to think like a user-centered designer and carry out activities that are key to user-centered design. Offered: jointly with IND E 545; W.

HCDE 519 Qualitative Research Methods (4) Provides hands-on experience with qualitative research methods, such as interviewing and participant observation, as used in human-centered design and engineering. Students learn to develop appropriate research questions, collect observational data, develop interview protocols, conduct interviews, analyze data, and communicate findings.

HCDE 521 Seminar: Current Issues in Human Centered Design and Engineering (1-2, max. 3) Presentations on current issues in human centered design and engineering. Prerequisite: HCDE graduate student status or permission of instructor. Credit/no-credit only. Offered: AW.

HCDE 523 Design Use Build (DUB) Seminar (1, max. 3) Exploration of advanced issues in human centered design and engineering research and practice. Students are encouraged to join the dub mailing list for calendar of events. Credit/no-credit only. Offered: AWSp.

HCDE 530 Computational Concepts in HCDE (4) Introduces basic computational concepts and programming skills needed to work with interactive systems in HCDE. Draws on topics such as log analysis, visualization, prototyping, and data mining. Students analyze data to inform user research and design.

HCDE 532 Web Design Studio (2) Provides an overview of basic principles and practices of professional web site design and programming. Students gain hands-on experience with designing and building a successful website using industry standard techniques. For students planning to take HCDE 535 or HCDE 537 without previous programming experience.

HCDE 534 Designing a Human Centered Venture (4) Explores the planning of a new venture related to human-centered design. Examines relevant topics, such as team formation, user and market research, value creation, and the iterative demand planning for a new venture.

HCDE 536 Interaction Design and Prototyping (4) Investigates advanced topics in the theory and practice of interaction design, using a project-oriented approach. Develops expertise in design, development, and critique of solutions in online and mobile platforms. Examines issues such as interaction theory, requirements and specifications, design language, prototyping, and presentation of projects. Prerequisite: HCDE 518.

HCDE 537 User-Centered Web Design (4) Theory and practice of the user-centered web development process. Principles and processes for documenting and implementing various development stages, including requirements analysis, user needs analysis, information architecture, prototyping, mock-ups, and production. Prerequisite: HCDE 518.

HCDE 539 Physical Computing and Prototyping (4) Reviews fundamentals of designing and prototyping human-centered interactive systems and environments that include software and hardware components. Students build projects using electronic devices and fabrication tools. Provides hands on experience in a project-based, studio environment.

HCDE 541 Grant Writing for Career Development (4) Introduces the steps on compiling a grant proposal, with an emphasis on increasing research fluency. Provides hands-on experience with communicating research topics, particularly for the purpose of applying for grant support.

HCDE 542 Theoretical Foundations in Human Centered Design and Engineering (4) Examines theories that inform work in human centered design and engineering, focusing particularly on theories of communication and interaction design. Topics include complexities of interaction as it is configured in different theoretical frameworks, implications of these different configurations, and why these differences matter to people engaged in professional practice/research.

HCDE 543 Empirical Traditions in Human Centered Design and Engineering (4) Introduces empirical traditions that inform research and practice in the field of human centered design and engineering. Topics include epistemological assumptions underlying research approaches and a survey of empirical methods.

HCDE 544 Research Methods I (4) Introduces experimental, quasi-experimental, and related research methods in human centered design and engineering. Examines the relationship between theory and research, hypothesis testing, experimental designs, modes of observation, sampling, validity, and data analysis and interpretation. Students undertake an intensive research project. Prerequisite: Introductory statistics course.

HCDE 545 Research Methods II (4) Provides hands-on experience with qualitative research methods with particular emphasis on how ethnographic fieldwork methods (e.g., interviewing and participant observation) are used in human centered design and engineering. Students undertake an intensive research project at a field site, collecting and analyzing data.

HCDE 546 Design Thinking (4) Examines how design is enacted within disciplines, exploring commonalities and differences in design practices. Surveys empirical studies of design practices and approaches.

HCDE 547 Academic Development Seminar (1, max. 10) Addresses academic research and professional competencies necessary for doctoral students. Credit/no-credit only.

HCDE 548 Advanced Topics in Human Centered Design and Engineering (4, max. 20) In-depth examination of a specialized topic in an emerging area of human centered design and engineering.

HCDE 561 Advanced Japanese for Technical and Business Professions 1 (4) Tsutsui Focuses on reading skills (e.g., vocabulary, phrases, grasping main ideas and paragraph structure) and familiarizes students with Japanese web sites and web reading tools. Students also develop the skills necessary for giving oral reports on technical/business articles. Teaches skills for writing summaries. Prerequisite: HCDE 463. Offered: A.

HCDE 562 Advanced Japanese for Technical and Business Professions 2 (4) Tsutsui Further develops reading skills. Students read more extensively, expand their technical/business vocabulary, and improve skills for grasping main ideas quickly. Students also improve oral skills for report giving and discussion and writing skills for emails and summaries. Laboratory work is required. Prerequisite: HCDE 561. Offered: W.

HCDE 563 Advanced Japanese for Technical and Business Professions 3 (4) Tsutsui Integrates the reading, oral, and writing skills acquired through the first-year and second-year technical/business Japanese sequences. Students

work on research projects, give formal presentations, and submit project reports. Substantial individual readings are involved as well as individual conferences with the instructor on research methods, readings, and report drafts. Prerequisite: HCDE 562. Offered: Sp.

HCDE 592 Capstone Planning (1) Helps students define capstone topics, form project teams, and develop initial concepts, deliverables, and schedules for the HCDE capstone project.

HCDE 593 Capstone (4) Capstone design experience. Integration of knowledge and skills acquired during program into one project. Prerequisite: HCDE 518; HCDE 592.

HCDE 596 Directed Research in Human Centered Design and Engineering (1-5, max. 18) Students, working in teams under the supervision of individual faculty members, review relevant literature, pose research questions, design and conduct studies, and present the results in papers prepared either for submission to a professional journal or for presentation at a professional conference. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

HCDE 597 Approaches to Teaching Technical Communication (1-2, max. 2) Examines theory and practice of teaching engineering undergraduate students written and oral technical communication competencies, strategies for developing teaching skills and philosophies. Teaching seminar for instructors of HCDE 231 and HCDE 333. Prerequisite: concurrent teaching appointment or permission of instructor. Credit/no-credit only. Offered: AWSpS.

HCDE 599 Special Projects (1-5, max. 5) Written report required. Prerequisite: permission of graduate adviser or committee chair. Offered: AWSpS.

HCDE 600 Independent Study or Research (*-)

HCDE 601 Internship (2-10, max. 10) Written report required. Prerequisite: permission of committee chair. Offered: AWSpS.

HCDE 700 Master's Thesis (*-) Prerequisite: permission of thesis adviser. Offered: AWSpS.

HCDE 800 Doctoral Dissertation ([1-10]-) Prerequisite: permission of thesis adviser. Credit/no-credit only. Offered: AWSpS.

Industrial and Systems Engineering

G-7 Mechanical Engineering Building

Industrial and systems engineering (ISE) prepares students for careers in an increasingly diverse, dynamic, and technological world. Industrial engineers focus on the integration of humans, machines, materials, and information to achieve optimum performance of operating systems. This focus on the "big picture" makes industrial and systems engineering one of the most people-oriented and customer-focused of the engineering disciplines.

Industrial and systems engineering involves the study of engineering design, system integration, optimization, quality and reliability, supply chain management, virtual reality, and manufacturing.

Being an industrial engineer is about choices. Industrial engineers have the opportunity to work in many different kinds of businesses and nonprofit organizations. The most distinctive aspect of industrial engineering is the flexibility it offers. Many industrial engineers eventually move into supervisory or management positions where they continue to draw on their technical background. Demand for industrial engineers has grown dramatically over the past two decades.

UNDERGRADUATE PROGRAM

Adviser

G7 Mechanical Engineering, Box 352650

(206) 543-5041

leadvise@uw.edu

Industrial and Systems Engineering offers the following program of study:

- The Bachelor of Science in Industrial Engineering degree (BSIE)

Bachelor of Science in Industrial Engineering

Suggested First- and Second-Year College Courses: MATH 124, MATH 125, MATH 126; CHEM 142, CHEM 152; PHYS 121, PHYS 122, PHYS 123; English composition; courses to fulfill VLP and I&S requirements.

Department Admission Requirements

Applicants are considered in three groups -- Freshman Admission, Early Admission, and Upper-Division Admission. Admission is competitive, and completion of the minimum requirements does not necessarily guarantee admission. Applicants not admitted under one admission group may subsequently apply to another admission group after completing more coursework. All applicants have the right to petition and appeal the department's admission decision.

Freshman Admission

The UW Industrial and Systems Engineering program enrolls up to 10 percent of its incoming class directly out of high school, prior to completion of university-level prerequisites. Freshman applicants to the UW who have listed industrial and systems engineering as their intended major are automatically considered. Competitive applicants have taken or are taking calculus and at least one year of laboratory science (preferably physics). Admission is for autumn quarter only.

Early Admission

1. *Course Requirements:* MATH 124, MATH 125, MATH 126; 10 credits of physical-science courses plus accompanying laboratory, at the level of PHYS 121, PHYS 122, PHYS 123, or CHEM 142, CHEM 152; and 5 credits of English composition. All courses must be completed prior to the July 1 application deadline. Admission is for autumn quarter only.
2. Applicants must be currently enrolled at the UW and must have completed a minimum of 15 credits taken in residence at the UW.
3. *Grade Requirements:* Minimum 2.0 grade in each prerequisite course and a minimum 2.50 overall GPA.

Upper-Division Admission

1. *Course Requirements:* MATH 124, MATH 125, MATH 126; PHYS 121, PHYS 122, PHYS 123; CHEM 142, CHEM 152; and at least 5 credits of English composition.
2. 45 credits completed by application deadline. Applications are accepted for autumn quarter admission only. Application deadline is July 1.

Graduation Requirements

180 credits as follows:

General Education Requirements (91 credits)

1. *Written and Oral Communications (12 credits):* 5-credits English composition from the University-approved list; HCDE 231; HCDE 333 (or department-approved alternative).

2. *Visual, Literary, & Performing Arts (VLP) and Individuals & Societies (I&S) (30 credits):* Minimum 10 credits in each area
3. *Natural World (49 credits)*
 - a. *Mathematics (24 credits):* MATH 124, MATH 125, MATH 126, MATH 307, MATH 308; IND E 315
 - b. *Science (25 credits):* CHEM 142, CHEM 152; PHYS 121, PHYS 122, PHYS 123

Major Requirements (89 credits)

1. *Engineering Fundamentals (28 credits):* CSE 142, MSE 170, A A 210, E E 215, CEE 220, M E 230, IND E 250
2. *Industrial Engineering Core (24 credits):* IND E 316, IND E 337, IND E 410, IND E 411, IND E 494, IND E 495
3. *Technical Electives (37 credits):* At least one class from approved courses in each of the following areas: operations research, statistics, production/operations, design, and general engineering. See adviser for list of approved technical electives.
4. *Grade Requirements:* Minimum 2.00 cumulative GPA in all engineering courses with no grade below 1.0 in these courses.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Industrial and systems engineering graduates are proficient in mathematics, sciences, engineering fundamentals, and the use of computers; use a broad knowledge of industrial engineering methods and tools associated with operations research, quality engineering, and human factors; apply engineering design methods and tools to represent, integrate, and solve problems, including the ability to recognize problem context and integrate knowledge and skills from allied disciplines; communicate effectively; and possess the professional characteristics of leadership, ethics, and the ability to motivate and work with others.

IE prepares students to serve as the efficiency experts of organizational change. Students are encouraged to take a systems view when solving problems, recognize the organizational and societal impact of technical decisions, develop good oral and written communication skills, participate in teams, and take initiative. Industrial engineers draw upon specialized knowledge and skills in math, the physical sciences, and social sciences together with the principles and methods of engineering analysis and design.

- *Instructional and Research Facilities:* Industrial and systems engineering provides designated computing facilities for undergraduate students. Research facilities include the Human Interface Technology Laboratory, the Production Systems Laboratory, the Manufacturing Laboratory, and the Center for Engineering Learning and Teaching.
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major).. See adviser for requirements.
- *Research, Internships, and Service Learning:* Students have the opportunity to pursue cooperative and internship programs at the College level through the College's Engineering Co-op Program (www.engr.washington.edu/coop/).
- *Department Scholarships:* ISE offers scholarships to outstanding undergraduate students. All applicants to the BSIE program are considered for these scholarships. Awards are made based on both merit and financial need.

- *Student Organizations/Associations:* Students are actively involved in the UW student chapter of the Institute of Industrial Engineers (IIE); the ISE National Honor Society, Alpha Pi Mu; and the IE Student Advisory Board.

GRADUATE PROGRAM

Graduate Program Coordinator

G7 Mechanical Engineering, Box 352650

(206) 543-5041

leadvise@uw.edu

The Department of Industrial and Systems Engineering offers graduate programs leading to the Master of Science in Industrial Engineering (M.S.I.E.) and Doctor of Philosophy (Ph.D.). Graduate courses and research programs are offered in manufacturing, operations research, large-scale assembly, experimental statistics, production planning, quality control, reliability engineering, computer-integrated manufacturing, simulation, supply chain, human factors, virtual reality, and human interface technology.

Master of Science in Industrial and Systems Engineering

Admission Requirements

For consideration, applicants are expected to have a bachelor's degree in engineering, mathematics, or science, with a minimum 3.00 GPA.

Degree Requirements

41 credits, as follows:

Coursework Only Program

1. 21 graded credits in industrial engineering (500 level or above) courses
2. 17 graded credits in technical electives (a maximum of 9 technical elective credits may be taken at the 400 level)
3. 3 credits of industrial engineering seminar: IND E 591, IND E 592, IND E 593

Thesis Program

1. 18 graded credits in industrial engineering (500 level or above) courses
2. 11 graded credits in technical electives (a maximum of 9 technical elective credits may be taken at the 400 level)
3. 9 credits of master's thesis (IND E 700)
4. 3 credits of industrial engineering seminar: IND E 591, IND E 592, IND E 593

Doctor of Philosophy

Admission Requirements

For consideration to the Ph.D. in Industrial Engineering degree, applicants should have, or be close to completing, their master's degree in any discipline of engineering when applying, with a minimum 3.00 GPA.

Degree Requirements

90 credits, as follows:

1. 3 credits of industrial engineering graduate seminar: IND E 591, IND E 592, IND E 593 (1, 1, 1)
2. 60 credits of coursework, with at least 18 credit hours of 500-level courses. A master's degree from the UW or another institution may be used as a substitute for 30 of these 60 credits.
3. General examination

4. Dissertation: 27 credits of dissertation (IND E 800) over a period of at least three quarters.
5. Final examination

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crsat/.

IND E 101 Introduction to Industrial Engineering (1) I&S Examines the basic concepts and methods of industrial engineering through team-based hands-on activities. Explores the profession of industrial engineering. Discusses resources available to industrial engineering students at the University of Washington. Offered: A.

IND E 250 Fundamentals of Engineering Economy (4) NW Chaovalitwongse Basics of industrial cost analysis and accounting. Application of interest computations to engineering decision making. Analysis of engineering alternatives based on use of interest computations, valuations, depreciation, and cost estimates. Offered: ASpS.

IND E 315 Probability and Statistics for Engineers (3) NW Boyle, Johnson, Kapur, Mastrangelo Application of probability theory and statistics to engineering problems, distribution theory and discussion of particular distributions of interest in engineering, statistical estimation and data analysis. Illustrative statistical applications may include quality control, linear regression, and analysis of engineering data sets. Prerequisite: either MATH 136, MATH 307, or AMATH 351. Offered: AWSpS.

IND E 316 Design of Experiments and Regression Analysis (4) NW Kapur Introduction to the analysis of data from planned experiments. Analysis of variance for multiple factors and applications of orthogonal arrays and linear graphs for fractional factorial designs to product and process design optimization. Regression analysis with applications in engineering. Prerequisite: IND E 315. Offered: jointly with STAT 316; W.

IND E 321 Statistical Quality Control (4) Boyle, Mastrangelo Design of quality control and assurance systems. Statistical Process Control (SPC) design and implementation. Control charts for attributes and variables. Process capability analysis and process improvement techniques. Statistical tolerance design. Quality management and recent developments. Prerequisite: IND E 315. Offered: W.

IND E 337 Introduction to Manufacturing Systems (4) Storch Description of manufacturing systems. Includes discussion of current trends in manufacturing. Introduces process flow analysis, manufacturing organizations including job-shop, assembly lines, and group technology, manufacturing inventory philosophies (just-in-time, MRP, OPT), work environment, and work simplification.

IND E 351 Human Factors in Design (4) Boyle Engineering considerations of the abilities and limitations of the human aspect in the design of operational systems and components. Functional, psychological, physiological, and environmental considerations. Offered: Sp.

IND E 410 Linear and Network Programming (4) Gbate, Zabinsky Modeling and optimization of linear network problems. Topics include: optimization of linear systems, mathematical model design, simplex method, primal-dual algorithms, parametric programming, goal programming, network problems and algorithms, and PERT/CPM. Prerequisite: either MATH 136 or MATH 308; CSE 142. Offered: A.

IND E 411 Stochastic Models and Decision Analysis (4) Gbate, Zabinsky Stochastic systems analysis to industrial engineering problems. Topics include: Markov chains, queueing theory, queueing applications, and decision analysis. Prerequisite: IND E 315; IND E 410. Offered: W.

IND E 412 Integer and Dynamic Programming (4) Gbate, Zabinsky Modeling and optimization of problems and dynamic programming approach to optimization. Topics in-

clude: integer programming formulation techniques, linear and Lagrangian relaxation, branch-and-bound and cutting-plane methods, integer programming applications, and dynamic programming. Prerequisite: IND E 411. Offered: Sp.

IND E 424 Simulation (4) Beamon Discrete-event simulation methodology emphasizing model formulation and construction with modern simulation languages and environments, statistical basis for evaluating model results, design and management of simulation projects. Application to manufacturing, retail, and service industries. Prerequisite: IND E 337, which may be taken concurrently; IND E 411. Offered: W.

IND E 426 Reliability Engineering and System Safety (4) Kapur Reliability and system safety measures. Life distributions and their applications in reliability. System reliability models. Design by reliability and probabilistic design. Reliability and safety analysis through FMECA and FTA. Reliability estimation and measurement by testing for binomial, exponential, and Weibull distributions. Prerequisite: IND E 315. Offered: Sp.

IND E 430 Manufacturing Scheduling and Inventory (4) Beamon Manufacturing scheduling and inventory control for different work organizations. Coverage of workforce scheduling, job- and flow-shop scheduling and order release, production line balancing, MRP II, Lean Production, and data management. Particular attention to computer-based aspects of management and scheduling for manufacturing and service industries. Prerequisite: IND E 337; IND E 410, both of which may be taken concurrently. Offered: A.

IND E 439 Plant Layout and Material Handling (4) Beamon Design of new or expanding industrial facilities. Consideration of work organization and layout. Study of basic design of plant systems, including plumbing, electrical, HVAC, illumination, acoustics, and waste handling. In depth coverage of material handling system design and equipment choices. Prerequisite: IND E 410 which may be taken concurrently. Offered: A.

IND E 455 User Interface Design (4) Furness Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interface, and research methodologies are discussed. Offered: jointly with HCDE 455; A.

IND E 470 Systems Engineering (4) Concepts of system approach, system hierarchies, functional analysis, requirements, trade studies, and other concepts used to define and integrate complex engineering systems. Introduction to risk analysis and reliability, failure modes and effects analysis, writing specifications, and lean manufacturing. Offered: jointly with A A 470.

IND E 494 Design in the Manufacturing Firm (4) Mastrangelo Engineering design in manufacturing firms is presented. Topics include design methodology, concurrent engineering, and project management. Focus on the relationship between product design and manufacturing (design for production and assembly). Prerequisite: IND E 337. Offered: W.

IND E 495 Industrial Engineering Design (4) Mastrangelo Capstone senior design project involving identification and synthesis of industrial engineering skills. Students apply their knowledge of industrial engineering to actual industrial problems. Prerequisite: IND E 494. Offered: Sp.

IND E 496 Technology-Based Entrepreneurship (3) Furness Concentrates on hands-on aspects of innovation and entrepreneurial enterprise development. Examines relationships between innovation, iterative prototyping, and marketing testing. Students identify market opportunities, create new technology-based products and services to satisfy customer needs, and construct and test prototypes. Offered: jointly with M E 496.

IND E 498 Special Topics in Industrial Engineering (1-5, max. 9) Lecture and/or laboratory.

IND E 499 Special Projects (2-5, max. 12)

IND E 508 Stochastic Processes in Engineering (3) Non-measure theoretic introduction to stochastic processes. Topics include Poisson processes, renewal processes, Markov and semi-Markov processes, Brownian motion, and martingales, with applications to problems in queuing, supply chain management, signal processing, control, and communications. Prerequisite: E E 505. Offered: jointly with E E 508.

IND E 512 Introduction to Optimization Models (3) *Chao-lit Wongse, Zabinsky* Presents optimization models that are used in applications such as industrial engineering, production, transportation, financial investment, health-care systems, and environmental ecology. Problems span a variety of continuous and integer optimization models, with discussion of multi-objectives and incorporating randomness into optimization models.

IND E 513 Linear Optimization Models in Engineering (3) *Ghate, Zabinsky* Advanced formulation techniques to expand applications of linear programming to large-scale models. Appreciation of role of optimization models in engineering applications through introduction of techniques such as decomposition. Individual engineering projects. Prerequisite: IND E 410 and MATH 308 or permission of instructor.

IND E 515 Fundamentals of Optimization (5) Maximization and minimization of functions of finitely many variables subject to constraints. Basic problem types and examples of applications; linear, convex, smooth, and nonsmooth programming. Optimality conditions. Saddlepoints and dual problems. Penalties, decomposition. Overview of computational approaches. Prerequisite: linear algebra and advanced calculus. Offered: jointly with AMATH 515/MATH 515.

IND E 516 Applications of Optimization in Engineering Design (3) *Zabinsky* Discussion of issues arising in applications of optimization to engineering design. Emphasis on formulating problems and selecting appropriate solution techniques. Random search methods for problems otherwise computationally intractable. Individual projects in engineering optimal design. Prerequisite: AMATH 515/MATH 515/IND E 515 and MATH 328 or permission of instructor.

IND E 521 Quality Control in Manufacturing (3) *Mastrangelo* Design of quality control systems in manufacturing. Use of advanced statistical process controls, sampling inspection techniques, process capability, and other statistical tools. Also includes vendor sourcing and control tools, methods for establishing specifications and tolerances, quality function deployment, and other quality control techniques. Prerequisite: graduate standing.

IND E 524 Robust Design and Quality Engineering (3) *Kapur* Introduction to robust design and quality engineering. Applications of design of experiments for product and process design optimization. Experimental design using orthogonal arrays and linear graphs. System models using Chebyshev's orthogonal polynomials. Robustness in design and quality improvement for complex systems including Taguchi methods for quality engineering. Prerequisite: IND E 316 or equivalent.

IND E 526 Reliability in Product Design and Testing (3) *Kapur* Product assurance including reliability and quality engineering. Reliability design, measurement, and optimization. Advanced topics in probabilistic design. Design of reliability test plans and analysis of test data. Design of reliability programs and their management. Prerequisite: graduate standing.

IND E 531 Computer Integrated Manufacturing (3) Design and analysis of advanced manufacturing systems from a strategic as well as technological perspective. Focus on information generation, management, and coordination aspects of complex manufacturing organizations. Examination

of system integration alternatives and consequences for relationships with customers and suppliers. Prerequisite: IND E 431 or equivalent. Offered: jointly with M E 505.

IND E 535 Engineering Simulation (3) *Beamon* Advanced applications of discrete event, continuous, and combined discrete-continuous simulation modeling, detailed examination of fundamental computer programming concepts underlying the design and development of simulation languages, variance reduction techniques, and output analysis for various engineering, service systems, and manufacturing applications. Prerequisite: IND E 424 or equivalent.

IND E 537 Introduction to Manufacturing Systems (3) Description of manufacturing systems. Includes discussion of current trends in manufacturing, especially lean principles. Introduces process flow analysis, manufacturing organizations including job-shop, assembly lines, and group technology, manufacturing inventory philosophies (just-in-time, MRP, OPT), work environment, and work simplification. Offered: jointly with ENV H 537; A.

IND E 538 Large Assembly Manufacturing Systems (3) *Storch* Presents principles of group technology, zone construction, product-oriented work breakdown structure. Application to shipbuilding, aircraft, rail-car, and truck manufacture. Techniques of production planning, scheduling and control, organization, and plant layout, as well as the role of the computer, are studied in detail. Prerequisite: graduate standing.

IND E 543 Virtual Interface Technology (1/3, max. 3) *Furness* Explores advanced concepts and technologies for interfacing humans to complex machines, with focus on virtual interfaces. Interface design principles reviewed from psychological and technological perspectives. Hardware, software, and mindware aspects of virtual interfaces investigated. Applications postulated and designed. Prerequisite: graduate standing in College of Engineering or permission of instructor.

IND E 544 Virtual World Development (3) *Furness* Software implementation, physiological and cognitive constraints, and the mathematics and philosophy of inclusion. Development of software tools, editing and interaction techniques, disposition of virtual world entities, nature of space, situated knowledge, divergent models for multiple participants, experiential mathematics, cyberspace. Cultural, legal, moral, ethical issues. Prerequisite: IND E 543 or permission of instructor.

IND E 545 User-Centered Design (4) Explores the user-centered design paradigm from a broad perspective, emphasizing how user research and prototype assessment can be integrated into different phases of the design process. Students learn to think like a user-centered designer and carry out activities that are key to user-centered design. Offered: jointly with HCDE 518; W.

IND E 546 Analytical Methods in Transportation I (3) *Boyle* Application of analytical and statistical methods to issues in transportation and driving. Analysis of probability distributions that describe variables. Development of statistical models for predicting transportation phenomena. Elementary sampling theory hypothesis testing, regression analysis, time series analysis, applied to transportation data. Prerequisite: either IND E 315, MATH 390/STAT 390, or equivalent. Offered: jointly with CEE 584; W.

IND E 549 Human Factors in Engineering Design (3) Engineering considerations of the abilities and limitations of the human aspect in the design of operational systems and components. Functional, psychological, physiological, and environmental considerations. Covers traditional human factors material with a project-based focus/emphasis. Offered: jointly with ENV H 549; Sp.

IND E 551 Elements of Dynamic Enterprise Modeling (3) Introduces practical techniques for modeling, analyzing, and implementing real-time enterprise control systems in application area such as manufacturing, supply chain flow control, and logistics decision schemas. Uses basic mathematical

tools supported with a symbolic algebra software tool. Requires basic computer skills. Offered: A.

IND E 552 Introduction to Real-Time Enterprise Control (3) Provides students with principles, designs, techniques, and algorithms for synthesizing real-time control of enterprise processes, using hybrid systems theory. Application areas include supply chain flow control, logistics decision schemas, transportation systems, dynamic reconciliation procedures, minimum cost production, and maximum profit price/ordering strategies. Prerequisite: IND E 551, or permission of instructor. Offered: W.

IND E 553 Modeling and Automation of Enterprise Processes (3) Third course in a three-course sequence. Provides architecture, algorithms, and procedures for designing and implementing enterprise control policies for automating and enhancing enterprise functionality. Emphasis on hybrid system theories. Prerequisite: IND E 552, or permission of instructor. Offered: Sp.

IND E 564 Recognition of Health and Safety Problems in Industry (2) Develops skills in occupational health and safety hazard recognition in a variety of important Northwest industries. Focuses on process understanding and hazard recognition skills during walk-through inspections of several local facilities, stressing a multidisciplinary approach. Offered: jointly with ENV H 564; A.

IND E 566 Introduction to Ergonomics (3) Basic principles of ergonomics in work environment applied to problems of worker and management. Topics include measurement of physical work capacity, problems of fatigue and heat stress, applied biomechanics, worker-machine interactions and communication, design of displays and controls. Prerequisite: basic human physiology or permission of instructor. Offered: jointly with ENV H 566/NSG 508; W.

IND E 567 Applied Occupational Health and Safety (3) Application of occupational safety and health principles. Student teams perform evaluations, assess production methods/processes and exposures, health and safety procedures and programs, and develop engineering and administrative controls. Students perform on a consulting project with a local company including budgeting, project reporting, and presentation. Offered: jointly with ENV H 559/NSG 505; Sp, even years.

IND E 569 Occupational Biomechanics (4) Lectures and laboratories address human occupational biomechanical and physiological limits and measurement, analysis, and modeling techniques that are used by ergonomists for design of safe, healthful, and productive physical work. Prerequisite: ENV H 566 or permission of instructor. Offered: jointly with ENV H 569; Sp, even years.

IND E 570 Supply Chain Systems (3) *Beamon* Develops concepts related to the design, evaluation, and performance of supply chain systems through an exploration of contemporary practice and research, focusing on current issues, analytical frameworks, and case studies. Prerequisite: IND E 315 or equivalent.

IND E 571 Humanitarian Logistics (3) *Beamon* Explores the basic challenges, requirements and techniques for managing logistics operation within the domain of humanitarian relief. Students work in multi-disciplinary teams, applying course concepts and techniques to theoretical and real world humanitarian crises.

IND E 575 Inventory Management (5) *Jain* Examines modeling and analysis of inventory flow in supply chains in order to improve service and decrease cost. Covers tools and methods for making long-term and short-term inventory related decisions for items with different demand and supply characteristics. Topics include forecasting, production planning, deterministic and stochastic inventory models, and supply management. Offered: jointly with SCTL 503; W.

IND E 576 Facility Design and Operations Management (5) *Heim* Introduces the fundamental principles, concepts, and procedures for designing and managing supply-chain networks of factories, suppliers, warehouses, and distribu-

tion centers. Students learn to use engineering systems design methodologies and software to construct appropriately detailed quantitative models, evaluate alternative supply network configurations, and assess the management of their operations. Offered: jointly with SCTL 504; Sp.

IND E 581 Navigating the Business Environment (3) *Mastrangelo* Covers the fundamentals of finance and accounting, marketing, strategy, and business communication as well as the skill of identifying and influencing the key decision maker. Offered: A.

IND E 582 Technical Leadership (3) *Mastrangelo* Includes how to motivate, reach consensus, work virtually, recruit, and work with engineers from different cultures. Offered: W.

IND E 583 Decision Analysis in Engineering (3) *Mastrangelo* Examines multi-criteria decision tools involving qualitative and quantitative methods. Covers decision trees, subjective probability, utility and value theories, goals and objectives, risk, optimization, and simulation. Includes case studies in decision and systems analysis. Offered: Sp.

IND E 584 Project Performance (3) *Mastrangelo* Examines the fundamentals of project performance and application of systems engineering theory, concepts, and tools and techniques to plan, manage, and accomplish organizational objectives in a project framework. Also considers the critical roles leadership and team development plays in successful completion of projects. Offered: S.

IND E 591 Seminar (1-) Topics of current interest in industrial engineering. Prerequisite: graduate standing in Industrial Engineering or permission of instructor. Credit/no-credit only. Offered: A.

IND E 592 Seminar (-1-) Topics of current interest in industrial engineering. Prerequisite: graduate standing in Industrial Engineering or permission of instructor. Credit/no-credit only. Offered: W.

IND E 593 Seminar (-1) Topics of current interest in industrial engineering. Prerequisite: graduate standing in Industrial Engineering or permission of instructor. Credit/no-credit only. Offered: Sp.

IND E 595 Global Integrated Systems Engineering ([4]-6-, max. 10) Covers systems engineering, project management, finance, economics, and a seminar on global technical topics. Offered: jointly with A A 595; AW.

IND E 596 Global Integrated Systems Engineering Project (3) *Mastrangelo* Project-based systems design course. Prerequisite: A A/INDE 595. Offered: jointly with A A 596; Sp.

IND E 599 Special Topics in Industrial Engineering (1-5, max. 9) Prerequisite: permission of supervisor.

IND E 600 Independent Study or Research (*-)

IND E 700 Master's Thesis (*-)

IND E 800 Doctoral Dissertation (*-)

Materials Science and Engineering

302 Roberts

Materials science and engineering is an interdisciplinary field that addresses the structure, processing, and property relationships in materials for engineering applications. Basic principles of chemistry and physics are applied to provide an understanding of the structure of materials and the manner in which the structure determines the properties. Scientific processing methods are then applied to yield the necessary properties, which then can be integrated with, and designed to accommodate the needs of, modern technology.

Advances in materials enable technological progress in many fields. Historically, this connection between materials and technology has been so intimate that major periods in civilization have been named after the dominant material used in that era (e.g., Bronze Age, Iron Age). In the past few decades, at the core of the progress in such diverse fields as transportation, communication, electronics, energy and environment are significant advances in materials. Materials science and engineering is a broad and growing discipline.

Materials Science and Engineering at the University of Washington has recently experienced rapid expansion into new research areas, including polymers, hybrids, biomaterials, biomimetics, nanomaterials, photonic and magnetic materials. These areas have applications in current and emerging industries, and complement existing strength in ceramics, metals, electronic materials, and composites.

UNDERGRADUATE PROGRAM

Adviser

302A Roberts, Box 352120

(206) 543-2600

mse@uw.edu

The Department of Materials Science and Engineering offers the following programs of study:

- The Bachelor of Science in Materials Science and Engineering degree
- The Bachelor of Science in Materials Science and Engineering degree with an option in nanoscience and molecular engineering
- A minor in materials science and engineering

Bachelor of Science in Materials Science and Engineering

Suggested First- and Second-Year College Courses: MATH 124, MATH 125, MATH 126; PHYS 121, PHYS 122, PHYS 123; CHEM 142, CHEM 152; English composition; CSE 142 or AMATH 301; MSE 170.

Department Admission Requirements

Applicants are considered in three groups - Direct Freshman Admission, Early Admission, and Upper-Division Admission. Admission is competitive. Completion of minimum requirements described below does not guarantee admission. Applicants not admitted under one admission group may subsequently apply to another admission group after completing more coursework. All applicants have the right to appeal the department's admission decision.

Nanoscience and Molecular Engineering Option (NME): Admission to the NME option for MSE majors is by self-selection and normally occurs upon completion of NME 220, all MSE prerequisites, and formal admission to the MSE Department. A small number of advanced students may be admitted into the NME option upon application to the department. Admission is based on the student's academic record, including grades in NME 220 and any MSE courses already taken and on prior experience/work in the field of nanoscience and/or molecular engineering. Students applying for the NME option should indicate that interest in the Materials Science and Engineering application and discuss their interests and background in the essay.

Direct Freshman Admission

1. Open to freshman students formally admitted to the UW
2. High school GPA of 3.70 or higher; SAT (or equivalent) scores of 1300 or higher
3. Indication on the application that Materials Science and Engineering is the first choice for the major

Early Admission

1. *Course Requirements:* MATH 124, MATH 125, MATH 126; 10 credits of physical science at the level of PHYS 121, PHYS 122, PHYS 123, or CHEM 142, CHEM 152, or above; 5 credits of English composition. All courses must be completed prior to the July 1 application deadline.
2. Applicants must be currently enrolled at the UW and must have completed a minimum of 15 credits taken in residence at the UW. Applications are accepted for autumn quarter only. Application deadline is July 1.
3. *Grade Requirements:* Minimum 2.0 grade in each course required for admission and minimum 2.50 cumulative GPA for all courses required for admission

Upper-Division Admission

1. *Course Requirements:* MATH 124, MATH 125, MATH 126, MATH 307; PHYS 121, PHYS 122; CHEM 142, CHEM 152; CSE 142 or AMATH 301; MSE 170; 5 credits of English composition
2. 64 credits completed by application deadline. Applications are accepted for autumn quarter only. Application deadline is July 1.
3. *Grade Requirements:* Minimum 2.0 grade in each course required for admission and minimum 2.50 cumulative GPA for all courses required for admission.

Graduation Requirements

Minimum 180 credits to include:

General Education Requirements (87-92 credits)

1. *Written and Oral Communications:* 8 credits, to include one 5-credit English composition course from the University list; HCDE 231. University-required 4 additional writing credits are met by major core courses.
2. *Visual, Literary, & Performing Arts (VLPA), and Individuals & Societies (I&S) (24 credits):* Minimum 10 credits required in each area.
3. *Natural World (55-60 credits):*
 - a. *Mathematics (24-25 credits):* MATH 124, MATH 125, MATH 126, MATH 307, MATH 308 (or MATH 318); one from MATH 309, MATH 324, IND E 315, or STAT 390
 - b. *Science (31-35 credits):* CHEM 142, CHEM 152; PHYS 121, PHYS 122, PHYS 123; two additional natural science courses from the department's approved list

Major Requirements (93credits)

1. *Engineering Fundamentals (24 credits):* CSE 142 or AMATH 301, MSE 170, A A 210, CEE 220; two of the following: E E 215, M E 123, A A 260 or CHEM E 325, IND E 250, CHEM E 220
2. *Materials Science and Engineering Core (53 credits):* MSE 310, MSE 311, MSE 312, MSE 313, MSE 321, MSE 322, MSE 331, MSE 333, MSE 342, MSE 351, MSE 352, MSE 362, MSE 399, MSE 431, MSE 442, MSE 491, MSE 492, MSE 499
3. *Technical Electives (16 credits):* See department advising office for list of acceptable courses.
4. *Grade Requirement:* Minimum 2.00 departmental cumulative GPA

Major Requirements for Nanoscience and Molecular Engineering Option (97 credits)

1. *Engineering Fundamentals (24 credits):* CSE 142 or AMATH 301, MSE 170, A A 210, CEE 220; two of the following: E E 215, M E 123, A A 260 or CHEM E 325, IND E 250, CHEM E 220
2. *Materials Sciences and Engineering Core (53 credits):* MSE 310, MSE 311, MSE 312, MSE 313, MSE 321, MSE 322, MSE 331, MSE 333, MSE 342, MSE 351, MSE 352, MSE 362, MSE 399, MSE 431, MSE 442, MSE

- 491, MSE 492, MSE 499. The senior project (MSE 499) must be in an NME area.
3. *Nanoscience and Molecular Engineering Courses* (20 credits): NME 220, NME 221, NME 321, NME 421; additional approved nanoscience and molecular engineering electives to reach 20 credits. See adviser for list of approved electives.
4. *Grade Requirements*: Minimum 2.00 departmental cumulative GPA

Minor

Minor Requirements

30 credits as follows: MSE 170, MSE 321, MSE 322, MSE 331, MSE 333, MSE 342, MSE 351, MSE 352, MSE 362. Minimum 2.0 grade of 2.0 required for each course.

The following courses serve as prerequisites for the departmental courses in the minor: MATH 124, MATH 125, MATH 126, MATH 307, and MATH 308 or MATH 318; CHEM 142 or CHEM 145, CHEM 152 or CHEM 155; PHYS 121, PHYS 122, PHYS 123; MSE 170; English composition. Students should take these courses before beginning the minor program.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes*: Undergraduate students are offered both broad core and in-depth courses. The broad core provides the needed background and understanding of all types of engineering materials, including metals, ceramics, polymers, electronic materials, and composites. The curriculum provides an opportunity to use basic knowledge in science and engineering fundamentals to synthesize and design materials for engineering applications. The undergraduate curriculum emphasizes hands-on experience, oral and written communication, and teamwork, and encourages participation in research. Graduates with a degree in materials science and engineering find employment in a broad range of industries including aerospace, biomedical, electronic manufacturing, materials processing, and transportation.

The Bachelor of Science in Materials Science and Engineering program is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: (410) 347-7700, and the department has adopted the following student outcomes:

- An ability to apply knowledge of mathematics, science and engineering
 - An ability to design and conduct experiments, as well as to analyze and interpret data
 - An ability to design a system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability
 - An ability to function on multi-disciplinary teams
 - An ability to identify, formulate and solve engineering problems
 - An understanding of professional and ethical responsibilities
 - An ability to communicate effectively
 - The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context
 - A recognition of the need for, and an ability to engage in life-long learning
 - Knowledge of contemporary issues
 - An ability to use the techniques, skills and modern engineering tools necessary for engineering practice
- An ability to apply advanced science (such as chemistry and physics) and engineering principles to ceramics, metals, polymers and composite materials systems
 - An integrated understanding of the scientific and engineering principles underlying the four major elements of the field: structure, properties, processing and performance related to material systems
 - An ability to apply and integrate knowledge from each of the four major elements of the field to solve materials selection and design problems
 - An ability to utilize experimental, statistical and computational methods consistent with the goals of the program
 - Experience in laboratory work and in research and/or design problem solving
 - Preparation, as appropriate to the student and the area of interest, to enter graduate degree programs.
- *Instructional and Research Facilities*: Facilities include equipment for electron and optical microscopy, x-ray diffraction, high-temperature heat treatment and mechanical testing, specialized processing equipment, including hot and cold isostatic presses, nitrogen reaction furnaces, and automated TGA, DTA analysis systems. Equipment for analyses of particle size, surface areas, and pore size is also available. Students have liberal access to University computing facilities.
 - *Honors Options Available*: With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
 - *Research, Internships, and Service Learning*: Materials Science and Engineering students interested in paid internship experiences should contact the Engineering Co-op and Internship Program, 301 Loew Hall, Box 352180, (206) 543-8711, coop@engr.washington.edu.
 - *Department Scholarships*: In addition to need-based aid provided through the University's Office of Student Financial Aid, companies and individuals with interest in developing materials science and engineering students have provided scholarships for students admitted to the program. Specific information and application forms are available from the academic counselor in 302 Roberts.
 - *Student Organizations/Associations*: Keramos (materials honor society); American Ceramic Society (ACerS); ASM/TMS (the joint student chapter of ASM International and TMS); Society for the Advancement of Materials and Process Engineering (SAMPE).
 - *Of Special Note*: Combined BS/MS Degree Program. The goal of the combined BS/MS program in Materials Science and Engineering is to provide a more direct route to the master's degree for well-qualified undergraduate students who wish for more in-depth graduate-level work in preparation for work in industry or for a PhD program. The combined program creates a more efficient and continuous academic experience that leads directly to the Master of Science degree. Students earn both the BS and MS degrees in five years. This program is available to students after they are admitted to the department. Information is available below.

GRADUATE PROGRAM

Graduate Program Coordinator
302 Roberts, Box 352120
(206) 543-2600
mse@uw.edu

The Department of Materials Science and Engineering offers programs of study leading to the Master of Science in

Materials Science and Engineering (MSMSE) and the Doctor of Philosophy in either materials science and engineering or materials science and engineering/nanotechnology.

In addition, the degree of Master of Science (without designation) is offered through the College of Engineering. This degree is intended to accommodate students with undergraduate majors outside physical science or engineering who desire a special graduate program to encompass a broad range of materials science studies.

The primary goals of the master's and doctoral programs are to prepare students for industrial employment and research/development careers and to generate new knowledge. The specific objectives are as follows:

- Deepen knowledge and capabilities broadly and in a chosen specialty area: A student's knowledge, attained through coursework and scholarly investigation of literature relevant to thesis project, should be commensurate with that of leading researchers in the field.
- Master and develop state-of-the-art research techniques appropriate to specialty: Analytical, computational, and experimental tools are learned via instruction by adviser(s) and peers in conjunction with maintaining currency with literature.
- Contribute new knowledge of lasting value to the field by creative and independent research: A student's thesis research must demonstrate originality and high quality, as judged by faculty committee.
- Broaden candidate's knowledge of field and societal issues: Through coursework, department and group seminars, and attendance at professional meetings, a student learns to appreciate context of specialty within materials science and engineering and gain ability to apply knowledge and methods to a spectrum of engineering and scientific challenges.
- Learn to work effectively with colleagues and contribute to professional community: Attained by cooperation in team research projects, presentation of research and professional meetings.

Combined Bachelor of Science/Master of Science

Admission Requirements

Students may apply to enter the combined BS/MS program any time after they are accepted into the MSE department as an undergraduate major. Requirements for application include:

1. Overall minimum 3.20 GPA in the last 90 credits before application
2. At least 15 credits of MSE courses completed with a minimum 3.40 GPA
3. Statement of interest in and goals for the MS degree
4. Interview with admissions committee

Students accepted into the combined BS/MS program by the department apply to the Graduate School in December of their senior year. These students normally enroll in the materials science option for the MS degree.

Degree Requirements

216 credits.

Requirements are the same as for the current BS and MS programs. However, up to 7 credits of 400- or 500-level courses taken as an undergraduate over and above the BS requirement may be counted towards the MS degree. These credits transfer to the graduate program when the student enters as a graduate student, subject to approval of the MSE Graduate Program Committee. The Graduate School waives the restrictions on transfer credits for this purpose.

Students admitted into the BS/MS program combine their BS senior project requirement (MSE 499) with the MS the-

sis requirement (MSE 700) and begin research starting summer or autumn quarter of their senior year. The student receives 4 credits of MSE 499 for the undergraduate portion of the research program, then registers for 9 or more credits of MSE 700 for the thesis. Written and oral reports are required to complete the MSE 499 credits, to be submitted before the end of the senior year. The thesis is required for completion of the MS degree.

Master of Science in Materials Science and Engineering

Admission Requirements

The applicant must have a minimum 3.00 undergraduate GPA in the last 90 graded quarter hours or the last 60 graded semester hours. Graduate Record Examination (GRE) results are also required for the general test.

Students with backgrounds in engineering and the physical sciences are admitted into the MSMSE program. After admission, students with a minimum three years' industrial experience in an engineering position may apply for the engineering materials (practice-oriented, non-thesis) option.

Specific program pre-requisites, which may be satisfied after entry into the program, are as follows:

1. Knowledge of fundamentals of Materials Science and Engineering equivalent to MSE 170
2. Knowledge of crystallography equivalent to MSE 331
3. Background in materials properties equivalent to MSE 362 and MSE 351
4. Knowledge of kinetics equivalent to MSE 322
5. Understanding of thermodynamics equivalent to the level of MSE 421

Degree Requirements

36 credits, as follows:

At least 27 credits must be for coursework, including 3 credits of MSE 520 seminar (see below). Of these 27 credits, 18 must be in courses numbered in the 500 series (these 18 may include the 3 seminar credits). Numerical grades from approved 400-level and all 500-level courses must be received for at least 18 quarter credits of coursework taken at the UW. A minimum 3.00 cumulative GPA is required for a graduate degree at the University. Required courses may not be taken on the S/NS grading option. The S/NS grading option in other courses must have the approval of the student's faculty adviser.

Thesis Option

1. Three required core courses (9 credits): MSE 510, MSE 525, MSE 541
2. Three optional core courses
3. 3 credits of seminar (MSE 520)
4. 9 credits of thesis work (MSE 700)
5. 6 credits of electives (400- or 500-level physical science or engineering courses) to meet the 36-credit requirement

Non-thesis Option

1. Three required core courses (9 credits): MSE 510, MSE 525, MSE 541
2. Four practice-oriented materials or related engineering courses, 12 credits minimum, chosen to complement the student's program
3. Materials engineering project, MSE 598, 4 credits, taken during the last quarter of the master's program
4. Electives to meet the 36 credit requirement.
5. Of the above credits, all must be at the 400 or 500 level, with a minimum of 18 at the 500 level, and other Graduate School requirements must be met. Numerical grades are also required for at least 18 credits of 400- or 500-level coursework.

Doctor of Philosophy

Admission Requirements

The applicant must have a minimum 3.00 GPA in the last 90 graded quarter hours or the last 60 graded semester hours. Graduate Record Examination (GRE) results are also required for the general test.

In general, entering graduate students with only the BS degree are required to enroll as MS students.

Prerequisite:

1. Knowledge of fundamentals of materials science and engineering equivalent to MSE 170
2. Knowledge of crystallography equivalent to MSE 331
3. Background in materials properties equivalent to MSE 362 and MSE 351
4. Knowledge of kinetics equivalent to MSE 322

The department also requires that all entering graduate students have an understanding of thermodynamics equivalent to the level of MSE 421. If the student does not have two undergraduate thermodynamics courses upon entry to the graduate program, then MSE 421 is required for the PhD degree.

Students interested in materials science and engineering with the nanotechnology option must make formal application to the UW's Center for Nanotechnology after being admitted to the MSE graduate program.

Degree Requirements

90 credits as follows:

1. 30 credits from MSMSE degree or equivalent
2. Three required core courses (9 credits): MSE 510, MSE 525, MSE 541
3. 6 credits of seminar (MSE 520)
4. 9 credits of elective MSE courses
5. 36 credits of MSE 800
6. Qualifying examination
7. General examination
8. Portfolio review
9. Dissertation
10. Final examination

Advising and Progress to Degree

The graduate coursework is designed to provide a higher level expertise than a BS in both core topics and specialty areas chosen by the student. Thus, all students must take three required core courses (MSE 510, MSE 525, and MSE 541) and a series of elective courses. Students are also required to enroll for the department seminar series.

Graduate students are advised by their Supervisory/Thesis Committee chair, members of the Supervisory/Thesis Committee, and the academic counselor, each with a specific advising role. The department also maintains a Graduate Student Handbook, given to each graduate student upon entry. Graduate students work closely with their committee chairs. Through this interaction, students develop a professional identity which includes learning how to do research, defining research problems, research supervision, data analysis and synthesis, presentation and participation in professional meetings, writing papers and reports, writing research proposals, and receiving information and advice regarding career options and help with placement.

Financial Support

Graduate students are eligible for a variety of competitive financial awards while they pursue their MSE degrees. Awards include teaching and research assistantships and a broad spectrum of internal and external fellowships. Almost all graduate students receive some financial support.

Further details are on the departmental website and in the Graduate Student Handbook.

Engineering Materials Option for the Master of Science

The Engineering Materials option for an MS in Materials Science and Engineering is a non-thesis program designed for students with substantive industrial experience who want a master's degree to further their career goals or to meet work requirements. Students selecting this degree option should be practicing materials engineers with a bachelor of science degree. This program contains practice-oriented courses in addition to the usual graduate core courses. In place of a research-oriented thesis, students carry out a complete analysis and develop recommended solutions to an engineering materials problem. This project is industrially oriented, undertaken at an industrial site and supervised by an experienced engineer in industry and an MSE faculty member. Written and oral final project reports are required. The engineering materials option is designed to be completed in one year (four quarters) for on-campus students; it is also available for part-time students through the Education at a Distance for Growth and Excellence (EDGE) program.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

MSE 170 Fundamentals of Materials Science (4) NW Fundamental principles of structure and properties of materials utilized in practice of engineering. Properties of materials are related to atomic, molecular, crystalline structure. Metals, ceramics, multiphase systems, and polymeric materials. Relationships between structure and electrical, mechanical, thermal, chemical properties. For advanced freshmen and sophomores. Prerequisite: either CHEM 152, CHEM 154, or CHEM 155. Offered: AWPSS.

MSE 273 Introduction to Molecular Engineering of Interfaces and Surfaces (2) NW Covers interfaces and surfaces critical in every field of science, engineering, and medicine from catalytic reactions, drug delivery systems, biocompatibility, carbon fiber composites, semiconductor design, and global warming. Combines active learning, case studies, and hands-on laboratory exploration in nanotechnology. Offered: W.

MSE 298 Introduction to Modern Materials (1) Materials and advances in materials are at the core of a large number of significant technological advances. Seminar format highlights processing, properties, and uses of a broad class of materials for a variety of applications, each introduced by a faculty member from the department. Offered: ASp.

MSE 310 Introduction to Materials Science and Engineering (3) Introduces the materials field to new department majors. Examples are drawn from ceramics, metals, polymers, electronic materials, and composites. Structure-properties-manufacturing-design relationships are emphasized. Materials selection design project. Introduction to research. Offered: A.

MSE 311 Integrated Junior Laboratory I (3) Laboratory experimental techniques including writing, literature search, research planning, and computer applications. Optical microscopy experiments, sample preparations, X-ray equipment, and X-ray diffraction analysis of materials. Prerequisite: MSE 170. Offered: A.

MSE 312 Integrated Junior Laboratory II (3) Materials processing related laboratory experiments, including powder synthesis, redox reactions of particulate materials, grain growth, recrystallization, phase transformation, green tape processing, particle interaction and rheology, slip and tape casting and dry processing, sol-gel processing, polymer

processing, sintering behavior, metal welding, and heat treatment. Prerequisite: MSE 311. Offered: W.

MSE 313 Integrated Junior Laboratory III (3) Kinetics and phase transformation related laboratory experiments, including solidification. Mechanical properties related laboratory experiments, including stress-strain behavior of materials and elastic modulus of materials, effect of work hardening on stress strain behavior, and effect of surface condition of the strength of glass. Prerequisite: MSE 312. Offered: Sp.

MSE 321 Thermodynamics and Phase Equilibrium (4) Phase equilibria in materials systems of one, two, and three components. Determination of phase diagrams. Quantitative applications of thermodynamics to systems of interest to materials scientists; detained review of thermodynamic laws and principles. Offered: A.

MSE 322 Kinetics and Microstructural Evolution (4) Applications of thermodynamic and kinetic principles to the study of transport processes, transformations and reactions in engineering materials. Thermal activation and rates of processes, nucleation and growth, phase transformations, grain growth, sintering, among other processes. Prerequisite: MSE 321. Offered: W.

MSE 331 Crystallography and Structure (3) Theory and practice of x-ray diffraction with applications to materials sitemaps. Principles of crystal symmetry, lattice systems, and stereographic projections. Bragg's law of diffraction, Laue conditions, diffraction by X-rays, single crystal and powder diffraction techniques and their applications to lattice, phase, strain, and texture analyses. Prerequisite: MSE 170. Offered: A.

MSE 333 Materials Characterization (3) Principles and applications of analytical techniques, imaging, diffraction and spectroscopy for materials characterization including crystal structures, texture formation, phase analysis. Nano- and micro-structures of materials including defects and second phases, chemistry, bonding, compositions of materials. Demonstrations and lab experiments involving light scattering and diffraction techniques. Prerequisite: MSE 170; MSE 331; MSE 351. Offered: Sp.

MSE 342 Materials Processing I (3) Provides students with the fundamentals and applications of metal and alloy processing techniques. Focuses on relationships between the processing fundamentals and practice, and between processing, microstructure, and properties. Ferrous and non-ferrous metal and alloy processing discussed. Prerequisite: MSE 170; MSE 322. Offered: W.

MSE 351 Electronic Properties of Materials (3) Introduction to elementary solid-state concepts in materials, free electrons, and band theories. Principles to conduction in metals, insulators, semiconductors, and applications of semiconductors and devices. Prerequisite: MSE, 170, MSE 331. Offered: W.

MSE 352 Functional Properties of Materials I (3) Introduction to thermal properties, electrical (ionic and polaron) conduction and optical properties, including origins of color, interaction of light wave with materials, lasers and optoelectronics. Focuses on the relations between physical properties and chemical composition, crystal structure, and microstructure. Prerequisite: MSE 351. Offered: Sp.

MSE 362 Mechanical Behavior of Materials I (3) Influence of structure on the mechanical properties materials. Definition of different mechanical properties and experimental techniques to measure them. Elastic, viscoelastic, and plastic deformation. Introduction to fracture. Prerequisite: MSE 170. Offered: Sp.

MSE 399 Undergraduate Research Seminar (1) Introduces MSE majors to various research projects available to MSE faculty laboratories. Credit/no-credit only. Offered: W.

MSE 421 Case Studies in Thermodynamics (3) Applications of thermodynamics to the steady state. Statistical interpretation of entropy. Heterogeneous equilibria. Thermodynam-

ics of solutions. Defects in solids and thermodynamics of surfaces. Prerequisite: MSE 321, MSE 322. Offered: W.

MSE 431 Failure Analysis and Durability of Materials (3) Treats the areas of failure analysis and durability in a wide range of materials applications. Reviews concepts in mechanical and environmental behavior of materials. Includes instruments available to engineers, both destructive and nondestructive, and case studies. Prerequisite: MSE 333; MSE 342; MSE 362. Offered: W.

MSE 442 Materials Processing II (3) Develops a basic understanding of both engineering and science aspects of ceramic processing. Fundamentals of powder processing and characterization, green body formation, sintering, microstructural development and properties. Prerequisite: MSE 342. Offered: A.

MSE 443 Process Principles in Ferrous and Non-Ferrous Materials Production (3) Ironmaking and steelmaking processes analyzed by methods of material and heat balances, computational thermodynamics, and process kinetics. Hydrometallurgical and electrometallurgical operations. Process optimization. Prerequisite: MSE 321. Offered: Sp.

MSE 450 Magnetism, Magnetic Materials, and Related Technologies (3) Introduces magnetism, magnetic materials, and related applications. Discusses intrinsic and phenomenological concepts of magnetism, ordered magnetism materials, structure-sensitive properties, magnetic phenomena, small particles, thin films, and applications (magnetic recording, permanent magnets, and spin-electronics).

MSE 452 Functional Properties of Materials II (4) Dielectric materials including ferroelectrics, piezoelectrics and pyroelectrics, magnetic properties, high temperature superconductivity, shape memory materials. Detained discussion on relations of these properties with atomic and crystal structures, and applications. Prerequisite: MSE 351, MSE 352. Offered: W.

MSE 462 Mechanical Behavior of Materials II (4) Influence of structure on the mechanical properties of materials. Stress-strain tensors and response of materials to multiaxial loads. Effect of symmetry on elastic properties; spring dashpot analogs for viscoelasticity; strengthening mechanisms and continuum plasticity; failure probability and toughening mechanisms; creep, fatigue, and stress corrosion cracking. Prerequisite: AA 210; CEE 220; MSE 362. Offered: Sp.

MSE 463 Corrosion and Wear of Materials (4) Mechanisms of corrosion, thermodynamics, kinetics of corrosion. Passivity; Pourbaix diagrams; corrosion rate testing and measurements; forms of corrosion; effects of alloy and environmental variables; corrosion testing. Wear mechanisms: adhesive, abrasive, erosive. Fretting; surface roughness, wear testing. Coatings for corrosion and wear protection. Offered: Sp.

MSE 471 Introduction to Polymer Science and Engineering (3) Introduction of preparative methods of polymers; physical chemistry of polymeric molecules in solution, liquid and solid phase; thermodynamics of polymers; methods of characterization; mechanical properties; fabrication techniques; properties of commercial polymers. Offered: A.

MSE 473 Noncrystalline State (4) Chemistry and physics of inorganic glass and amorphous semiconductors; structure, properties, and processing of vitreous materials. Prerequisite: MSE 170; MSE 321; MSE 331. Offered: Sp.

MSE 475 Introduction to Composite Materials (4) Microstructural design and processing of composite materials; polymeric, metallic, and ceramic matrices; fibers and fiber-reinforced composites, thermal, mechanical, and electrical properties. Offered: A.

MSE 477 High Temperature Materials (4) Chemical and mineralogical composition; processing methods; thermal, physical, and chemical properties and tests; application in high-temperature processes. Prerequisite: MSE 310, MSE 321. Offered: Sp.

MSE 481 Science and Technology of Nanostructures (3)

Comprehensive introduction to the developing field of nanoscience and nanotechnology. Includes materials properties as a function of length-scale and dimensionality, applications in medicine/biology, electronics, magnetism, and electro-mechanical systems. Cooperative learning approaches involving student participation with team assignments, class activities, lectures, and laboratory visits. Offered: W.

MSE 482 Biomaterials/Nanomaterials in Tissue Engineering (3)

Provides fundamental understanding of biomaterials, implant applications, and their design consideration. Includes the fundamentals of synthesis, properties, and biocompatibility of metallic, ceramic, polymeric, composite, and biological materials and their applications for both hard and soft tissue replacement, and controlled drug delivery.

MSE 483 Nanomedicine (3) Covers methods of synthesis and characterization of nano-sized materials and specific considerations for use in biological systems.

MSE 484 Materials Chemistry (3) NW Overview of basic principles, techniques, and applications associated with solid materials. Topics include description of crystals, examples of crystal structures, structural analysis, band structures of solid materials, preparation of materials, materials for microelectronics, and materials for information technology. Prerequisite: CHEM 453 or CHEM 455. Offered: jointly with CHEM 484; ASp.

MSE 485 Introduction to Electronic Packaging and Materials (3)

Taya The governing equations of transport phenomena: mechanical, thermal, and electromagnetic behavior, thermomechanical and electromagnetic properties of packaging materials, electromagnetic characteristics of circuit and transmission lines, thermal management and reliability analysis of packaging, interconnect and material processing technology. Prerequisite: MSE 170. Offered: jointly with M E 485; AW.

MSE 486 Fundamentals of Integrated Circuit Technology (3)

Processing physics, chemistry, and technology, including evaporation, sputtering, epitaxial growth, diffusion, ion implantation, laser annealing, oxidation, chemical vapor deposition, photoresists. Design considerations for bipolar and MOS devices, materials and process characterization. Future trends. Prerequisite: either both E E 331 and E E 361 or MSE 351. Offered: jointly with E E 486; AW.

MSE 487 Laboratory in Electronic Packaging and Materials (1)

Taya, Stoebe Laboratory course to accompany M E 485 Experiments related to design, processing and reliability of electronic packaging used in consumer electronics. Co-requisite: M E 485. Offered: jointly with M E 487.

MSE 491 Design in Materials Engineering I (2)

Integration of technical materials engineering concepts with professional components related to materials engineering. Reviews materials design, teamwork, leadership, engineering economics, and ethics. Reports on the professional components important to the senior thesis and begins a two-quarter, team design project on materials engineering. Prerequisite: MSE 313. Offered: A.

MSE 492 Design in Materials Engineering II (2)

Integration of technical materials engineering concepts with professional components related to materials engineering. Reviews process design, manufacturability, and quality control. Completes the two-quarter team design project on materials engineering. Prerequisite: MSE 491. Offered: W.

MSE 497 Undergraduate Research (1-5, max. 12)

Research in materials under faculty supervision other than the MSE senior project. Cannot be used toward the technical elective requirements in the MSE major. Credit/no-credit only. Offered: AWSpS.

MSE 498 Special Topics (1-5, max. 15)

Special topics in materials science and engineering offered as a course with lectures, conferences, or laboratory. Offered: AWSpS.

MSE 499 Special Project (*-, max. 5) Materials science and engineering field or laboratory investigations in group or individual setting. Written report required. Offered: AWSpS.

MSE 501 Advanced Processing of Inorganic Materials (3) Discusses advanced processes of inorganic materials including metals, ceramics, and electronic materials, such as high temperature processing, sintering, solidification, single crystal growth from liquid, and vapor phase deposition. Emphasizes both the fundamentals and practical approaches of these processing techniques. Offered: A, even years.

MSE 502 Sol-Gel Processing (3) Fundamentals of colloid science and the physics and chemistry of the sol-gel process. Emphasizes the synthesis and applications of various materials, such as multi-component oxides, nanocomposites, meso- and microporous materials, organic/inorganic hybrids, and biomaterials that have important applications in both leading technologies and modern industries. Offered: A, odd years.

MSE 504 Introduction to Microelectro Mechanical Systems (4) Theoretical and practical aspects in design, analysis, and fabrication of MEMS devices. Fabrication processes, including bulk and surface micromachining. MEMS design and layout. MEMS CAD tools. Mechanical and electrical design. Applications such as micro sensors and actuators, or chemical and thermal transducers, recent advances. Offered: jointly with E E 502/M E 504.

MSE 510 Bonding, Crystallography, and Symmetry-Related Properties of Materials (3) Rigorous introduction to the fundamentals of bonding, symmetry, crystallography, and related properties. Quantum mechanical foundation of cohesion and properties of solids. Geometric approach to understanding symmetry elements in 2-D and 3-D, including point groups, space groups, stereographic projections, and bravais lattices. Tensor properties of crystals related to crystallography and symmetry. Offered: A.

MSE 512 Experimental Transmission Electron Microscopy (3) Fundamentals of electron optics as applied to microscopy; applications of contrast theories and electron diffraction with emphasis on defects and multiphase structures in crystalline solids. Prerequisite: MSE 510. Offered: W, odd years.

MSE 513 Transmission Electron Microscopy Laboratory (2) One four-hour laboratory and one two-hour discussion/demonstration per week; metallic, ceramic, electronic biological sample preparation techniques; diffraction, imaging, and spectroscopy techniques in electron microscopy. Prerequisite: MSE 512 which may be taken concurrently. Offered: W, odd years.

MSE 515 Advanced Transmission Electron Microscopy (3) Principles of image formation in crystalline and amorphous materials at the atomic resolution level; high spatial resolution electron diffraction with emphasis on convergent beam electron diffraction; quantitative elemental compositional and chemical analysis with energy dispersive X-ray spectroscopy and electron energy loss spectroscopy; high voltage electron microscopy. Prerequisite: MSE 512 and MSE 513.

MSE 518 Advanced Mineralogy (3) Crystal symmetry: point groups, space groups. Mathematical description of crystal structures; group theory, irreducible representations; tensor description of physical properties: stress, strain, piezoelectricity, elasticity; structural and magnetic phase transitions, Landau theory, deformation and creep crystals; elasto-viscous properties of Earth's mantle, crystal chemistry, solid state reactions. Offered: jointly with ESS 537; A.

MSE 520 Seminar (1, max. 6) Review of research problems in recent literature. Registration required for all graduate students. Credit/no-credit only. Offered: AWSpS.

MSE 524 Applied Rate Phenomena (3) Introduction to rate theory and transport processes. The principal thrust is on applications in ceramics and metallurgy. Prerequisite:

basic course in transport phenomena or permission of instructor. Offered: W.

MSE 525 Kinetics and Phase Transformations (3) Thermodynamic basis for kinetic processes, including diffusion and phase transformation kinetics. Diffusion problems and solution methodologies, statistical treatment of diffusion, solid-liquid and solid-solid transformations, ordering transitions. Special topics related to grain growth, sintering, martensitic transformations. Prerequisite: MSE 322 and MSE 421 or equivalent. Offered: Sp.

MSE 528 Physics and Modeling of VLSI Fabrication (4) Physics of VLSI fabrication, emphasizing processing modeling and simulation. CMOS process, sequences, point defects and diffusion, ion implantation and annealing, film growth kinetics, deposition and etching, advanced photolithography. Process interactions and process integration. Extensive use of process simulation software. Prerequisite: either E E 486/MSE 467, E E 520/M E 504/MSE 504, or E E 527. Offered: jointly with E E 528.

MSE 541 Defects in Materials (3) Detailed study of the general properties and effects of point, line, and planar defects in crystalline solids. Prerequisite: MSE 331 or equivalent. Offered: W.

MSE 550 Magnetism, Magnetic Materials, and Related Technologies (3) Introduce magnetism, magnetic materials, and related applications. Discusses intrinsic and phenomenological concepts of magnetism, ordered magnetic materials, magnetic phenomena, small particles, thin films, and applications (magnetic recording, permanent magnets, and spin-electronic). Offered: Sp.

MSE 555 Biomimetics: Bioinspired Design and Processing of Materials (4) How biological organisms produce materials with controlled structure, chemistry, and hierarchy to attain physical properties far superior to traditional engineering materials. Fundamental biological building materials, their synthesis, and their self-assembly with emphasis on examples of soft and hard tissues. Offered: W, even years.

MSE 560 Organic Electronic and Photonic Materials/Polymers (3) Physical and material concepts determining properties of organic electronic and photonic materials. Discusses electronic structure, physico-chemical characterization, and device application. Includes introduction of electronic band structure of polymers, electrically conducting polymers; organic nonlinear optical electroluminescent materials; polymer optical fibers; tow-photon absorption materials for 3-D microfabrication. Offered: jointly with CHEM 564; W.

MSE 562 Introduction to Electronic Composites (3) Taya Fundamentals of microstructure-macro-property relation of electronic composites. This course covers applications (computers, laser packages, medical devices, MEMS, avionics), functions (mechanical, thermal, electromagnetic, and optical), microstructure-macro-property relations, processing issues, and modeling of electronic composites. Offered: jointly with M E 562; Sp.

MSE 563 Advanced Composites: Design and Manufacturing (3) Manufacturing and processing techniques of metal-, polymer-, and ceramic-matrix composites; design considerations related to manufacturing techniques; non-destructive testing of composite structures. Fiber-matrix interfacial features and interactions. Interfacial thermodynamics applied to selection of fiber-matrix combinations. Prerequisite: MSE 475 or M E 450 or equivalent by permission of instructor. Offered: jointly with M E 563; Sp.

MSE 565 Electron Theory of Materials (3) Solid-state concepts of materials. Atomic bonding, statistical mechanics, Brillouin zone theory. Applications to conduction, optical, and magnetic properties of metals, semiconductors, and insulators. Offered: W, odd years.

MSE 568 Active and Sensing Materials (3) Taya Fundamental knowledge of the nano-structure property relations of active and sensing materials, and their devices. Exam-

ples of the active and sensing materials include: shape memory alloys (SMAs), ferromagnetic SMAs, ferroelectric, pyroelectric and piezoelectric materials, thermoelectrics, electroactive and conducting polymers, photoactive polymers, photovoltaics, and electrochromic materials. Offered: jointly with M E 568; Sp.

MSE 570 Graduate Tutorial in Materials Science and Engineering (3) A materials science and engineering tutorial for beginning graduate students who did not major in the field as an undergraduate, or who wish to broaden their knowledge of materials science and engineering. Focuses on materials' physical and chemical structures, and their relationship to mechanical, electrical, dielectric, optical, magnetic, and thermal properties.

MSE 582 Biomaterials/Nanomaterials in Tissue Engineering (3) Provides fundamental understanding of biomaterials, implant applications, and their design consideration. Includes the fundamentals of synthesis, properties, and biocompatibility of metallic, ceramic, polymeric, composite, and biological materials and their applications for both hard and soft tissue replacement, and controlled drug delivery.

MSE 583 Nanomedicine (3) Covers methods of synthesis and characterization of nano-sized materials and specific considerations for use in biological systems.

MSE 598 Engineering Materials Problems (4) Involves a concentrated project which may include the design of a system or process, or analysis of a set of data related to the materials engineering area. Requires a professional quality report and an oral presentation of the results. Offered: AWSpS.

MSE 599 Special Topics in Materials Science (1-5, max. 15) Studies of special advanced topics in materials science. Prerequisite: permission of instructor. Offered: AWSpS.

MSE 600 Independent Study or Research (*-) Offered: AWSpS.

MSE 700 Master's Thesis (*-) Offered: AWSpS.

MSE 800 Doctoral Dissertation (*-) Offered: AWSpS.

Mechanical Engineering

143 Mechanical Engineering Building

Mechanical engineering is one of the broadest and oldest of the engineering disciplines and therefore provides some of the strongest interdisciplinary opportunities in the engineering profession. Power utilization (and power generation) is often used to describe the focus of mechanical engineering. Within this focus are such diverse topics as thermodynamics, heat transfer, fluid mechanics, machine design, mechanics of materials, manufacturing, stress analysis, system dynamics, numerical modeling, vibrations, turbomachinery, combustion, heating, ventilating, and air conditioning. Degrees in mechanical engineering open doors to careers not only in the engineering profession but also in business, law, medicine, finance, and other non-technical professions.

UNDERGRADUATE PROGRAM

Adviser

143 Mechanical Engineering Bldg., Box 352600

(206) 543-5090

meadvise@uw.edu

The Department of Mechanical Engineering offers the following program of study:

- The Bachelor of Science in Mechanical Engineering (BSME) degree
- The Bachelor of Science in Mechanical Engineering (BSME) degree with an option in mechatronics
- The Bachelor of Science in Mechanical Engineering (BSME) degree with an option in nanoscience and molecular engineering

Bachelor of Science in Mechanical Engineering

Department Admission Requirements

Applicants are considered in two groups -- Early Admission and Upper-Division Admission. Admission is competitive. Completion of minimum requirements described below does not guarantee admission. All applicants have the right to petition and appeal the department's admission decision. Applications are accepted for autumn quarter only.

Nanoscience and Molecular Engineering Option (NME)

Admission to the NME option for mechanical engineering majors is by self-selection and normally occurs upon completion of NME 220, all mechanical engineering prerequisites, and formal admission to the mechanical engineering major. A small number of advanced students (either UW or transfer) may be admitted into the NME option upon application to the department. Admission is based on the student's academic record, including grades in NME 220 and any mechanical engineering courses already taken and on prior experience/work in the field of nanoscience or molecular engineering. Students applying for the NME option should indicate that interest on their mechanical engineering application and discuss their interests and background in the essay.

Early Admission

1. *Course Requirements:* MATH 124, MATH 125, MATH 126; 10 credits of physical science at the level of PHYS 121, PHYS 122, PHYS 123, or CHEM 142, CHEM 152, or higher; 5 credits of English composition. All courses must be completed prior to the July 1 application deadline
2. Applicants must be currently enrolled at the UW and must have completed a minimum of 15 credits taken in residence at the UW.
3. *Grade Requirements:* Minimum 2.0 grade in each course required for admission and minimum 2.50 cumulative GPA for all courses required for admission

Upper-Division Admission

1. *Course Requirements:* MATH 124, MATH 125, MATH 126, PHYS 121, PHYS 122; CHEM 142, CHEM 152; A A 210; CEE 220; M E 230; 5 credits of English composition
2. 65 credits completed by July 1 application deadline
3. *Grade Requirements:* Minimum 2.0 grade in each course required for admission and minimum 2.50 cumulative GPA for all courses required for admission

Graduation Requirements

180 credits as follows:

General Education Requirements (85 credits)

1. *Written and Oral Communication:* 12 credits, to include one 5-credit English composition course from the University list; HCDE 333 (or department-approved alternative).
2. *Visual, Literary, & Performing Arts (VLPA), and Individuals & Societies (I&S) (24 credits):* Minimum 10 credits in each area
3. *Natural World (49 credits):*

- a. *Mathematics (24 credits):* MATH 124, MATH 125, MATH 126, MATH 307 (or AMATH 351), MATH 308 (or AMATH 352), MATH 309 (or AMATH 353 or MATH 324)
- b. *Science (25 credits):* CHEM 142, CHEM 152; PHYS 121, PHYS 122, PHYS 123

Major Requirements (95-102 credits)

1. *Engineering Fundamentals (31 credits):* A A 210; AMATH 301; CEE 220; E E 215; IND E 315 (or MATH 390/STAT 390); M E 123; M E 230; MSE 170
2. *Mechanical Engineering Core Courses (45 credits):* M E 323, M E 331, M E 333, M E 354, M E 355, M E 356, M E 373, M E 374, M E 395, M E 495
3. *Mechanical Engineering Option Courses (19-26 credits)*
 - a. *Standard Option (19 credits):* See department for approved list of engineering electives.
 - b. *Mechatronics Option (19-21 credits):* ME 471, M E 473, M E 477, M E 494; two of M E 469, M E 470, M E 478, M E 480, PHYS 334, PHYS 335
 - c. *Nanoscience and Molecular Engineering Option (26 credits):* NME 221, NME 321, and NME 421; M E 410, M E 411; 13 credits of approved nanoscience and molecular engineering electives. See department for approved list.
4. Minimum 2.00 cumulative GPA

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:*
 - *Success in the Profession.* The department's goal is success for its graduates in industry, research, and academic careers by virtue of skills and attributes learned in the program. Graduates succeed in their professional and academic positions by using fundamental science and analysis to solve engineering problems, successfully executing engineering designs, and performing effectively in design teams, in the use of management tools, and through effective oral, written, and graphical communication.
 - *Contribution to Society.* Graduates should be critical thinkers in the tradition of the broad liberal arts education. They succeed in this goal by being able to think critically, in the sense of broadly educated individuals (i.e., be informed evaluators/consumers of information); perform independent, informed analysis on issues inside and outside of technology; and continue lifelong learning.

The BSME program is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012, telephone: (410) 347-7700, and the department has adopted the following student outcomes:

- a. An ability to apply knowledge of mathematics, science, and engineering
- b. An ability to design and conduct experiments, as well as to analyze and interpret data
- c. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- d. An ability to function on multi-disciplinary teams
- e. An ability to identify, formulate, and solve engineering problems
- f. An understanding of professional and ethical responsibilities
- g. An ability to communicate effectively
- h. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context

- i. A recognition of the need for, and an ability to engage in, life-long learning
 - j. Knowledge of contemporary issues
 - k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
- Each student's success is measured by demonstration of the following learning outcomes:

- a. Ability to apply this knowledge to the formulation and solution of mechanical engineering problems
 - b. Ability to design thermal and mechanical components to achieve a desired goal. Ability to develop, conduct, and analyze experiments or tests that may aid in this design process.
 - c. An understanding of the necessary professional abilities of a practicing engineer including ethical conduct, teamwork in the pursuit of a goal, and effective communication
 - d. Ability to conduct computer-based design and analysis in engineering applications
 - e. Exposure to a general education program that aids in the understanding of and increases the appreciation for the "non-technical" world
 - f. Realization of the business environment in which engineering is practiced.
 - g. Awareness and necessity of continuing education, graduate study, and other lifelong learning experiences
 - h. Interest groups within the faculty provide instruction in four areas: design; energy and fluids; mechanics, materials and manufacturing; and systems and dynamics. Departmental thrust areas for graduate and undergraduate research include: environment; healthcare; information technology; and manufacturing. Several on-going senior capstone design projects provide both undergraduate and graduate students with hands-on, interdisciplinary, team-driven opportunities that encompass such diverse topics as Formula SAE car; human-powered submarine, mechatronics, and fuel cell technology.
- *Instructional and Research Facilities:* The department has well-equipped laboratories for pursuing research in various disciplinary fields in mechanical engineering and for fabricating specialized research equipment. These include experimental stress analysis; materials testing/characterization; synthesis and simulation of electromechanical control systems; foundry, welding, and other metal fabrication operations; computer facilities for CAD/CAM/CIM and CFD research; wind tunnels for boundary-layer and high-speed flow analysis; combustion systems performance, exhaust emissions control, and combustion engines; acoustics, vibration, and dynamic testing and measurements and modal analysis; radiation, conduction, and convection (including multiphase) heat-transfer analysis, and a bioengineering flow facility. Visit the department website to view faculty research areas.
 - *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major). See adviser for requirements.
 - *Research, Internships, and Service Learning:* The department participates in the College of Engineering Co-op Program. The Center for Career Services also lists internship opportunities.
 - *Department Scholarships:* The department offers approximately forty scholarships each year. Scholarship applications are available on the College of Engineering Website. The deadline for scholarship applications is April 1. Sophomores may apply for scholarship consideration before being admitted to the department.

• *Student Organizations/Associations:*

- American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE)
- American Society of Mechanical Engineers (ASME)
- Pi Tau Sigma - Mechanical Engineering Honor Society (PTS)
- Society of Automotive Engineers (SAE)
- Society of Manufacturing Engineers (SME)
- Society of Naval Architects and Marine Engineers (SNAME)
- Society of Women Engineers (SWE)

GRADUATE PROGRAM

Graduate Program Coordinator

143 Mechanical Engineering Bldg, Box 352600

(206) 543-5090

megrad@uw.edu

The Department of Mechanical Engineering offers graduate programs leading to the degrees of Master of Science in Mechanical Engineering (MSME) and Doctor of Philosophy (PhD). The department also provides authorized options leading to the College-wide Master of Science in Engineering (MSE) degree. These degrees provide balanced combinations of formal instruction and independent research or design experience. Although there are thesis and non-thesis options for the MSME, completion of a thesis is highly recommended.

Individual projects may be drawn from a wide spectrum of topics, which include mechanical and energy conservation systems, heat transfer, combustion, fluid mechanics, applied mechanics, computational mechanics, computer-aided design and manufacturing, production systems, materials behavior, robotics, controls, vibrations, and applications of mechanical engineering science to a variety of such interdisciplinary fields as bioengineering, ocean engineering, environmental engineering, nanotechnology, micro electro-mechanical systems, and acoustics. Flexible requirements for coursework provide opportunities both for a broad scientific and professional background and for specialty training.

Master of Science in Mechanical Engineering

Admission Requirements

1. *Grade Point Average:* The Graduate School requires a minimum 3.00 GPA for the last 90 quarter hours or 60 semester hours of graded undergraduate coursework to receive consideration. The department prefers an minimum overall 3.20 undergraduate GPA. In addition, the department prefers that PhD applicants have a minimum 3.5 MS GPA.
2. Quality and difficulty of courses taken and universities and colleges attended.
3. *GRE General Test:* Minimum GRE scores of 450 Verbal (350 if English is not a native language), 650 Quantitative, and 4.0 Analytical Writing
4. Three letters of recommendation
5. Statement of purpose
6. Official transcripts from all colleges/universities attended
7. Professional experience, if applicable
8. *English Requirements for Foreign Nationals:* TOEFL scores for foreign nationals whose native language is not English, with a minimum score of 580 for the paper examination and 237 for the computer-based examination

Degree Requirements

42 credits, as follows:

1. Thesis-option students must register for 12 credits of thesis research and 30 credits of related numerically graded coursework. Non-thesis option students must take all 42 credits in numerically graded courses.
2. Course grades must be 2.7 or above
3. At least 12 credits for the thesis option and 18 credits for the non-thesis option must be taken in 500-level mechanical engineering courses, including 6 credits of mathematical and engineering analysis requirements: M E 564 and M E 565.
4. At least 3 credits of computational or numerical analysis must be taken from the following list of approved courses (or from an approved plan of individual study conducted as part of thesis research): M E 535, AA 543, A A 540, CEE 504, E E 578, AMATH 581, and AMATH 584.
5. The remaining credits (18 for thesis-option students and 24 for non-thesis option students) may be from other departments, and may include a maximum of 9 credits (12 credits for non-thesis) at the 400 course level (excluding M E 498 and M E 499).
6. Non-thesis option students may substitute up to 6 credits of M E 599 Special Projects (not to be confused with the class M E 599) for 6 credits of classroom courses. Permission forms for project proposals can be obtained from the Mechanical Engineering Student Services Office. The student must write a research paper under the supervision of a faculty member and the credits must be taken for a numerical grade.

For thesis-option students, special projects courses such as M E 599 and M E 600 do not count toward the 42-credit total unless the project is recommended by the student's faculty supervisor and pre-approved by the Graduate Program Coordinator. Seminar requirement: All full-time students must register for a seminar course every quarter while in the master's program. Quarterly registration for seminars is necessary for satisfactory progress in the program, but does not count toward the 42 credits of numerically graded coursework and thesis research required for graduation.

Doctor of Philosophy

Admission Requirements

1. *Grade Point Average:* The Graduate School requires a minimum 3.00 GPA for the last 90 quarter hours or 60 semester hours of graded undergraduate coursework for admission. The department prefers an overall minimum 3.20 undergraduate GPA. In addition, the department prefers that PhD applicants have a minimum 3.50 MS GPA.
2. Quality and difficulty of courses taken and universities and colleges attended
3. *GRE General Test:* The department requires the following minimum GRE scores: 450 Verbal (350 if English is not a native language), 650 Quantitative, and 4.0 Analytical Writing.
4. Three letters of recommendation
5. Statement of purpose
6. Official transcripts from all colleges/universities attended
7. Professional experience, if applicable
8. *English Requirements for Foreign Nationals:* TOEFL scores for foreign nationals whose native language is not English, with a minimum score of 580 for the paper exam and 237 for the computer-based exam

Degree Requirements

90 credits, to include:

1. *Advisory Committee:* During the first year of post-master's study, the student should select a two- to three-person advisory committee from the Mechanical Engineering Department.
2. *Coursework:* All new post-master's students must successfully complete two to three graduate courses per quarter in their first year of study, as approved by the advisory committee. Normally this includes a sequence in advanced applied mathematics.
3. *Seminar Requirement:* Post-master's students register for the mechanical engineering seminar (M E 520), in the autumn quarter of their matriculation year. Otherwise, students are encouraged to register for engineering seminar courses offered by other UW engineering programs, i.e., M E 518, M E 523, M E 591, AMATH 501, IND E 591, IND E 592, IND E 593, MSE 520. Seminar must be taken on a quarterly basis throughout the entire PhD program.
4. *Research:* Post-master's students must conduct initial research in their first year of study under the direction of the advisory committee. This requirement applies even if the student holds a teaching assistantship.
5. *Qualifying Examination:* Every full-time student in the department's PhD program is required to take the examination within one calendar after entry into the program.
6. *Supervisory Committee:* A graduate student is not considered a doctoral student until a Supervisory Committee has been appointed by the Dean of the Graduate School. Students need to provide the name of the committee chair, Graduate School Representative (GSR), and at least two mechanical engineering faculty for approval to the Graduate Program Coordinator (GPC). The department requires that at least three members of the committee be Mechanical Engineering faculty, two of whom must be core Mechanical Engineering faculty. This committee, established before the end of the second year of PhD study and no less than four months prior to scheduling the general examination, replaces the first-year Advisory Committee.
7. *Dissertation Proposal:* Prepared after the student has conducted one or two quarters of in-depth research, during which time the student should meet frequently with the committee chair. Submit copies of the proposal to all members of the Supervisory Committee prior to the examination. The proposal must be approved by the committee chair before the general examination is scheduled.
8. *Dissertation Research:* Registration for a minimum of 27 credits of dissertation research over a period of at least three quarters -- and at least two quarters after the general examination.
9. *Reading Committee:* The reading committee, consisting of three members drawn from the Supervisory Committee, must include at least two core Mechanical Engineering faculty.
10. *Final Examination*
11. *Dissertation Defense*

Research Facilities

The department has well-equipped laboratories for pursuing research in various disciplinary fields in mechanical engineering and for fabricating specialized research equipment. These include experimental stress analysis; materials testing/characterization; synthesis and simulation of electromechanical control systems; foundry, welding, and other metal fabrication operations; computer facilities for CAD/CAM/CIM and CFD research; wind tunnels for boundary-layer and high-speed flow analysis; combustion systems performance, exhaust emissions control, and combustion engines; acoustics, vibration, and dynamic testing and measurements and modal analysis; radiation, conduction, and convection (including multiphase) heat-

transfer analysis, and a bioengineering flow facility. Visit the department website to view faculty research areas.

Financial Aid

Financial aid is offered to full-time graduate students as funds permit. Funds, however, are limited and the assignment of assistantships and fellowships is highly competitive. Aid may be in the form of a research assistantship for sponsored programs, a fellowship provided by the University or industry, or a teaching assistantship.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at uw.edu/students/crscat/

M E 123 Introduction to Visualization and Computer-Aided Design (4) VLPA/NW Adee Methods of depicting three-dimensional objects and communicating design information. Development of three-dimensional skills through freehand sketching and computer-aided design using parametric solid modeling. Offered: AWSpS.

M E 124 Visualization and Computer-Aided Design Laboratory (2) VLPA/NW Adee Methods of depicting three-dimensional objects and communicating design information. Development of three-dimensional visualization skills through computer-aided design using parametric solid modeling. Offered: AWSpS.

M E 230 Kinematics and Dynamics (4) NW Fabien Kinematics of particles, systems of particles, and rigid bodies; moving reference frames; kinetics of particles, systems of particles, and rigid bodies; equilibrium, energy, linear momentum, angular momentum. Prerequisite: A A 210.

M E 323 Engineering Thermodynamics (5) Kramlich Engineering thermodynamics, including thermodynamic concepts and properties, the first and second laws of thermodynamics, energy conversion, refrigeration, humidification, and combustion. Engineering design applications. Prerequisite: either CHEM 142 or CHEM 144; MATH 126; PHYS 121.

M E 331 Introduction to Heat Transfer (4) Emery Study of heat transfer by conduction, radiation, and convection; elementary heat-exchanger design. Prerequisite: either M E 333 or CEE 342.

M E 333 Introduction to Fluid Mechanics (5) Riley Introduction to the basic fluid laws and their application. Conservation equations, dynamic similarity, potential flow, boundary-layer concepts, effects of friction, compressible flow, fluid machinery, measurement techniques. Prerequisite: AMATH 301; M E 323; either MATH 307 or AMATH 351.

M E 341 Energy and Environment (3) NW Energy use. Fossil energy conversion. Oil, gas, coal resources. Air impacts. Nuclear energy principles, reactors, fuel cycle. Prerequisite: either MATH 112, MATH 124, or Q SCI 291; either CHEM 120, CHEM 142, CHEM 144, PHYS 114, or PHYS 121. Offered: jointly with CHEM E 341/ENVIR 341; A.

M E 354 Mechanics of Materials Laboratory (5) Tuttle Properties and behavior of engineering materials including stress-strain relations, strength, deformation mechanisms, strength, deformation, fracture, creep, and cyclic fatigue. Introduces experimental techniques common to structural engineering, interpretation of experimental data, comparison of measurements to numerical/analytical predictions, and formal, engineering report writing. Lecture and laboratory. Prerequisite: MSE 170, CEE 220.

M E 355 Introduction to Manufacturing Processes (4) Ramulu Study of manufacturing processes, including interrelationships between the properties of the material, the manufacturing process, and the design of components. Interpretation of experimental data, comparison of measurements to numerical/analytical predictions, and formal, engineering report writing. Prerequisite: M E 354.

M E 356 Machine Design Analysis (4) Chung Analysis, design, and selection of mechanical and electromechanical subsystems and elements, such as gears, linkages, cams, motors, and bearings. Prerequisite: M E 354.

M E 373 Introduction to System Dynamics (5) Garbini Mathematical modeling, analysis, and design of physical dynamic systems involving energy storage and transfer by lumped-parameter linear elements. Time-domain response by analytical methods and numeric simulation. Laboratory experiments. Prerequisite: either AMATH 351 or MATH 307; either AMATH 352 or MATH 308; E E 215; M E 230.

M E 374 Systems Dynamic Analysis and Design (5) Garbini Extension of M E 373. Frequency response analysis, generalized impedance concepts and applications, Fourier series analysis and Laplace transform techniques. Modeling and analysis of electromechanical actuators and rotating machinery. Laboratory experiments and design projects. Prerequisite: AMATH 301; M E 373.

M E 395 Introduction to Mechanical Design (4) Cooper Design process and methodology; decision making; optimization techniques; project planning; engineering economics; probabilistic and statistical aspects of mechanical design; ethical and legal issues. Prerequisite: M E 123; M E 323; IND E 315 or MATH 390/STAT 390 either of which may be taken concurrently.

M E 406 Corrosion and Surface Treatment of Materials (3) Sandwith Corrosion fundamentals and forms (galvanic, crevice, pitting, stress corrosion, erosion, hydrogen, and leaching). Principles of design, materials selection, cathodic protection and surface treatments (coatings, carburizing, nitriding, and plating) applied to reduce corrosion. Failure analysis applied to case studies.

M E 409 Introduction to Numerical Control and Computer-Aided Manufacturing (3) Ramulu Control system fundamentals, numerical control (NC) machine control systems, and the design aspect of NC machine tools, programming methods of NC machines, computer-aided manufacturing, CNC, DNC, and process optimization. Prerequisite: M E 355 which may be taken concurrently.

M E 410 Nanodevices: Design and Manufacture (3) Chung Examines design, fabrication, and manufacture of nano devices with state-of-the-art nanotechnology. Covers classification and selection of nanoscale materials and manufacturing methods: Includes nanodevice design projects. Offered: A.

M E 411 Biological Frameworks for Engineers (3) Sniadecki Introduces the fundamentals of biology for an engineer. Covers mechanisms and biomechanics of DNA, proteins, cells, connective tissue, musculoskeletal tissue, and cardiovascular tissue, integration principles of living systems, structure-function relationships, and techniques to study biology and medicine, and tissue engineering. Offered: A.

M E 414 Engineering Innovation in Medicine (3) J. POSNER, P. REINHALL Introduces the role of innovation and engineering in the design of medical devices and healthcare technologies, applicable both to medical practice and healthcare-focused engineering. Discusses medical practice, clinical needs finding, FDA regulation, insurance reimbursement, intellectual property, and the medical device design process. Offered: A.

M E 415 Sustainability and Design for Environment (3) Cooper Analysis and design of technology systems within the context of the environment, economy, and society. Applies the concepts of resource conservation, pollution prevention, life cycle assessment, and extended product responsibility. Examines the practice, opportunities, and role of engineering, management, and public policy. Offered: jointly with CEE 495/ENVIR 415.

M E 425 HVAC Engineering (4) Emery Heating, ventilating, and air conditioning of built environment. Human comfort, psychometric processes, load computations, fluid distribution, and controls. Design analysis of HVAC system is

taught in the lectures and applied in the class project. Prerequisite: M E 323; M E 331.

M E 426 Sustainable Energy Design (3) Malte Energy systems with renewable energy and efficient use of energy. Project-based learning: analysis, systems engineering, design, component characteristics, and environmental impacts. Prerequisite: M E 333.

M E 430 Advanced Energy Conversion Systems (4) Kramlich Advanced and renewable energy conversion systems and technologies are treated. Included are high efficiency combined cycles; renewable energy conversion involving solar, wind, and biomass; direct energy conversion and fuel cells; and nuclear energy. Environmental consequences of energy conversion and environmental control are discussed. Prerequisite: M E 323.

M E 431 Advanced Fluid Mechanics (4) Mescher Advanced topics in fluid mechanics, including kinematics, potential theory and vortex dynamics, viscous flow, turbulence, experimental and numerical methods, and design. Prerequisite: M E 333.

M E 433 Turbomachinery (4) Aliseda Thermodynamics, gas dynamics, and fluid mechanics of axial and centrifugal compressors, pumps, and turbines. Selection of components for engineering applications. Design problems and/or laboratory experiments to illustrate operating characteristics of turbomachines.

M E 440 Advanced Mechanics of Materials and Solids (3) Study of mechanics of deformable bodies, including three-dimensional stress and strain tensors and their transformations. Equations of compatibility, continuity and equilibrium. Elastic constants. Failure criteria including fracture, yield, and instability. Deflection relations for complex loading and shapes. Indeterminate problems. Design applications and numerical methods. Prerequisite: M E 354.

M E 442 Renewable Energy (4) NW P. MALTE Introduction to renewable energy. Principles and practices: solar, wind, water, and biomass energy conversion. Prerequisite: either M E 323, CHEM E 325, A A 260, or E E 351. Offered: jointly with CHEM E 442; W.

M E 445 Introduction to Biomechanics (4) J. SANDERS Presents the mechanical behavior of tissues in the body and the application to design of prostheses. Tissues studies include bone, skin, fascia, ligaments, tendons, heart valves, and blood vessels. Discussion of the structure of these tissues and their mechanical response to different loading configurations. An important part of the class is a final project. Offered: jointly with BIOEN 440; Sp.

M E 450 Introduction to Composite Materials and Design (3) Tuttle Stress and strain analysis of continuous fiber composite materials. Orthotropic elasticity, lamination theory, failure criterion, and design philosophies, as applied to structural polymeric composites.

M E 459 Introduction to Fracture Mechanics (3) Ramulu Deformation processes leading to fracture, and linear elastic fracture mechanics. Fatigue crack propagation. Fracture control and failure analysis. Prerequisite: M E 354; M E 356.

M E 460 Kinematics and Linkage Design (3) Ganter Synthesis of linkage-type mechanisms using graphical and computer methods.

M E 461 Mechanics of Thin Films (3) Wang Provides an overview of the thin film deposition processes; the stress and microstructure development during film growth; the mechanisms of adhesion; delamination and fracture; and the state-of-the-art characterization techniques for the microstructure and mechanical properties of thin films, coatings, and nanomaterials. Offered: A.

M E 468 Air-Pollution Control Equipment Design (3) Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption.

tion of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Offered: jointly with CEE 494/CHEM E 468.

M E 469 Applications of Dynamics in Engineering (4) *Storti* Application of the principles of dynamics to selected engineering problems, such as suspension systems, gyroscopes, electromechanical devices. Includes introduction to energy methods, Hamilton's principle and Lagrange equations, and the design of dynamic system. Prerequisite: M E 374.

M E 470 Mechanical Vibrations (3) *Reinhal* Single-degree-of-freedom linear systems techniques. Matrix techniques for multi-degree-of-freedom linear systems. Applications in vibration isolation, transmission, and absorption problems and instrumentation. Prerequisite: M E 373.

M E 471 Automatic Control (4) *Berg* Dynamic system modeling; control system stability and performance analysis; compensator design by Bode and root-locus methods. Prerequisite: M E 374.

M E 473 Instrumentation (4) *Garbini* Principles and practice of industrial and laboratory measurement. Dynamics of instrument response; generalized performance analysis of sensor systems; theory of transducers for motion, force, pressure, flow, and other measurements. Lecture and laboratory. Prerequisite: M E 374.

M E 477 Embedded Computing in Mechanical Systems (4) *Garbini* Analysis of electromechanical systems employing microcomputers for control or data acquisition. Microcomputer architecture, memory organization, C language programming, interfaces, and communications. Particular emphasis on design of hardware and software interfaces for real-time interaction with mechanical systems. Weekly laboratory. Prerequisite: M E 374.

M E 478 Finite Element Analysis (4) *Reinhal* Development of theory and concepts of finite element analysis. Applications in all areas of mechanical engineering, including mechanics of solids, heat transfer, and design of dynamical systems. Weekly computer exercises. Prerequisite: M E 123; M E 374; either MATH 308 or AMATH 352.

M E 480 Introduction to Computer-Aided Technology (4) *Ganter* Principles of computer-aided technology. Computer-aided design, engineering, drafting, and manufacturing; computer-aided design systems, geometry, computer graphics, hardware, computer-aided vehicle/system design synthesis. System demonstrations, laboratories, and site visits. Prerequisite: M E 123; AMATH 301.

M E 481 Internal Combustion Engines (4) *Kramlich, Malte* Internal combustion engines including spark and compression ignition piston engines, with focus on engine performance and the thermodynamics, combustion, emissions, and efficiency of engines. Impact of greenhouse gas constraints on engines. Prerequisite: either M E 323, A A 260, or CHEM E 325.

M E 485 Introduction to Electronic Packaging and Materials (3) *Taya* The governing equations of transport phenomena: mechanical, thermal, and electromagnetic behavior, thermomechanical and electromagnetic properties of packaging materials, electromagnetic characteristics of circuit and transmission lines, thermal management and reliability analysis of packaging, interconnect and material processing technology. Prerequisite: MSE 170. Offered: jointly with MSE 485; AW.

M E 487 Laboratory in Electronic Packaging and Materials (1) *Taya, Stoebe* Laboratory course to accompany M E 485 Experiments related to design, processing and reliability of electronic packaging used in consumer electronics. Co-requisite: M E 485. Offered: jointly with MSE 487.

M E 494 Mechatronics Design Preparation (1) *Garbini* Design laboratory preparation. Covers the development of functional specifications; exploration of prior art; static and dynamic modeling. Prerequisite: M E 471; M E 473. Offered: W.

M E 495 Mechanical Engineering Design (4) *Cooper* Design laboratory involving the identification and synthesis of engineering factors to plan and achieve specific project goals. Current literature and prerequisite texts used as reference sources. Prerequisite: M E 395.

M E 496 Technology-Based Entrepreneurship (3) *Furness* Concentrates on hands-on aspects of innovation and entrepreneurial enterprise development. Examines relationships between innovation, iterative prototyping, and marketing testing. Students identify market opportunities, create new technology-based products and services to satisfy customer needs, and construct and test prototypes. Offered: jointly with IND E 496.

M E 498 Special Topics in Mechanical Engineering (1-5, max. 6) Lecture and/or laboratory. Maximum of 6 credits may be applied toward an undergraduate degree.

M E 499 Special Projects (2-5, max. 6) Written report required.

M E 500 Advanced Composite Structural Analysis (3) Covers advanced stress analysis methods for composite structures made of beams, laminates, sandwich plates, and thin shells; stress and buckling analyses of solid and thin-walled composite beams; shear deformable theory for bending of thick laminated plates; and stress and fracture mechanics analysis of bonded joints. Prerequisite: A A 532. Offered: jointly with A A 535; Sp, odd years.

M E 501 Modern Manufacturing Processes (3) *Ramulu* General survey and introduction to modern manufacturing engineering processes. Fundamental principles and practices of modern manufacturing processes. Case studies and exercises relating the course material directly to modern industrial practice. Offered: A.

M E 503 Continuum Mechanics (3) Reviews concepts of motion, stress, energy for a general continuum; conservation of mass, momentum, and energy; and the second law; constitutive equations for linear/nonlinear elastic, viscous/inviscid fluids, and general materials; and examples/solutions for solid/fluid materials. Offered: jointly with A A 503; A.

M E 504 Introduction to Microelectro Mechanical Systems (4) Theoretical and practical aspects in design, analysis, and fabrication of MEMS devices. Fabrication processes, including bulk and surface micromachining. MEMS design and layout. MEMS CAD tools. Mechanical and electrical design. Applications such as micro sensors and actuators, or chemical and thermal transducers, recent advances. Offered: jointly with E E 502/MSE 504.

M E 505 Computer Integrated Manufacturing (3) Design and analysis of advanced manufacturing systems from a strategic as well as technological perspective. Focus on information generation, management, and coordination aspects of complex manufacturing organizations. Examination of system integration alternatives and consequences for relationships with customers and suppliers. Prerequisite: IND E 431 or equivalent. Offered: jointly with IND E 531.

M E 507 Fluid Mechanics (3) Covers inviscid and viscous incompressible flows, exact solutions of laminar flows, creeping flows, boundary layers, free-shear flows, vorticity equation, and introduction to vortex dynamics. Offered: jointly with A A 507; W.

M E 508 Theory and Design for Mechanical Measurements (3) Fundamental concepts of mechanical measurements, principles of sensors and transducers, signal conditioning and data acquisition, advanced experiment planning and analysis, and applications in mechanical engineering.

M E 510 Mathematical Foundations of Systems Theory (4) Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineer-

ing systems stressed. Offered: jointly with A A 510/CHEM E 510/E E 510.

M E 511 Biological Frameworks for Engineers (3) *Sniadecki* Introduces the fundamentals of biology for an engineer. Covers mechanisms and biomechanics of DNA, proteins, cells, connective tissue, musculoskeletal tissue, and cardiovascular tissue, integration principles of living systems, structure-function relationships, and techniques to study biology and medicine, and tissue engineering. Offered: A.

M E 515 Life Cycle Assessment (3) *Cooper* Presents and discusses the computation structure and data sources for environmental Life Cycle Assessment. Uses Life Cycle Assessment to analyze materials, products, and services. The analysis either identifies opportunities for improvements or selects a superior alternative on the basis of pollution prevention and resource conservation. Offered: W.

M E 520 Seminar (-1, max. 6) Credit/no-credit only. Offered: AWSp.

M E 521 Thermodynamics (3) *Kramlich* Fundamental concepts of temperature, thermodynamic properties, and systems. The first, second, and combined laws. Development of the relations of classical thermodynamics. Introduction to statistical thermodynamics. Prerequisite: M E 323 and graduate standing in mechanical engineering or permission of instructor. Offered: A.

M E 522 Thermodynamics (3) *Malte* Topics from statistical thermodynamics, including the Boltzmann, Bose-Einstein, and Fermi-Dirac statistics. Solutions of the Schrodinger wave equation and evaluation of the partition function for translation, rotation, and vibration. Prerequisite: M E 521 or permission of instructor.

M E 523 Energy and Environment Seminar (1, max. 20) *Malte* Student discussions of topics in combustion science and technology, alternative fuels, renewable energy, environmental consequences of energy conversion, and design for environment. Also, presentations by outside experts. May be repeated for credit. Credit/no-credit only. Offered: AWSp.

M E 524 Combustion (3) *Kramlich* Chemical and physical processes of combustion with applications to design of combustors, fuel selection, and consideration of environmental effects. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: Sp, odd years.

M E 525 Applied Acoustics I (3) *Dahl, Reinhal* Introduces acoustics through various applications such as medical ultrasound, underwater sound, noise control and vibrations. Includes linear acoustics, wave equation, planewave solutions, acoustics scales; reflection, refraction, scattering and diffraction, acoustic sources, radiation from transmission through plates. Prerequisite: graduate standing in Engineering, allied field, or permission of instructor. Offered: Sp.

M E 526 Special Topics in Acoustics (3) *Dahl, Reinhal* Advanced study of special topics in acoustics, such as medical ultrasound, underwater sound, noise control and vibrations. Prerequisite: ME 525, or permission of instructor. Offered: A.

M E 527 Musculoskeletal Biomechanics (4) *R. CHING* Engineering principles and mechanics applied to the musculoskeletal system including structure-function property relationships of musculoskeletal tissues, the biomechanics of joint systems, and applications of biomechanics in industry and research. Offered: jointly with BIOEN 520; W.

M E 528 Acoustics of Environmental Noise (4) Offered: jointly with CEE 554.

M E 529 Advanced Energy Conservation Systems (4) *Kramlich* Covers advanced energy conversion systems and technologies, including high efficiency combined cycles, advanced rankine, integrated gasification combined cycle, nuclear, biomass thermal conversion, and fuels cells. Discusses environmental consequences. Offered: A.

M E 530 Radiative Heat Transfer (3) *Mescher* Covers black and gray body radiation, radiative material properties, radiation exchange between surfaces, radiation in participating media, and combined radiation with conduction or convection. Offered: W.

M E 531 Conductive Heat Transfer (3) Analysis of steady-state and transient heat conduction in single- and multidimensional systems by mathematical, graphical, numerical, and analogical methods. Prerequisite: graduate standing in mechanical engineering or permission of instructor.

M E 532 Convective Heat Transfer (3) *Kramlich* Introduction to fluid flow and boundary-layer theory as applicable to forced- and natural-convection heat transfer. Condensation and boiling heat transfer. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

M E 534 Fluid Mechanics II (3) *Riley* Review of basic principles, some exact solutions and their interpretation, waves (water waves, sound waves, shock waves), boundary layers, jets and wakes, flow stability, turbulence, applications. Prerequisite: M E 507 or permission of instructor. Offered: W.

M E 535 Computational Techniques in Mechanical Engineering (3) *Emery* Advanced heat transfer studies of interest to mechanical engineers. Subject coverage varies from year to year. Prerequisite: permission of instructor. Offered: Sp.

M E 536 Micro and Nanoscale Fluid Transport Phenomena (3) *Posner, Shen* Focuses on fundamental fluid transport physics at the micro/ and nanometer scale for applications in micro/nanofluidic devices. Presents the core concepts of low-Reynolds number Newtonian fluid mechanics; mass transfer; charged double layers; electrokinetically driven flow and transport; and surface tension. Discusses state of the art micro and nanoscale total analytical devices. Offered: WSp.

M E 537 Topics in Fluid Mechanics (3) Selected fluid mechanics relevant to current advances in research and application. Topics selected vary with faculty and student interest, but have included flow stability, special topics in turbulence, and turbulent reacting flows.

M E 538 Advanced Fluid Mechanics (4) *J. RILEY* Advanced topics in fluid mechanics, including kinematics; potential theory and vortex dynamics; viscous flow; turbulence; numerical methods; and design. Offered: A.

M E 539 Renewable Energy I (4) *Malte* Renewable energy, principles and practices of energy conversion, with focus on solar energy and bio-energy. Offered: W.

M E 540 Renewable Energy II (3) *Malte* Explores renewable energy, principles and practices of energy conversion, focusing on wind and hydrokinetic energy. Offered: Sp.

M E 541 Fatigue of Materials (3) *Ramulu* Macro and micro aspects of fatigue of metals and fatigue mechanisms. Analytical methods for fatigue and life assessment in advanced materials. Offered: W.

M E 543 Fluid Turbulence (3) Methods of characterizing fluid turbulence; probability concepts; spatial and temporal velocity correlations; spectral energy transfer; turbulent diffusion; isotropic turbulence and Kolmogoroff's hypothesis; Taylor's hypothesis; hot-wire measurement techniques. Prerequisite: 3 credits of graduate level fluid mechanics or permission of instructor. Offered: W, even years.

M E 544 Advanced Turbulence Modeling Techniques (3) *Riley* The Reynolds stress transport equations; plane homogeneous shear flow; modeling the pressure-strain, diffusion, and dissipation rate correlation tensors; one and two-equation turbulence models; near-wall turbulence and wall functions; limitations of length scale and eddy viscosity modeling. Prerequisite: 3 credits of turbulence-related coursework. Offered: Sp, even years.

M E 546 Micro-Scale Heat Transfer (3) *Mescher* Covers advanced heat conduction and radiation principles, emphasizing micro-scale applications. Offered: Sp, odd years.

M E 547 Linear Systems Theory (4) Linearity, linearization, finite dimensionality, time-varying vs. time-invariant linear systems, interconnection of linear systems, functional/structural descriptions of linear systems, system zeros and invertibility, linear system stability, system norms, state transition, matrix exponentials, controllability and observability, realization theory. Offered: jointly with A A 547/E E 547.

M E 548 Linear Multivariable Control (3) Introduction to MIMO systems, successive single loop design comparison, Lyapunov stability theorem, full state feedback controller design, observer design, LQR problem statement, design, stability analysis, and tracking design. LQG design, separation principle, stability robustness. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with A A 548/E E 548.

M E 549 Estimation and System Identification (3) Fundamentals of state estimation for linear and nonlinear systems. Discrete and continuous systems. Probability and stochastic systems theory. Models with noise. Kalman-Bucy filters, extended Kalman filters, recursive estimation. Numerical issues in filter design and implementation. Prerequisite: either A A 547, E E 547, or M E 547. Offered: jointly with A A 549/E E 549.

M E 550 Nonlinear Optimal Control (3) Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Offered: jointly with A A 550/E E 550.

M E 551 Elasticity I: Elastostatics (3) *Taya* Elastostatics, including general formulations of 2D and 3D elastostatic problems (stress function method, complex variable method, displacement potential method). Eshelby's method is emphasized and used to solve 2D and 3D problems with special application to composite materials. Offered: W.

M E 552 Viscoelasticity and Plasticity (3) *Taya* Covers viscoelasticity, including the stress-strain equations in terms of convolution integral, Fourier transform, and Laplace transform modes. Plasticity focuses on generalized plastic behavior.

M E 553 Adhesion Mechanics (3) *Tuttle* Introduction to adhesive systems and test/evaluation techniques. Stress/strain analysis methods used with adhesive joints. Examples of practical applications. Prerequisite: graduate student status or permission of instructor. Offered: Sp, even years.

M E 555 Thermoelasticity (3) *Emery* Basic equations of thermoelasticity for isotropic elastic solids. Analysis of disks, cylinders, spheres, beams, and plates under steady temperature and sudden and slow heating and cooling. Introduction to thermoelastic stability. Prerequisite: M E 551 or permission of instructor.

M E 556 Experimental Stress Analysis I (3) *Tuttle* Theory and practice of experimental techniques including strain gages and strain gage-based devices, thermocouples, LVDTs, and transducer design. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor. Offered: A.

M E 557 Experimental Stress Analysis II (3) *Tuttle* Theory and practice of optical mechanics, including interferometric techniques (moiré and holographic), geometric moiré methods, and photoelasticity. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor. Offered: W, even years.

M E 559 Introduction to Fracture Mechanics (3) *Ramulu* Applications of linear fracture mechanics to failure analysis and fracture control based on actual case studies. Fracture toughness and fatigue testing techniques, crack initiation, and propagation fatigue life prediction of mechanical components subjected to environmental effects. Offered: W.

M E 561 Mechanics of Thin Films (3) *Wang* Provides an overview of the thin film deposition processes; the stress and microstructure development during film growth; the mechanisms of adhesion; delamination and fracture; and the state-of-the-art characterization techniques for the microstructure and mechanical properties of thin films, coatings, and nanomaterials. Offered: A.

M E 562 Introduction to Electronic Composites (3) *Taya* Fundamentals of microstructure-macro-property relation of electronic composites. This course covers applications (computers, laser packages, medical devices, MEMS, avionics), functions (mechanical, thermal, electromagnetic, and optical), microstructure-macro-property relations, processing issues, and modeling of electronic composites. Offered: jointly with MSE 562; Sp.

M E 563 Advanced Composites: Design and Manufacturing (3) Manufacturing and processing techniques of metal-, polymer-, and ceramic-matrix composites; design considerations related to manufacturing techniques; non-destructive testing of composite structures. Fiber-matrix interfacial features and interactions. Interfacial thermodynamics applied to selection of fiber-matrix combinations. Prerequisite: MSE 475 or M E 450 or equivalent by permission of instructor. Offered: jointly with MSE 563; Sp.

M E 564 Mechanical Engineering Analysis (3) *Storti* Application of mathematical methods to the description and analysis of systems in mechanical engineering. Analogies in heat transfer, fluid flow, stress distribution, dynamics, and feedback control. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: A.

M E 565 Mechanical Engineering Analysis (3) *Storti* Applications of vectors, matrices, and partial differential equations to mechanical engineering systems, including computational techniques and analogies. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: W.

M E 568 Active and Sensing Materials (3) *Taya* Fundamental knowledge of the nano-structure property relations of active and sensing materials, and their devices. Examples of the active and sensing materials include: shape memory alloys (SMAs), ferromagnetic SMAs, ferroelectric, piezoelectric and piezoelectric materials, thermoelectrics, electroactive and conducting polymers, photoactive polymers, photovoltaics, and electrochromic materials. Offered: jointly with MSE 568; Sp.

M E 570 Manifolds and Geometry for Systems and Control (3) Introduction to fundamentals of calculus on manifolds and group theory with applications in robotics and control theory. Topics include: manifolds, tangent spaces and bundles, Lie groups and algebras, coordinate vs. coordinate-free representations. Applications from physics, robotics, and control theory. Offered: jointly with A A 570/E E 570; W, even years.

M E 572 Methodologies for Engineering Design: Conceptual Design (3) *Kumar* Methodologies particularly useful in the conceptual or preliminary phase of a design. The design process. Impact of formulating independent functional requirements. Physical and functional coupling in design. Case studies in conceptual design of products and processes. Prerequisite: graduate standing or permission of instructor. Offered: W, even years.

M E 578 Optimization in System Sciences (3) Covers convex sets, separation theorems, theorem of alternatives and their applications, convex analysis, convex functions, conjugation, subgradients, convex optimization, duality and applications, linear and semi-definite programming. Linear matrix inequalities, optimization algorithms, applications in system theory and control, bilinear, rank minimization, optimization software. Offered: jointly with A A 578/E E 578; W.

M E 580 Geometric Methods for Non-Linear Control Systems (3) Analysis and design of nonlinear control systems

focusing on differential geometric methods. Topics include controllability, observability, feedback linearization, invariant distributions, and local coordinate transformations. Emphasis on systems evolving on Lie groups and linearly uncontrollable systems Prerequisite: A A 570/E E 570/M E 570. Offered: jointly with A A 580/E E 580; Sp, even years.

M E 581 Digital Control (3) *Chizeck* Sampled-data systems, and z-transform. Frequency domain properties. Sampling D/A and A/D conversion. Controller design via discrete-time equivalents, direct methods, state feedback and observers. Quantization effects. LQR control and introduction to LQG optimal control. Prerequisite: E E 548/A A 548/ M E 548. Offered: jointly with A A 581/E E 581; W.

M E 582 Introduction to Discrete Event Systems (3) *Berg* Modeling DES with automata and Petri nets. Languages. State estimation and diagnostics. Control specifications. Feedback control. Dealing with uncontrollability and unobservability. Dealing with blocking. Timed automata and Petri nets. Prerequisite: A A 447/E E 447/ M E 471. Offered: jointly with A A 582/E E 582; Sp, even years.

M E 583 Nonlinear Control Systems (3) Analysis of nonlinear systems and nonlinear control system design. Phase plane analysis. Lyapunov stability analysis. Describing functions. Feedback linearization. Introduction to variable structure control. Prerequisite: A A 447/E E 447/M E 471. Offered: jointly with A A 583/E E 583.

M E 585 System Identification and Adaptive Control (3) Theory and methods of system identification and adaptive control. Identification of linear-in-parameter systems, using recursive LS and extended LS methods; model order selection. Indirect and direct adaptive control. Controller synthesis, transient and stability properties. Offered: jointly with A A 585/E E 585.

M E 588 Dynamics and Vibrations (3) *Shen* Variational techniques, Hamilton's principle, Lagrange's equations applied to dynamics of particles and rigid bodies. Vibration analysis of multi-degree-of-freedom and continuous systems. Prerequisite: graduate standing in engineering or permission of instructor. Offered: A.

M E 589 Vibrations (3) *Storti* Study of systems with nonlinear damping and restoring forces excited by deterministic or random inputs. Applications in measurement, testing, and design of mechanical systems. Nonlinear systems are emphasized. Prerequisite: M E 588 or permission of instructor. Offered: W, even years.

M E 591 Robotics and Control Systems Colloquium (1, max. 30) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Credit/no-credit only. Offered: jointly with A A 591/CHEM E 591/E E 591.

M E 593 Feedforward Control (3) *Devasia* Design feedforward controllers for precision output tracking; inversion-based control of non-minimum-phase systems; effect of plant uncertainty on feedforward control; design of feedforward controllers for applications such as vertical take off and landing aircraft, flexible structures and piezo-actuators. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with A A 593/E E 593; Sp, even years.

M E 594 Robust Control (3) Basic foundations of linear analysis and control theory, model realization and reduction, balanced realization and truncation, stabilization problem, coprime factorizations, Youla parameterization, matrix inequalities, H-infinity and H2 control, KYP lemma, uncertain systems, robust H2, integral quadratic constraints, linear parameter varying synthesis, applications of robust control. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with A A 594/E E 594; Sp, odd years.

M E 597 Networked Dynamics Systems (3) Provides an overview of graph-theoretic techniques that are instrumental for studying dynamic systems that coordinate their states over a signal-exchange network. Topics include net-

work models, network properties, dynamics over networks, formation control, biological networks, observability, controllability, and performance measures over networks. Prerequisite: A A 547/E E 547/M E 547. Offered: jointly with A A 597/E E 597.

M E 598 Topics in Research (1) Doctoral seminar. Credit/no-credit only. Offered: AWSp.

M E 599 Special Projects (1-5, max. 9) Written report required. Prerequisite: permission of department chairperson. Offered: AWSpS.

M E 600 Independent Study or Research (*-) Written report required. Offered: AWSpS.

M E 700 Master's Thesis (*-) Offered: AWSpS.

M E 800 Doctoral Dissertation (*-) Offered: AWSpS.

College of the Environment

Dean

Lisa Graumlich
209 Ocean Sciences

Associate Deans

Bruce Nelson, Research

Julia Parrish, Academic Affairs and Diversity

Rapidly changing interactions between the Earth's environment and human activities drive the research and teaching at the College of the Environment. By connecting some of the world's leading educators and researchers with students, practitioners, and citizens, the College cultivates communities that work with and learn from each other as they tackle the environmental challenges of the twenty-first century.

For decades the UW has been recognized as home to one of the strongest constellations of environmental and intellectual talent in the world. In fulfillment of a vision for a bold, resourced, enduring, and effective environmental hub, the UW launched the College of the Environment in July 2009. The College fosters existing and new collaborations between faculty, staff, and students who are engaged in the study of the Earth's dynamic land, water, and atmosphere systems; the development and application of engineering and technological advances; and the impact of policy and human dimensions on the environment and the management of natural resources.

Offering more than 20 degree programs, ranging from bachelor to doctoral, and granting more than 450 degrees annually, the College is comprised of the following core units:

- School of Aquatic and Fishery Sciences
- Department of Atmospheric Sciences
- Department of Earth and Space Sciences
- Program on the Environment
- School of Environmental and Forest Sciences
- School of Marine and Environmental Affairs
- School of Oceanography
- Friday Harbor Laboratories
- Joint Institute for the Study of the Atmosphere and Ocean
- Washington NASA Space Grant Consortium
- Washington Sea Grant Program

COLLEGE FACILITIES

The College of the Environment main office is in the Ocean Sciences Building, Suite 200, located at 1492 NE Boat Street. For locations of all College of the Environment buildings, see the Academics-at-a-Glance page for links to campus maps showing the College's school and departmental buildings.

The College's facilities and field stations include the following, among others: Center for Sustainable Forestry at Pack Forest, Friday Harbor Laboratories, Pacific Northwest Seismic Network, Research Vessel Thomas G. Thompson, and Wind River Crane Canopy Research Center.

UNDERGRADUATE PROGRAM

The College of the Environment offers the following undergraduate degree options:

Bachelor Degree Programs

Bachelor of Science

- Aquatic and Fishery Sciences
- Atmospheric Sciences
- Bioresource Science and Engineering
- Earth and Space Sciences (degree options areas: biology, environmental, geology, and physics)
- Environmental Science and Resource Management (degree option areas: landscape ecology and conservation, restoration ecology and environmental horticulture, sustainable forest management, and wildlife conservation)
- Oceanography

Bachelor of Arts

- Environmental Studies

Minors

- Aquatic and Fishery Sciences
- Arctic Studies
- Atmospheric Sciences
- Climate Science
- Earth and Space Sciences
- Environmental Science and Resource Management
- Environmental Studies
- Oceanography
- Restoration Ecology

Admission

The College does not have admission requirements beyond those required for admission to the University of Washington. Most of the majors within the College are open admission and can be declared at any time by students in good academic standing, except for the major in Bioresource Science and Engineering within the School of Environmental and Forest Sciences, which has a competitive admission process.

General Education Requirements

Minimum 85 credits as follows:

1. *Written and Oral Communication*: One 5-credit English composition (C) course from the approved University list with a minimum 2.0 grade; 10 additional writing credits.
2. *Quantitative & Symbolic Reasoning (QSR)*: 10 credits. See departmental lists for specific quantitative and symbolic reasoning requirements.
3. *Areas of Knowledge*
 - a. *Visual, Literary, & Performing Arts*: 10 credits. Visual, Literary, & Performing Arts (VLPA) includes courses such as literature, art, music, and drama which stress the essential qualities of individual forms of expression. First- and second-quarter language courses may not be counted toward the VLPA requirement. (May substitute first-year language courses for VLPA requirements by completing a third quarter of a three-course sequence. Language courses at the second-year level and beyond may be counted toward the VLPA requirement.)
 - b. *Individuals & Societies (I&S)*: 20 credits, with at least 10 credits out of major*. Individuals & Societies includes courses in subjects such as history, economics, psychology, and sociology which stress the social nature of mankind, and the development and analysis of societies and social institutions.
 - c. *Natural World (NW)*: 20 credits, with at least 10 credits out of major*. See departmental list for specific natural world requirements.
 - d. *Additional Areas of Knowledge*: 10 credits

* Definition of "out of major": Course must have an out-of-major prefix and may not overlap with courses required for the major. This includes cross-listed courses.

GRADUATE PROGRAM

The College of the Environment offers the following graduate degree options:

Master's Degree Programs

Master of Science

- Aquatic and Fishery Sciences
- Atmospheric Sciences
- Earth and Space Sciences
- Forest Resources
- Oceanography
- Science for Teachers
- Other Master's Degrees:
 - Master of Environmental Horticulture
 - Master of Forest Resources
 - Master of Marine Affairs

Doctoral Degree Programs

Doctor of Philosophy

- Aquatic and Fishery Sciences
- Atmospheric Sciences
- Earth and Space Sciences
- Forest Resources
- Geologic Sciences
- Geophysics
- Oceanography
- Graduate Certificate Programs
- Astrobiology
- Climate Sciences
- Environmental Management

Science for Teachers Program Overview

The Master of Science in Science for Teachers (MSST) is a graduate degree in science developed specifically for teachers and administered by the College of the Environment. Because science is moving at ever-increasing speeds, with new breakthroughs, innovations and technologies, keeping pace requires science educators to engage in hands-on, high-level, real-life science. The MSST program has three core components: practicing science through an independently-designed research project, deepened disciplinary content knowledge, and the development of an interdisciplinary skill set. These components work together to give teachers the opportunity to experience directly how the three dimensions of the Next Generation Science Standards (cross-cutting concepts, science and engineering practices, core disciplinary ideas) are integrated and realized in cutting-edge contemporary science.

Master of Science (Science for Teachers)

uwsst@uw.edu

coenv.washington.edu/students/graduate-students/prospective-students/degree-programs-advisers/master-of-science-for-teachers/

The College of the Environment offers the Master of Science in Science for Teachers (MSST), a graduate degree in science developed specifically for teachers. The MSST program provides a unique opportunity to conduct scientific research with world-renowned UW faculty and research professionals as a mechanism to strengthen and broaden content knowledge and scientific skill sets. This degree is designed to:

- Move science teachers through the skills that are fundamental to today's scientific practice – experimental design, data manipulation, data visualization, and science communication
- Create a flexible and personally-tailored elective set within the student's discipline of choice
- Culminate in the design and implementation of an individualized and independent scientific research project

The flexible course structure is especially designed to fit the needs of K-12 teachers. Course work can be taken throughout the UW, and faculty research mentors range across Colleges of the Environment, Arts and Sciences, Public Health, and Medicine. MSST is intended to be completed in two years and may be compatible with part-time work or teaching. Students may take additional time to complete their degree if needed.

The Master of Science in Science for Teachers does not lead to teacher certification.

Admission Requirements

Admission to the Master of Science (Science for Teachers) degree program is based on evaluation of required application materials in competition with other applicants. Required materials include Graduate Record Examination general test scores, three letters of recommendation, official academic transcripts, minimum GPA of 3.0 required for last two years of study, a bachelor's degree in a science field (or demonstrated equivalency), and experience working in an educational setting. Applicants must apply directly to, and be accepted by, the University's Graduate School. Applications are accepted for Autumn Quarter only.

Degree Requirements

36 total credits as follows:

1. 18 credits at the 500-level or higher
2. Minimum 2.7 grade in 18 credits at the 400-level or higher
3. Minimum 3.00 GPA
4. Core courses based on shared skills sets, with a secondary focus on developing student cohorts: SCI T 501; SCI T 502; SCI T 503; SCI T 600 (9-10 credits)
5. Statistics course (5 credits) at the 300-500 level
6. An elective pathway that the student and Graduate Program Coordinator develop based on the disciplinary needs of the student.

Financial Aid

The Master of Science (Science for Teachers) program does not provide funding to students. Applicants in need of support are encouraged to contact the UW Office of Student Financial Aid to explore options for grants, loans, scholarships, and work-study; to apply for College of the Environment Scholarships; and to investigate outside sources of funding.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crscat/

C ENV 110 Introduction to Food and the Environment (5) I&S/NW Hilborn Relates the production and consumption

of food to the major areas of environmental science including energy use, water consumption, biodiversity loss, soil loss, pollution, nutrient cycles, and climate change. Studies the basic science and how food production impacts the key processes.

C ENV 190 Introductory Topics in Environment (1-5, max. 15) Covers topics related to all areas of the environment.

C ENV 410 MESA Introductory Tutor Training Workshop (1) Tutor skills and cultural competence training designed to prepare tutors to work in small groups with Seattle middle and high school students in math and science. Credit/no-credit only. Offered: ASp.

C ENV 420 MESA Introductory Tutor Training Seminar (1-2) Second course in the tutor training program. Continued development of tutoring skills and cultural competence training designed to prepare tutors to work in small groups with Seattle middle and high school students in math and science. Credit/no-credit only. Offered: AW.

C ENV 425 MESA Tutoring Practicum (1-3, max. 15) Trained MESA tutors work in small groups with Seattle middle and high school students in math and science. Develop tutoring skills, share best practices, and problem solve through online interactions with the MESA tutoring program. Credit/no-credit only. Offered: AWSp.

C ENV 430 MESA Advanced Tutor Training Seminar (1-2) Advanced tutor training program. Continued development of tutoring skills and cultural competence training designed to prepare tutors to work in small groups with Seattle middle and high school students in math and science. Credit/no-credit only. Offered: A.

C ENV 490 Special Topics in Environment (1-5, max. 15) Covers topics related to all areas of the environment depending on curricular needs and interests of students and faculty.

C ENV 500 Communicating Science to the Public Effectively (3) Teaches emerging scientists how to effectively communicate their research to the public. Uses lessons and tools such as group discussion, feedback, and practice. Credit/no-credit only. Offered: W.

C ENV 590 Special Topics in Environment (1-5, max. 15) Covers topics related to all areas of the environment depending on curricular needs and interests of students and faculty.

Friday Harbor Labs

FHL 305 Biology of Fishes (5) NW N. GIDMARK Covers the morphological, physiological, behavioral, and ecological diversity of fishes worldwide; provides a basic foundation for advanced courses in all areas of aquatic sciences. Participants engage in field-based collecting, copious dissection/illustration laboratories, and delve into scientific literature on this fascinating group's biology. Recommended: Recommended: 10 credits biological science. Offered: ASp.

FHL 430 Marine Zoology (5) NW Survey of groups of invertebrate animals represented in the San Juan Archipelago; natural history, functional morphology, ecology, distribution, habitat, adaptation, trophic interrelationships, and evolution. Prerequisite: BIOL 445, which must be taken concurrently; permission of Friday Harbor director. Offered: jointly with BIOL 430.

FHL 432 Marine Invertebrate Zoology (9) NW Comparative morphology and biology of marine invertebrates with emphasis on field and laboratory studies. Representatives of all major and most minor phyla are collected, observed live, and studied in detail. Taken at Friday Harbor Laboratories. Not open for credit to students who have taken BIOL 434. Offered: jointly with BIOL 432; S.

FHL 435 Research Apprenticeship in Marine Science (15) NW Immersive quarter in research in close collaboration with one-three faculty mentors on a specific topic that varies with the apprenticeship. Students engage in laboratory or field research in marine science, involving gathering,

analyzing, and communicating results as part of a research team. Offered: jointly with BIOL 435/MARBIO 435; ASpS.

FHL 440 Marine Botany (5) NW Survey of plants represented in marine environments; natural history; ecology, distribution, habitat, adaptation, and trophic interrelationships. Taken at Friday Harbor laboratories. Prerequisite: either BIOL 220, B BIO 220, or TESC 140; BIOL 430, which must be taken concurrently. Offered: jointly with BIOL 445.

FHL 450 Nearshore Ecology Research Experience (6) NW M. DETHIER A hands-on introduction of "doing science" in close collaboration with a faculty member. Students engage in research around a thematic focus of ecology of nearshore marine ecosystems, with lab experiments and field work. Students gather, analyze, write up, and present their own data. Offered: jointly with MARBIO 450; ASp.

FHL 460 Aquatic Animals Research Experience (6) NW P. DITSCHKE-KURU A hands-on introduction of "doing science" in close collaboration with a faculty member. Students engage in research around a thematic focus of aquatic animals, with lab experiments and field work. Students gather, analyze, write up, and present their own data. Offered: jointly with MARBIO 460; ASp.

FHL 470 Research in Marine Biology (1-15, max. 15) NW B. SWALLA A hands-on introduction of "doing science" in close collaboration with a faculty member. Students engage in research in marine biology; credits vary with the scale of the project with may include lab experiments and field work. Students gather, analyze, write up, and present their own data. Offered: jointly with MARBIO 470; ASp.

FHL 490 Marine Sciences Seminar (1, max. 3) NW P. DITSCHKE-KURU, N. GIDMARK Students attend seminars by marine scientists each week and ask questions about their seminars. Offered: ASpS.

FHL 492 Ecology and Conservation of Marine Birds and Mammals (9/15) NW An intensive, field-based course that offers motivated students the opportunity to learn about these ecologically and culturally important marine animals and the conservation problems they face. Emphasizes first-hand learning and individual research projects. Offered: jointly with FISH 492/MARBIO 492; S.

FHL 528 Advanced Topics in Fish Biology (9, max. 27) Focuses on various aspects of fish biology, such as functional morphology, sensory biology, or swimming mechanics. Taught at Friday Harbor Laboratories. Offered: S.

FHL 536 Comparative Invertebrate Embryology (9) Studies diversity in developmental patterns in major marine taxa. Analyzes evolutionary changes in development, with emphasis on observation of live embryos and larvae. Offered: jointly with BIOL 536; S.

FHL 539 Marine Algae (9) Field and laboratory studies of marine algae of the San Juan Archipelago with emphasis on seaweed diversity, identification, and the role of algae in marine ecosystems. Offered at Friday Harbor Laboratories. Offered: jointly with BIOL 539.

FHL 548 Advanced Topics in Evolution and Development (9, max. 27) Focuses on various aspects of evolution and development of marine organisms, such as larval biology or evolution and development of metazoans. Students work on individual projects during the course. Taught at Friday Harbor Laboratories. Offered: S.

FHL 568 Advanced Topics in Ecology and Biomechanics (9, max. 27) Focuses on various aspects of ecology and biomechanics of marine organisms, such as experimental ecology, ocean acidification, deep sea biodiversity, or biomechanics. Taught at Friday Harbor Laboratories. Offered: S.

FHL 585 Advanced Topics in Neurobiology and Physiology (9, max. 27) Focuses on various aspects of neurobiology or physiology of marine organisms, such as neurobiology, ethology, or marine chemosensory biology. Taught at Friday Harbor Laboratories. Offered: S.

Science Teaching

SCI T 501 Observational Science and Experimental Design for Teachers (2) Students consider the nature of scientific exploration; practice using observations, evidence, and explanation to make hypotheses; and explore case studies demonstrating various experimental designs. Combines on-line activities, readings, hands-on activities, presentations, and discussions. Offered: A.

SCI T 502 Data Analysis and Visualization for Teachers (2) Students gain experience analyzing and visualizing data sets, evaluate the use of common data visualization tools, and create graphs of their own data sets. Combines on-line activities, readings, hands-on activities, presentations, and discussions. Offered: W.

SCI T 503 Science Communication for Teachers (2) Students examine effective communication of scientific research. Students critically evaluate example presentation from on-campus departmental seminars, practice communicating their own scientific research to mentors and peers, and deliver a formal oral presentation. Offered: Sp.

Aquatic and Fishery Sciences

116 Fishery Sciences

The School of Aquatic and Fishery Sciences (SAFS) encompasses multi-disciplinary programs at the interface between the traditional fields of natural history, environmental biology, and natural resource management. Primary foci are the management of sustainable fisheries of commercially important species; biocomplexity and ecosystem-based management; and sustainable aquaculture. In addition, human-induced effects on natural ecosystems (including habitat change and restoration, impacts of climate change, emerging diseases, the effects of invasive species, and processes affecting endangered species and declining populations) are major areas of research. In pursuit of these objectives, a variety of basic sciences are used, including ecology and evolution, population biology, behavior, physiology, microbiology, and genetics. The scope of aquatic systems ranges from watersheds, rivers and lakes, to estuarine and near-shore shelf, open ocean systems and culture facilities. Graduates of the School of Aquatic and Fishery Sciences are uniquely qualified for careers in universities as well as other educational settings, natural resources management agencies at the local to international levels, environmental consulting, and non-profit organizations with an environmental focus.

UNDERGRADUATE PROGRAM

Adviser

116 Fishery Sciences, Box 355020

(206) 543-7457

safsadv@uw.edu

The School of Aquatic and Fishery Sciences (SAFS) offers the following programs of study:

- The Bachelor of Science, with a major in aquatic and fishery sciences
- A minor in aquatic and fishery sciences
- An interdisciplinary minor in marine biology
- An interdisciplinary minor in quantitative science

The School's undergraduate program has been substantially modified in recent years to reflect student and faculty interests in ecology and conservation biology, as well as more traditional fields such as stock assessment and

fishery management. Faculty dedication to teaching, substantial benefit gained in close faculty contact within a relatively small program, and significant experiential training and research have made SAFS an appealing major that has doubled in recent years. The Bachelor of Science degree provides an underpinning in sciences such as biology, chemistry, and mathematics/statistics, then adds a core curriculum within aquatic sciences. Students study within areas of individual interest, grouped in three primary areas: aquatic ecology, conservation and management of aquatic resources, and biology and culture of aquatic animals.

Bachelor of Science

Suggested First- and Second-Year College Courses: Recommended courses for first year students: English composition; calculus; CHEM 120 or CHEM 142, and CHEM 220; BIOL 180; and FISH 250 and/or FISH 101. Recommended courses for second year students: BIOL 200 and BIOL 220; Q SCI 381; FISH 310 and/or FISH 311; and any additional courses that meet the College general education requirements. Students should start FISH core courses as soon as they meet the appropriate prerequisites.

Department Admission Requirements

Students in good academic standing may declare this major at any time, including on their application for admission to the UW. After notification of admission and before registration, new students should visit or email the Student Services Office for help in planning their programs.

Graduation Requirements

180 credits, as follows:

Students must complete the College of the Environment general education and the Aquatic and Fishery Sciences major requirements outlined below. Many courses may overlap in both categories unless otherwise noted. Courses taken to meet the degree requirements outlined below may not be taken on the satisfactory/not-satisfactory grading option. Remaining credits to bring the total to 180 are general electives.

- 1. General Education Requirements (85 credits):** May and do overlap with major requirements unless otherwise noted.
 - a. Written Communication (15 credits):** 5 credits English composition (ENGL 131 preferred); 10 additional credits, satisfied by departmental courses, shown below.
 - b. Quantitative and Symbolic Reasoning (10 credits):** Met by departmental requirements, shown below.
 - c. Natural World (20 credits):** 10 credits must be taken "out of major," defined as courses that count neither toward major requirements nor have the prefix of the department from which the student is earning his or her degree (includes cross-listed courses).
 - d. Visual, Literary, & Performing Arts (VLPA) (10 credits):** May overlap with major requirements. No specific courses required.
 - e. Individuals & Societies (I & S) (20 credits):** 10 credits must be taken "out-of-major," defined as courses that count neither toward major requirements nor have the prefix of the department from which the student is earning his or her degree (includes cross-listed courses).
 - f. Additional Areas of Knowledge (10 credits)**

2. Major Requirements

- a. Foundational Courses (50+ credits):** MATH 124 and MATH 125, or Q SCI 291 and Q SCI 292; Q SCI 381; general chemistry (CHEM 120 or CHEM 142); organic chemistry (CHEM 220 or CHEM 223); BIOL 180, BIOL 200, BIOL 220; PHYS 114 or PHYS 121; two courses counting for "physical world" requirement. See adviser or website for acceptable courses in this category.

- b. Scientific Writing and Communication (3 credits):** FISH 290
 - c. Natural History Courses (10 credits):** FISH 310 and FISH 311.
 - d. Core Courses (15 credits minimum):** FISH 312; FISH 323; FISH 324; FISH 340.
 - e. 400-Level FISH Electives (minimum 16 credits, 4 courses):** 400-level courses from within the School of Aquatic and Fishery Sciences for the major, excluding FISH 453, FISH 479, and FISH 492.
 - f. Capstone (7-13 credits):** FISH 493, FISH 494, FISH 495
- 3. GPA Requirement:** Minimum 2.00 cumulative GPA in all courses counted in each of the following categories: natural history, core courses, and 400-level electives.

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, contact the departmental adviser or refer to the department website.

Minor

Aquatic and Fishery Sciences

Minor Requirements: Minimum 28 credits to include three courses (two of which must be at least at the 300 level) from FISH 101, FISH 250, FISH 310, FISH 311, FISH 312, FISH 323, and FISH 324; Q SCI 381 or Q SCI 482; minimum two upper-division FISH courses totaling at least 8 credits.

Marine Biology

The minor in marine biology is sponsored jointly by the School of Aquatic and Fishery Sciences, the School of Oceanography, and the College of Arts and Sciences, and is designed to immerse students in the study of marine organisms and ecosystems, starting in the freshman year. Because the experience of marine sciences cannot be taught entirely within the classroom, the minor is structured to provide ample opportunity for fieldwork and research within the coursework. A description of the minor can be found under the Interdisciplinary Undergraduate Program section of the catalog.

Quantitative Science

Students interested in quantitative skills applied to biological and ecological fields should consider minoring in quantitative science, an interdisciplinary minor supported by the School of Aquatic and Fishery Sciences and the School of Environmental and Forest Sciences. More information may be found on the Center for Quantitative Science website.

Student Outcomes and Opportunities

- **Learning Objectives and Expected Outcomes:** Aquatic and fishery sciences is a life science major designed to provide students a broad framework of knowledge and sets of skills for employment in a variety of areas (e.g., natural resource management, environmental consulting, fish or aquatic wildlife biology, aquaculture). In addition, students receive excellent preparation for graduate study in a number of life science fields. Expected student outcomes include:
 - Skills in written and oral communication, data analysis, field and laboratory skills. Skill sets have been integrated into all core and flagship courses.
 - Exposure to career paths in the field and interaction with professionals. Skills gained allow students to obtain an entry-level aquatic scientist position or admission to graduate school.
 - Emphasis in one of three focus areas (aquatic ecology, conservation and management, aquatic biology)

and culture); students get a broad overview, then may specialize in one of the three areas.

- Strong encouragement to pursue multiple internship and research experiences, including opportunities like FHL research apprenticeships and Alaska Ecological Research Program.
- Understanding not only of the science, but also the socio-political-economic environment and its impact on the field of aquatic and fishery sciences.
- All students participate in a capstone experience that requires them to demonstrate acquired skill sets (including public presentation in an undergraduate research symposium).

SAFS graduates pursue careers in the private sector (environmental consulting firms, private companies), the public sector (state and federal agencies, non-profit organizations, non-governmental agencies, education), and many continue into graduate programs in either research or policy. The undergraduate degree prepares students for either direct employment in a number of fields within public and private sectors, or for competitive entry into applicable graduate programs worldwide.

- **Instructional and Research Facilities:** The School of Aquatic and Fishery Sciences is housed in several buildings on the University of Washington campus. In addition, the School maintains various facilities off campus, including field research stations in Washington State and Alaska.
- **Honors Options Available:** With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors requirements in the major).
- **Research, Internships, and Service Learning:** SAFS scientists work closely with employers in both the public and private sectors, leading to opportunities for undergraduates to receive both internship and research experience. Scientists from area agencies (NOAA, National Marine Fisheries, Alaska Fisheries Sciences Center, National Marine Mammal Lab, the U.S. Forest Service, the Student Conservation Association, and the Seattle Aquarium) come to the school to attend weekly SAFS departmental seminars; undergraduates are encouraged to attend. The School of Aquatic and Fishery Sciences is second only to the UW Medical School in federal research dollars brought to the UW campus, providing many paid hourly student positions within the department.
- **Department Scholarships:** Scholarships are awarded on the basis of academic merit, financial need, and other factors. The annual application process for continuing students begins in spring; check with the Office of Student Services for applications and deadlines. All undergraduates, both freshmen and transfers, are considered for recruitment scholarships if they have declared AFS as their major on their application to the University of Washington.
- **Student Organizations/Associations:** SURF (Society for Undergraduate Resources in Fisheries) organizes social, career, and educational activities for undergraduates in aquatic and fishery sciences. SURF also prints t-shirts, welcomes new students to the program, represents the program at events, and collaborates with student groups in other related departments on events.
- **Of Special Note:** The School of Aquatic and Fishery Sciences has sent a small group of students and three faculty members to two Alaska Salmon Field Stations for a six-week course in aquatic ecology. These students receive education in ecology, limnology, population modeling, field techniques, scientific writing, and presentation skills.

GRADUATE PROGRAM

Graduate Program Coordinator

116 Fishery Sciences, Box 355020

(206) 616-5893

safs@uw.edu

The School of Aquatic and Fishery Sciences, established in 1919, offers courses and conducts research on the conservation, management, and effective use of natural resources. Education and research in the School include studies of aquatic ecology; ichthyology; population dynamics; management of free-ranging stocks; restoration ecology; and effects of human activities on freshwater and marine ecosystems. SAFS is recognized internationally for its graduate programs, especially in the area of quantitative fisheries management, all research programs are well respected.

Students may apply for admission into programs leading to the Master of Science or Doctor of Philosophy. Students who apply for the PhD program must hold a master's degree prior to beginning their doctoral studies. All students who receive a master's degree from the School and wish to pursue a PhD are reviewed by the Recruitment, Admissions, and Scholarship Committee before being accepted into the PhD program.

Master of Science

Admission Requirements

1. A bachelor's degree from an institution of recognized standing with a minimum 3.00 GPA in the last two years (90 quarter credits or 60 semester credits) of college work
2. Typically at least a 500 on both the verbal and quantitative portions of the GRE and a 5 on the analytic portion (a 500 if taken before October 2002)
3. If an international student, a minimum TOEFL score of 580 on written exam or 237 on computerized exam, or 70 on Internet-based exam

Degree Requirements

45 credits as follows:

1. **School of Aquatic and Fishery Sciences Core Courses:**
 - a. Q SCI 482
 - b. At least two of the following, for 2 credits each: FISH 510, FISH 511, FISH 512, FISH 513, FISH 514, FISH 578, or QERM 597
 - c. FISH 521
 - d. FISH 522
 - e. 18 credits of thesis research: FISH 700
2. **Additional Course Requirements:** At least 12 credits of coursework at the 400 or 500 level are required in addition to the SAFS core courses listed above. 4 of the 12 credits must be in 500-level courses. At least 9 of the additional 12 credits must be numerically graded.

Doctor of Philosophy

Admission Requirements

1. Minimum 3.00 GPA for last two years (90 quarter credits or 60 semester credits) of graded college work
2. GRE scores of 500 on the verbal and quantitative sections and 5 on the analytical section (500 if before October 2002)
3. If an international student, a minimum TOEFL score of 580 on written exam or 237 on computerized exam, or 70 on Internet-based exam

Admission to the PhD Program after Receiving an MS Degree from the School of Aquatic and Fishery Sciences

Students who wish to continue study toward the doctoral degree after receiving a master's from the School must apply to the Graduate Program Coordinator by way of the Student Services Office; the application is considered by the Recruitment, Admissions, and Scholarship Committee and a recommendation is then sent to the director for concurrence or denial. Applications must be submitted by the sixth week of the quarter in which the master's degree is conferred. For more information, refer to the SAFS website.

Bypassing the Master's Degree

Students admitted to the School at the pre-master's level may, under exceptional circumstances, proceed directly to post-master's study. Application should be made to the Graduate Program Coordinator via the Student Services Office for consideration by the Recruitment, Admissions and Scholarship Committee. More information is available on the SAFS website.

Students who bypass the master's degree must complete all PhD requirements within ten years of beginning graduate study, including MS coursework if used to fulfill any PhD requirements.

Degree Requirements

Minimum 90 credits, as follows:

1. **SAFS Core Courses:** Same as those required of MS students. Must be taken as part of the doctoral program if they or their equivalents have not been taken during an MS program.
 - a. Q SCI 482
 - b. At least two of the following, for 2 credits each: FISH 510, FISH 511, FISH 512, FISH 513, FISH 514, FISH 578, or QERM 597
 - c. FISH 521
 - d. FISH 522
 - e. 27 credits of doctoral dissertation: FISH 800 (a maximum of 10 dissertation credits may be taken in any one academic quarter)
2. **Additional Course Requirements:** At least 48 credits of coursework at the 400 level or above, including dissertation credits, are required in addition to the required core courses listed above. Of those, at least 9 credits must be numerically graded.

Financial Aid

General information on graduate student support is available from the Office of Student Financial Aid, 105 Schmitz. The majority of first-year graduate students are offered research assistantships by appropriate faculty members, depending on the availability of research funding. The School of Aquatic and Fishery Sciences also has a limited number of fellowship opportunities for outstanding entering students. Other students may have their studies supported by the agency for which they work or they may be international students with scholarships from their home countries.

Graduate applicants are urged to discuss their financial needs with professors in their potential major fields during the early stages of the graduate application process. The graduate applicant is automatically considered for any fellowships, research assistantships, or teaching assistantships available from the School of Aquatic and Fishery Sciences when the admission application is submitted.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at uw.edu/students/crsat/

FISH 101 Water and Society (5) I&S/NW Examines ecological and social issues associated with water resources as human populations increase and climate warms. Offered: W.

FISH 230 Economics of Fisheries and Oceans (5) I&S/NW, QSR C. ANDERSON Examines how and why people and businesses make choices that lead to over-fishing, hypoxic zones, and oil spills in aquatic environments. Applies economic principles to understand how alternative policies might change these decisions, and how distributional effects influence politically feasible solutions. Offered: jointly with ECON 230; Sp.

FISH 250 Marine Biology (3/5) I&S/NW Lecture-laboratory course in marine biology focusing on physical, biological, and social aspects of the marine environment. Topics include oceanography, ecology, physiology, behavior, conservation, fisheries, exploration, and activism. Weekend field trip. Honors section research project. Offered: jointly with BIOL 250/OCEAN 250; AS.

FISH 260 Recreational Fisheries: Science, Management, and Policy (3/5) I&S/NW Grue Provides an overview of Washington's recreational fisheries emphasizing science, management, and policy. Optional laboratory focuses on science and technology behind fishing tactics, tackle, and equipment, ways to minimize impacts and enhance conservation, and politics associated with opportunities for recreational anglers. Suitable for students with or without a strong science background. Offered: Sp.

FISH 270 Aquatic Ecophysiology (5) NW Focuses on fundamental physiology, with an emphasis on processes relevant to living in a variety of aquatic environments. Includes a broad survey of taxa, from prokaryotes to mammals, and a variety of aquatic habitats. Prerequisite: BIOL 200. Offered: jointly with MARBIO 270/OCEAN 270.

FISH 290 Scientific Writing and Communication (3) Designed to teach undergraduate students how to gather information on scientific questions; critically read scientific writing; learn the structure and functions of scientific papers to effectively communicate; learn techniques for effective communication of science in oral and poster presentations; and understand the ethical boundaries associated with scientific communication. Offered: AW.

FISH 296 Study Abroad: Aquatic and Fishery Sciences (1-15, max. 30) NW For participants in UW study abroad program. Specific content varies and must be individually evaluated. Credit not does not apply to major requirements without approval.

FISH 300 Exploring Opportunities in Marine Science (1) Explores academic, research, and career opportunities in the field of marine science and helps prepare students for graduation. Intended for junior and transfer students studying marine science. Credit/no-credit only. Offered: jointly with MARBIO 300/OCEAN 300; A.

FISH 310 Biology of Shellfishes (5) NW Aquatic invertebrates with emphasis on taxa with economic and cultural significance. Dramatic diversity, adaptation to environment, and evolutionary forces highlighted. Laboratories, field trips. Offered: Sp.

FISH 311 Biology of Fishes (3/5) NW Covers morphological, physiological, behavioral, and ecological diversity of fishes of the world; designed to provide a basic foundation for advanced courses in all areas of aquatic sciences. 3-credit option does not include laboratory. Offered: jointly with BIOL 311; W.

FISH 312 Fisheries Ecology (3/5) NW Ecological characteristics of fishes and shellfishes in the important freshwater and marine habitats of North America. Relationship between physical aspects of the habitats and community structure. Impacts of human activities on diversity and abundance. Prerequisite: BIOL 220. Offered: Sp.

FISH 323 Conservation and Management of Aquatic Resources (5) NW Topics include population dynamics, extinction risk, meta-populations, marine reserves, bioeco-

nomics, protection of endangered species, sustainable harvesting, and management institutions. Examines case studies such as salmon, albatross, and whales as representative of conservation issues in aquatic sciences. Sampling, experimental design, computer skills, and research writing. Offered: A.

FISH 324 Aquatic Animal Physiology and Reproduction (3/5) NW Adaptations of aquatic animals to environmental challenges. Energy pathways from feeding and digestion through maintenance (metabolism, movement, repair), homeostasis (respiration, osmoregulation, thermoregulation), growth and reproduction (sex determination, manipulation, sex change). Roles of sensory, nervous, and endocrine systems in mediating environmental information. Hands-on laboratory. Prerequisite: BIOL 220. Offered: W.

FISH 328 Forestry-Fisheries Interactions (4) NW Offered: jointly with ESRM 328.

FISH 330 Climate Change Impacts on Marine Ecosystems (5) NW Links the physics of climate to marine ecosystem processes, exploring both observed climate impacts from the past and projected ecosystem changes due to human-caused climate change in the future. Case studies include polar, sub-arctic, temperate, tropical, and upwelling ecosystems, and ocean-acidification and its projected impacts. Required: high school or college physics and algebra with a basic understanding of Newton's Laws and the ability to comprehend and construct vector diagrams. Offered: jointly with ENVIR 330; Sp.

FISH 340 Genetics and Molecular Ecology (5) NW Application of molecular markers to ecology, evolution, and the management of living resources. Emphasis on understanding the strengths and weaknesses of the approach based on case studies. Prerequisite: BIOL 200. Offered: jointly with BIOL 340; A.

FISH 370 Marine Evolutionary Biology (5) NW Emphasizes geobiological patterns of marine evolutionary biology environment; processes of evolution; marine prokaryote and eukaryote diversity; and applications of evolutionary principles to ocean change, and conservation and management of marine biodiversity. Prerequisite: either FISH 270/OCEAN 270/MARBIO 270 or BIOL 220. Offered: jointly with MARBIO 370/OCEAN 370; Sp.

FISH 404 Diseases of Aquatic Animals (5) NW Overview of communicable and noncommunicable diseases that affect fish and shellfish. Major pathogens of free-ranging as well as captive animals discussed. Students learn to recognize, prevent, and control economically and ecologically important disease syndromes. Offered: Sp, even years.

FISH 423 Aquatic Invasion Ecology (4) QSR Explores the patterns, drivers, and consequences of species invasions in freshwater, estuary, and marine ecosystems. Focuses on the science and management needs for preventing, controlling, and eradicating invasive species. Topics illustrated with cases from the Pacific Northwest and the world. Prerequisite: either BIOL 462 or BIOL 180.

FISH 424 Biology and Culture of Aquatic Organisms (5) NW Explores the concept of sustainability and the interrelationship between environment, aquatic species, and culture of aquatic animal and plant species globally. Current practices, animal biology and health, near-shore ecosystem conservation, water quality, and strategies to improve the sustainability of aquaculture for food production and species conservation. Offered: Sp, odd years.

FISH 428 Stream and Watershed Restoration (5) NW Overview of restoration principles and techniques with specific application to freshwater aquatic systems. Develops knowledge and skills to assess ecosystems conditions, identify and prioritize restoration opportunities, and evaluate them from a scientific and economic perspective. Prerequisite: either BIOL 356, ESRM 304, or FISH 312. Offered: Sp, even years.

FISH 437 Fisheries Oceanography (4) Investigates how the environment influences distributions and abundances of

marine vertebrate and invertebrate species. Uses studies to understand fish and zooplankton life histories, predict trends in populations, reduce uncertainty in resource management, and to decouple anthropogenic from natural effects on aquatic populations. Offered: W.

FISH 441 Integrative Environmental Physiology (3/5) NW Comparative advanced aquatic physiology focusing on the functional response of organisms to natural and human-associated environmental stress. Offered: A.

FISH 444 Conservation Genetics (5) NW Advanced genetic concepts and methods related to species' conservation and management. Includes genetic diversity and evolution, small populations and fragmentation, genetic viability, management of wild and captive populations, reintroductions, hatchery-wild interactions and forensics. Labs include molecular techniques. Offered: W.

FISH 447 River Ecology and Watershed Management (3) NW Investigation of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of flowing aquatic ecosystems and the riparian zone. Case studies explore human interactions with rivers and approaches to river management.

FISH 450 Salmonid Behavior and Life History (3/5) NW Behavior, ecology, life history, and conservation of salmon and trout, including their distribution, homing migration, reproduction, ecology of juveniles in different freshwater habitats, seaward migration, and the ecological and evolutionary factors affecting them. Offered: A.

FISH 452 Spatial Information Technology in Ecosystem Sciences (3) NW Logsdon Introduces the use of Geographic Information Systems (GIS), remote sensing, and spatial analysis in the ecosystem sciences. Emphasizes sampling and analysis of spatially-referenced data about the coastal and marine environments, integrating these technologies in an applied research setting. Offered: jointly with OCEAN 452; A.

FISH 453 Geospatial Pattern Analysis and Geostatistics (3) NW Logsdon Focuses on the application of geospatial pattern analysis and geostatistics in earth science research. Develops understanding in detecting, describing, and estimating spatial pattern and trends. Prerequisite: either Q SCI 381 or Q SCI 482; OCEAN 452. Offered: jointly with OCEAN 453; W.

FISH 454 Ecological Modeling (5) NW T. ESSINGTON Examines concepts in ecological modeling focusing on the rationale, interpretation, and motivation for modeling in ecological sciences. Explores individual, population, and ecosystem-based models. Excel-based computer exercises, model building and interpretation, readings. Offered: jointly with Q SCI 454; W.

FISH 455 Fish and Wildlife Toxicology (3/5) NW Overview of fish/wildlife toxicology: history of the field; regulations; methods used to assess risks contaminants pose to fish/wildlife; classes of contaminants and their direct, sublethal and indirect effects; and contemporary threats of contaminants to fish/wildlife, their habitats and prey. Includes laboratory. Offered: jointly with ESRM 457; W.

FISH 458 Modeling and Estimation in Conservation and Resource Management (4) NW T. BRANCH Explores the use of models in the evaluation of alternative management policies for natural resources, including modeling approaches, fitting models to data, and evaluating alternative management policies. Emphasizes calculating risk of extinction, and design of biological reserves. Offered: jointly with Q SCI 458; Sp.

FISH 461 Resource Economics for Management and Policy (4) I&S, DIV Examines how and why resource users make decisions leading to over fishing and pollution. Introduces market and non-market economic tools that support the natural resource management process. Evaluates incentives presented by alternative policies, with an emphasis on regional and global fishery management case studies.

Prerequisite: either FISH 230/ECON 230, ENVIR 235/ESRM 235/ECON 235, or a 300-level FISH course. Offered: A.

FISH 464 Arctic Marine Vertebrate Ecology (4) NW Explores the structure and function of Arctic ecosystems, life history, and adaptations of vertebrates, and how species are affected by climate warming. Emphasizes upper-level trophic interactions, evolutionary drivers, food chains, energy transport paths, and influence of sea ice. Case studies provide background on Arctic conservation and management. Prerequisite: BIOL 180. Offered: W, odd years.

FISH 473 Limnology (3) NW Ecology, conservation, and management of inland aquatic ecosystems. Explores interactions among biological, chemical, and physical features of lakes and other aquatic habitats. Prerequisite: BIOL 180. Offered: jointly with BIOL 473; A.

FISH 474 Limnology Laboratory (2) NW Examination of biota of fresh waters, survey of limnological methods, analysis of data, and writing of scientific papers. Prerequisite: BIOL 473/FISH 473/CEE 462, which may be taken concurrently. Offered: jointly with BIOL 474/CEE 463; A.

FISH 475 Marine Mammalogy (3/5) NW Evolution, taxonomy, physiology, life history, and behavior of marine mammals; the techniques of studying and the management and conservation of them. Offered: Sp.

FISH 477 Seminar in Marine Biology (3) NW Roccap Reviews current research in marine biology. Emphasizes critical readings and discussion of primary literature. Prerequisite: FISH 250, OCEAN 250, or BIOL 250; Q SCI 381, STAT 220, or STAT 311. Offered: jointly with BIOL 477/OCEAN 477; W.

FISH 478 Topics in Sustainable Fisheries (3, max. 9) I&S/NW Seminar series featuring local, national, and internationally known speakers in fisheries management and conservation. Conservation/restoration in practice. Pre-seminar discussion section focusing on select readings. Topics may include harvest management, whaling, by-catch, salmon, marine protected areas, introduced species, citizen action, co-management, and marine ethics. Offered: jointly with BIOL 478/ENVIR 478.

FISH 479 Research in Marine Biology (1-15, max. 15) Individual research on topics in marine biology. Research projects supervised by an individual faculty member. Projects may include laboratory work, fieldwork, and literature surveys. Prerequisite: BIOL 250/FISH 250/OCEAN 250; Q SCI 381. Offered: jointly with BIOL 479/OCEAN 479; AWSpS.

FISH 480 Human Dimensions of Fishery Management (3) I&S/NW Techniques and philosophy for conservation, management, and development of harvested marine populations. Emphasis on integration of ecological, sociological, and economic dimensions of institutional decision making for policy formation in uncertain environments. Offered: jointly with SMEA 480.

FISH 489 Peer Teaching Assistants in Aquatic and Fishery Sciences (1-5, max. 10) Designed to prepare graduate and public school teaching by developing mentoring and communication skills through direct experience. Skills gained through attending lectures and weekly preparation sessions, directed discussions with faculty and TAs, and teaching course lab or discussion sections. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWSpS.

FISH 491 Aquatic Ecological Research in Alaska (12) NW Intensive, full-time research training experience where a team of students works on focused research problems guided by a group of faculty, postdoctoral, and graduate student mentors. Examines behavioral ecology, limnology, and population dynamics. Students also choose specific research questions for their own exploration. Course location: Alaska. Offered: S, even years.

FISH 492 Ecology and Conservation of Marine Birds and Mammals (9/15) NW An intensive, field-based course that offers motivated students the opportunity to learn about these ecologically and culturally important marine animals

and the conservation problems they face. Emphasizes field learning and individual research projects. Offered: jointly with FHL 492/MARBIO 492; S.

FISH 493 Capstone Preparation (1) Includes defining a capstone research question, conducting a literature review, preparing a project proposal and budget, reviewing peer proposals, and attending/critiquing the quarterly capstone symposium. Prerequisite: FISH 290. Offered: ASp.

FISH 494 Capstone Project I ([1-9]-, max. 9) Self-directed research or project under direction of a faculty member. Includes defining research question, determining methodology, data collection and analysis, writing a paper, and presenting findings. Required for graduation for majors. May be taken concurrently with FISH 495. Prerequisite: either FISH 290 or FISH 493; Q SCI 381.

FISH 495 Capstone Project II (-[3/4]) Self-directed research project under direction of a faculty member. Typically includes defining a research question, determining methodology, data collection and analysis, writing a paper, and presenting findings. May be taken concurrently with FISH 494 with permission of instructor.

FISH 496 Study Abroad: Aquatic and Fishery Sciences (1-15, max. 30) NW For participants in UW study abroad program. Specific content varies and must be individually evaluated. Credit not does not apply to major requirements without approval.

FISH 497 Special Topics in Aquatic and Fishery Sciences (1-15, max. 15) NW One-time offerings of topics in fisheries by resident or visiting faculty.

FISH 498 Internship/Experiential Learning (1-15, max. 15) Structured, practical training in the fishing industry, government agencies, and other areas utilizing fisheries, food science, or quantitative science expertise. Experiences are supervised and evaluated. Written reports required. Credit/no-credit only. Offered: AWSpS.

FISH 499 Undergraduate Research (1-15, max. 15) Individual research within the School of Aquatic and Fishery Sciences. Each project supervised by an individual faculty member. Written reports required. Offered: AWSpS.

FISH 502 Spatial Information Technology in Ecosystem Sciences (3) Logsdon Introduces the use of Geographic Information Systems (GIS), remote sensing, and spatial analysis in the ecosystem sciences. Emphasizes sampling and analysis of spatially-referenced data about the coastal and marine environments, integrating these technologies in an applied research setting. Offered: jointly with OCEAN 502; A.

FISH 503 Geospatial Pattern Analysis and Geostatistics (3) Logsdon Focuses on the application of geospatial pattern analysis and geostatistics in earth science research. Develops understanding in detecting, describing, and estimating spatial pattern and trends. Offered: jointly with OCEAN 503; W.

FISH 507 Special Topics in Fisheries (1-15, max. 15)

FISH 510 Current Topics in Genetics and Physiology (1-5, max. 15) Contemporary problems and issues in genetics and physiology as they relate to aquatic and fisheries sciences.

FISH 511 Current Topics in Evolution, Ecology, and Behavior (1-5, max. 15) Contemporary problems and issues in evolution, ecology, and behavior as they relate to aquatic and fisheries sciences.

FISH 512 Current Topics in Quantitative Science (1-5, max. 15) Contemporary problems and issues in quantitative science as they relate to aquatic and fisheries sciences.

FISH 513 Current Topics in Management, Conservation, and Restoration (1-5, max. 15) Contemporary problems and issues in management, conservation, and restoration as they relate to aquatic and fisheries sciences.

FISH 514 Current Topics Aquaculture, Utilization, and Pathology (1-5, max. 15) Contemporary problems and issues

in aquaculture, utilization, and pathology as they relate to aquatic and fisheries sciences.

FISH 520 Advanced Ecology of Marine Fishes (4) Focuses on the unique ecological challenges facing marine fishes, including individual, population, community, and ecosystem-scale processes. In-depth discussions of issues based on extensive reading of primary literature and analysis.

FISH 521 Research Proposal Writing for Graduate Students (4) Practice in reading, writing, critiquing, and evaluating research grant and contract proposals. Lecture and discussion of funding resources, structure of proposals, proposal review, evaluation criteria, and agency feedback. Examples of successful and unsuccessful grant applications. Preparing proposals and critiquing others' efforts. Offered: W.

FISH 522 Hot Topics in Aquatic and Fishery Sciences (2) Discussion of the primary literature of aquatic and fishery sciences. All readings are current, high profile papers which spark a new avenue of investigation, set out a new paradigm, or define a central problem, etc. Credit/no-credit only. Offered: A.

FISH 526 Ecology of Aquatic Ecosystems (3) Explores natural and human-driven processes regulating the structure and functioning of freshwater and marine ecosystems. Topics include biogeochemistry, energy, and material flows among habitats, evolution in ecological time, commonality of marine and freshwater habitats, and the issues of scale in understanding ecosystem dynamics.

FISH 530 Application of Bioenergetics Models to Aquatic Food Webs (4) Modeling framework quantifying bioenergetics, including consumption, growth, nutrient recycling and contaminant bioaccumulation; links physiology and behavior of individual organisms to ecological processes within populations and aquatic food webs. Common applications include estimating predation, carrying capacity, or growth potential in different habitats. Offered: Sp, odd years.

FISH 531 Aquatic Food Web Processes (4) Examines how temporal-spatial variability in environmental conditions, nutrient, food supply, predation, and competition among species and life stages regulate species in freshwater and marine food webs. Demonstrates how behavior and physiology of individuals are mechanistically linked to distribution, trophic interactions, and processes relevant to ecosystem-based management. Offered: Sp, even years.

FISH 538 Fisheries Acoustics (3-5) Horne Studies the use of sound as an aquatic sampling tool and application of acoustic technologies to resource management and aquatic research. Topics include: sonar equation, survey design, equipment use, and abundance estimates. Uses case studies in bio-acoustic predation, habit evaluation, ocean observatories, and marine renewable energy. Offered: A.

FISH 539 U.S. Fisheries Management and Policy (3) Examination of basic laws and policies in the US that govern fisheries management and their implementation by managers at federal, tribal, state, and international levels. Includes lectures, guest speakers, and field trips. Offered: jointly with SMEA 539.

FISH 541 Integrative Environmental Physiology (3/5) Comparative advanced aquatic physiology focusing on the functional response of organisms to natural and human-associated environmental stress. Includes lecture, laboratory work, and team-based research project.

FISH 545 Applied Population Genetics (3) Collection, analysis, and interpretation of genetic data (allele frequencies, microsatellite data, DNA sequences) for detection of population structure, population assignment, estimation of population size, and phylogenography. Includes discussion of scientific papers and analysis of example data sets.

FISH 546 Bioinformatics for Environmental Sciences (3) Examines how to incorporate molecular information into environmental and conservation sciences, with an emphasis on analysis of DNA and RNA sequence information.

Prerequisite: introductory biology, genetics, and statistics courses.

FISH 547 River Ecology and Watershed Management (3) Investigation of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of flowing aquatic ecosystems and the riparian zone. Case studies explore human interactions with rivers and approaches to river management.

FISH 552 Introduction to R Programming for Natural Scientists (2) Introduces R, a freely available and widely used platform for statistical analysis. Covers reading, storing, and manipulating data; introductory graphics; basic statistical analyses; and fitting linear models. Credit/no-credit only. Offered: A.

FISH 553 Advanced R Programming for Natural Scientists (2) Covers the use of maximum likelihood estimation and programming in R. Uses R functions to estimate parameters of models and to quantify uncertainty. Prerequisite: FISH 552; Q SCI 381 or Q SCI 482, or permission of instructor. Credit/no-credit only. Offered: A.

FISH 554 Beautiful Graphics in R (2) Branch Explores how to create beautiful scientific graphics in the open-source language R. Covers the theory of visualization, critically examines elements of good and bad graphics, and teaches students how to translate data in their graduate theses into publication-quality graphics. Offered: W.

FISH 557 Estimation of Population Parameters (4) Statistical analysis of population data; design and analysis of mark-recapture experiments on natural populations; laboratory work on computers. Offered: W, even years.

FISH 558 Decision Analysis in Natural Resource Management (4) Focuses on age and size-structured population models; Bayesian methods; Sample Importance Resample algorithm; Markov chain Monte Carlo algorithm; policy evaluation; and risk analysis and uncertainty in fisheries management. Offered: A, odd years.

FISH 559 Numerical Computing for the Natural Resources (5) Focuses on generalized linear and mixed effects models; numerical integrator and differentiation; Bayesian and maximum likelihood parameter estimation; root finding; ADMB and WinBUGS coding; and risk analysis. Offered: A, even years.

FISH 560 Applied Multivariate Statistics for Ecologists (4) Use and interpretation of multivariate analysis, including the majority of approaches in common use by ecologists. Emphasizes the conceptual understanding and practical use of the methods, illustrated with ecological case studies. Prerequisite: Q SCI 482 or equivalent.

FISH 561 Resource Economics for Management and Policy (4) Examines how and why resource users make decisions leading to over fishing and pollution. Introduces market and non-market economic tools that support the natural resource management process. Evaluates incentives presented by alternative policies, with an emphasis on regional and global fishery management case studies. Offered: A.

FISH 562 Ecosystem Based Fisheries Management (2) Theory and practice of ecosystem based fisheries management. Areas of emphasis includes by-catch avoidance, the interaction between physical and biotic habitat and fish productivity, trophic ecosystem models, area based management and dynamics of fishing fleets. Offered: Sp, odd years.

FISH 563 Ecosystem Based Fisheries Management Laboratory (2) Laboratory covering the theory and practice of ecosystem based fisheries management. Areas of emphasis includes by-catch avoidance, the interaction between physical and biotic habitat and fish productivity, trophic ecosystem models, area based management and dynamics of fishing fleets. Recommended: either Fish 454, Fish 458, or Fish 558; R programming experience. Offered: Sp, odd years.

FISH 567 Topics in Advanced Ecology (3, max. 6) Discusses literature on active research areas or controversies in different branches of ecology. Offered: jointly with BIOL 567/SEFS 567; W.

FISH 578 Graduate Topics in Sustainable Fisheries (2, max. 6) Seminar series featuring local, national, and internationally known speakers in fisheries management and conservation. Case studies. Conservation/restoration in practice. Post-seminar discussion section led by speaker on topics covered in lecture. Topics may include harvest management, whaling, by-catch, salmon, marine protected areas, introduced species, citizen action, co-management, and marine ethics. Credit/no-credit only.

FISH 581 Case Study Research: Design and Methods (3) Provides in-depth training in case study theory, design, and methods. Designed for exploring prospectus ideas or beginning analysis of thesis research. Through readings, discussions, exercises, and lectures, students learn how to select units of analysis, control data quality, and collect, analysis, and report data. Offered: jointly with SMEA 581.

FISH 600 Independent Study or Research (*) Credit/no-credit only.

FISH 700 Master's Thesis (*) Credit/no-credit only.

FISH 800 Doctoral Dissertation (*) Credit/no-credit only.

Atmospheric Sciences

416 Atmospheric Sciences-Geophysics Building

Atmospheric sciences is a wide-ranging discipline that includes topics as diverse as weather forecasting, global warming, air quality, Pacific Northwest weather and climate, mountain weather, marine weather, El Nino, the ozone hole, ice ages, and the weather of Mars. It considers problems that are both scientifically challenging and critical for the welfare of modern society. These problems are addressed with theory, measurements, and computer simulations.

UNDERGRADUATE PROGRAM

Adviser

416 Atmospheric Sciences-Geophysics Building, Box 351640

(206) 543-4576

advise@atmos.washington.edu

The Department of Atmospheric Sciences offers the following programs of study:

- The Bachelor of Science degree with a major in atmospheric sciences
- A minor in atmospheric sciences
- The minor in Climate Science is offered jointly with the Department of Atmospheric Sciences, the Department of Earth and Space Sciences, and the School of Oceanography.

Bachelor of Science

Suggested First- and Second-Year Courses: ATM S 220; MATH 124, MATH 125, MATH 126; PHYS 121, PHYS 122, PHYS 123; CSE 142. The first required atmospheric sciences course is ATM S 301, which is offered autumn quarter only. Any lower-division atmospheric sciences courses except ATM S 220 count as electives and not as part of the major.

Department Admission Requirements

Students in good academic standing may declare this major at any time.

Major Requirements

Minimum 97-117 credits as follows:

1. *Core Requirements (58-59 credits):* MATH 124, MATH 125, MATH 126; PHYS 121, PHYS 122, PHYS 123; either STAT 390/MATH 390, or Q SCI 381; ATM S 220, ATM S 301, ATM S 321, ATM S 340, ATM S 341, ATM S 370, ATM S 431.
2. *Options (39 to 58 credits):*
 - a. *Meteorology (42-45 credits)*
 - i. *Core (33 credits):* AMATH 301; ATM S 358, ATM S 441, ATM S 442, ATM S 444, ATM S 451, ATM S 452; CSE 142
 - ii. *Advanced Mathematics (9-12 credits):* MATH 324; either AMATH 351 and AMATH 353 or MATH 307, MATH 308, and MATH 309
 - b. *Climate (39-49 credits)*
 - i. *Core (27-29 credits):* AMATH 301; ATM S 358, ATM S 380, ATM S 460, ATM S 487; CSE 142; either ESS 431 or ESS 433; either OCEAN 423 or OCEAN 450
 - ii. *Electives (12-20 credits):* Minimum four courses from an approved list. See adviser for approved list of electives.
 - c. *Chemistry (52-58 credits)*
 - i. *Core (52-58 credits):* ATM S 451, ATM S 458, ATM S 480; CHEM 142, CHEM 152, CHEM 162, CHEM 223, CHEM 224, CHEM 321
 - ii. *Electives (12-18 credits):* Minimum four courses from an approved list. See adviser for approved list of electives.
3. Minimum 2.0 grade in courses applied to the major

Pre-graduate Program for Physical Science, Mathematics, and Engineering Majors

The following elective course sequence is suitable preparation for students interested in pursuing graduate study in atmospheric sciences: ATM S 301, ATM S 340, ATM S 441.

Minor

Minor Requirements: 25 credits to include ATM S 301 plus other approved courses. The minor may include a maximum of 6 independent study credits. Prerequisites include MATH 126 or MATH 136, and PHYS 123. Some courses may require further math or chemistry experience.

Minor in Climate Science

See description in the Climate Science listing in the Undergraduate Interdisciplinary Programs section of the General Catalog.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* The degree program qualifies students for professional employment in weather forecasting, air-quality control and monitoring, and other areas of atmospheric sciences and related fields. The baccalaureate degree also is appropriate preparation for graduate study in atmospheric sciences.
- *Instructional and Research Facilities:* Extensive computer resources are available in the departmental computer laboratory. The department also maintains an extensive collection of weather data in graphical and numerical electronic format. A study area is provided for undergraduates. An instrument laboratory is maintained with a wide range of observing and data collection systems. Students also have access to a machine shop and an electronics laboratory.
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors)

requirements in the major). See adviser for requirements.

- **Research, Internships, and Service Learning:** Internships are available either within the department or with outside organizations, providing a valuable opportunity to test a student's interests in various meteorological career paths and to extend the student's knowledge. A limited number of departmental scholarships are available each year, based on academic excellence or financial need. Employment opportunities are often available in one of the many departmental research groups, and some internships are paid.

Students majoring in atmospheric sciences may take advantage of a variety of opportunities to enhance their education. Undergraduate students are welcome at the department's many seminars and colloquia and are encouraged to join in the annual forecast contest. They may work on independent research projects under the guidance of a faculty member, or be an active participant in a field program.

- **Department Scholarships:** The Bruce Caldwell Memorial Scholarship and the Anonymous Donor Atmospheric Sciences Scholarship are both awarded annually, based on both academic excellence and financial need.
- **Student Organizations/Associations:** Student Chapter of American Meteorological Society, Puget Sound American Meteorological Society Chapter, Weekly Weather Discussion for all majors.

GRADUATE PROGRAM

Graduate Program Coordinator

416 Atmospheric Sciences-Geophysics, Box 351640

(206) 543-4576

advise@atmos.washington.edu

Rapid growth of research in atmospheric sciences began in the late 1940s in response to needs and opportunities in weather forecasting. Extensive research is now underway to extend the time scale over which useful forecasts can be made and to increase the amount of regional and temporal detail in short-range forecasts. In addition, the atmospheric sciences now address a broad range of other problems of fundamental interest and importance. Examples include changes in climate that could result from increases in atmospheric CO₂ and other greenhouse gases, and the application of remote-sensing techniques to the monitoring and understanding of weather and climate.

Graduate students in the atmospheric sciences come from a variety of disciplines: Physics, chemistry, engineering, atmospheric, or geophysical sciences, and applied mathematics. Opportunities are broad enough that each of these backgrounds is valuable for specific subfields within the atmospheric sciences. However, students of atmospheric sciences should have in common a sound background in the fundamentals of physics and applied mathematics and an interest in complex natural phenomena. Research projects and graduate courses in the Department of Atmospheric Sciences are closely related, and the well-prepared graduate student may expect to begin research work rather quickly.

Master of Science

Admission Requirements

1. Complete Graduate School application (a copy must be sent to the department)
2. Official copy of transcripts
3. Statement of interests: one page essay, must address the reasons why the student wishes to pursue a graduate program in atmospheric sciences

4. GRE General Examination scores sent from the Educational Testing Service
5. Three letters of recommendation, either submitted online or, using the appropriate forms, sent directly to the department by the evaluators
6. For international applicants: TOEFL scores, sent by the testing service
7. **Deadline:** January 15. Autumn is the only quarter for which the department accepts applications.

Degree Requirements

45 credits, to include

1. **Core Classes (25-28 credits):** ATM S 501, ATM S 502, ATM S 532, ATM S 535, ATM S 558. One of the following sequences: ATM S 505, ATM S 509, ATM S 542; or ATM S 503, ATM S 504
2. The two-course dynamics sequence (ATM S 503, ATM S 504) is intended for those whose research specialty is outside the realm of dynamic meteorology. Most students are encouraged to take the three-course sequence in dynamics (ATM S 505, ATM S 509, ATM S 542).
3. Master's students need 36 credits to graduate (excluding seminars and colloquia); 27 of the credits presented must be from graded courses numbered 500 or above, of which at least 3 credits must be in approved applied mathematics courses and 24 must be in core atmospheric sciences courses. The remaining 9 credits are for the master's thesis. However, students intending to pursue a PhD should take all the courses required above.

Doctor of Philosophy

Admission Requirements

1. All students admitted into the Atmospheric Sciences graduate program are admitted initially to the MS track of study. Students in the MS track who seek entry into the PhD program are evaluated by the departmental committee on graduate studies.
2. A student who wishes to be considered by the committee must first write a letter to the academic counselor and also to the student's MS committee, requesting admission into the PhD program, and choosing one of the three following evaluation options:
 - a. MS thesis in atmospheric sciences or a closely related discipline, completed before entering the department, submitted the first week of autumn quarter of the student's second academic year in the department.
 - b. Draft of UW Department of Atmospheric Sciences MS thesis approved by the MS Supervisory Committee.
 - c. Manuscript of a peer-reviewed journal article on which the student is lead author.

Degree Requirements

Minimum 90 credits, to include:

1. Coursework
 - a. ATM S 501, ATM S 502
 - b. ATM S 505, ATM S 509 (Students whose anticipated research has minimal connection with atmospheric dynamics, such as laboratory or fieldwork in atmospheric chemistry or cloud microphysics, may take ATM S 503 and ATM S 504 in place of ATM S 505 and ATM S 509. See Graduate Program Coordinator before enrolling in ATM S 503.)
 - c. Either ATM S 532 or ATM S 558
 - d. ATM S 535, ATM S 542

- e. Each of the following, taken every quarter coursework is taken: ATM S 520, either ATM S 521 or ATM S 524, and ATM S 600 (up to 10 credits each quarter)
- f. **Electives:** Courses in the student's areas of interest, as determined in consultation with adviser
- g. **Applied Math:** Either AMATH 401, AMATH 567 or AMATH 581; either AMATH 402 or AMATH 568
- h. ATM S 700 (10 credits each quarter, beginning the second year of the program)

2. General Examination
3. Dissertation
4. Final Examination

Assistantships

Nearly all graduate students are supported by either research assistantships or fellowships. Students are usually a teaching assistant during at least one quarter, in the second year of study. Students are supported full-time during the summer.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crsat/

ATM S 101 Weather (5) NW The earth's atmosphere, with emphasis on weather observations and forecasting. Daily weather map discussions. Highs, lows, fronts, clouds, storms, jet streams, air pollution, and other features of the atmosphere. Physical processes involved in weather phenomena. Intended for nonmajors. Offered: AWSpS.

ATM S 103 Hurricanes and Thunderstorms: Their Science and Impact (3) I&S/NW Explores the science, history, and impacts of thunderstorms and hurricanes. Includes basic processes responsible for thunderstorms and hurricanes and for the lightning, hail, high winds, and storm surges that accompany them. Presents significant historical examples, along with the impact on human activities, strategies for personal safety, and societal adaptation. Offered: Sp.

ATM S 111 Global Warming: Understanding the Issues (5) I&S/NW Ackerman, Anderson, Bitz, Fu, Jaegle, Thornton Includes a broad overview of the science of global warming. Discusses the causes, evidence, future projections, societal and environmental impacts, and potential solutions. Introduces the debate on global warming with a focus on scientific issues. Offered: AWSp.

ATM S 211 Climate and Climate Change (5) I&S/NW The nature of the global climate system. Factors influencing climate including interactions among the atmosphere, oceans, solid earth, and biosphere. Stability and sensitivity of climate system. Global warming, ozone depletion, and other human influences. Intended for nonmajors. Offered: AWSp.

ATM S 212 Air Pollution: From Urban Smog to the Ozone Hole (5) I&S/NW Alexander, Jaegle, Thornton Introduction to air pollution on local, regional, and global scales, with focus on the sources, transformation, and dispersion of pollutants responsible for urban smog, acid rain, climate change, and the ozone hole. Health and environmental effects of air pollutants, technological solutions, and international policy regulations.

ATM S 220 Exploring the Atmospheric Sciences (1, max. 2) NW Focuses on current research in the atmospheric sciences and the related implications for public health, business, and environmental policy. Credit/no-credit only.

ATM S 290 The Weather Challenge (1, max. 8) NW McMurdie Includes participation in a national weather forecast contest; weekly discussion on forecast models, forecasting methods, and unique considerations for specific forecast

locations. Prerequisite: ATM S 101. Credit/no-credit only. Offered: AW.

ATM S 301 Introduction to Atmospheric Sciences (5) NW Composition and structure of the atmosphere. Clouds and weather phenomena. Thermodynamic processes. Solar and terrestrial radiation. Air motions. Daily weather discussions and forecasts. For majors and nonmajors. Prerequisite: minimum grade of 2.0 in each of MATH 124; MATH 125; MATH 126; PHYS 121; PHYS 122; and PHYS 123. Offered: A.

ATM S 321 The Science of Climate (3) NW Evolution and present state of earth's climate. Emphasis on physical processes determining the climate of the earth's atmosphere and surface: radiative transfer, energy balance, hydrologic cycle, and atmospheric and oceanic energy transport. Factors controlling climate change. Prerequisite: minimum of grade of 2.0 each of MATH 124; MATH 125; MATH 126; PHYS 121; PHYS 122; PHYS 123. Offered: Sp.

ATM S 340 Introduction to Thermodynamics and Cloud Processes (3) NW Examines thermodynamics and hydrostatics. Studies cloud and precipitation processes with emphasis on the microphysics. Prerequisite: ATM S 301. Offered: W.

ATM S 341 Atmospheric Radiative Transfer (3) Comprehensive introduction to atmospheric radiation, including solar and infrared radiation, the earth's radiation budget, and remote sensing. Prerequisite: ATM S 301. Offered: Sp.

ATM S 358 Fundamentals of Atmospheric Chemistry (3) NW Review of basic principles of physical chemistry; evolution and chemical composition of earth's atmosphere; half-life, residence and renewal time; sources, transformation, transport and sinks of gases in the troposphere; atmospheric aerosols; chemical cycles; air pollution; stratospheric chemistry. Offered: Sp.

ATM S 370 Atmospheric Structure and Analysis (5) NW Structure and evolution of extratropical cyclones, fronts, and convective systems. Surface and upper air analysis techniques. Radar and satellite data. Real-world applications of basic dynamical principles. Introduction to operational products and forecasting. Prerequisite: ATM S 301. Offered: W.

ATM S 380 Weather and Climate Prediction (3) NW Applies weather and climate models to solve problems in atmospheric sciences. Includes visualization of atmospheric phenomena and Earth's energy and hydrologic cycles; and basics in numerical modeling and high-performance computing. Prerequisite: MATH 126; PHYS 122; either ATMS 101, ATM S 111, ATM S 211, ATM S 301, ASTR 150, ASTR 321, or ESS 201. Offered: W.

ATM S 390 Honors Tutorial in Atmospheric Sciences (*, max. 6) Review and discussion of selected problems in atmospheric sciences. Introduction to research methods. Presentation of a research paper. Offered: AWSpS.

ATM S 431 Boundary-Layer Meteorology (3) NW Introduction to boundary-layer meteorology. Surface energy budgets, structure and evolution of boundary layers, and basic ideas of turbulence theory. Prerequisite: either ATM S 340 or PHYS 224. Offered: A.

ATM S 441 Atmospheric Motions I (3) NW Basic equations governing atmospheric motions and their elementary applications; circulation and vorticity; dynamics of midlatitude disturbances. Prerequisite: either AMATH 353 or MATH 309; MATH 324. Offered: A.

ATM S 442 Atmospheric Motions II (5) NW Wave dynamics, numerical prediction, development of midlatitude synoptic systems, and general circulation. Includes laboratory exercises. Prerequisite: ATM S 441. Offered: W.

ATM S 444 Design and Application of Ensemble Prediction Systems (4) NW Covers the fundamental of chaos theory to help compare and contrast traditional, deterministic forecasting versus ensemble forecasting. Explores the various components of an ensemble prediction system. Introduces

decision science to show how to apply probabilistic weather information in optimal decision making. Prerequisite: ATM S 370; either STAT/MATH 390 or Q SCI 381; AMATH 301. Offered: Sp.

ATM S 451 Instruments and Observations (5) NW Principles of operating instruments for measuring important atmospheric parameters (e.g., temperature, humidity, aerosol concentration). Concepts of sensitivity, accuracy, representativeness, time response. Manipulation of output data including signal processing and statistical analysis. Experimental design and implementation of the design in actual field experiments is included. Prerequisite: ATM S 370; either STAT/MATH 390 or Q SCI 381. Offered: Sp.

ATM S 452 Weather Forecasting and Advanced Synoptic Meteorology (5) NW Basic forecasting techniques. Application of numerical modeling and statistical approaches. Structure, evolution, and forecasting of convective systems. Radar applications. Diurnal and topographically-forced circulations. Aviation meteorology. Laboratories include extensive practice in forecasting and surface map analysis. Prerequisite: ATM S 370; ATM S 442; either STAT/MATH 390 or Q SCI 381. Offered: Sp.

ATM S 458 Air Pollution Chemistry (4) NW Global atmosphere as a chemical system emphasizing physical factors and chemical processes that give rise to elevated surface ozone, particulate matter, and air toxics; international issues of air pollution transport and changing tropospheric background composition; and regulatory control strategies and challenges. Aimed at science and engineering majors. Offered: jointly with CHEM 458; A.

ATM S 460 Water in the Environment (3) NW Discusses the unique physical and chemical properties of the water molecule in relation to the atmospheric greenhouse effect, precipitation formation, oceanic circulations, infiltration of water through soils, geyser eruptions, and glacier and sea ice thickness. Prerequisite: either ESS 310, MATH 126, or MATH 136; PHYS 123. Offered: jointly with ESS 424/PHYS 460.

ATM S 475 Current Research in Climate Science Seminar (3, max. 6) Weekly lectures focusing on a particular aspect of climate from invited speakers, complemented by class discussion, readings, and final paper. Promotes interdisciplinary understanding of climate concepts. Prerequisite: either ESS 201, ATM S 211, or ATM S 321. Offered: jointly with ESS 475/OCEAN 475; A.

ATM S 480 Air-Quality Modeling (3) NW Evaluation of air-quality models relating air pollution emissions to environmental concentrations. Emphasis on models used for air pollution permits. Emphasizes current problems. Prerequisite: MATH 125. Offered: jointly with CEE 480; W.

ATM S 487 Fundamentals of Climate Change (3) Examines Earth's climate system; distribution of temperature, precipitation, wind ice, salinity, and ocean currents; fundamental processes determining Earth's climate; energy and constituent transport mechanisms; climate sensitivity; natural climate variability on interannual to decadal time scales; global climate models; predicting future climate. Prerequisite: ATM S 321.

ATM S 490 Current Weather Analysis (1, max. 6) NW Reviews and analyzes current weather situations and forecasts. Promotes active discussion between the leader and attendees, and provides exposure to practical aspects of forecasting, the structure of synoptic and local weather phenomena, and applications of basic meteorological concepts. Credit/no-credit only. Offered: AWSp.

ATM S 492 Readings in Meteorology or Climatology (*, max. 15) Credit/no-credit only. Offered: AWSpS.

ATM S 497 Undergraduate Internship (1-5, max. 30) Internship experience with a public agency or private company, supervised and approved by a faculty member. Requires preparation of a professional report reflecting on the experience. Credit/no-credit only. Offered: AWSpS.

ATM S 499 Undergraduate Independent Research (1-5, max. 30) Individual research supervised by a faculty member. May involve laboratory work, fieldwork, or surveys. Credit/no-credit only. Offered: AWSpS.

ATM S 501 Fundamentals of Physics and Chemistry of the Atmosphere (5) Fundamentals of hydrostatics, thermodynamics, radiation, cloud physics, and atmospheric chemistry. Offered: A.

ATM S 502 Introduction to Synoptic Meteorology (3) Overview of weather systems; atmospheric observations and data assimilation. Elementary manual and computer-aided synoptic analysis techniques. Interpretation of satellite and ground-based observations. Kinematics. Fronts and frontogenesis; life cycles of extratropical cyclones; related mesoscale phenomena. Numerical weather prediction; interpretation of forecast products. Offered: Sp.

ATM S 503 Atmospheric Motions I (3) Basic equations governing atmospheric motions and their elementary applications; circulation and vorticity; dynamics of midlatitude disturbances. Offered: A.

ATM S 504 Atmospheric Motions II (5) Wave dynamics, numerical prediction, development of midlatitude synoptic systems, and general circulation. Prerequisite: either ATM S 441 or ATM S 503. Offered: W.

ATM S 505 Introduction to Fluid Dynamics (4) Eulerian equations for mass-motion; Navier-Stokes equation for viscous fluids, Cartesian tensors, stress-strain relations; Kelvin's theorem, vortex dynamics; potential flows, flows with high-low Reynolds numbers; boundary layers, introduction to singular perturbation techniques; water waves; linear instability theory. Prerequisite: either a course in partial differential equations or permission of instructor. Offered: jointly with AMATH 505/OCEAN 511; A, odd years.

ATM S 508 Geochemical Cycles (4) Descriptive, quantitative aspects of earth as biogeochemical system. Study of equilibria, transport processes, chemical kinetics, biological processes; their application to carbon, sulfur, nitrogen, phosphorus, other elemental cycles. Stability of biogeochemical systems; nature of human perturbations of their dynamics. Prerequisite: permission of instructor. Offered: jointly with CHEM 523/OCEAN 523.

ATM S 509 Geophysical Fluid Dynamics I (4) Dynamics of rotating stratified fluid flow in the atmosphere/ocean and laboratory analogues. Equations of state, compressibility, Boussinesq approximation. Geostrophic balance, Rossby number. Poincare, Kelvin, Rossby waves, geostrophic adjustment. Ekman layers. Continuously stratified dynamics: Inertia-gravity waves, potential vorticity, quasigeostrophy. Prerequisite: OCEAN 511 or ATM S 505/AMATH 505. Offered: jointly with OCEAN 512; W.

ATM S 510 Physics of Ice (3) Structure of the water molecule. Crystallographic structures of ice. Electrical, optical, thermal, and mechanical properties of ice. Growth of ice from vapor and liquid phases. Offered: jointly with ESS 531.

ATM S 511 Snow and Ice on the Earth's Surface (3) Snow and ice climatology. Formation of the ice crystals in clouds. Snow metamorphism. Transfer of radiative, sensible, and latent heat at snow and ice surfaces. Remote sensing of snow and ice. Growth and melt of sea ice. Climatic records from ice. Prerequisite: permission of instructor. Offered: jointly with ESS 532.

ATM S 512 Dynamics of Snow and Ice Masses (3) Rheology of snow and ice. Sliding and processes at glacier beds. Thermal regime and motion of seasonal snow, glaciers, and ice sheets. Avalanches and glacier surges. Deformation and drift of sea ice. Response of natural ice masses to change in climate. Prerequisite: permission of instructor. Offered: jointly with ESS 533.

ATM S 514 Ice and Climate (3) Examines the role of ice and snow in climate. Polar climate dynamics. Polar-global interactions. Modeling snow cover, sea ice, and ice-sheet

balance, and flow in the climate system. Prerequisite: permission of instructor. Offered: jointly with ESS 535.

ATM S 519 Scientific Writing and Graphics (2) *Waddington, Warren* Covers principles of scientific writing; methods of ensuring clarity in writing for scientific journals and research proposals; principles of graph construction; and authorship, peer review, and citations. For graduate students in Earth-science related fields. Credit/no-credit only. Offered: jointly with ESS 519/OCEAN 518; Sp, odd years.

ATM S 520 Atmospheric Sciences Colloquium (1, max. 24) Seminars on current research in advanced topics related to atmospheric sciences, conducted by faculty and visiting professors/scientists. Includes presentation of doctoral dissertations by department graduate students. For Atmospheric Sciences graduate students only. Prerequisite: permission of department. Credit/no-credit only. Offered: AWP.

ATM S 521 Seminar in Atmospheric and Climate Dynamics (*, max. 24) Directed at current research in the subject. For advanced students. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AWP.

ATM S 523 Seminar in Atmospheric Physics and Chemistry (*, max. 24) Directed at current research in the subject. For advanced students. Prerequisite: permission of instructor. Credit/no-credit only. Offered: AW.

ATM S 524 Seminar in Climate Dynamics and Energy Transfer (*, max. 24) Directed at current research in the subject. For advanced students. Prerequisite: permission of instructor. Credit/no-credit only. Offered: A.

ATM S 525 Seminar - Topics in Atmospheric Chemistry (1-3, max. 6) Seminar for atmospheric scientists, chemists, engineers in problems associated with the chemical composition of the atmosphere. Covers wide variety of topics, ranging from the natural system to urban pollution and global atmospheric change. Prerequisite: ATM S 301 or permission of instructor. Offered: jointly with CEE 553.

ATM S 532 Atmospheric Radiation: Introductory (3) Fundamentals of radiative transfer; absorption and scattering by atmospheric gases; elementary applications to constraints on the thermal structure, photochemistry, and remote sensing. Prerequisite: PHYS 225 or permission of instructor. Offered: Sp.

ATM S 533 Atmospheric Radiation: Advanced (3) Optical properties and particle absorption and scattering; solutions of radiative transfer equation in multiple scattering atmospheres; applications to atmospheric and surface energy balance and remote sensing. Prerequisite: ATM S 532/ESS 571 or permission of instructor. Offered: A.

ATM S 534 Remote Sensing of the Atmosphere and Climate System (3) Satellite systems for sensing the atmosphere and climate system. Recovery of atmospheric and surface information from satellite radiance measurements. Applications to research. Prerequisite: ATM S 532 or ATM S 533.

ATM S 535 Cloud Microphysics and Dynamics (3) Basic concepts of cloud microphysics, water continuity in clouds, cloud dynamics, and cloud models. Prerequisite: ATM S 501 or permission of instructor. Offered: jointly with ESS 573; Sp.

ATM S 536 Mesoscale Storm Structure and Dynamics (3) Techniques of observing storm structure and dynamics by radar and aircraft, observed structures of precipitating cloud systems, comparison of observed structures with cloud models. Prerequisite: either ATM S 535 or ESS 573.

ATM S 542 Synoptic and Mesoscale Dynamics (3) Quasi-geostrophic theory, baroclinic instability, symmetric instability, tropical disturbances, frontogenesis, orographic disturbances, convective storms. Prerequisite: ATM S 509/OCEAN 512 and AMATH 402 or equivalents. Offered: Sp.

ATM S 544 Design and Application of Ensemble Prediction Systems (4) Covers the fundamental of chaos theory to help compare and contrast traditional, deterministic forecasting versus ensemble forecasting. Explores the various

components of an ensemble prediction system. Introduces decision science to show how to apply probabilistic weather information in optimal decision making. Prerequisite: ATM S 501; ATM S 502; and ATM S 552 or permission of instructor. Offered: Sp.

ATM S 545 General Circulation of Atmosphere (3) Requirements of the global angular momentum, heat, mass, and energy budgets upon atmospheric motions as deduced from observations. Study of the physical processes through which these budgets are satisfied. Prerequisite: ATM S 509/OCEAN 512 or permission of instructor. Offered: A.

ATM S 547 Boundary Layer Meteorology (3) Turbulence, turbulent fluxes, averaging. Convection and shear instability. Monin-Obukhov similarity theory, surface roughness. Wind profiles. Organized large eddies. Energy fluxes at ocean and land surfaces, diurnal cycle. Convective and stably stratified boundary layers. Cloud-topped boundary layers. Remote sensing. Boundary layer modeling and parameterization. Prerequisite: ATM S 505, AMATH 505, or OCEAN 511.

ATM S 551 Atmospheric Structure and Analysis I: Synoptic Scale Systems (4) Extratropical cyclones and cyclogenesis. Jet streams. Upper waves in the westerlies. Diagnosis of vertical motions. Fronts and frontogenesis. Prerequisite: ATM S 502 and ATM S 509/OCEAN 512.

ATM S 552 Objective Analysis (3) Review of objective analysis techniques commonly applied to atmospheric problems; examples from the meteorological literature and class projects. Superposed epoch analysis, cross-spectrum analysis, filtering, eigenvector analysis, and optimum interpolation techniques. Offered: W.

ATM S 554 Paleoclimate Proxies (3) *Alexander, Sachs* Provides a critical evaluation of the most commonly applied paleoclimate proxies from the ocean, land, and ice sheets. Offered: jointly with ESS 554/OCEAN 554.

ATM S 555 Planetary Atmospheres (3) Problems of origin, evolution, and structure of planetary atmospheres, emphasizing elements common to all; roles of radiation, chemistry, and dynamical processes; new results on the atmospheres of Venus, Mars, Jupiter, and other solar system objects in the context of comparative planetology. Offered: jointly with ASTR 555/ESS 581.

ATM S 556 Planetary-Scale Dynamics (3) Zonally symmetric circulations, planetary waves, equatorial waves, dynamics of the middle atmosphere, trace constituent transport, nonlinear aspects of atmospheric flows. Prerequisite: ATM S 542 or permission of instructor.

ATM S 558 Atmospheric Chemistry (3) Photochemistry of urban, rural, and marine tropospheric air, and of the natural and perturbed ozone in the middle atmosphere. Unity of the chemistries in these apparently different regimes. Prerequisite: ATM S 458 or ATM S 501 or CHEM 457 or permission of instructor. Offered: Sp.

ATM S 559 Climate Modeling (3) *Bitz, Thompson* Principles of Earth system modeling. Emphasis on atmosphere, ocean sea ice, and land-surface components. Climate forcing. Appropriate use of models. Topics of current interest including carbon cycle, atmosphere chemistry, and biogeochemistry. Prerequisite: either ATM S 587/OCEAN 587/ESS 587, ATM S 504 or ATM S 505. Offered: jointly with ESS 559/OCEAN 558.

ATM S 560 Atmosphere/Ocean Interactions (3) Observations and theory of phenomena of the coupled atmosphere-ocean system. El Nino/Southern Oscillation; decadal tropical variability; atmospheric teleconnections; midlatitude atmosphere-ocean variability. Overview of essential ocean and atmospheric dynamics, where appropriate. Prerequisite: ATM S 509/OCEAN 512. Credit/no-credit only. Offered: jointly with OCEAN 560.

ATM S 564 Atmospheric Aerosol and Multiphase Atmospheric Chemistry (3) Physics and chemistry of particles and droplets in the atmosphere. Statistics of size distribu-

tions, mechanics, optics, and physical chemistry of atmospheric aerosols. Brownian motion, sedimentation, impaction, condensation, and hydroscopic growth. Prerequisite: permission of instructor.

ATM S 571 Advanced Physical Climatology (3) Physical processes that determine the climate of Earth and its past and future changes. Greenhouse effect. Climate modeling. Radiative and dynamical feedback processes. Orbital parameter theory. Critical analysis of climate change predictions. Prerequisite: permission of instructor. Offered: A.

ATM S 575 Large Scale Dynamics of the Tropical Atmosphere (3) Observations and underlying dynamics of large-scale tropical circulations. Factors that determine regions of large-scale persistent precipitation in the tropics, thermal forcing of atmospheric circulations by these regions, and temporal variability of the forcing and response. Prerequisite: ATM S 509/OCEAN 512, ATM S 542.

ATM S 581 Numerical Analysis of Time Dependent Problems (5) Numerical methods for time-dependent differential equations, including explicit and implicit methods for hyperbolic and parabolic equations. Stability, accuracy, and convergence theory. Spectral and pseudospectral methods. Prerequisite: either AMATH 581, AMATH 584/MATH 584, AMATH 585/MATH 585, or permission of instructor. Offered: jointly with AMATH 586/MATH 586; Sp.

ATM S 582 Advanced Numerical Modeling of Geophysical Flows (3) Topics of current interest including: efficient time differencing, semi-implicit and multiple time-step techniques. Semi-lagrangian schemes. Treatment of poorly resolved gradients. Flux-corrected transport. Positive definite advection schemes. Aliasing error and nonlinear instability. Wave permeable boundary conditions. Prerequisite: ATM S 581 and AMATH 586 or MATH 586.

ATM S 585 Climate Impacts on the Pacific Northwest (4) *Mantua, Snover* Knowledge of past/future patterns of climate to improve Pacific Northwest resource management. Topics include the predictability of natural/human-caused climate changes; past societal reactions to climate impacts on water, fish, forest, and coastal resources; how climate and public policies interact to affect ecosystems and society. Offered: jointly with ENVIR 585/ESS 585/SMEA 585; Sp.

ATM S 586 Current Research in Climate Change (2, max. 20) Weekly lectures focusing on a particular aspect of climate (topic to change each year) from invited speakers (both UW and outside), plus one or two keynote speakers, followed by class discussion. Credit/no-credit only. Offered: jointly with ESS 586/OCEAN 586.

ATM S 587 Fundamentals of Climate Change (3) Examines Earth's climate system; distribution of temperature, precipitation, wind ice, salinity, and ocean currents; fundamental processes determining Earth's climate; energy and constituent transport mechanisms; climate sensitivity; natural climate variability on interannual to decadal time scales; global climate models; predicting future climate. Offered: jointly with ESS 587/OCEAN 587.

ATM S 588 The Global Carbon Cycle and Climate (3) *Emerson* Oceanic and terrestrial biogeochemical processes controlling atmospheric CO₂ and other greenhouse gases. Records of past changes in the earth's carbon cycle from geological, oceanographic, and terrestrial archives. Anthropogenic perturbations to cycles. Develop simple box models, discuss results of complex models. Offered: jointly with ESS 588/OCEAN 588; W.

ATM S 589 Paleoclimatology: Data, Modeling, and Theory (3) Evidence for past changes in land and sea surface temperature, in precipitation and atmospheric dynamics, and in ocean circulation: both long and interannual timescales. Paleoclimate modeling and theory. Time series analysis and climate noise. Rapid climate change. Statistical reconstruction of interannual variability. Offered: jointly with ESS 589/OCEAN 589.

ATM S 591 Special Topics (1-4, max. 9) Lecture series on topics of major importance in the atmospheric sciences. Prerequisite: permission of instructor.

ATM S 593 Climate Science Seminar (1) *Mote* Focuses on how to communicate climate science to many different audiences through careful construction of figures and through written and oral communication. Credit/no-credit only. Offered: jointly with ESS 593/OCEAN 593; W.

ATM S 596 Climate Science Capstone Project (1-5, max. 5) *Mote* Climate capstone directed by a mentor, may be a group effort, and may encompass curriculum development, internships, workshop organization, etc., capturing interdisciplinary aspects of climate science and effective communication of climate science. Offered: jointly with ESS 596/OCEAN 596; AWSpS.

ATM S 600 Independent Study or Research (*-) Credit/no-credit only. Offered: AWSpS.

ATM S 700 Master's Thesis (*-) Offered: AWSpS.

ATM S 800 Doctoral Dissertation (*-) Offered: AWSpS.

Earth and Space Sciences

070 Johnson Hall

Earth and space sciences seeks to further the understanding of the Earth, the solar system, and their histories. The scope extends from the center of Earth to the rim of the solar system, and activities cut across traditional disciplines of physics, chemistry, biology, geology, and mathematics. The discipline examines Earth's interior structure, chemistry, motion, and dynamics; geologic hazards; processes affecting the surface environment and climate; the surrounding space environment; planetary processes; and geobiology.

UNDERGRADUATE PROGRAM

Adviser

070 Johnson Hall, Box 351310

(206) 616-8511

advising@ess.washington.edu

The Department of Earth and Space Sciences offers the following programs of study:

- The Bachelor of Science degree with a major in earth and space sciences, with options in biology, geology, physics, and environmental earth sciences
- The Bachelor of Arts degree with a major in earth and space sciences
- A minor in earth and space sciences
- A minor in climate science (offered jointly with the Department of Atmospheric Sciences and the School of Oceanography)

The Bachelor of Science degree is designed for students interested in geology and geophysics, and a career path in graduate studies or in the private sector where field and technology experiences and problem-solving skills are an important asset. The biology option enables B.S. students interested in paleontology and paleobiology to emphasize biology courses. The physics option allows for an emphasis in physics and geophysics. The environmental earth sciences option is designed for students interested in environmentally focused courses and careers. The Bachelor of Arts degree is designed for students who wish to obtain a broad understanding of earth sciences as a background for careers such as science journalism, environmental law, K-12 teaching, or environmental policy.

Bachelor of Science

Suggested First- and Second-Year Courses: MATH 124, MATH 125, MATH 126; PHYS 121, PHYS 122, PHYS 123 or PHYS 114/PHYS 117, PHYS 115/PHYS 118, PHYS 116/PHYS 119; CHEM 142.

Department Admission Requirements

Students in good academic standing may declare this major at any time.

Major Requirements

101 credits as follows:

1. *Science Core (35 credits):*
 - a. *Basic Supporting Science (20 credits):* MATH 124, MATH 125 or equivalent; PHYS 114/PHYS 117 or PHYS 121; CHEM 142. (Students wishing to pursue the ESS Physics Option must take PHYS 121.)
 - b. *ESS Required Core Courses (15 credits):* ESS 211, ESS 212, ESS 213. (Students in the ESS Physics Option may substitute ESS 205 for one of these.)
2. One of the four ESS Options below (minimum 61-71 credits, depending on option):
 - a. *Biology Option (69 credits)*
 - i. *Supporting Science (26 credits):* CHEM 152, CHEM 162; BIOL 180, BIOL 200; and one of BIOL 220, PHYS 115/PHYS 118, PHYS 122, MATH 126, STAT 311.
 - ii. *ESS Required (31 credits):* Three of ESS 311, ESS 312, ESS 313, ESS 314; ESS 400; ESS 418.
 - iii. *ESS Electives (12 credits):* ESS 400-level courses or any ESS 311-series course not taken as a required course, above. (May not include independent study or seminar courses numbered ESS 489 through ESS 499).
 - b. *Environmental Earth Sciences Option (69-71 credits)*
 - i. *Supporting Science (15 credits):* STAT 311 or Q SCI 381; CHEM 152 or CHEM 220; and one of CHEM 162, PHYS 115/PHYS 118, or PHYS 122, MATH 126
 - ii. *ESS Required (44 to 46 credits):* ESS 201; two of ESS 311, ESS 312, ESS 313, ESS 314; ESS 326; two from ESS 315, ESS 421, ESS 426, ESS 427, ESS 454, ESS 455, ESS 456, ESS 457, ESS 459; ESS 400; ESS 418.
 - iii. *Electives (10 credits):* Additional courses chosen from any ESS 311-series course not taken as a required course above, from ESS 400-level courses (may not include independent study or seminar courses numbered ESS 489 through ESS 499), or from an approved list of courses outside ESS.
 - c. *Geology Option (67-71 credits)*
 - i. *Supporting Science (18-20 credits):* MATH 126, PHYS 115/PHYS 118 or PHYS 122 and two of PHYS 116/PHYS 119 or PHYS 123; CHEM 152, MATH 307, MATH 308, STAT 311
 - ii. *ESS Required (31 credits):* Three of ESS 311, ESS 312, ESS 313, ESS 314; ESS 400; ESS 418
 - iii. *ESS Electives (18-20 credits):* ESS 400-level courses or any ESS 311-series course not taken as a required course, above. May not include independent study or seminar courses numbered ESS 489 through ESS 499).
 - d. *Physics Option (61-67 credits)*
 - i. *Supporting Science (32-35 credits):* MATH 126, MATH 308, MATH 324 or MATH 136, MATH 324; PHYS 122, PHYS 123, PHYS 227, PHYS 228, PHYS 321, PHYS 322.
 - ii. *ESS Required (14 credits):* Two of ESS 311, ESS 312, ESS 313, ESS 314, ESS 418.

- iii. *ESS Electives (15-18 credits):* ESS 400-level courses or any ESS 311-series course not taken as a required course, above. (May not include independent study or seminar courses numbered ESS 489 through ESS 499).

3. All courses counted towards the major must be completed with a minimum grade of 2.0

Bachelor of Arts

Suggested First- and Second-Year College Courses: Q SCI 291, Q SCI 292 or MATH 124, MATH 125; PHYS 114/PHYS 117 or PHYS 121; CHEM 142.

Department Admission Requirements

Students in good academic standing may declare this major at any time.

Major Requirements

90 credits as follows:

1. *Supporting Science (35 credits):*
 - a. *Basic Supporting Science (20 credits):* CHEM 142; Q SCI 291, Q SCI 292 or MATH 124, MATH 125; PHYS 114/PHYS 117 or PHYS 121.
 - b. *Additional Courses:* 15 credits from department's approved list of courses in science and mathematics. See adviser for current list.
2. *ESS Courses (55 credits):*
 - a. *Required Courses (15 credits):* Two of ESS 211, ESS 212, ESS 213. One of ESS 311, ESS 312, ESS 313, ESS 314.
 - b. *Elective Courses:* 40 upper-division credits (300 and 400 level) with at least 10 credits at the 400 level (may not include independent study or seminar courses numbered ESS 489 through ESS 499.)
3. All courses counted towards the major must be completed with a minimum grade of 2.0

Continuation Policy

All students must make satisfactory academic progress in the major. Failure to do so results in probation, which can lead to dismissal from the major. For the complete continuation policy, contact the departmental adviser or refer to the department website.

Minor

Minor Requirements: 30 ESS credits with at least 15 at the upper-division level (300- or 400-level) of which at least 3 credits must be at the 400-level (may not include independent study or seminar courses numbered ESS 489 through ESS 499.) All courses must be completed with a minimum grade of 2.0.

Minor in Climate Science

See description in the Climate Science listing in the Undergraduate Interdisciplinary Programs section of the General Catalog.

Student Outcomes and Opportunities

- *Learning Objectives and Expected Outcomes:* Students who graduate with an undergraduate degree in Earth and Space Sciences (ESS) have achieved these learning goals:
 - Have a general knowledge of the basic areas of solid earth geology and geophysics, geobiology, surface processes, space physics, and analogues of processes within the solar system.
 - Be proficient in one of the core disciplines through the completion of requirements in one of four options: standard (geology), (geo)biology, (geo)physics, or environmental.

- Think critically and obtain quantitative predictions using skill sets that involve multiple disciplines and all core sciences.
- Have obtained hands-on experience from extensive fieldwork and/or laboratory experience.
- Have the ability to communicate scientific information clearly and precisely, both orally and in writing.
- Have the ability to read, understand, and use scientific literature.
- *Instructional and Research Facilities:* See below, at end of graduate program requirements.
- *Honors Options Available:* With College Honors (Completion of Honors Core Curriculum and Departmental Honors); With Honors (Completion of Departmental Honors in the major). See adviser or department website for requirements.
- *State Licensing Endorsement Available:* Students interested in pursuing State Licensing for Geologists can receive guidance in course selection that meets state requirements for the geologist licensing examination (see adviser for requirements or visit department website).
- *Research, Internships, and Service Learning:* Job and internship possibilities are posted in the department and forwarded by email to all undergraduate students.
- *Department Scholarships:* A limited number of departmental scholarships are available. Scholarship applications are invited from all undergraduate students in the major during spring quarter. The awards are applicable to the following academic year.
- *Student Organizations/Associations:* Geo Club organizes field trips and social gatherings. Information about meetings and events is forwarded to undergraduate majors by email.

GRADUATE PROGRAM

Graduate Program Coordinator
070 Johnson Hall , Box 351310
206-616-8511
advising@ess.washington.edu

The Department of Earth and Space Sciences offers graduate programs leading to the Master of Science (M.S.) degree and the Doctor of Philosophy (PhD) degree in both geological sciences and geophysics. The programs emphasize a rigorous quantitative approach in conjunction with detailed in-situ and/or laboratory observations to address significant problems that lead to a better understanding of the Earth and its environment.

Major areas of interest are the internal and surface structures and materials of the Earth and planets, dynamic processes within the earth, oceans, atmosphere, and space environments, their history and the interaction of life with these environments. The required curriculum is flexible to facilitate interdisciplinary research approaches. Earth and Space Sciences is also one of the core departments (with the Department of Atmospheric Sciences and the School of Oceanography) in the interdisciplinary graduate program on climate change and a participant in the astrobiology program.

Master of Science

Admission Requirements

1. Official test scores for the Graduate Record Exam (GRE)
2. Official TOEFL scores for international applicants. TSE scores are not required.
3. One copy of official transcripts for all colleges and universities attended, in sealed envelopes, if possible. International transcripts must be in the original language and accompanied by a certified English translation.

International transcripts must be in the original language and accompanied by a certified English translation.

4. Three letters of recommendation (submitted via the UW Web Application for Graduate Admission)
5. Departmental application form (submitted via the UW Web Application for Graduate Admission)
6. Personal resume and personal statement (submitted via the UW Web Application for Graduate Admission)

Degree Requirements

36-45 credits, as follows:

Since the department encourages interdisciplinary courses of study tailored to each student, there are few formal requirements for the M.S. degree beyond those specified by the Graduate School.

Departmental requirements for graduate students in Earth and Space Sciences include the following:

1. Courses determined in consultation with the student's advisory committee to insure both depth and breadth
2. ESS 594, each quarter offered in the first year
3. ESS 599, every quarter (except summer)
4. Two ESS introductory breadth courses (any 50X course)
5. An experiential learning experience
6. A data analysis course or a research project with a significant data analysis component
7. Preliminary examination (see below)
8. Draft thesis or research paper
9. Final examination

With Thesis: 36 credits, of which 18 must be in courses at the 400 level or above and up to 9 may be for thesis (ESS 700). Final examination consists of oral presentation and defense of thesis.

Without Thesis: 45 credits, of which 18 must be in courses at the 400 level or above, which includes a 5-credit research paper (ESS 600). Final examination is oral and is administered by a Supervisory Committee.

Preliminary Examination: Required for every graduate student in the department's program. Provides one component the department uses to evaluate admission to the PhD program early in the student's second year. Along with the first-year research seminar sequence, the preliminary examination encourages students to learn how to develop and present a research project, and get an early, structured start on graduate research. All entering graduate students must present and defend a research proposal before a Student Evaluation Committee (SEC) at the beginning of their second year in the department.

For the preliminary examination, a graduate student must demonstrate the ability to think critically, logically, and creatively and to communicate effectively; and must show knowledge of the disciplines that underlie the student's general area of interest (e.g., geology, geophysics, physics, math, chemistry, biology).

Doctor of Philosophy

Admission Requirements

1. Official test scores for the Graduate Record Exam (GRE)
2. Official TOEFL scores for international applicants. TSE scores are not required.
3. One copy of official transcripts for all colleges and universities attended, in sealed envelopes, if possible. International transcripts must be in the original language and accompanied by a certified English translation.
4. Three letters of recommendation (submitted via the UW Online Application for Graduate Admission)
5. Departmental application form (submitted via the UW Online Application for Graduate Admission)

6. Personal resume and personal statement (submitted via the UW Online Application for Graduate Admission)

Degree Requirements

90 credits, to include:

Since the department encourages interdisciplinary courses of study tailored to each student, there are few formal requirements for the PhD degree beyond those specified by the Graduate School.

Departmental requirements for graduate students in both geological sciences and geophysics include the following:

1. Courses determined in consultation with the student's advisory committee to insure both depth and breadth
2. ESS 594, each quarter offered in the first year
3. ESS 599, every quarter (except summer)
4. Two ESS introductory breadth courses (any 50X course)
5. An experiential learning experience
6. A data analysis course or a research project with a significant data analysis component
7. Preliminary examination (see below)
8. General examination
9. Draft dissertation
10. Dissertation defense

Preliminary Examination: An ESS requirement for every graduate student. Provides one component the department uses to evaluate admission to the PhD program early in the second year. Along with the first-year research seminar sequence, the preliminary examination encourages students to learn how to develop and present a research project, and get an early, structured start on graduate research. All entering graduate students must present and defend a research proposal before a Student Evaluation Committee (SEC) at the beginning of their second year in the department.

For the preliminary examination, a student must demonstrate the ability to think critically, logically, and creatively and to communicate effectively; and must show knowledge of the disciplines that underlie the student's general area of interest (e.g., geology, geophysics, physics, math, chemistry, biology).

Research Facilities

Extensive laboratory facilities are available for a wide range of experimental/field work. These include a wet chemistry laboratory, a JEOL 733 Superprobe with EDS/WDS and a high resolution laser Raman spectrometer for mineral analysis, a thermal-ionization mass spectrometer, a multi-collector inductively-coupled-plasma mass spectrometer and associated clean laboratories for analysis of stable and radiogenic isotopes, a computer laboratory, a remote-sensing laboratory with an image-processing system with LANDSAT tape library and spectral reflectance equipment, and high temperature controlled atmosphere furnaces. There is also field equipment for electromagnetic induction studies; a high-pressure/temperature laboratory, including a laser-induced phonon spectrometer and diamond anvil cells for studying such rock and mineral properties as compression, sound velocities, and thermal conductivity; a permanent, regional seismic network; a portable telemetered seismic network for studying volcanoes and active faults in western North America; geodetic-quality global-positioning-system receivers; a cold laboratory for studying problems in snow-cover geophysics, glaciology, and sea-ice research; a geophysical-fluids laboratory; two cloud microphysics laboratories; a space physics and aeronomy laboratory for preparing ground-based, balloon, rocket, and satellite experiments; and a laboratory for the study of advanced plasma propulsion concepts. Additional facilities are provided by the Quaternary Research Center (which houses state-of-the art cosmogenic isotope and

stable-isotope research laboratories, palynology, snow and ice research, and a periglacial laboratory) and the Burke Memorial Washington State Museum (which houses paleontological laboratories and extensive reference collections of invertebrate, vertebrate, and plant fossils, and minerals).

Financial Aid

Most graduate students receive support in the form of teaching or research assistantships, and endowed fellowships and scholarships.

COURSE DESCRIPTIONS

See page 5 for an explanation of course numbers, symbols, and abbreviations. For complete undergraduate course descriptions, see the online course catalog at www.uw.edu/students/crsca/.

ESS 100 Dinosaurs (2) NW Biology, behavior, ecology, evolution, and extinction of dinosaurs, and a history of their exploration. With dinosaurs as focal point, course also introduces the student to how hypotheses in geological and paleobiological science are formulated and tested.

ESS 101 Introduction to Geological Sciences (5) NW Survey of the physical systems that give the earth its form. Emphasizes the dynamic nature of interior and surface processes and their relevance to mankind and stresses the value of rocks and earth forms in the understanding of past events. A course with laboratory for non-science majors. Not open for credit to students who have taken ESS 105, or ESS 210. Field trips. Offered: AWSp.

ESS 102 Space and Space Travel (5) I&S/NW Explores the sun, solar storms, observations from space and from Earth; Earth's space environment, radiation belts and hazards, plasma storms and auroras, rockets and propulsion, human exploration efforts, societal impact, planetary systems and resources, and project highlighting space and its exploration. Open to non-majors. Offered: AWSp.

ESS 103 Minerals and Gems (3) NW Introduction to the nature of minerals: composition, structure, physical properties, and origins, with emphasis on gem minerals. Focuses on topics of particular interest in gemology, such as mechanisms of color, history and lore of gems, and uses of gems. Hands-on laboratories using about one hundred representative gems and minerals.

ESS 104 Prehistoric Life (3) NW Fossils and how they are preserved. What fossils tell us about past life and environments. How the history of life unfolded and what caused the great events in biological evolution. Open to non-science majors, but also lays a foundation for higher-level geobiology courses.

ESS 105 The Earth: Its Processes and Hazards (5) NW Introduction to physical and environmental geology. Focuses on both large-scale tectonics forces that create Earth's continents and oceans, and surficial forces that shape Earth's landscapes. Emphasizes processes that endanger human populations (such as earthquakes, volcanic eruptions, and floods). Not open for credit to students who have taken ESS 101.

ESS 106 Living with Volcanoes (3) I&S/NW Explores volcanoes and volcanic eruptions on Earth and in the solar system. Examines how volcanoes work and how they affect the environment, life, and human societies. Illustrates principles using local examples of recent volcanism and ancient examples of mega-eruptions. Evaluates the possibility of predicting future eruptions.

ESS 115 Astrobiology: Life in the Universe (5) NW R. BUICK, D. CATLING, V. MEADOWS, W. SULLIVAN Introduction to the new science of astrobiology, study of the origin and evolution of life on Earth, and the search for microbial and intelligent life elsewhere in the Universe. Designed for non-science, liberal arts majors. Offered: jointly with AST-BIO 115/ASTR 115/BIOL 114/OCEAN 115.

ESS 119 Introduction to Laboratories (1, max. 3) Reviews research being performed in visited and independent research opportunities and possibilities. Includes weekly visits to labs in ESS and related fields. Credit/no-credit only.

ESS 201 The Earth System and Climate (5) NW Earth's dynamic environment, global energy balance, interplay of chemical, physical, and biological processes shaping the Earth's surface and climate. Emphasis on quantitative methods for measuring, evaluating, and understanding contemporary changes relative to the last several thousand years. Prerequisite: either MATH 124, MATH 144, or Q SCI 291.

ESS 202 Earthquakes (5) I&S/NW Earthquakes of the Pacific Northwest and around the world - their cause and relationship to plate tectonics; why, where, and when they occur. How earthquakes affect human life: shaping landscape, hazards. Laboratory explores physical processes associated with earthquakes. One field trip. Open to non-science majors.

ESS 203 Glaciers and Global Change (5) I&S/NW Explores how glaciers record climate change and human activities through bubbles of ancient air and trace impurities in the ice. Also reviews glaciers impact on societies through sea-level, coastlines, water supplies, and transportation routes. Open to non-science majors.

ESS 204 The Paleobiology and Geobiology of Mass Extinctions (3-4) NW P. WARD Covers the origin and diversification of life on Planet Earth, and abrupt die-offs in mass extinctions. Explores how new instrumentation and experimentation in biology and chemistry, and improved sampling of the fossil record in geology, combine with astrobiology and geobiology to revise out history of Earth and its life. Prerequisite: a minimum grade of 1.7 in ESS 100. Offered: W.

ESS 205 Access to Space (5) NW Group development of student experiments to the outer rim of our atmosphere and the beginning of space; investigation of stratosphere, mesosphere, thermosphere, magnetosphere, development of exploration packages; basic electronic fabrication, global positioning, radio tracking, expectations at high altitudes. Open to all disciplines. No previous experience of electronics required.

ESS 209 Interdisciplinary Earth Sciences Field Seminar (3-12, max. 12) NW Miscellaneous field-based and experiential learning activities in earth and space sciences.

ESS 210 Physical Geology (5) NW Introduction to the physical and chemical processes of the earth's surface and interior. Plate tectonics, earthquakes, volcanism, glaciation. Optional field trips to Cascades and Olympics. Background in geology not required but science background desirable. Not open for credit to students who have taken ESS 101.

ESS 211 Physical Processes of the Earth (5) NW Overview of Earth. Deformation of soil, sediment, and rock. Erosional and depositional processes and landforms. Seismicity and plate-tectonics. Structural, geomorphic, and climatic interactions in major tectonic regimes. Use of stereonet, air photos, geologic maps, and cross sections. Two one-day field excursions. Prerequisite: a minimum grade of 1.7 in either MATH 124 or Q SCI 291, either of which may be taken concurrently; a minimum grade of 1.7 in either both PHYS 114 and PHYS 117 or PHYS 121. Offered: A.

ESS 212 Earth Materials and Processes (5) NW Crystallography, crystal chemistry, and characteristics of rock-forming and ore minerals. Description, phase equilibria, origin, and associations of igneous, sedimentary, and metamorphic rocks. Laboratory study of hand specimens. Two one-day field excursions. Prerequisite: minimum grade of 1.7 in CHEM 142. Offered: W.

ESS 213 Evolution of the Earth (5) NW Introduction to paleontology, types of stratigraphy, and radiometric dating. The physical, chemical, biological, and plate tectonic evolution of the earth's crust, seawater, and atmosphere. Comparison with other planets. Climate changes and man as a

geologic agent. Two one-day field excursions. Prerequisite: minimum grade of 1.7 in either ESS 211 or ESS 212. Offered: Sp.

ESS 230 Rivers and Beaches (3/5) NW Introduction to Earth surface environments, the processes that shape them, how humans affect them and are affected by them. Weekend field trips examine mountains, rivers, deltas/estuaries, beaches, and environments beyond. Focus on linkages between these environments to illustrate coupling between landscapes and seascapes. Offered: jointly with OCEAN 230.

ESS 301 Geology of the Northwest (5) NW Geologic history of Washington, Oregon, and Idaho. Emphasis on use of geologic principles in interpreting evidence found in landscapes and rocks. Weekend field trips optional. Prerequisite: either ESS 101, ESS 105, ESS 210, ESS 211.

ESS 302 Great Ice Age (5) NW Growth of mile-thick ice sheets, worldwide lowering of sea level, and other geological and paleoclimatological changes that accompany the harsh environments of a global glaciation. Geology of the last three million years, focusing on the causes and effects of global glaciation and future climate change. Prerequisite: either ESS 101, ESS 105, ESS 210, ESS 211.

ESS 304 Volcanoes and Glaciers of the Pacific Northwest (5) NW Introduction to volcanic and glacial processes, emphasizing examples in the Pacific Northwest. Volcanic products, landforms, hazards, prediction, and history. Relationship to tectonics. Nature and distribution of present and former glaciers in Washington. Two all-day Saturday field trips to Cascade volcanoes required.

ESS 305 Geology of the National Parks (5) NW Reviews a wide range of fundamental geological processes, using North American parks and monuments as examples of natural laboratories. Includes plate-tectonic history, volcanism, mountain-building, and glacial, fluvial, and a host of other geomorphic forces as preserved in geologic exposures of National Parks. Prerequisite: either ESS 101, ESS 105, ESS 210, or ESS 211.

ESS 306 Planetary Geology (5) NW Up-to-date survey of geological features and processes on and within planets and their moons deduced from sampling, remote sensing, spacecraft imagery, and theory. Comparative discussion of volcanism, tectonics, surface processes, and thermal evolution. Examination of moon rocks and meteorites. Prerequisite: either ESS 101, ESS 105, ESS 210, ESS 211.

ESS 310 Mathematical Methods in the Earth Sciences (5) NW Roe Presents mathematical methods for Earth Sciences applications. Focuses on setting up equations and on the quality of written solutions. Prerequisite: MATH 125; either PHYS 114/PHYS 117 or PHYS 121.

ESS 311 Geomechanics (5) NW Introduction to continuum mechanics: elasticity, fluid dynamics, diffusion, porous flow, multiphase flow, dimensional analysis, and natural convection. Example applications: earthquakes and rock mechanics, flow of glaciers, slope stability, debris flows, groundwater flow, contaminant transport, flow in rivers and channels, mantle and magma convection. Prerequisite: either MATH 125 or Q SCI 292; either PHYS 114 and PHYS 117 or PHYS 121. Offered: W.

ESS 312 Geochemistry (5) NW Geochemical concepts essential to earth science studies. Crystal chemistry and elemental affinities, thermodynamics of geologic processes, trace element and isotopic fractionation, weathering, cosmochemistry, and exploration of basic global geochemical cycles. Laboratory exercises explore the dynamics of geochemical processes. Prerequisite: CHEM 142; either MATH 125 or Q SCI 292; ESS 212. Offered: Sp.

ESS 313 Geobiology (5) NW Introduction to the early record of life on earth. Environmental factors leading to life's diversification. The role of life in biomineralization. The history of biodiversity. The role of life in landform and soil formation. Laboratory exercises demonstrate specimens and

techniques. Prerequisite: CHEM 142; either PHYS 114 and PHYS 117 or PHYS 121. Offered: A.

ESS 314 Geophysics: Expedition to Planet Earth (5) NW Survey of fundamental geophysics using an investigative approach. Examines how a future expedition of extraterrestrial humanoids could use geophysical data, physical principles, and mathematical techniques to decide whether they should colonize Earth and understand why the indigenous civilization became extinct. Prerequisite: either MATH 126 or ESS 310; either PHYS 115 and PHYS 118 or PHYS 122. Offered: A.

ESS 315 Environmental Earth Science (5) NW Analysis of geologic constraints upon human activity and the environmental consequences of such activity. Topics include hillslope processes, fluvial and groundwater processes, earthquake and volcanic hazards, and environmental aspects of deforestation and atmospheric pollution. Prerequisite: either ESS 101, ESS 105, ESS 210, ESS 211. Offered: jointly with ENVIR 313.

ESS 326 Geomorphology (5) NW Introduction to landforms and surficial deposits. Emphasis on landscape-forming processes. Intended for students who wish to take additional courses in geomorphology. Prerequisite: either PHYS 114 or PHYS 121.

ESS 345 The Environment of Fuel and Mineral Deposits (3) I&S/NW Fuels and nonmetallic ores as the substrate of industrial civilization. Provides non-majors with sufficient information about these resources to allow for informed decisions of related geological, environmental, and societal issues. Prerequisite: either ESS 210 or ESS 211.

ESS 400 Field Geology (12) NW Six weeks of geologic mapping in a variety of rock types in the Western United States. Enhances students' knowledge of geologic phenomena and processes. Development of skills in mapping, field interpretation, and report writing. Students responsible for own living expenses while in the field. Prerequisite: ESS 211; ESS 212; ESS 213; one course selected from ESS 311, ESS 312, ESS 313, or ESS 314. Offered: S.

ESS 401 Regional Geology of the Pacific Northwest (3) NW Explores the geological diversity of the Pacific Northwest temporally (Archean to Pleistocene), tectonically (craton, terranes, and cover sequences), and lithologically (ophiolites to coal). Three weekend field trips required.

ESS 402 International Field Geology (3-12, max. 12) NW Supervised geological field work in classic, instructive international sites. Venue varies from year to year. Work may include geologic mapping, construction of cross sections, measurement and analysis of stratigraphic sections, field excursion, and supervised individual research projects.

ESS 403 Global Tectonics (5) NW Introduction to large-scale plate tectonics processes and observations including motions on a sphere, polar-wander paths, plate-boundary seismicity, focal mechanisms, gravity, magnetics, and heat flow. Also includes observations and theories of plate deformation and continental dynamics with emphasis on Western North America. Prerequisite: PHYS 121.

ESS 406 Earth Sciences for Middle and High School Science Teachers: Solid Earth (3) NW Topics of contemporary interest selected to meet state academic standards. Topics include Pacific Northwest earthquakes and volcanoes, global and regional plate tectonics, history of the Earth, the Earth's interior, planetary geology, and surface processes on the Earth. Does not count toward the ESS degree. Prerequisite: ESS 101.

ESS 408 Great Geological Issues (3) NW History and development of geological and paleontological theories and controversies; philosophy and methodology that have driven scientific inquiry in the earth sciences. Offered: A.

ESS 410 Marine Geology and Geophysics (4) NW Explores the geological and geophysical processes that form and shape the ocean basins and continental margins. Prerequisite: either ESS 210, ESS 211, or ESS 212. Offered: jointly with OCEAN 410; A.

ESS 411 Geophysical Continuum Mechanics (5) NW Analysis of stress and strain. Measurement and interpretation of strain in geological materials. Elasticity applied to determine stress in the Earth's lithosphere. Creep of solids and flow of geological materials. Prerequisite: either MATH 136 or both MATH 307 and MATH 308.

ESS 412 Introduction to Seismology (3) NW Examines stress and strain, the wave equation, travel times, amplitude and phase, reflection seismology, surface waves, and source theory, including moment tensors, radiation patterns, far-field wave shapes, source spectra, stress drop, and magnitude. Prerequisite: either ESS 411 or PHYS 123 and either MATH 307 or MATH 308.

ESS 413 Geophysics: The Earth (3) NW The Earth and its interior; gravity, magnetism, heat flow, seismology. Earth's outer structure, studied through the unifying concepts of plate tectonic theory. Quantitative approaches to problems, using techniques of classical physics. Prerequisite: either ESS 412 or PHYS 322.

ESS 414 Geophysics: Fluids (3) NW Introduction to geophysical fluid dynamics. An overview of fluids in geophysics with emphasis on the oceans. A nonrigorous development of the equations of motion with examples drawn from oceanography and solid earth geophysics. Prerequisite: either MATH 136 or both MATH 307 and MATH 308; PHYS 322.

ESS 415 Space and Plasmas (3) NW Survey of various phenomena occurring in outer regions of Earth's atmosphere, ionosphere, magnetosphere, and Van Allen radiation belts. Laboratory applications include plasma thrusters and fusion. Concepts include charged particles in magnetic fields, drift motion, plasma, magnetohydrodynamic waves. Prerequisite: PHYS 321.

ESS 416 Geophysics: The Atmosphere (3) NW Phenomena of the lower atmosphere: some simple applications of the principles of classical thermodynamics, fluid dynamics, and radiative transfer to the atmospheric hydrological cycle, global energy balance, and atmospheric dynamics and climate. Prerequisite: ESS 414.

ESS 418 Geoscience Communication (4) Covers principles of organizing, developing, and writing geoscience information including abstracts, presentations, scientific articles, correspondences, and proposals. Reviews writing conventions, use of illustrations, style, and tone. Prerequisite: 5 credits of composition; two of ESS 201, ESS 211; ESS 212, and ESS 213, any of which may be taken concurrently. Offered: WSp.

ESS 420 Introduction to Geological Geographic Information Systems (5) Walters Examines principles of GISA applied to the geological sciences. Covers basics of GIScience, data types, and GIS analyses. Includes hands-on analysis applied to geologic patterns and phenomena: sources geological data; geological mapping; measures of topography; hydrologic flow patterns; and topics of the students' own interests. Prerequisite: ESS 211. Offered: ASp.

ESS 421 Introduction to Geological Remote Sensing (4) NW Principles of image interpretation for geologists. Study of land forms, structure, lithology, surface processes using aircraft and satellite data. Use of digital multispectral images and radar images for geological mapping.

ESS 422 Intermediate Spectral Remote Sensing (4) NW Explores spectral image processing with ENVI software, used in individualized projects involving satellite or aircraft images. Emphasis on integration of remote sensing and field measurement using process models and Geographic Information Systems (GIS). Prerequisite: ESS 421.

ESS 424 Water in the Environment (3) NW Discusses the unique physical and chemical properties of the water molecule in relation to the atmospheric greenhouse effect, precipitation formation, oceanic circulations, infiltration of water through soils, geyser eruptions, and glacier and sea ice thickness. Prerequisite: either ESS 310, MATH 126,

or MATH 136; PHYS 123. Offered: jointly with ATM S 460/PHYS 460.

ESS 426 Fluvial Geomorphology (5) Hydraulic and morphological characteristics of streams and valley floors. Landscape evolution by stream erosion and deposition. Field exercises emphasize quantitative analysis of fluvial processes, channel forms, acquisition of various skills, such as mapping, topographic surveying, report writing. Prerequisite: either ESS 311 or ESS 326.

ESS 427 Hillslope Geomorphology (5) NW Theoretical, laboratory, and field study of hillslope evolution by mass wasting and water erosion. Prerequisite: either ESS 311 or ESS 326.

ESS 431 Principles of Glaciology (4) NW Covers snow deposition and metamorphism, avalanches, heat and mass balance at snow and ice surfaces, glacier flow, ice sheets, sea ice, permafrost, methods of paleoclimate reconstruction, Ice Age theories. Prerequisite: PHYS 121.

ESS 432 Glacial Geology (5) NW Interpretation of glacial environments and history through study of sediments and landforms. The laboratory component is largely field based and visits some spectacular glaciated landscapes. Provides students an experiential learning approach to the field as well as an opportunity to conduct independent research.

ESS 433 Environmental Change in the Glacial Ages (5) NW Physical, biological evidence of climatic change during Quaternary Period; emphasizing stratigraphy, chronology. Impact of alternating glacial/interglacial cycles on earth's terrestrial, marine environments. Theories on causes of climatic variation.

ESS 435 Glacial-Periglacial Geomorphology NW (3) NW Hallet Introduces glacial processes that shape mountainous and polar regions, creating a wealth of characteristic landforms; and periglacial processes that profoundly impact nearly twenty percent of the land surface of the planet and Mars through frost action and thermal fluctuations. Prerequisite: MATH 125; either PHYS 114 or PHYS 121; ESS 211; ESS 326.

ESS 437 Mineralogy (5) NW Symmetry of crystals and crystal structures. Rules of crystal chemistry. Microscopic, diffraction, and spectroscopic techniques of mineral characterization. Transformation processes in minerals: order-disorder, phase transition, and exsolution. Crystal chemistry and phase relations. Reactions on mineral surfaces. Physical properties, deformation, and creep. Prerequisite: CHEM 142; ESS 212; ESS 312.

ESS 439 Petrology of Igneous Rocks (5) NW Systematic study of the major families of volcanic and plutonic igneous rocks with emphasis on tectonic setting, phase relations, geochemistry, and models of their origin and evolution throughout geologic time. Laboratory emphasizes thin-section study of rocks using transmitted and reflected light. Prerequisite: ESS 312.

ESS 440 Petrography and Petrology of Metamorphic Rocks (5) NW Mineralogy, textures, and origins of metamorphic rocks; metamorphic facies and metamorphic phase equilibria; controls of metamorphism. Prerequisite: ESS 312.

ESS 441 Petrology and Petrography of Sedimentary Rocks (5) NW Mineralogy, textures, and origin of sedimentary rocks, using petrographic microscope. Prerequisite: ESS 312.

ESS 445 Geology of Ore Deposits (5) NW The geologic principles, environmental aspects, and exploration strategies of selected types of metallic and nonmetallic ore deposits and coal. Prerequisite: ESS 312.

ESS 447 Engineering Geology: Methods and Application (4) Applies the application of geologic principles to geotechnical and environmental problems; includes investigation and characterization of soil and rock properties. Includes two weekend field trips. Prerequisite: ESS 210 or ESS 211; either ESS 311, ESS 411, ESS 463, or CEE 220.

ESS 449 Intensive Field Experience in Biology (3-5) NW Introduces field methods and research in various areas of biology, e.g., paleontology, ecology, climate change, and mycology. Includes two or more weeks away from campus at field site. Offered: jointly with BIOL 475; S.

ESS 450 Paleobiology (3) NW Biological evolution over the past 500 million years, considering how the reciprocal interactions between environment and evolution have influenced the major episodes in life's history and providing a background for assessing the evolutionary impact of modern environmental change.

ESS 451 Invertebrate Paleontology (5) NW Important larger invertebrate groups; morphology, classification, stratigraphic distribution, evolution, paleoecology. Offered: jointly with BIOL 451.

ESS 452 Vertebrate Paleontology (5) NW C. SIDOR Examines fossil vertebrate life, focusing on systematics and morphology of major lineages (fish, reptiles, bird, and early mammal relatives). Examines fossil and modern vertebrates from the Burke Museum collection in the lab. Weekend field trip. Prerequisite: either BIOL 354, BIOL 452, BIOL 453 or ESS 100. Offered: jointly with BIOL 450.

ESS 453 Fossil Mammals (5) NW Evolutionary relationships of fossil mammals, from mammal-like reptiles of late Paleozoic to diverse Cenozoic groups. Morphology, adaptations, extinctions, evolutionary patterns. Structures and relationships of most major groups. Field trip. Prerequisite: either ESS 100 or ESS 452.

ESS 454 Hydrogeology (4) NW Covers the analysis of groundwater flow systems, geologic controls, and hydrologic properties; basics of chemistry and solute transport in groundwater; and the use of numerical models. Considers local examples and groundwater resource management. Prerequisite: ESS 311.

ESS 455 Stratigraphy (4) NW Systematic study of stratified rocks and space-time implications. Principles of stratigraphy, including biostratigraphy, magnetostratigraphy, seismic stratigraphy, subsurface analysis. Basin analysis, evolution of sedimentary basins and continental margins. Prerequisite: ESS 213.

ESS 456 Depositional Environments (4) NW Principles of sedimentary facies analysis, including survey of modern processes that produce sedimentary sequences. Recognition of various depositional environments represented in the geologic record, including terrestrial, marine terrigenous, and carbonate environments. Two field trips required. Prerequisite: ESS 213.

ESS 457 Environmental Geochemistry (4) NW Examines the geochemistry of natural waters, emphasizing applications in geological and soil sciences. Topics include soil/ground water composition; weathering and the carbon cycle; equilibrium computer modeling; colloids and clay minerals; organic geochemistry of water and soil; and groundwater quality. Experience with geochemical instrumentation. Prerequisite: ESS 312, CHEM 152, or CHEM 155.

ESS 459 Environmental Isotope Geology (3) NW The geochemistry of stable isotopes. Topics include the theory of isotope fractionation, application of isotopes in earth surface processes, climate, and biogeochemical cycles. Includes extensive laboratory experience. Prerequisite: ESS 312.

ESS 460 Cosmogenic Nuclides in Geomorphology (3) NW Use of cosmic-ray-produced nuclides to date rock surfaces and analyze geomorphic processes. Nuclide production by cosmic radiation above and below ground; tracer methods; exposure dating; coupling of cosmogenic nuclide data to geomorphic models. Open to undergraduate students only. Prerequisite: either ESS 311 or ESS 312.

ESS 461 Geological Time (3) NW Principles of radiometric dating. Methods applicable to Earth history from planetary formation to the recent past. Radiocarbon dating; geological dating with long-lived isotopes; uranium series, trapped

charge and cosmogenic isotope techniques. Applications in archaeology, climate change, geomorphology, tectonics, and Earth evolution.

ESS 462 Volcanic Processes (4) NW Pre-eruption, eruption, and post-eruption processes. Examines triggers of magma ascent, controls on volatile build-up and loss, magma fragmentation, magma-groundwater interaction, eruption column dynamics, gravity-controlled eruptive phenomena, syn- and post-eruption lahars and other re-working of deposits. Prerequisite: either ESS 212, ESS 311, or ESS 312.

ESS 463 Structure and Tectonics (5) NW Geometry, kinematics, and tectonic setting of major types of structures, including those in contractional fold-and-thrust belts; extended crust; strike-slip-dominated regimes; and shear zones. Laboratory exercises develop basic tools of structural geology. Prerequisite: ESS 213.

ESS 465 Seismology and Earthquake Engineering (3) NW Presents an overview of earthquake processes and details of the characteristics of destructive ground motion; illustrates the effects of such motion on engineering structures; reviews current practice in estimating earthquake hazards for important structures such as nuclear power plants. Prerequisite: either ESS 310, MATH 126, MATH 134, or both MATH 307 and MATH 308. Offered: jointly with CEE 431.

ESS 467 Seismic Exploration and Stratigraphy (5) NW Introduction to theory and practice of seismic exploration. Application of refraction and reflection techniques to problems in engineering geology and mineral exploration. Constraints in the interpretation of subsurface structure. Prerequisite: either ESS 311 or OCEAN 410; either MATH 126 or MATH 136; PHYS 123. Offered: jointly with OCEAN 412.

ESS 471 Introduction to Space Physics (3) NW Introduces several areas of space physics, the physical principles that apply therein, and the methods by which significant observations are made. Covers electromagnetic and plasma processes from the center of the sun to the surface of the earth. Prerequisite: PHYS 123.

ESS 472 Rockets and Instrumentation (2-4, max. 12) Students launch science payloads to high altitude using high power amateur rockets, providing design, fabrication, test, integration, and management experience; covers science motivation, engineering aspects, and delivery systems. Project may vary each year. Offered: AW.

ESS 475 Current Research in Climate Science Seminar (3, max. 6) Weekly lectures focusing on a particular aspect of climate from invited speakers, complemented by class discussion, readings, and final paper. Promotes interdisciplinary understanding of climate concepts. Prerequisite: either ESS 201, ATM S 211, or ATM S 321. Offered: jointly with ATM S 475/OCEAN 475; A.

ESS 480 Advanced Methods in Isotope Geochemistry (3, max. 18) NW Huntington, Steig Studies new developments in isotope geochemistry. Topics vary by quarter and may include clumped isotopes, triple-oxygen isotopes, rate isotopes, mass-independent fractionation, and their incorporation into Earth system models. Introduces theory, measurement, and applications to processes in Earth, ocean, atmospheric, planetary, and climate science. Prerequisite: either ESS 312, ESS 424, ESS 457, ESS 459.

ESS 489 Honors Seminar (3) Covers current scientific topics in earth and space sciences; philosophy and methodology of science strategies for developing research projects; scientific education and career planning. May require colloquium or local conference attendance. Offered: A.

ESS 490 Special Topics (1-10, max. 20) NW

ESS 492 Undergraduate Teaching Experience and Outreach (1-3, max. 12) NW Designed to help undergraduate majors acquire effective teaching skills at the college and public school level. Teaching experience gained through assisting graduate student teaching assistant or K-12 public school outreach. Involves classroom teaching experience and improving communications and presentation skills.

ESS 495 NASA Science and Engineering Research Seminar (1, max. 4) NW Review of current space science-related research. Emphasis varies, but topics may include planetary geology, astronomy, global change, aeronautical engineering, and remote sensing. Credit/no-credit only.

ESS 498 Undergraduate Thesis (5) NW The thesis must be submitted at least one month before graduation.

ESS 499 Undergraduate Research (*, max. 15)

ESS 501 Geochemical Systems (3) Nelson Geochemical systems through time, from solar system origin to present. Explores fundamental geochemical concepts using current research issues and discussion. Concepts include radiogenic and stable isotope systematic, thermodynamics, high and low temperature chemistry of rocks and water, geochemical cycles through Earth's history. Prerequisite: graduate student standing or permission of instructor.

ESS 502 The Solid Earth (3) Concepts of internal earth processes: Earth as heat engine and chemical processor, style of mantle convection, origin and evolution of the Earth's magnetic field, Cascadia subduction and hazards. Introduces seismology, fluid dynamics, heat flow, gravity, and geomagnetism. Focuses on the analysis, critique, and communication of ideas from scientific literature.

ESS 503 Introduction to Solar Terrestrial Physics (3) Introduces several areas of space physics, the physical principles that apply therein, and the methods by which significant observations are made. Covers electromagnetic and plasma processes from the center of the sun to the surface of the Earth. Prerequisite: PHYS 123.

ESS 504 The Earth Surface (3) Investigates the coupled tectonic and geomorphic processes that shape the surface of the Earth, creates the surface environment that sustains humanity and other life systems, and produces natural hazards. Introduces modern tools, techniques, and theories applicable to analysis of this coupled dynamic system.

ESS 505 The Cryosphere (4) Waddington, Warren Covers snow deposition and metamorphism, avalanches, heat and mass balance at snow and ice surfaces, glacier flow, ice sheets, sea ice, permafrost, methods of paleoclimate reconstruction, and Ice Age theories. Prerequisite: PHYS 121. Offered: A.

ESS 508 Great Geological Issues (3) History and development of geological and paleontological theories and controversies; philosophy and methodology that have driven scientific inquiry in the earth sciences. Requires a term paper analyzing primary material. Prerequisite: graduate standing in earth sciences, or in history of science, or permission of instructor.

ESS 509 Field Methods in Applied Geology I (3) Crider Introduction to problems and techniques of applied geology. Studies the interactions among land use, infrastructure, and the dynamic landscape of the Pacific Northwest. Includes nine-day intensive, mid-September field course held near Mount Rainier. Prerequisite: strong background in field methods and geology. Offered: A.

ESS 510 Field Methods in Applied Geology II (3) Troost Application of applied geology core curriculum to field problems. Includes nine-day intensive, mid-June field course held on the Olympic Peninsula and coastal Puget Sound. Prerequisite: ESS 509; three of ESS 420, ESS 454, ESS 526, ESS 527, or ESS 547. Offered: S.

ESS 511 Geophysical Continuum Mechanics (5) Analysis of stress and strain. Measurement and interpretation of strain in geological materials. Elasticity applied to determine stress in the Earth's lithosphere. Creep of solids and flow of geological materials. Includes advanced, research-oriented problems. Prerequisite: MATH 307 and MATH 308 or equivalent.

ESS 512 Seismology (3) Examines stress and strain, the wave equation, travel times, amplitude and phase, reflection seismology, surface waves, and source theory, including moment tensors, radiation patterns, far-field wave

shapes, source spectra, stress drop, and magnitude. Prerequisite: either ESS 511 or PHYS 123 and one of MATH 307 or MATH 308.

ESS 513 Geophysics: The Earth (3) Study of gravity, magnetism, heat flow, seismology. Earth's outer structure studied through unifying concepts of plate tectonic theory. Quantitative approaches to problems, using techniques of classical physics. Includes advanced, research-oriented problems. Prerequisite: ESS 512; PHYS 322.
